# THE COLORADO AGRICULTURAL INDUSTRY

Agriculture is the state's principal industry and as such brings more money into the state and provides employment for more people than any other. Employment is provided both in the producing and processing of agricultural products. Mining of gold, other metals, coal and the tourist trade make large contributions to the state's wealth and employment, but these are topped by agriculture. The gross farm income for 1935 was \$104,493,000, compared with the low total of \$88,476,000 in 1934. This improvement was due to both larger volume production and higher unit prices.

The Colorado agricultural industry is a very interesting one; both from the large variety of crops grown and the extreme variation in conditions of climate and elevation under which they are grown. In addition to raising all of the staple crops such as wheat, corn, hay, etc., the state produces most of the principal truck crops in commercial quantities. These truck crops are shipped to many parts of the United States where they provide an important part of the country's fresh vegetable diet. These crops are grown mostly at elevations varying from 3,500 feet to over 8,000 feet above sea level.

Four principal tree fruits, apples, peaches, pears, and cherries are grown in commercial quantities. Colorado peaches and apples are distributed throughout the United States.

The three species of meat animals are raised in all parts of the state. Cattle and sheep graze at both low and high elevations and turn otherwise useless roughage into the valuable products of beef, lamb, and wool.

With approximately 3,400,000 acres, or 40 per cent of the total crop land, under irrigation, Colorado agriculture can always be counted upon to produce substantial quantities of food necessities. The hazard of production is materially lessened in the irrigated areas of the Platte Valley of Northern Colorado, the Arkansas Valley of the Southeast, the San Luis Valley of Southcentral Colorado, and the irrigated portions of the Western Slope and mountain areas.

## INVENTORY VALUE OF CROPS

The value of crops produced in 1935 is placed at \$62,693,000 compared with \$49,516,000, the low valuation resulting from small production in 1934. For principal crops these valuations were determined by multiplying the total quantity produced by average prices paid to growers for the season. This inventory valuation should not be confused with "gross farm income" or "cash farm income." Inventory values represent in a measure an index of change in farm values from year to year. Obviously most feed crops such as corn, oats and barley fall into the income classification only as these commodities are marketed through livestock. Data concerning "farm income" which include the returns to growers from both cash crops, livestock and livestock products are dealt with subsequently.

## FARM INCOME

In response to public demand for current information on the value of farm products, data are published at the close of each year giving the inventory valuation of each farm crop. Inventory values are also placed upon the different species of livestock. These data have very definite value, but in no sense represent farm income in the years in which the crops are produced. A large percentage of the crops of feed grains and hay are marketed through livestock and these crops do not return cash to the farm until the livestock are marketed. The relationship between inventory value and income from cash crops such as wheat, sugar beets, truck crops, etc., however, is quite close.

The farm income series available since 1921 gives these data in two classifications. (1) "Gross" farm income includes cash received from the sale of farm products as well as the value of commodities produced on the farm and consumed in the farm household on the farms where the commodities were produced. (2) "Cash" income represents the amount of money received for quantities of crops and livestock actually sold off the farms where these were produced.

"Gross" farm income for the calendar year 1935 is estimated at \$104,493,000, while "cash" farm income for that year was \$95,153,000. In 1934 these totals were \$88,476,000 and \$81,382,000 respectively.

### REVIEW OF THE 1935 CROP SEASON

Yields obtained for principal crops grown in 1935 were about 90 per cent of the ten-year average. This represents a marked improvement from the drouth year of 1934 when yields were only 61 per cent of the ten-year average. In general, yields were good in irrigated sections, but fair to poor in dryland sections. The area of all crops harvested totaled 4,961,000 acres compared with 3,800,000 acres harvested in 1934. While abandonment of some crops was fairly large, the general character of the season was decidedly more favorable than that of the previous year.

Production of the four principal feed grains, corn, oats, barley, and grain sorghums totaled 22,655,000 bushels compared with 10,218,000 bushels in 1934 and 37,778,000 bushels the 1928-32 5-year average. Production of all hay and forage amounted to 2,232,000 tons compared with 1,535,000 tons the short crop of 1934 and 2,449,000 tons, the 5-year average. With livestock numbers somewhat below normal and hay supplies about equivalent to average, the relationship between feed supplies and the number of hay and grain consuming animals was definitely favorable in nearly all parts of the state for carrying animals through the winter of 1935-1936 in satisfactory condition.

Production of each of the principal cash crops, wheat, dry beans, sugar beets, potatoes, and fruit in 1935 was above 1934, but for the most part, production of these crops was below average. Nearly all of these crops returned larger amounts of money to producers' bank accounts than these same crops returned in 1934. In the case of potatoes, the cash return was nearly three times as large as for 1934 production.

**Winter Wheat**—Production of winter wheat was the smallest in many years, totaling only 2,380,000 bushels. The crop entered the winter in the fall of 1934 in very poor condition and abandonment of planted acreage was very large. Of the 986,000 acres planted only 207,000 acres remained for harvest. The yield per acre on the area remaining for harvest was low. The crop was valued at \$2,190,000.

**Spring Wheat**—Production of spring wheat was about average with a total of 4,152,000 bushels. Premature ripening and rust in the northeast portion of the state, affected acre yields adversely. Only 346,000 of the 402,000 acres planted remained for harvest.

**Potatoes**—The 1935 potato crop set a new record of production. The crop totaled 18,000,000 bushels. Yields were unusually good in the San Luis Valley and fair to good elsewhere, the average yield for the state being 180 bushels per acre. A late freeze caused extensive loss in northern states, which supply the commercial market. As a result of that loss Colorado producers received fair prices for this large crop. The crop was valued at \$9,540,000.

**Sugar Beets**—The 1935 acreage was curtailed to 147,000 acres planted and 140,000 acres harvested, and the high average yield of 13 tons per acre resulted in a crop of only 1,826,000 tons. This was much below average. The value placed on this crop is \$10,609,000. Yields were unusually good in the principal producing section of northern Colorado and weather during harvest was favorable.

**Beans**—The 1935 crop of dry beans totaled 1,256,000 100-pound bags compared with the short crop of only 279,000 bags in 1934 and 1,279,000, the 5-year average. The acreage harvested in 1935 at 465,000 acres was  $2\frac{1}{2}$  times the small acreage harvested in 1934 and was above average. Acre yields in irrigated sections were unusually good, but yields of beans grown on dryland were quite low as a result of late planting, lack of summer moisture, and frost injury. The crop is valued at \$3,705,000.

**Corn**—Production of total corn is placed at 10,761,000 bushels compared with 3,376,000 bushels in 1934 and 20,847,000 bushels, the 5-year average. Production of corn for grain amounted to 8,844,000 bushels compared with 1,587,000 bushels in 1934.

## FRUIT

**Apples**—The 1935 crop of total apples is estimated at 1,590,000 bushels, compared with 1,354,000 bushels in 1934. While production in 1935 was higher than 1934, the crop was considerably below the 5-year (1928-32) average of 2,019,000 bushels. Both the number of apple trees and production of fruit have maintained a gradual downtrend during the last two years. Principal producing sections are, the Western Slope, Northern Colorado, and the Canon City area.

**Peaches**—Peach production in 1935 set a new record with 1,276,000 bushels. This quantity compares with 1,260,000 bushels produced in 1934 and 950,000 bushels, the 5-year average (1928-32). Peaches are grown almost entirely as a commercial crop and production centers largely in the counties of Mesa and Delta on the Western Slope. Production has trended sharply upward in recent years as new plantings came into bearing.

**Pears**—Pears are of minor importance in most parts of the state, with commercial producing areas developing in the same territory as peaches. Production in 1935 totaled 351,000 bushels compared with 307,000 bushels in 1934 and 380,000 bushels the 5-year average.

**Cherries**—The 1935 cherry crop of 4,662 tons, while much above the average (1928-32) of 3,315 tons, was considerably smaller than the relatively large 1934 crop of 5,920 tons. A considerable portion of the crop grown in the Loveland, Fort Collins and Grand Junction areas is canned.

## LIVESTOCK INVENTORY AND VALUE

The inventory valuation of all livestock on Colorado farms increased \$36,851,000 from January 1, 1935, to January 1, 1936. This increase was due entirely to higher values per head for all species of livestock as the numbers of each species except sheep were smaller than on January 1, 1935. Numbers of all cattle, milk cows, horses and stock sheep each decreased 5 per cent during 1935. Mules decreased 10 per cent and hogs 15 per cent, while the number of all sheep increased 3 per cent.

The total value of all livestock on January 1, 1936, is placed at \$98,667,000, compared with \$61,816,000 on January 1, 1935, \$54,411,000 the low value of January 1, 1933, and \$148,929,000 on January 1, 1930.

**All Cattle**—The number of all cattle and calves totaled 1,510,000 head January 1, 1936, compared with 1,590,000 head January 1, 1935, and 1,773,000 head January 1, 1934, which was the largest number in recent years. The total value on January 1, 1936, was \$45,775,000, compared with \$25,914,000 a year earlier. The per head valuation increased from \$16.30 to \$30.30 during 1935.

**Milk Cows**—The number of milk cows (included with all cattle), decreased 5 per cent during 1935 and now totals 256,000 head, compared with 270,000 head January 1, 1935, and 300,000 head January 1, 1934. The average value of milk cows per head on January 1, 1936, was \$42.00, compared with \$25.00 a year earlier.

**Sheep**—The number of stock sheep decreased 5 per cent during 1935 and the number on January 1, 1936, totaled 1,587,000 head, compared with 1,671,000 head a year earlier and 1,778,000 two years preceding. The decline in stock sheep numbers during 1935 was almost entirely in the number of ewe lambs kept for breeding.

The number of sheep and lambs on feed for market was estimated at 1,255,000 head on January 1, 1936, compared with 1,085,000 January 1, 1935. The number of all sheep and lambs was placed at 2,842,000 January 1, 1936, against 2,756,000 January 1, 1935, the average value per head being \$6.85 and \$4.50 in the two years respectively.

**Horses**—Horse numbers continued the decline which began in 1920 and the number on January 1, 1936, totaled only 264,000 head, compared with 278,000 January 1, 1935. The current number is only about two-thirds as large as the high number of 421,000 on January 1, 1920. Horse values increased sharply during 1935 and on January 1, 1936, averaged \$69.00 per head, compared with \$51.00 one year preceding. A few more colts were raised in 1935 than in 1934. The inventory valuation of the last two years is as follows: 1936, \$18,286,000; 1935, \$14,174,000.

**Mules**—Mule numbers declined 10 per cent during 1935 and on January 1, 1936, totaled only 17,000 head, compared with 19,000 head January 1, 1935, and

38,000 head on January 1, 1925. January 1 values per head and total values for the last two years are as follows: 1936, \$90.00 and \$1,531,000; 1935, \$66.00 and \$1,263,000.

**Hogs**—The Colorado hog industry is at low ebb, primarily the result of the limited supply of feed grains. Inventory numbers January 1, 1936, totaled only 228,000 head, compared with 268,000 head January 1, 1935, and 624,000 head January 1, 1932, the recent high point. The average value per head January 1, 1936, was \$12.80 and more than double the value of \$5.20 per head January 1, 1935. The total inventory valuation January 1, 1936, was \$2,909,000, against \$1,386,000 January 1, 1935.

#### LIVESTOCK FEEDING

Colorado leads the country as a producer of grain finished lambs, and fattens annually about 25 per cent of the nation's total. The Northern Colorado section is advantageously located as related to the source of feeder lambs. Feeders can be obtained directly from ranges in Colorado and other Western sheep states, or from the Denver stockyards, which is the largest sheep and lamb market in the country. This market also provides adequate facilities for marketing the finished product. Colorado lamb feeders fatten from 1 to 1½ million lambs annually. The lamb feeding industry is a natural complement of the beet sugar industry. Feeding of these animals is the most advantageous means of utilizing the beet top and beet pulp, by-products of the growing and manufacture of sugar beets. Sugar beets are grown as a general cash crop in the four feeding areas of Northern Colorado, the Arkansas Valley, the Western Slope sections and the San Luis Valley of Southcentral Colorado. Locally raised feed grains and alfalfa provide most of the additional grain and hay needed for a balanced fattening ration.

Fattening of cattle in the four feeding sections, while done on a smaller scale than lamb feeding, is none the less an important part of the agricultural industry in these sections, particularly the Northern Colorado area. From 100,000 to 175,000 cattle are fattened in these sections annually.

Note—Data concerning price and value not available for earlier years.

## ACREAGE, PRODUCTION AND VALUE OF DRY BEANS IN COLORADO, 1914-1935

Year	Acres	Yield per Acre, Lbs.	Production, 100 Lb. Bags	Price per Cwt.	Value	Value per Acre
1914-----	20,000	900	180,000	\$3.33	\$ 600,000	\$30.00
1915-----	21,000	972	204,000	3.80	775,000	36.90
1916-----	38,000	672	255,000	7.00	1,781,000	46.87
1917-----	250,000	468	1,170,000	8.00	9,360,000	37.44
1918-----	252,000	390	983,000	7.33	7,207,000	28.60
1919-----	66,000	390	257,000	5.83	1,502,000	22.76
1920-----	52,000	480	250,000	5.25	1,310,000	25.19
1921-----	45,000	480	216,000	4.50	972,000	21.60
1922-----	106,000	300	318,000	7.33	2,331,000	21.99
1923-----	159,000	480	763,000	6.17	4,708,000	29.61
1924-----	286,000	204	583,000	5.17	3,014,000	10.54
1925-----	332,000	420	1,394,000	4.00	5,578,000	16.80
1926-----	398,000	216	860,000	4.67	4,015,000	10.09
1927-----	322,000	330	1,063,000	4.50	4,782,000	14.35
1928-----	374,000	270	1,010,000	5.67	5,726,000	15.31
1929-----	372,000	360	1,339,000	4.90	6,562,000	17.64
1930-----	450,000	600	2,700,000	2.80	7,560,000	16.80
1931-----	351,000	258	906,000	1.40	1,268,000	3.61
1932-----	221,000	198	438,000	1.50	656,000	2.97
1933-----	365,000	330	1,204,000	2.65	3,192,000	8.74
1934-----	186,000	150	279,000	5.50	1,534,000	8.25
1935-----	465,000	270	1,256,000	2.95	3,705,000	7.97

Note—The decline in average yield and value per acre is due almost wholly to the large acreage of non-irrigated land which has been devoted to this crop in recent years. More than 85 per cent of the crop is now produced without irrigation.

## ACREAGE, PRODUCTION AND VALUE OF BROOMCORN IN COLORADO, 1915-1935

Year	Acres	Yield per Acre, Pounds	Production, Tons	Price per Ton	Value	Value per Acre

\*Some duplication between markets has been eliminated. The figures include all market receipts of Colorado livestock, whether shipped to Colorado markets or to markets in other states.

†Receipts include some New Mexico, Wyoming and Utah sheep shipped from Colorado points. September-December, 1934, receipts include Government purchases that went to market.

‡Receipts for July-December, 1934, include Government purchases that went to market.

## FARM MORTGAGE DEBT IN COLORADO IN 1930 BY COUNTIES

(Compiled from Census Reports)

Note.—This table embraces only farms operated by full owners. Full owners are farm operators who own all the land which they operate. State totals for farms of this and other tenures for 1930 with comparative figures for 1925 and 1920 are shown in another table.

COUNTY	Farms Operated by Full Owners				Value of Land and Buildings		Amount of Mortgage Debt	
	Total	Free from Mortgage Debt	Mortgaged	No Report or Amt. Not Stated	Farms Free from Mortgage Debt	Mortgaged Farms	Total	Avg. Per Acre

## Dairying

**D**AIRYING ranks as one of Colorado's most important industries. The farms and factories of the state produced in the 14 years ending June 30, 1936, dairy products, including milk, butter, ice cream, cheese and evaporated, condensed and malted milk, to the value of \$352,887,260, as reported by the state dairy commissioner. That is equal to an average annual value of \$25,206,233. The maximum was established in 1929, with a value of \$33,134,695, and the minimum in 1933, when the total value of the output was \$16,261,330, a decrease of 50.9 per cent. The decrease between 1929 and 1933

resulted principally from the lower prices received for the products and some curtailment of output due to decreased consumption. There was a slight increase in 1934. In 1936 the total value of all dairy products went to \$25,912,658, an increase over the preceding year of \$1,868,915 or 7.8 per cent.

The value of factory products, butter, cheese, condensed milk, ice cream, etc., and the total value of all products, including the output of the factories, as reported by the state dairy commissioner, for fiscal years ending June 30, are as follows:

	<b>Factory Products</b>	<b>All Dairy Products</b>
1923.....	\$11,354,477	\$23,348,356
1924.....	14,004,422	28,543,590
1925.....	12,114,710	25,832,969
1926.....	13,450,855	26,430,336
1927.....	14,533,764	28,902,412
1928.....	17,117,396	31,453,025
1929.....	18,553,840	33,134,695
1930.....	15,308,386	28,635,025
1931.....	12,690,913	24,164,509
1932.....	10,245,134	19,885,874
1933.....	8,618,733	16,261,330
1934.....	9,695,399	16,338,738
1935.....	10,002,062	24,043,743
1936.....	11,069,501	25,912,658

The production of butter, as reported by the dairy commissioner for fiscal years, including butter made on the farms and in factories, is as follows:

	<b>Pounds</b>	<b>Value</b>
1923.....	21,726,717	\$ 9,342,487
1924.....	26,166,488	11,644,087
1925.....	23,572,142	8,817,707
1926.....	*19,965,779	*8,087,273
1927.....	24,200,138	11,374,065
1928.....	26,468,663	12,175,584
1929.....	26,664,857	12,932,456
1930.....	27,604,776	10,213,767
1931.....	25,800,119	8,753,977

1936.....	23,265,823	7,588,822

\*Exclusive of farm butter.

Cheese production in the state is showing a substantial increase, the output of all varieties over a twelve-year period going from a minimum of 1,657,073 pounds in 1923 to a maximum of 5,646,345 pounds in 1934, a gain of 240.7 per cent. The value of production has shown a wider variation, the minimum for the period being \$288,048 in 1926 and the maximum, \$1,023,190 in 1929. The output and value in fiscal years are as follows:

	<b>Pounds</b>	<b>Value</b>
1923.....	1,657,073	\$ 342,344
1924.....	2,489,642	591,867
1925.....	1,867,045	412,598
1926.....	1,971,280	288,048
1927.....	2,350,565	407,868
1928.....	3,860,816	748,031
1929.....	5,344,006	1,023,190
1930.....	5,553,597	986,768
1931.....	4,765,004	609,638
1932.....	4,899,066	511,066
1933.....	5,121,326	520,615
1934.....	5,646,345	582,557
1935.....	4,444,742	559,725
1936.....	5,094,315	700,252

A table published herewith shows in detail the dairy operations of the state for the years 1933, 1934, 1935, and 1936.

The number of plants in the state licensed to engage in the manufacture of dairy products as of June 30 of the years named, as reported by the state dairy commissioner, is as follows:

	<b>1936</b>	<b>1935</b>	<b>1934</b>
Creameries (butter) .....	90	93	89
Ice Cream plants and counter freezers... .	148	93	91
Cheese factories.....	21	20	18
Malted and dried milk plants .....	3	3	2
Condensaries and evaporated milk plants .....	3	3	3
Cottage cheese factories .....	40	39	40
Receiving stations....	339	359	325
Licensed plants.....	261	198	191
Licensed operators...1,091	1,143	1,025	
Oleomargarine plants.	13	12	..

Of the plants licensed in 1936, 30 made no product other than butter, 98 made no product other than ice cream, 20 made only cheese and eight made only cottage cheese.

In 1929 milk and cream exported from the state in excess of imports was valued at \$777,637. This condition changed in 1931, when imports exceeded exports by \$33,440. This has continued in subsequent years, the value of imports in excess of exports being as follows:

1931.....	\$ 33,440
1932.....	96,301
1933.....	302,214
1934.....	348,785
1935.....	644,339

The figures are significant in that they indicate the state is producing less cream and milk than the demand for these products. Colorado plants receive cream supplies from nine surrounding states.

Butter sold in Colorado in fiscal years ending June 30, as reported by the state dairy commissioner, is as follows:

	<b>Year</b>	<b>Pounds</b>
1932.....		13,454,721
1933.....		15,166,950
1934.....		15,653,051
1935.....		13,969,010
1936.....		13,774,195

All of the 63 counties in the state reported cows and heifers milked in 1929. Nineteen counties, however, had 64 per cent of all cows and heifers milked. These counties and the number milked, with the number milked in 1924, as shown by the census, follow:

County	Number 1929	1924	County	Number 1929	1924
Adams	7,221	7,664	Weld	22,428	23,606
Baca	6,832	7,056	Yuma	9,907	9,018
Boulder	6,386	6,397			
Delta	5,710	5,041		149,785	147,967
Douglas	5,985	5,470	Total state	234,530	229,700
Elbert	8,671	9,339	Per cent.	63.9	64.4
El Paso	9,996	10,315			
Kit Carson	8,416	6,539	A table published herewith gives the		
Larimer	6,606	5,978	income from farm production of milk		
Las Animas	5,708	4,894	in Colorado by specified years as es-		
Lincoln	6,024	6,514	timated by the bureau of agricultural		
Logan	7,244	6,653	economics.		
Mesa	6,543	6,854	Another table shows the number of		
Morgan	6,323	6,252	milk cows on farms, milk production		
Prowers	5,635	5,317	per cow per year and total production		
Pueblo	5,880	6,700	of milk on farms, by years, and a chart		
Washington	8,270	8,360	gives the trend of production by years.		

#### INCOME FROM FARM PRODUCTION OF MILK IN COLORADO BY YEARS

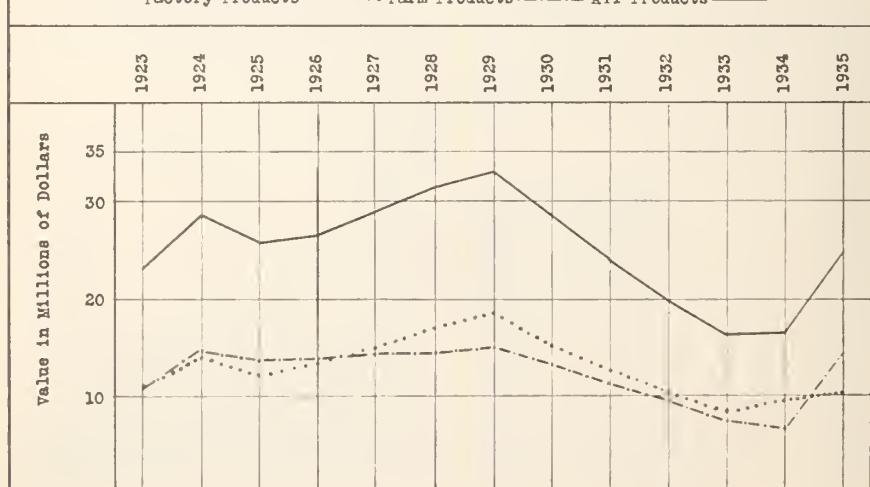

(Compiled by the U. S. Bureau of Agricultural Economics)

	Farm Price (a)	Farm Value	Gross Income	Cash Income
1932	\$0.99	\$ 9,940,000	\$ 9,544,000	\$7,515,000
1933	.95	9,956,000	9,566,000	7,510,000
1934	1.14	12,016,000	11,560,000	8,823,000
1935	1.41	13,324,000	12,845,000	9,669,000

(a) Receipts per 100 pounds of milk equivalent sold. Total receipts from milk sold at wholesale, milk retailed by producers, butterfat sold and farm butter sold divided by total quantity of milk used for these purposes.

#### VALUE COLORADO OUTPUT OF DAIRY PRODUCTS BY YEARS

Factory Products ..... Farm Products ..... All Products -----

**MEAN AVERAGE PRICES PAID PRODUCERS FOR MILK AND CREAM IN FISCAL YEARS**  
 (From Report of the State Dairy Commissioner)

	1935	1934	1933	1932	1931	1930	1929
Sour cream, cream station price, per lb. b.f.	\$0.23½	\$0.14½	\$0.13	\$0.18	\$0.23½	\$0.30	\$0.43
Sour cream, track price, per lb. b.f.-----	.24½	.17½	.16	.21	.26¾	.33	.45
Sweet cream, delivered, per lb.-----	.31	.22	.21	.26	.31	.38	.49
Milk for fluid use, per cwt.-----	1.75	1.22	1.40	1.70	2.03	2.25	2.18
Milk for manufacturing use, per cwt.-----	1.05	.84	.75	.97	1.23	1.43	1.92

**MILK COWS AND PRODUCTION OF MILK; ESTIMATED NUMBER OF PRODUCING COWS, YIELD PER COW AND TOTAL PRODUCTION IN COLORADO BY SPECIFIED YEARS**

(Department of Agriculture)

	Milk Cows on farms (a)	Milk Production Per Cow (pounds) (b)	Total Production of Milk on Farms (b) (pounds)
1929 -----	243,000	4,500	1,094,000,000
1930 -----	244,000	4,450	1,086,000,000
1931 -----	247,000	4,300	1,062,000,000
1932 -----	251,000	4,000	1,004,000,000
1933 -----	262,000	4,000	1,048,000,000
1934 (preliminary) -----	262,000	3,790	993,000,000

(a) Average number of milk cows on farms during year, excluding heifers not fresh.

(b) Excluding milk spilled or wasted on farms and milk sucked by calves.

**PRODUCTION AND SALES OF DAIRY PRODUCTS IN COLORADO IN 1929 AND 1919**

(Compiled from Census of Distribution)

	1929	1919	Per Ct. of Change

\*Includes statistics for two farms reported for San Juan in 1930, to avoid disclosure of individual operations. 1929 is the latest year for which census figures are available.

## Poultry

Climatic conditions are especially favorable for poultry raising in Colorado and as a result the industry has shown a substantial growth in recent years. The comparatively light rainfall and abundance of sunshine in the poultry raising areas, which make it possible for fowls to spend much of the time out of doors, are important factors contributing to the success of the industry. Diseases are less prevalent than in most sections of the country and young fowls make rapid and vigorous growth.

Poultry raisers have found, also, that climatic conditions are favorable for the production of a good quality of fowl for the table, and the eggs are graded as being of extra quality and are in demand as far east as New York, to which state large quantities are exported annually.

Almost all sections of the state with the exception of the mountainous counties, where the climate is too severe, are adapted to the raising of poultry. The state has not produced in the past sufficient quantities of chickens and eggs to meet the demand, and imports from adjoining states have been large, sometimes aggregating as much as \$5,000,000 in value a year. This condition has been overcome by the establishment of commercial poultry farms to which the owners devote all of their time instead of regarding poultry as a side line, and Colorado now is an exporting state. The introduction of the commercial poultry farm has had much to do with improving the quality of the poultry and products. In 1919, according to census reports, average egg production per hen was 59, but this has been increased to an average of more than 70 per hen.

The value of all poultry raised and of eggs produced in 1929, the latest year for which census figures are

available, was \$13,677,213, distributed as follows:

Chickens raised .....	\$ 4,768,549
Turkeys raised .....	1,443,913
Ducks raised .....	58,742
Geese raised.....	36,786
All poultry .....	\$ 6,307,990
Eggs produced.....	7,369,223
Poultry and eggs .....	\$13,677,213

The number of chickens on the farms on April 1, 1930, was 3,653,054. These included only chickens over three months old. The figures are not exactly comparable with those of former census years, due to a difference in the dates upon which the census was taken. The number on farms on April 1, 1925, was 3,751,618. A considerable number of chickens are killed between January 1 and April 1. The number of chickens on farms, by years, as reported by the census was as follows:

Year	Number
1900 (June 1).....	*968,761
1910 (April 15).....	1,644,471
1920 (Jan. 1).....	2,874,721
1925 (Jan. 1).....	3,751,618
1930 (April 1).....	3,653,054

\*Includes guinea fowls.

The number of chickens raised in 1929 was 6,333,339, with a value of \$4,768,549. This was an increase of 26.5 per cent over 1924 and 63.2 per cent over 1919 in the number of chickens raised and 42.6 per cent over 1924 and 53.6 per cent over 1919 in the value. The number of chickens raised and their value, by census years, are as follows:

Year	Number	Value
1909.....	2,585,132	\$1,277,417
1919.....	3,880,873	3,104,698
1924.....	5,005,977	3,343,769
1929.....	6,333,339	4,768,549

The number of eggs produced (in dozens) in 1929 was 27,343,356, with a value of \$7,369,223. This was an increase of 32.1 per cent over 1924 and 92.9 per cent over 1919 in the dozens of eggs produced and 44.6 per cent

over 1924 and 29.9 per cent over 1919 in their value. The daily production of chicken eggs on April 1, 1930, was 1,830,917 and the average for 1929 was 898,959 daily. The dozens of eggs produced and their value in census years are as follows:

Year	Number (doz.)	Value
1899.....	5,704,290	.....
1909.....	10,577,829	\$2,444,006
1919.....	14,172,375	5,668,950
1924.....	18,561,043	5,094,348
1929.....	27,343,356	7,369,223

The raising of baby chicks has grown into a substantial industry, and it is estimated that 5,000,000 are being produced annually. This number includes exports. The census gives 3,061,768 as the number of baby chicks purchased in the state by farmers in 1929.

Turkey raising has increased steadily, the number reported in 1929 being 547,789, with a value of \$1,443,913. Comparative figures as to the number raised are not available, but on January 1, 1920, there were 57,687, with a value of \$183,113, reported on the farms. The number on the farms on April 15, 1910, was 26,430.

The turkey industry was a leading phase of agricultural activity in southwestern Colorado in former years, but more recently it has been more widely distributed, and in 1929 turkeys were reported in every county but two. There are a number of ranches in the state where the birds range much as

other classes of livestock, in some instances the flocks being of sufficient size to warrant the use of horses in herding them. Carload shipments of the birds at certain seasons are not uncommon. Approximately 40 per cent of the crop is marketed for Thanksgiving, 49 per cent for Christmas and 11 per cent later. A more general use of turkey meat at other than the special seasons has been a noticeable development in the past few years.

There is published herewith a table showing the number of chickens raised, their value and the number on farms by years and by counties as reported by the census bureau. Another table gives the egg production and value by years and counties and a third table shows the number and value of turkeys, ducks and geese raised by counties in 1929 and the value of all poultry in that year. Another table shows the assessed valuation of poultry by counties for taxation purposes as reported by county assessors for 1934 and 1935.

Another table gives the number of hens and pullets and all chickens on farms and their value on January 1, by years, the number and value of chickens raised and sold annually, and eggs produced and sold annually, beginning with 1925, as reported by the bureau of crop and livestock estimates, with the same data for the United States.

## Horticulture, Floriculture and Seed Growing

COLORADO produces annually approximately \$10,000,000 worth of orchard fruits, berries, flowers and vegetables grown under glass and flowers grown in the open, nursery products, bulbs and flower and vegetable seed. Some branches of the combined industry have shown very substantial growth in recent years, and in the growing of vegetable and flower seed Colorado ranks as one of the principal states of the Union. The industry is described under separate headings in this chapter. A summary of the value of production in 1929, the last census year for which figures for all divisions of the industry are available, although later figures are given elsewhere for some products, is as follows:

Orchard fruits:	Value 1929
Apples .....	\$ 2,454,347
Peaches .....	1,198,009
Pears .....	895,023
Plums and prunes .....	55,825
Cherries .....	586,981
Grapes .....	33,016
Total .....	<hr/> 5,223,201
Berries:	
Strawberries .....	\$ 173,471
Raspberries .....	205,149
Black and dewberries .....	17,313
Loganberries .....	20
Other berries .....	23,839
Total .....	<hr/> 419,792
Flowers, etc.:	
Flowers and vegetables grown under glass and flowers grown in the open .....	\$ 2,137,912
Nursery products .....	228,059
Bulbs .....	21,913
Flower and vegetable seed .....	1,147,978
Total .....	<hr/> 3,535,862
Grand total .....	<hr/> 9,178,855

The above summary is exclusive of certain farm crop seed grown extensively in the state. The value of millet and alfalfa seed grown in 1929, for example, was \$115,200 and \$525,000.

### HORTICULTURE

The value of Colorado's orchard crops varies year by year according to climatic conditions and the seasonal farm value. In a 16-year period ending with 1933, the maximum output was established in 1919, when the crop was valued at \$9,451,800, and the minimum in 1932, with a crop value of \$1,963,000. The value of the crop, including fruits and berries, by years, as reported by the Co-operative Crop Reporting service, is as follows:

1919 .....	\$9,451,800
1920 .....	6,143,700
1921 .....	8,953,000
1922 .....	5,910,750
1923 .....	5,987,620
1924 .....	6,801,000
1925 .....	6,068,000
1926 .....	5,239,000
1927 .....	5,647,000
1928 .....	3,786,000
1929 .....	5,370,000
1930 .....	2,753,000
1931 .....	2,403,000
1932 .....	1,963,000
1933 .....	2,009,000
1934 .....	2,874,380

Soil and climatic conditions in certain areas of Colorado are especially suited to the production of nearly all orchard and small fruits adapted to this latitude. The quality of the soil in the fruit-growing districts, the abundance of sunshine, water for irrigation, and atmospheric conditions existing in relatively high altitudes combine to make an excellent grade of fruit that commands favorable prices on account of its quality. The areas in which the industry is profitable are restricted as to size, and the fruit orchards are located mostly in the valleys surrounded by mountain ranges which protect them from hard winters and early and late frosts.

Apples, peaches and pears are the principal orchard fruits grown. Other fruits and berries grown include plums, apricots, grapes, strawberries, raspberries, loganberries, blackberries and currants. Cherries are grown extensively in certain areas and rank next to the three principal fruits in value and volume of production.

The locations of the principal orchards of the state and the areas in which small fruits are grown are shown in two tables published herewith. One of these gives the number of apple, peach and pear trees of bearing age, by counties, in 1930 and 1920, and production in 1929, as shown by the census reports. Another shows the number of cherry and plum and prune trees and grape vines of bearing age, by counties, for the same years.

Another table gives state totals on trees of bearing age in 1930 and 1920, trees not of bearing age and production and value of fruits in 1929 and 1919.

Other tables give state totals on the number of farms reporting strawberries, raspberries, blackberries and

dewberries, currants, gooseberries and other small fruits in 1929 and 1919, the acreage cultivated and the production and value for these years; the quantity and value of the fruit crops from 1918 to 1935, inclusive, as reported by the Colorado Co-Operative Crop Reporting service, and the average prices for apples, peaches and pears in Colorado and the United States for the years 1927 to 1935, inclusive.

The most important fruit-growing districts are the western slope, in the valleys of the Grand and Gunnison rivers and tributary streams, comprising parts of Garfield, Mesa, Delta and Montrose counties; the Canon City district, comprising a part of Fremont county; the Arkansas valley, comprising parts of Crowley, Otero, Pueblo, Bent and Prowers counties; southwestern Colorado, comprising parts of La Plata and Montezuma counties, and comparatively small areas near the foothills along the eastern side of the mountains. The western slope area ranks first in importance from the standpoint of production, with the Canon City district second. Apples, peaches and pears are the principal fruit crops in the Grand valley and in the valleys of tributary streams, though practically all fruits grown in the state are produced here. This district produces nearly all the commercial peach crop of the state and a very large proportion of the apple crop. Southwest Colorado produces as fine a variety of all kinds of fruit as is grown in any part of the state, but lack of adequate transportation facilities has retarded development of the fruit-growing industry in this district. In the Canon City district the principal crop is apples, with a considerable production of cherries and small fruits. Some apples, cherries and small fruits are grown in the Arkansas valley, especially in Crowley and Otero counties, and cherries are grown rather extensively in several of the counties just east of the mountains, particularly in Larimer county. Apples have been grown to considerable extent in this same area for a good many years, but the yield is not so dependable as on the western slope and the quality of the fruit is not so high. In the irrigated district immediately north of Denver, including parts of Boulder, Adams, Larimer and Weld counties, berries and other small fruits are grown successfully and always find a good market in Denver. Routt county is especially famous for

its strawberries, which come into market late in the summer after the berries from most other districts are gone, and for that reason command exceptionally high prices.

Some attention has been paid in the past few years to the growing of orchards in the non-irrigated districts of eastern Colorado, and a few small trees of hardy varieties are being grown on many of the farms. In the irrigated sections of eastern Colorado apples and some other tree fruits are grown successfully. Late spring frosts frequently damage fruits in all sections of the state, but the organization of community forces in the principal fruit-producing districts to heat orchards with specially devised heaters on nights when the temperature falls below the frost point has in a large measure eliminated the danger of loss from this source.

#### FLORICULTURE

The growing of flowers and vegetables under glass and flowers in the open has increased very rapidly in Colorado in recent years. Receipts of 204 establishments reporting under this classification to the census bureau amounted to \$2,137,912 in 1929, an increase of \$1,075,648, or 101.3 per cent compared with 1919. In the last named year receipts increased \$539,579, or 126.6 per cent, over 1909. Of the receipts from the sale of products in 1929, \$2,008,879, or 94 per cent, was from flowers and flowering plants and \$129,033, or six per cent, from vegetables and vegetable plants. Cut flowers furnished the largest part of the revenue, or \$1,327,291, of which \$1,094,483 represented wholesale sales and \$232,808 was in retail sales.

Colorado ranked 13th among the states and the District of Columbia in 1929 in the area under glass, being exceeded only by 12 states. The total area under glass was 3,519,888 square feet, an increase of 1,537,354 square feet, or 77.5 per cent, compared with 1919. This increase was actually larger than the figures indicate as hotbeds and frames were included in the total for 1919 and reported separately in 1929. The value of lands, buildings and equipment operated by the 204 establishments in growing flowers and vegetables under glass and flowers in the open was \$4,143,359. An accompanying table shows the number of establishments, value of lands, buildings and equipment, area under glass, expenditures, and receipts for 1929, 1919 and 1909.

Climatic conditions, which are favorable for producing blooms of unusual brilliance in color, large size and lasting quality have had much to do with the development of the industry in Colorado, which finds a market for its products, not only in most parts of the United States, but in several foreign countries. Carnations lead the list of products with an estimated output of 12,000,000 a year. In 1929 there were 101 establishments, cultivating 1,582,463 square feet of carnation beds. The state ranked fifth in area among the states of the Union and was exceeded only by Illinois, Massachusetts, Pennsylvania and New York. Ten states depend upon Colorado for their entire supply of this flower and shipments have been made to Cuba, New York and London.

The greenhouses in this state produce a cut of 5,000,000 roses annually. The quality of these flowers compares favorably with that of the blooms grown in eastern and middle western sections of the country. In fact, the excellence of the quality of both roses and carnations is sustained during the entire year, whereas, in some sections of the country during certain seasons the heat is so excessive as to impair materially the standard required for good keeping and shipping qualities. There were 34 commercial establishments engaged in growing roses in 1929, and the area employed was 525,950 square feet. Colorado ranked 15th among the states in area devoted to this flower.

Six establishments were engaged in growing orchids in 1929, and the area comprised 15,995 square feet. One establishment grows more than 500 varieties, and their value is estimated at a million dollars. Colorado ranks ninth among the states in the production of orchids. Chrysanthemum culture employed 216,309 square feet and ranked 15th, 70 establishments being engaged in their production. Violets ranked 11th with seven establishments and 8,601 square feet, and bulbous flowers ranked 17th with 81,484 square feet and 39 establishments.

Sweet peas are grown under glass from September until June, and soon after that are produced out of doors. The mountain peas, grown in July, August and September, are of unusual quality in size and color, and are famous also in that they keep and ship well.

About 5,500,000 gladioli are grown annually in and around Denver. Asters.

peonies, marigolds, daisies and many other annuals and perennials are grown in large quantities, one of the foremost in number being the dahlias, which are increasing in number and beauty each year.

Because of favorable climatic conditions, gypsophila is considered to be in its best environment in Colorado. It is one of the outdoor products and is being grown in constantly increasing quantities. More than 150,000 bushes of gypsophila, or baby breath, as it is commonly called, are cut and dried annually. A large percentage of this product is sent to eastern states where it is used in wreaths and for other decorative purposes.

About 65,000,000 bedding plants are produced and sold annually. These include the different varieties of flowers such as petunias, geraniums, salvias, heliotrope, fuchsias and many kinds of decorative greens and foliage used so extensively in landscape gardening in parks, floral gardens, etc.

It is a recognized fact that climatic conditions in Colorado are most favorable for the growing of potted plants. This is especially true of cyclamen. Many thousands of this variety are sold in small pots to the surrounding states, and the sale of full-grown plants during the Christmas season is very large.

An average of 100,000 Easter lilies are grown for the Easter season, and 400,000 chrysanthemums are sold during the Thanksgiving days.

An important item of the floral industry is the forcing of Dutch bulbs, such as tulips, hyacinths and narcissi, about 500,000 being forced each season.

Colorado is taking a place rapidly as one of the most important, if not the leading state in the Union in the production of quality flowers.

#### NURSERIES

The nursery business in Colorado, while not as large as the industry engaged in the growing of flowers and vegetables under glass and flowers in the open, has shown a very substantial increase in recent years. Forty-six establishments reporting to the census bureau on operations in 1929, the latest report available, had receipts from the sale of products amounting to \$228,059 in that year. This was an increase of \$144,997, or 174.6 per cent over receipts of 33 establishments in 1919, and in the year last named receipts increased \$10,972, or 15.2 per

cent over 1909 as reported by 61 establishments. While 94 per cent of the receipts of those engaged in floriculture was derived from the sale of products at wholesale, the receipts of the nurseries were predominantly from the retail sales and amounted to 73.7 per cent of the total. The value of lands, buildings and equipment of the nurseries reporting for 1929 was \$325,266. An accompanying table summarizes the operations of nurseries in the state in 1929, 1919 and 1909.

A nursery, for census purposes, is a place devoted to the growing of lining-out stock, including budding and grafting stocks; ornamental plants; deciduous fruit trees and grapevines; edible nut trees; and small fruit plants. Citrus and subtropical fruit trees are not grown in Colorado nurseries. The establishments reporting for 1929 sold 1,537,962 plants in that year. These were distributed as follows: Lining-out stock, including budding and grafting stocks, 1,059,099 plants; ornamental plants (excluding young plants for budding, grafting and lining out), 912,980 plants; deciduous fruit trees and grapevines, 57,865 plants; small fruit plants (strawberries, gooseberries, etc.), 292,450; edible nut trees, 43 plants. Plants in the nurseries on April 1, 1930, divided among the above-named classifications, aggregated 3,453,835 plants. Additional facts on the nursery business are given in an accompanying summary of horticulture in Colorado.

#### BULB FARMS

Twelve establishments engaged in the growing of flower bulbs in Colorado in 1929 reported to the census bureau receipts for that year of \$21,913, of which \$13,507 was from wholesale and \$8,406 from retail sales. A bulb farm for census purposes is a place for propagating, growing and curing bulbs grown in open ground. The value of lands, buildings and equipment used in the industry for 1929 is \$22,415. The number of bulbs sold annually is close to 2,000,000. Gladiolus ranked first in 1929, with sales aggregating 1,239,700 bulbs. Additional facts regarding the industry

will be found in an accompanying summary of horticulture in Colorado.

#### SEED GROWING

Colorado is one of the principal flower and vegetable seed growing states in the Union. In 1929, according to the latest census report, 18 establishments in the state had wholesale and retail receipts of \$1,147,978 from sales of seeds produced. This was equal to 8.5 per cent of the \$13,522,053 receipts of all establishments in the United States reporting for that year. Colorado ranked fifth among the states in flower and vegetable seed production on the basis of receipts, being exceeded only by California, Idaho, Michigan and Montana. In the production of flower seed, Colorado ranked second, being exceeded only by California.

The data given herein apply only to establishments growing seeds for themselves or for others on a contract acreage basis. A seed producer, for census purposes, is an individual, partnership or corporation growing and properly maturing and curing flower and (or) vegetable seeds for distribution to the wholesale and retail trade.

The flower and vegetable seed growers in Colorado reporting for 1929 operated 12,839 acres of land and the value of lands, buildings and equipment was \$490,950. A table published herewith giving a summary of the horticultural industry shows the number of establishments, employes, receipts, expenditures, etc. The item of receipts used herein does not necessarily represent actual production, inasmuch as a crop may not all be sold the year it is produced. Of the \$1,147,978 receipts reported for that year, \$1,125,153 was from wholesale sales and \$22,825 from retail sales.

The \$110,737 receipts for flower seeds only were from wholesale sales, there being no retail sales reported. This sum represents 15.5 per cent of receipts of all flower growers in the United States from sales in 1929.

Receipts of establishments growing vegetable seeds only were \$1,037,241, of which \$1,014,416 was from wholesale

sales and \$22,825 from retail sales. Colorado ranked first among the states in the production of cucumber and cantaloupe seed; second in lima beans, onion and squash and pumpkin seeds; and third in garden beans and watermelon seeds. The state produced in 1929 a total of 283,812 pounds of cantaloupe seed, which was 98.3 per cent of 288,624 pounds reported by the seven principal states, including Colorado. Of 388,572 pounds of cucumber seeds produced by the states reporting, Colorado's output was 366,647 pounds, or 94.4 per cent of the total. Colorado's biggest seed crop is garden beans of all varieties. Colorado's production in 1929 was 4,190,358 pounds. Nineteen states, including Colorado, produced 37,884,031 pounds. Colorado was exceeded only by Idaho and Michigan and produced 11.1 per cent of the total. Principal seeds produced in 1929, production in pounds and Colorado's rank among the states are as follows:

<b>Class</b>	<b>Production Rank</b>
Cantaloupe .....	283,812 1
Cucumber .....	366,647 1
Garden beans .....	4,190,358 3
Lima beans .....	246,723 2
Onions .....	34,193 2

<b>Class</b>	<b>Production Rank</b>
Peas .....	1,323,726 7
Squash and pumpkin ...	57,412 2
Watermelon .....	18,475 3

The total production of the above and of pepper, radish, sweet corn and tomato seeds aggregated 6,617,885 pounds.

### MUSHROOMS

At the date of the last census Colorado had one establishment engaged in the growing of mushrooms and its receipts are not made public by the census bureau in order to avoid the disclosure of individual operations. It is, however, ranked as one of the largest establishments in the country engaged in that industry. In 1929 it operated 155,800 square feet of mushroom houses and was the only establishment of the kind in the Rocky Mountain states with the exception of a small plant in Montana. Subsequent to the 1930 census a second mushroom growing establishment has begun successful operations at Colorado Springs. This plant had a capacity of 10,000 pounds a year at the beginning of 1935, at which time plans were under way for doubling its output.

**HORTICULTURE: SUMMARY OF INDUSTRY FOR COLORADO, 1929**

(Compiled from the Last Census Reports)

Note—This table is a summary of commercial establishments only. The agricultural census, which included two items embraced in this summary, namely, receipts from sales of nursery products, flower and vegetable seeds and bulbs, and receipts from sales of flowers, vegetables and plants grown under glass and flowers grown in the open, reported receipts of \$2,300,673 by 494 farm operators. There is some duplication in the two reports and this total embraces some sales by farmers which are not included in the totals for the commercial establishments.

## Bees and Honey

COLORADO produces approximately 2,500,000 to 3,500,000 pounds of honey annually, the crop varying according to climatic conditions and the flora available for nectar secretions. In 1929, according to the latest available census reports, the state's crop was 3,509,510 pounds, valued at \$396,270. This was an increase of 1,015,560 pounds, compared with 1919, and a decrease of \$177,340 in value.

The high altitude, dry climate and types of sources provide a honey of flavor and body unexcelled anywhere in the United States. The color varies somewhat but as a rule ranges from white to a light amber and commands top prices on eastern markets. Amber honey, which has a stronger flavor and a deeper color, and which is used largely for baking and candy making, also is produced in considerable quantities. Honey is produced in the state from the lowest elevations of the valleys up to and including 7,500 to 8,000 feet above sea level.

A table is published herewith showing the number of stands of bees assessed for taxation purposes in 1934 and 1935, by counties, their assessed value and the average per stand. These figures, as reported by the county assessors, are of value principally as indicating the trend and distribution of the industry in non-census years, as they are necessarily incomplete and below the actual number.

The number of hives as reported by the census bureau for the state, by years, is as follows:

Year	Hives
1900, June 1	59,756
1910, Jan. 15	71,434
1920, Jan. 1	63,253
1930, April 1	67,289

The production, in pounds, and the value of the crop, by years, as reported by the census, is as follows:

Year	Pounds	Value
1899.....	1,732,630	*\$171,740
1909.....	2,306,492	225,883
1919.....	2,493,950	573,610
1929.....	3,509,510	396,270

\*Includes wax.

An accompanying table shows the number of bee hives and the value of the bees on April 1, 1930, and January 1, 1920, by counties, and the quantity

and value of the honey produced in 1929 and 1919, by counties. The figures are not exactly comparable, due to the different dates upon which the census was taken, as the normal life of a bee is only 35 days.

The surplus production of honey per hive has not been so favorable for the past few years, due to the curtailment of the quantity of native flora.

In 1921, the surplus production of honey per hive was estimated at 58 pounds, compared with an average of about 44.2 pounds for the country. In 1922 the surplus honey per stand was approximately 55 pounds, but in the following year it dropped to 31 pounds, where it remained in 1923, and in 1924 the average was about 30 pounds. Since the beginning of 1925 the average is estimated at around 40 pounds.

Approximately 60 per cent of the honey production of the state is in the hands of professional bee keepers.

Fifty of the 63 counties in the state reported honey production in 1929. While this indicates a wide distribution of the industry, 13 counties actually produced nearly 75 per cent of the total output. The counties comprising the principal honey-producing areas, their output and the value of production in 1929, are as follows:

County	Pounds	Value
Alamosa .....	128,048	\$ 13,445
Boulder .....	162,842	20,355
Conejos .....	120,953	12,700
Crowley .....	163,095	19,571
Delta .....	357,040	35,704
Garfield .....	163,562	17,992
La Plata .....	201,305	20,131
Mesa .....	299,620	29,962
Montrose .....	205,694	20,569
Morgan .....	134,071	16,759
Otero .....	317,421	38,091
Prowers .....	114,400	13,728
Weld .....	252,416	31,552
Total, 13 counties...	2,620,467	\$290,559
Total state .....	3,509,510	396,270
Per cent of total.....	74.7	73.3

The principal producing areas are in the sections devoted to the growing of alfalfa and sweet clover in the irrigated districts. The non-irrigated areas of the state, as distinguished from the irrigated districts, are not so inviting to the commercial apiarists, owing to the scarcity of flowers to furnish the nectar.

**BEES AND HONEY: NUMBER, VALUE AND PRODUCTION, BY COUNTIES AND YEARS**

## Agricultural Extension Service

**C**O-OPERATIVE extension work in agriculture and home economics in Colorado is conducted by the Colorado Agricultural college at Fort Collins in co-operation with the United States department of agriculture under the provisions of the Smith-Lever act. This act provides definitely for co-operation between the federal and state governments in carrying on a common enterprise and permitting participation by counties, local governments, associations and individuals.

In the extension service, scientific data developed by the state experimental station are given to the people through the demonstration method of teaching. This is mostly done through selected volunteer leaders in rural communities who agree to put into practice a method recommended by the extension service after it has been proved scientifically correct either by long farm practice elsewhere or through experiment station research. The service is headed by a director with a central office force of specialists and representatives in various agricultural counties which are organized for extension work. The county representatives are known as extension agents. The work is carried on intensively only in such counties as make financial provision for its support, a part of which is met out of federal funds under the agricultural extension act.

The extension service, in addition to demonstration work, maintains touch with the farmer and the farm home through direct correspondence and through the issuance of bulletins. The extension staff and list of county extension agents in the state, with their addresses, follow:

### **PERSONNEL OF EXTENSION SERVICE**

#### **Colorado Agricultural College Fort Collins, Colo.**

F. A. Anderson.....	Director
J. E. Morrison.....	Assistant Director
E. D. Smith.....	Associate Director
Fred C. Jans.....	Administrative Assistant
C. W. Ferguson.....	State Club Agent
Blanche Tomson.....	Assistant State Club Agent
T. G. Stewart.....	Agronomist (In Charge)
C. D. Leonard.....	Assistant Agronomist (Soils)
R. H. Tucker.....	Assistant Agronomist (Weeds)

### **PERSONNEL OF EXTENSION SERVICE—Continued**

R. P. Yates.....	Assistant Agronomist (Seed Certification)

**AGRICULTURAL EXPERIMENT  
STATION**

The Colorado agricultural experiment station is located at the Colorado State college at Fort Collins, where it operates an experiment farm in co-operation with the college and from which point its activities in the state are directed. The station was organized on February 29, 1888, and has 68 persons on its staff, including 41 teachers and four persons assisting in extension work. The station is under the supervision of the state board of agriculture and is operated on funds supplied jointly by the state and federal governments. Dr. Charles A. Lory is president of the college and

Dr. E. P. Sandsten is director of the station.

The experiment station operates three regular sub-stations and one in co-operation with the United States department of agriculture. The mountain sub-station is located at Avon, in Eagle county, at an elevation of between 7,600 and 7,800 feet above sea level. It has the distinction of being the highest station in the United States. This station was established in 1922. One of its purposes is to demonstrate the type of farming that should be carried on in the mountain areas, with livestock playing a prominent part. Another purpose is to carry on experimental work with hardy vegetables such as pod peas, head lettuce, cauliflower and potatoes, and to serve as a testing ground for new varieties originated at the home station at Fort Collins. The original farm consisted of 160 acres. In addition it has under lease a state section, owns a 100-acre tract in the national forest and a grazing permit for 100 head of stock.

Another sub-station is at Austin, in Delta county, at an elevation of 5,500 feet, where it has 30 acres, practically all of which is in fruit and vineyards. Here is cultivated every variety of fruit that can be grown in the state. It is a testing ground for new varieties, and here, also, experiments and demonstrations in orchard management, use of fertilizers and pruning, spraying, washing and packing of fruit are carried on.

The third sub-station is at Rocky Ford, in Otero county, where it demonstrates the type of farming for the Arkansas valley and similar regions. It is the oldest sub-station now in operation. The farm comprises 40 acres. Experimental work is carried on with particular reference to onions, cantaloupes and other vine crops, grapes, cherries and other small fruits which are especially adaptable to the valley.

The Akron station in Washington county is a joint operation of the home station at Fort Collins and the federal government. Methods of dry farming are demonstrated and tests made of various kinds of forage plants to show their value for dry farming areas.

An accompanying table shows the amounts and sources of revenues and summaries of disbursements for fiscal years ending June 30 for the experiment station, including the sub-stations.
