## Colorado Agricultural Statistics for 1922

---

The agricultural statistics contained in this pamphlet are for the most part collected by the assessors of the several counties in the state for the State Board of Immigration and compiled under the direction of the statistician of the board, in some cases in co-operation with the Colorado agricultural statistician of the Division of Crop and Livestock Estimates of the United States Bureau of Agricultural Economics. This co-operation was confined to the estimates of average yields of the various crops and the calculation of total production for the state and the several counties.

Practically all the material herein contained has been prepared for use in the Colorado Year Book for 1923 and is published in this form to meet the heavy demand for agricultural statistics for the state and the several counties coming from people in other states who contemplate acquiring or renting land in Colorado. The Year Book is not available for free distribution to such persons and moreover it contains considerable material in which they are not interested. This pamphlet is intended to take the place among this class of inquirers of the December Crop Report, issued by this department in co-operation with the United States Bureau of Agricultural Economics, for which much of the information herein contained is not available.

The maps and charts herewith published have also been prepared under the direction of the statistician of the Board of Immigration, chiefly from data collected by county assessors, though in some cases data compiled by the federal census bureau has been used.

The year 1922 was generally unfavorable to the agricultural industry in Colorado. Prices of most farm products, including livestock, showed some improvement over those of 1921, with fruits and potatoes as notable exceptions. The season was abnormally dry in most sections of the state and in some districts the drought was so severe as to cause serious damage to crops. The average precipitation for the state, based upon reports from nearly 100 stations, was 15.60 inches for the year, or 1.75 inches below normal. There was a deficiency in many of the principal agricultural districts during June, July, August, September and October. A wide strip of territory just east of the mountains and as far south as

Castle Rock and Limon and a large part of the southeast corner of the state suffered severely from drought, while counties in the extreme eastern part of the state and north of the Arkansas divide suffered less severely. As farming without irrigation is carried on here more extensively than in any other part of Colorado the result was a marked reduction in yield of such crops as wheat, corn and sorghums, which are grown extensively in this district. There was also a shortage of water for irrigation in some districts, which reduced yields of such crops as potatoes, sugar beets, alfalfa, etc., to below normal.

Despite these various adverse conditions, it will be noted from an examination of the table on page 4 that the farm value of all crops grown in the state in 1922 was greater than for the preceding year. This increase was due to advances in prices rather than to increased production, for the total farm output for 1922 was slightly below that for the preceding year, though the acreage under cultivation was somewhat more.

It will also be noted that the total acreage and production of most crops as given in the general table on page 4 is different from the total acreage and production given in the several county tables. This is due to the fact that the exact acreage reported by the several county assessors is given in the various county tables, and where production is calculated in these county tables the average yields for each county, as determined by the agricultural statistician of the United States Bureau of Agricultural Economics, are used in calculating county production. In the general table the acreage is corrected by adding about 4 per cent to the reports of county assessors on account of incompleteness and in the case of many crops, notably, wheat, corn, oats, rye, barley and beans, deductions from this acreage are made because of the acreage not harvested on account of crop failure. As the 1922 season was unfavorable for small grains and corn in most sections of the state the acreage of such crops not harvested was much above normal. In the cases of oats, barley and rye, considerable acreages are harvested for hay or pastured in the field. Only the estimated acreages harvested for grain are used in calculating the grain production in the general table on page 4, while the entire acreage is treated as harvested for grain in the county tables.

## CROP ACREAGE, PRODUCTION AND VALUE, 1921 AND 1922

	1922			1921

\*This includes the entire acreage of corn harvested and its estimated value for grain. For purposes of information, corn for silage, forage and pasture are included in those items in the table, but their acreages and values are not included in the totals.

†The varieties of tame hay with the estimated acreage of each variety for 1922 are as follows: Alfalfa, 13,000 acres; timothy, 45,000 acres; red clover, 4,700 acres; timothy and clover mixed, 124,000 acres; sweet clover, 16,000 acres; sudan grass, 19,000 acres; millet, 36,000 acres; other tame grasses, 21,000 acres; field peas, 14,000 acres; grains cut green, 135,000 acres; total, 1,239,000 acres. For 1921 the acreages are as follows: Alfalfa, 740,000 acres; timothy, 45,000 acres; red clover, 5,000 acres; timothy and clover mixed, 124,000 acres; sweet clover, 12,000 acres; millet, 48,000 acres; other tame grasses, 21,000 acres; field peas, 10,000 acres; grains cut green, 138,000 acres; sudan grass, 17,000 acres; total, 1,194,000 acres.

‡The estimated number of farm gardens is here given instead of the acreage. This figure is not included in the total.

§This acreage is all accounted for in the acreage of sugar beets harvested and is not included in the total acreage figure.

## ACREAGE OF WINTER WHEAT, 1922

Each dot represents 2,000 acres. The cross (X) is used in counties reporting less than 2,000 acres.

## ACREAGE OF SPRING WHEAT, 1922

Each dot represents 2,000 acres. The cross (X) is used in counties reporting less than 2,000 acres.

## ACREAGE OF CORN, 1922

Each dot represents 2,000 acres.

## ACREAGE OF RYE, 1922

Each dot represents 500 acres. The cross (X) is used in counties reporting less than 500 acres.

## ACREAGE OF OATS, 1922

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 1,000 acres.

## ACREAGE OF BARLEY, 1922

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 1,000 acres.

## AGRICULTURAL STATISTICS

## ACREAGE OF POTATOES, 1922

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 1,000 acres.

## ACREAGE OF BEANS, 1922

Each dot represents 500 acres. The cross (X) is used in counties reporting less than 500 acres.

## ACREAGE OF ALFALFA, 1922

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 1,000 acres.

## ACREAGE OF SORGHUMS, 1922

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 1,000 acres.

## PER CENT OF CULTIVATED AREA DEVOTED TO PRINCIPAL CROPS, 1922.

## PERCENT OF CULTIVATED LAND IN TOTAL AREA BY COUNTIES, 1922

## PERCENT OF PATENTED LAND IN TOTAL AREA BY COUNTIES, 1922

### Average Prices of Farm Products on Colorado Farms

The prices used are those reported by the U. S. Bureau of Agricultural Economics and are for the first or fifteenth of each month. They are, of course, prices paid on the farms.

The prices used are those reported by the U. S. Bureau of Agricultural Economics and are for the first or fifteenth of each month. They are, of course, prices paid on the farms.
