Washington

W. W. Putnam, *Agricultural Statistician*
Denver

In Cooperation with

Colorado State Board of Immigration

Division of Agricultural Statistics

Edward D. Foster, *Commissioner*

Howard D. Sullivan, *Deputy*

United States figures are generally presented only in the table on page 4, as are also estimates of condition and production with comparisons for some of the important state crops. In the table on page 3 are presented average yields per acre of the principal crops, by counties, as reported by U. S. Census Bureau for the years 1919 and 1909, and the resulting average yields for the state.

General Conditions—Due to the continuation of the drought conditions Colorado crop prospects generally declined materially during September and reached October 1 with figures several points below the ten-year average for this date. The composite condition for all crops of the state was 90.4 percent of the ten-year average condition for this date. This was a decline of 2.5 points during September, and was 11.4 points below the ten-year average for October 1. The estimated moisture in the soil compared with normal is rated as only 58 percent, compared with 86 percent on October 1 last year, and 75 percent the estimate for September 1 this year.

Corn—The further effect of the drought during the past month lowered the corn estimate nearly 2,000,000 bushels. The crop reached October 1 with a condition of 70 percent, 9 points below the ten-year average for October 1, the same figure as last year for this date and 22 points below the figure for October 1, 1920. Based on the assumption that all acreage planted for corn will be harvested for grain the crop is estimated at 19,068,000 bushels, compared with 15,979,000 bushels last year. In Colorado usually only about 70 to 80 percent of the acreage is harvested for grain, the remainder being harvested for silage, pastured or abandoned. The corn crop of the state for this year fully matured except as damaged by drought; there was no frost injury.

Spring Wheat—The spring wheat crop declined about 215,000 bushels during September. Based on an average yield of 16 bushels per acre the crop is now placed at 6,560,000 bushels. The combined production of winter and spring wheat amounts to 22,989,000 bushels, compared with the final estimate last year of 23,239,000 bushels. According to reports about 52 percent of this year's crop had been marketed by October 1, compared with 60 percent of the 1921 crop marketed by the same date last year.

Potatoes—The state potato crop declined 4 points during September and went below the 18,000,000 bushel mark. It is now estimated at 17,642,000 bushels (the largest crop in the history of the state), compared with 11,070,000, the final estimate for last year. The average yield per acre is less than a year ago, the large increase in production is due to the much larger acreage planted. The condition of the crop on October 1 was 74 percent, compared with 81 percent last year and 73 percent the ten-year average for October 1. The decline of over 1,000,000 bushels in the state crop during September was due largely to the effect of the continued hot, dry weather and the shortage of irrigation water in many districts. There was little, if any, frost injury. The U. S. crop also declined during September over 5,000,000 bushels, reducing the total estimate to 433,015,000 bushels, compared with the final estimate of 347,000 bushels last year, and 373,417,000 bushels for the 1916-20 five-year average production. The condition of the national crop on October 1 was 77.1 compared with 66.5 last year and 76.8 average condition on October 1 for the past ten years.

The car-lot movement of potatoes from Colorado up to October 7 was 3,594 cars, compared with 5,041 cars to October 8th, last year, and a total car-lot movement for last season's crop of 17,737 cars. The total car-lot shipments up to October 7, from the leading late potato-producing states was 32,566 cars, compared with

44,784 cars last season to the same date, and a total from last year's crop from these states of 185,367 cars.

Estimates of the total production in bushels for important potato states are given below for comparison:

| State | Forecast | | Final | | State | Forecast | | Final | |
|--------------|----------|----------|------------|----------|--------------|----------|----------|------------|----------|
| | Oct. 1 | Estimate | Dec., 1921 | Estimate | | Oct. 1 | Estimate | Dec., 1921 | Estimate |
| Maine | 21,411 | 37,152 | | | North Dakota | 19,488 | 11,520 | | |
| New York | 36,770 | 33,990 | | | Nebraska | 8,777 | 8,160 | | |
| Pennsylvania | 2,088 | 21,586 | | | Colorado | 17,642 | 11,070 | | |
| Virginia | 1,538 | 14,638 | | | Idaho | 14,767 | 10,545 | | |
| Ohio | 10,848 | 6,728 | | | California | 10,719 | 10,064 | | |
| Illinois | 8,870 | 6,413 | | | Montana | 7,034 | 5,000 | | |
| Michigan | 37,274 | 27,200 | | | South Dakota | 8,500 | 4,400 | | |
| Wisconsin | 37,638 | 21,420 | | | Totals for | | | | |
| Minnesota | 38,396 | 27,525 | | | (17 states) | 291,576 | 265,812 | | |
| Iowa | 9,216 | 8,291 | | | Totals U. S. | 433,015 | 347,000 | | |

Fruits—The fruit crops of the state still promise generally higher production than usual, as a whole, the largest in the history of the state. The apple crop of Colorado on October 1 was estimated at 3,750,000 bushels, compared with the crop of 3,200,000 bushels last year and 3,418,000 bushels as reported by the U. S. Census Bureau for 1919. The national crop declined slightly from September 1 and on October 1 was figured at 203,667,000 bushels, compared with 98,100,000 bushels last year and 179,000,000 bushels the 1916-20 five-year average. Figures for the peach and pear crops are found in the table on page 4.

Field Beans—The state crop of beans declined materially during September. The estimated production on October 1, was 690,000 bushels, compared with 342,000 bushels last year. Reports at the time this bulletin goes to press generally indicate that final estimates will be much lower both in acreage and production, as threshing returns are lower than expected. Indications are that only about 80,000 acres will be harvested for grain, and the average yield will not be much in excess of 5 bushels to the acre. Comparative production figures in bushels for 7 important states, forecast for 1922 and final estimates for 1921 in the order named, are indicated here: New York, 1,261,000-1,072,000 bushels; Michigan, 4,504,000-2,972,000; Colorado, 690,000-342,000; New Mexico, 93,000-830,000; Arizona, 72,000-68,000; Idaho, 252,000-216,000; California, 5,868,000-3,618,000.

Miscellaneous Crops: Estimates of condition and production of other important state crops with comparisons are presented in table on page 4. The October 1 condition figure for 1922, 1921, and 1919, in the order named, for crops not mentioned in the table on page 4, are as follows: Pasture, 60-92-89; field peas, 87-90-91; grapes, 88.75-76. The average yields (1922-21) for cabbage (tons), 11-11.7; onions (bus.), 240-250; broom corn (lbs.), 350-400.

General review of the United States crop conditions, October 1, 1922—The composite condition of all crops of the United States on October 1, or at time of harvest, was 1.4 percent lower than their ten-year average condition on that date, as compared with a condition of 1.2 percent below the average on September 1. The final yields per acre of crops last year were about 8.3 percent below average. The index number of aggregate crop production this year is about 7.2 percent higher than last year. This year the total acreage in cultivated crop is about 0.3 percent less than last year. The total production of important products this year, compared with last year, expressed in percentages, is estimated as follows: Corn, 92.6; wheat, 109.0; oats, 115.9; barley, 129.8; rye, 137.5; buckwheat, 99.6; white potatoes, 124.8; sweet potatoes, 106.9; tobacco, 126.0; flaxseed, 144.3; rice, 107.4; hay (all), 112.3; cloverseed, 144.0; cotton, 126.2; apples, 207.6; peaches, 171.6; pears, 156.1; cranberries, 149.1; hops, 108.2; sorghums (syrup), 80.7; sugar beets, 65.2; (last month, 67.6); grain sorghums, 83.3; broom corn, 90.9; beans, 142.9; peanuts, 82.6.

Trend of farm prices: The level of prices paid producers of the United States for the principal crops decreased about 2.0 percent during September; in the past ten years the price level decreased about 4.5 percent during September. On October 1 the index figure of prices was about 1.3 percent lower than a year ago, 45.5 percent lower than two years ago, and 30.1 percent lower than the average of the past ten years on October 1.

The prices of meat animals—hogs, cattle, sheep and chickens—to producers of the United States decreased 2.4 percent from August 15 to September 15; in the past ten years prices decreased in like period 1.2 percent. On September 15 the index figure of prices for these meat animals was about 8.1 percent higher than a year ago, 37.1 percent lower than two years ago, and 20.5 percent lower than the average of the past ten years on September 15.

AVERAGE YIELDS PER ACRE OF PRINCIPAL CROPS AS REPORTED BY THE UNITED STATES CENSUS BUREAU.

Notes—Figures on acreage and production stand for thousands and require the addition of three ciphers (000) to complete them. * Figures with the star (*) are for the 1919 final estimates. † represents the 1916-1920 five-year average. ° 1916-1921 six-year average. § includes on acreage and production are preliminary and subject to revision in December. § includes census figures for 1919. ‡ Corn production is estimated on the basis of the entire acreage planted, valued as grain. In Colorado, only about 70 to 80 percent is ever harvested purely as grain, the balance is cut for silage, pastured or abandoned.

Abbreviations—Agricultural, Agr'l; Condition, Cond'n; Commercial, Com'l; Percent, Pct; Production, Prod'n.
