## LETTER OF TRANSMITTAL.

---

To the Honorable Secretary of State, Denver, Colo.:

Sir—Hereto attached I submit for publication a compilation of agricultural statistics for the State of Colorado for the year 1893, together with “Introductory Remarks” on the same and “Notes on the Reports.”

Respectfully submitted,

DANIEL W. WORKING,

Secretary the State Board of Agriculture.

The State Agricultural College,  
Fort Collins, Colorado,  
January 22, 1895.

## INTRODUCTORY REMARKS.

---

This compilation is made from reports prepared by the assessors of thirty-nine of the fifty-six counties of Colorado. Nearly all the reports received from the several counties which reported are very imperfect and inaccurate; none are entirely complete and trustworthy. From these facts, which will impress themselves on any competent person who carefully examines the tables prepared, and the fact that seventeen counties made no reports, it is apparent that this report must be almost worthless. This is not as it should be. Statistics, to be of the greatest value, should be complete and accurate for all branches of the industry reported upon. Under the present law and by the present want of system, this ideal cannot even be approached.

It may not be improper to illustrate by a few examples from the following tables the character of information furnished to the public by the State of Colorado. Table III. shows that 2,393,185 bushels of potatoes were raised on 35,331 acres—an average yield per acre of a little less than 68 bushels. Weld, the county of largest acreage and greatest total yield, produced a trifle over 61 bushels per acre. Saguache County is reported to have produced at the rate of a fraction less than 10 bushels to the acre, and Rio Grande, an adjoining county, exactly 210—a phenomenal yield for 1,750 acres. Garfield County did even better, yielding 255,400 bushels on 1,200 acres. Park is below the average, her 2,500 acres producing only

150,000 bushels. Table V. shows that there were 17,000 dairy cows in Logan County. Table VI. informs the diligent inquirer that those cows produced exactly 15,030 pounds of butter during the year 1893—an average of 14 1-7 ounces per cow. During the same year the cows of Prowers County yielded 779 pounds and 7 ounces of butter apiece; those of Jefferson, 110 pounds and 4 ounces; while the average cow of Colorado gave milk that yielded 27 pounds and 10 ounces.

The wool clip of 1893 was very uneven. The average sheep of twenty-nine counties produced a little over 5 pounds of wool. In El Paso County the clip was about 7 pounds per sheep; in Eagle County it took 10 sheep to produce a pound of wool; while in Logan, where 7 cows yield 6 pounds of butter in a year, each sheep produced 15 pounds of wool. These, of course, are hard, cold, statistical facts. And has it not been written that "facts are sometimes stranger than fiction?"

A year ago I said, and now reiterate, that "If statistics are to be compiled at all, they ought to be compiled by such methods and with such care as will insure substantial accuracy; and it ought to be possible for the Secretary of the State Board of Agriculture to have at his command sources of information that would enable him to estimate with reasonable accuracy the value and amount of the agricultural products of the State. But, under present conditions, it is out of the question to make accurate and reliable estimates, and till he can do so with some confidence in their value as trustworthy information for the public, the present Secretary will make no estimates."

In Kansas, township assessors report to the Secretary of the Board of Agriculture the acreage in crops. With this information as a basis, the Secretary, by the aid of correspondents in all parts of the State, who report average yields and general crop

conditions, makes estimates of the amount and value of agricultural products. The Kansas reports are models of their kind.

In several respects Colorado is better situated than Kansas for the purpose of securing reliable information concerning the amount and value of her agricultural productions. With these advantages in view, I recommend that the present law providing for the collection, compilation and publication of agricultural statistics be repealed, and that in its stead there be enacted a law with provisions substantially as follows:

First—That assessors shall report to the Secretary of the State Board of Agriculture the amount of land in cultivation in the several counties, specifying the acreage irrigated; the acreage farmed without irrigation; the number of acres of irrigated meadow land; the number of acres of irrigated pasture; the fenced acreage of unirrigated pasture lands; also the number of head of the various kinds and classes of live stock owned.

Second—That all ditch owners shall report the acreage irrigated from their several ditches, together with the number of acres of the principal crops grown on lands so irrigated and the cost of irrigating water per acre of such land.

Third—That water commissioners shall report the acreage irrigated in the several districts; the number of acres of each of the different kinds of crops grown, and the yield of the same.

Fourth—That the Secretary of the State Board of Agriculture, may, by correspondence with farmers and others in the several counties of the State, secure estimates of the amount and value per acre and otherwise of the various crops grown.

In addition let it be provided that all these reports shall be made according to forms prescribed by the Secretary of the Board of Agriculture and at such

times and under such penalties as may be prescribed by the General Assembly.

With such provisions and with diligence and good judgment in choosing correspondents, and the same qualities in planning, compiling and making estimates, the Secretary ought to be able to prepare an annual statistical report of great value.

As an agricultural state, Colorado may never expect to rank with Illinois, Iowa, Missouri, Ohio and Indiana; but, as a state where agriculture reaches its best development by irrigation, it may fairly hope to be first. With proper storage and economical use, our streams will water a million acres that have never been touched by the conquering and civilizing plow. With proper development under the fostering care of the State, there is no good reason why our farming industry should not be conducted according to the principle that one acre well cultivated and well watered will yield a larger and more profitable crop than two acres farmed in a slovenly manner. And, in another ten years, if all the people shall have grown to appreciate the fact that "patronizing Colorado industries" means more than patronizing the manufacturing industries of the State, it will not be unreasonable to expect a yearly agricultural product four or five times as great and valuable as at present and much more profitable to a scantily rewarded portion of our citizenship. In many respects we should lead the world. In some of these we are already abreast of the most progressive.

Our laws are more than generous to organized mining and manufacturing enterprises; they were framed to favor the capitalist in his investments and the money lender in collecting his interest. But are they one-half as generous to the man with little money and large manhood and industry who comes to cultivate his little farm; to be a citizen and a pro-

ducer; to grow with the State and its better interests without sapping the earnings of others? I fear not. But it is not too late to make a good beginning. Will it be done?

DANIEL W. WORKING.

## NOTES ON THE REPORTS.

---

Baca County—"This is a new county and very sparsely settled; hence report is not more complete."

Boulder County—"The reduction in alfalfa was made on account of farmers last year putting in a great deal of that ground to wheat." The assessor reported of "coal, stone and mineral" land 6,380 acres.

Cheyenne County—"No crop on account of dry season."

El Paso County—"Number of acres farmed without irrigation, 22,094."

Gilpin County—"This county is not agricultural to any very great extent. All cereals, such as wheat, barley, oats and rye, are raised only for hay. Potatoes are raised for home consumption only."

Grand County—"We raise nothing here but cattle, horses and hay."

Larimer County—"I have no statistics at hand on any other articles than above figures. Hope this will be satisfactory so far as it goes."

Logan County—"Our crop report for 1893 is not so good as 1892, owing to a drouth in some parts of county."

Mineral County—Reports 8,434 acres agricultural land; 1,696 acres grazing land. “Have no estimate of amount of agricultural products.”
