COLORADO AGRICULTURAL STATISTICS 1994

Includes

**ANNUAL REPORT
COLORADO DEPARTMENT OF AGRICULTURE
FISCAL YEAR 1993-94**

COLORADO AGRICULTURAL STATISTICS DISTRICTS

COLORADO

The Centennial State, admitted to the Union in 1876, is the eighth largest state in area and has the highest average elevation. The highest point is at Mount Elbert, 14,433 feet above sea level, one of the 53 "fourteeners" rising above 14,000 feet. The lowest elevation is 3,350 feet in extreme eastern Prowers County.

Approximate Land Area: 66.3 Million Acres (104,687 Square Miles)

Approximate Cropland Area: 11.0 Million Acres

Approximate Irrigated Area: 3.0 Million Acres

Number of Farms and Ranches (1993): 25,500

Land in Farms and Ranches (1993): 32.8 Million Acres

Average Size of Farm and Ranch (1993): 1,286 Acres

Farms by Type

83%	Individual
11%	Partnership
5%	Corporate
1%	Other

Farms By Tenure

54%	Full Owners
31%	Part Owners
15%	Tenants

Farms By Class

59%	Livestock & Poultry
41%	Crops

Farm Marketing Receipts (1992):

Livestock & Livestock Products:

Field, Fruit, & Vegetable Crops:

\$4,038.4 Million

2,955.2 Million

1,083.2 Million

July, 1994

Dear friends,

This 1994 edition of **Colorado Agricultural Statistics** marks yet another year of close cooperation among the Colorado Department of Agriculture, the Colorado Agricultural Statistics Service, and the state's farmers and ranchers. This cooperation makes it possible to have access to reliable data about our industry.

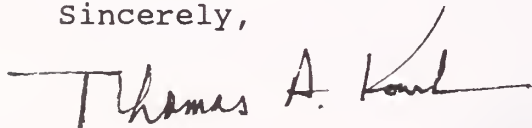

The importance of reliable and consistent agricultural data cannot be overstated. The data in this bulletin enables the user to quickly spot the major trends in production, track prices and yields, glimpse the financial picture of the state's agricultural industry, as well as many other uses.

Once again, the annual report of the Colorado Department of Agriculture is included in this bulletin. I urge you to take a moment and learn about the wide array of responsibilities this department performs for the agricultural community and Colorado consumers.

The Colorado Department of Agriculture is proud to assist in publication of this bulletin, but it is important to recognize the real authors of this report--the farmers and ranchers of Colorado. It is they who produce our state's bounty, steward its many resources, and take the time to respond to producer surveys.

Thanks to all who make this annual publication possible.

Sincerely,

Thomas A. Kourlis
Commissioner

TABLE OF CONTENTS

Colorado's rank in agriculture	2
Operations by specie; Farms and land in farms	3
FIELD CROPS:	
Principal crops; Historic acreage, production, and value	4
1993 Crop review	13
District and county estimates by crop:	
Winter wheat	16
Spring wheat	20
Corn for grain	24
Corn for silage	28
Barley	30
Oats	34
Sorghum for grain	38
Dry beans	42
Sugar beets	47
Potatoes; also disposition and stocks	48
Sunflowers	49
Hay crops	52
Grain and hay stocks	64
Barley and wheat varieties	67
FRUITS, VEGETABLES, AND MISCELLANEOUS:	
Fruit crops - 1993 review	69
Fruit production and value	70
Vegetable crops - 1993 review	71
Vegetable acreage, production, and value	72
Floriculture	74
Planting and harvesting dates	75
Precipitation	76
FARM INCOME AND PRICES:	
Farm income and cash receipts	77
Marketing year average prices by commodity	80
Monthly prices received by commodity	81
LIVESTOCK AND POULTRY:	
1993 Livestock review	85
Inventories by class	87
Cattle and calves	88
Sheep and lambs	89
Hogs and pigs	90
Sheep inshipments and wool production	91
Production, disposition, and income by species	92
Livestock slaughter by species	93
Stocker and feeder cattle inshipments	94
Feedlots and fed cattle marketings	94
Cattle on feed	95
Dairy and dairy products	97
Bees and honey; Trout	99
Chickens and eggs	100
Pasture and range feed condition	102
Livestock; Number on farms and inventory value	102
ANNUAL REPORT - Colorado Department of Agriculture	103
INDEX	115

Rank in Agriculture: Colorado's rank among states, 1993

Commodity	Unit	Colorado		Leading State		United States total
		Rank	Production	State	Production	
FIELD CROPS:						
Barley	1,000 bu.	11	7,650	North Dakota	117,600	400,225

^{1/} Yield and production, clean basis.

1993 CROP REVIEW

The combined value of production for small grain, hay, and late season row crops (excluding sugar beets) produced in 1993 totaled \$1,251.3 million compared with the comparable value of \$1,002.5 million for the 1992 crops. Colorado producers had a larger output in 1993 than they did in 1992 for winter wheat, corn for silage, sorghum for grain, dry beans, all hay, and all potatoes. The production from all other crops was lower than the previous year.

All hay was the state's leading crop in terms of the value of production by contributing \$332.5 or 26.6 percent of the total value from all crops. The 1993 crop of 4.28 million tons was 8 percent above the 3.96 million tons produced in 1992 as a result of higher yield per acre on fewer acres harvested. The acreage harvested and production of alfalfa was higher than last year while the yield per acre remained the same. Other hay production was lower as fewer acres harvested more than offset a higher yield. Hay prices averaged much above a year earlier for each type of hay.

The 96.99 million bushels of all wheat produced in 1993 was valued at \$309.3 million, making it the second most important crop in the state in terms of value. Winter wheat production, at 94.35 million bushels on 2.55 million acres harvested, was 37 percent higher than the previous year, the result of higher yields and an increase of 250,000 acres harvested from a year earlier. The crop broke dormancy in mostly good to excellent condition. Dry warm conditions in May lowered the condition ratings slightly but cool temperatures and good precipitation benefitted the crop the remainder of the season. Hail storms during June and July that hit Kit Carson, Yuma, and Washington counties hurt yield and increased abandonment. But where the hail did not develop, the moisture was a benefit. Spring wheat production declined 27 percent from 1992 to 2.64 million bushels as a 30 percent reduction in acreage harvested more than offset slightly better per acre yields.

Corn for grain dropped from the leading crop last year to the third most important crop in the state in terms of the value of production by contributing \$267.3 million or 21.4 percent of the total value from all crops. The 1993 crop of 99.0 million bushels was 20 percent less than the 123.58 million bushels produced in 1992 as a result of 10,000 fewer acres harvested and a much lower yield per acre. Yuma county, the state's leading corn producing county, was hit with numerous hail storms which lowered corn production. The summer was cooler than average so the corn did not reach full yield potential. The average yield of 120 bushels per

acre was 28 bushels less than the 1992 average. Corn silage production was up 7 percent from 1992 to 2.10 million tons as the increase in acreage harvested more than offset a slightly lower yield.

The value of production of all potatoes totaled \$156.50 million in 1993, up 55 percent from the previous year. Fall potato production was up 14 percent to 25.27 million cwt as growers harvested more acres and had higher yields per acre. Summer potato production, at 2.54 million cwt, was up 26 percent.

Dry bean production increased 9 percent from a year earlier to 2.83 million cwt and prices averaged higher resulting in a 58 percent increase in total value to \$78.42 million in 1993. Yields were less than the previous year but acres harvested increased. While no value has yet been determined for the 1993 crop of sugar beets, the 924 thousand tons of beets produced was down 3 percent from a year earlier.

Barley production declined 21 percent from 1992 to 7.65 million bushels in 1993 as growers harvested fewer acres but had higher yields. The 1993 crop value of \$22.57 million was down from \$24.98 million for the 1992 crop. Sorghum for grain production increased 14 percent from 1992 to 7.98 million bushels. Prices were also higher, pushing total value to \$20.59 million, up 53 percent from 1992. Oats production for 1993 was 6 percent below 1992, but with higher prices, the total value of \$3.57 million was basically unchanged.

The 1993 output of sunflowers was valued at \$11.72 million compared with \$9.38 million for the 1992 crop. Sunflower production decreased 3 percent from 1992 to 89.0 million pounds in 1993. Of the 89.0 million pounds harvested, 60.48 million pounds was from oil varieties and 28.52 million pounds was from non-oil varieties. Growers increased the acreage harvested of oil varieties by 10,000 acres from 1992 to 54,000 acres in 1993 while the acreage of non-oil varieties remained at 23,000 acres. Per acre yields declined for each type.

Winter wheat seedings for the 1994 crop were completed with many areas reporting short or very short top soil moisture. Most of September had occasional rainfall and below normal temperatures but producers finished planting the crop near the average pace. Emergence was also near normal. While the crop was rated in mostly good to excellent condition, growth was less than normal. Temperatures in October were near normal and winter conditions did not hit the state until early November. Generally mild winter conditions helped the crop and it broke dormancy in mostly good to excellent condition.

1993 COLORADO WEATHER SUMMARY IN BRIEF

January - The Continental Divide served to effectively separate weather conditions. West of the Divide, frequent intrusions of mild and moist Pacific air resulted in precipitation almost every day for the first three weeks. The storms dissipated as they moved east, and a shallow layer of cold air remained in place east of the mountains much of the month, interrupted by a few warmer days. Most precipitation east of the mountains was light.

February - The mountains and western valleys were besieged by frequent and heavy record breaking wet snows and low-elevation rains. Extreme southwestern areas had one of the wettest February's on record. At the same time, arctic air repeatedly visited eastern areas, adding to the string of colder-than-average months. Two storms in mid month left most of the Eastern Plains snowcovered and wetter than average.

March - The various weather combinations during the month typified March in Colorado. There was rain, wet snow, a little thunder, some sunny weather, warm days, cold days, and plenty of wind. High mountain snows continued to accumulate while most snow at lower elevations melted off by month's end. Precipitation was widely varied with equal areas above and below average. Temperatures averaged a little warmer than usual.

April - No less than 7 significant storm systems crossed the state with several other minor disturbances. The weather patterns moved and changed frequently. The month's precipitation was above average. Temperatures fluctuated widely with no lasting or unusual extremes of either warmth or cold, but averaging a little cooler than usual.

May - Widespread storm systems early in the month with strong winds, cold temperatures, and snow gave way to summerlike weather the last half. Numerous daily thundershowers were accompanied by tornadoes and hail. Warm temperatures and locally heavy thunderstorms in the mountains caused some rivers on the Western slope to overflow.

June - Springlike storm systems with strong winds and mountain snows made parts of June seem like April or May. However, summer arrived with episodes of severe thunderstorms and hot, dry weather late in the month. Individual storms were quite heavy, especially in the southeast and along the northern Front Range. For the month as a whole, temperatures were cooler than average while precipitation was mostly below average.

July - Following the pattern of remarkable extremes across the US, Colorado weather was no exception. Overall, cooler and drier than average conditions prevailed statewide. However, extremes of heat and cold, severe tornadoes and hail, flooding rains, a record windstorm and mountain snow all took place during the month.

August - Following one of the driest June-July periods in the mountains in several years, moisture streamed into southern areas during the month. Some locals had as many as 22 days with rain. Northwestern and north central areas remained drier than average. With the persistent cloudiness across the southern portions of the state, temperatures for the month averaged about two degrees below normal.

September - Thunderstorms with hail and damaging winds, heavy snows, heatwaves, early freezes, fog, and strong winds were all part of the month's weather. However, there were also a lot of lovely autumn days. Precipitation totals for the month were below normal except for the Front Range and much of the northern and central mountains. Temperatures fluctuated from near record highs to near record lows, but averaged cooler than usual for the state as a whole.

October - The September theme of stormy and extremely changeable weather continued into October. Near record warmth was followed by snow and near record cold with a few thunderstorms also occurring. Precipitation totals varied greatly, but were well above average over northern areas and across wide areas of the Eastern Plains. Overall, temperatures were cooler than average statewide for the fifth consecutive month.

November - This was the sixth month in a row with colder than average temperatures. Precipitation was above average over most of the northern and eastern areas. The month featured numerous mild days and fairly typical amounts of sunshine. However powerful rain and snow the 11th-14th and a record setting cold wave at Thanksgiving time affected the entire state.

December - Several fast-moving storms moved across the state, but they brought more wind than snow, especially along the Front Range. Many small doses of snow were received in the mountains, but precipitation for the month ended up well below average over most of the state. The persistent westerly winds kept temperatures warmer than average across the Eastern Plains while temperatures in the mountains and West Slope were near normal to below.

Field Crops: Acreage, production and value, Colorado, 1992-93

Year and Crop	Acreage planted	Acreage harvested	Yield per acre	Total production	Unit	Value per unit	Total value

COLORADO FRUIT CROPS - 1993

VALUE OF PRODUCTION BY CROP

(\$ 1,000)

1993 Value and Percent of Total

FRUIT CROPS - 1993

Colorado fruit growers had a higher production in 1993 for each fruit except peaches which equaled last year. Total production of the state's four major fruit crops in 1993 was 121.6 million pounds compared with 117.5 million pounds in 1992. Larger portions of the apple and peach crops were utilized in 1993 compared with 1992. The total value of the utilized production from the 1993 crops was \$21.3 million, up 9 percent from \$19.6 million a year earlier.

Apple growers had another favorable growing season and produced 92.0 million pounds in 1993, up 2 percent from the 90.0 million pounds produced in 1992. The average price received for all grades was 15.7 cents per pound compared with 14.5 cents per pound in 1992. The total value of the 1993 crop, at \$14.1 million, was 11 percent higher than the \$12.8 million for the 1992 crop. The 90 million pounds utilized in 1993 was the largest utilization since 1987. Apples represented 66 percent of the total value from the four fruit crops. Apples are produced in a larger production area than the other fruits and the total production is not usually affected as much by spring freezes.

Peach production for 1993, at 18.0 million pounds, was the same as last year and well above the 2.0 million pounds produced from the freeze damaged 1991 crop. A greater portion of the crop, 17.0 million pounds, was utilized in 1993 compared with last year. The total value of the utilized crop was \$5.3 million, 2 percent

higher than the year before. This is the first time since 1987 and 1988 that the crop has had back to back years without severe freeze damage. Because of the heavy concentration of peach orchards in the Palisade area, spring freezes have a more dramatic effect on that crop. In two of the last five years and in three of the last eight years, peach production has been sharply reduced by freeze damage. The 1986, 1989, and 1991 crops were the years in which production was limited with virtually no production in 1989 and very limited production in 1991.

Pear production in 1993 increased 25 percent from a year earlier to 5,000 tons. Growers received an average price of \$348 per ton for the latest crop compared with \$284 per ton for the 1992 output. The total value of the utilized production was \$1.7 million for the 1993 crop. This was a result of the larger utilized production and higher per unit prices. The total value for 1993 increased 47 percent from 1992.

Tart cherry production totaled 1.6 million pounds in 1993 compared with 1.5 million pounds in 1992. While all of the 1992 production was utilized, only 900,000 pounds of the 1993 crop was utilized. Prices were also lower. The total value of the utilized production, at \$224,000, was 59 percent below the \$547,000 received for the 1992 crop. This was a result of the lower price per unit and a 40 percent decline in the amount of the crop utilized compared with last year.

COLORADO VEGETABLE CROPS - 1993

VALUE OF PRODUCTION BY CROP

(\$ 1,000)

1993 Value and Percent of Total

VEGETABLE CROPS - 1993

Vegetable producers in Colorado harvested 9.9 million cwt of fresh market and processing crops during 1993 which had a total value of \$135.6 million. The 9.9 million includes only those vegetable crops for which acreage and production estimates are prepared. Numerous other vegetable crops are produced in the state but are not surveyed for acreage or production data.

Production of dry storage onions in 1993 totaled 5.7 million cwt, up 5 percent from the previous year. The 1993 value represented 65 percent of the total value from the nine crops. The harvested area increased 11 percent to 15,500 acres while the average yield of 370 cwt per acre was 5 percent below the 1992 average. The quantity of onions expected to be marketed had an estimated value of \$88.4 million compared with \$57.8 million from the 1992 crop, up 53 percent. This represented 58 percent of the total production of 9.9 million cwt from the nine vegetable crops.

Lettuce was the second highest value vegetable crop produced in the state during 1993, accounting for 8 percent of the total value. Production was up 2 percent from the previous year to 1.04 million cwt as a 6 percent increase in acres harvested more than offset a 3 percent reduction in the average yield per acre. Prices declined 32 percent from last year to \$10.80 per hundredweight. Lettuce production represented 11 percent of the total of the nine crops and ranked third in total production.

Carrot production was a close fourth in terms of value of production but ranked second in total production. Production increased 12 percent from the previous year, to 1,064,000 cwt, as a result of increased acreage and improved yields. The total value of the 1993 crop, at \$9.2 million, declined 9 percent from the 1992 value. Carrots represented 7 percent of the total value and 11 percent of the total production.

Sweet corn accounted for 5 percent of the total value and 7 percent of the total production while spinach accounted for 8 percent of the total value and 4 percent of the production. Sweet corn production was down 7 percent to 688,000 cwt as lower yields more than offset increased acreage. However, prices were much higher resulting in a 55 percent increase in total value to \$7.2 million. The 1993 spinach crop of 350,000 cwt had a total value of \$10.2 million.

Cabbage production from 1,400 acres harvested totaled 546,000 cwt in 1993 and had a total value of \$4.9 million. Cucumbers for pickles production in 1993 was 9,570 tons, up 41 percent from 1992, solely as a result of increased per acre yields. Prices were also higher, resulting in a total value of \$2.0 million, up 76 percent from 1992.

Cantaloupe production totaled 240,000 cwt from 1,600 acres harvested and had a total value of \$2,328,000. Processing tomatoes had a value of \$190,000 in 1993.

Total All Plants	129	55,743 ^{4/}

^{1/} The total covered growing area of 10,255,000 square feet consisted of the following:

- 565,000 square feet of glass;
- 7,985,000 square feet of fiberglass and other rigid greenhouses;
- 1,555,000 square feet of film plastic (single/double) greenhouses;
- 150,000 square feet of shade and temporary cover.

In addition, plants were produced on 42 acres of open ground.

^{2/} For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

^{3/} Total includes Standard and Pompon Chrysanthemums which are not published separately.

^{4/} Based on equivalent wholesale value of all sales for all crops except potted foliage plants which are based on net value of sales.

1/ Compiled from reports issued by the National Oceanic and Atmospheric Administration.

COLORADO FARM INCOME

The gross farm income for Colorado's 25,500 farms in operation during 1992 totaled \$4.43 billion, up 2 percent from \$4.34 billion generated from 26,000 farms operating during 1991. Production expenses declined slightly to \$3.48 billion. Net farm income, at \$946.9 million for 1992, was up 12 percent from \$845.3 million the previous year.

Cash receipts from farm marketings were up 7 percent from 1991 to \$4.04 billion in 1992. Receipts from the sale of crops declined 1 percent to \$1.08 billion while receipts from the sale of livestock and livestock products increased 11 percent to \$2.96 billion.

Government payments totaled \$203.2 million in 1992, down 6 percent from \$217.1 million the previous year. Other farm income declined 10 percent to \$144.0 million compared with \$159.2 million in 1991. The value of non cash income, at \$92.3 million during 1992, declined 7 percent from \$98.9 million for 1991 as all components of that group had a lower value than the previous year. The value of the inventory adjustment was a negative \$51.6 million compared with a positive \$98.9 million a year earlier as the value of various products had a much lower value at the end of 1992 than they did at the end of 1991.

^{1/} Includes operator households.

Farm production expenses totaled \$3.48 billion in 1992 compared with \$3.49 billion a year earlier. The farm origin components of feed, livestock and poultry, and seed purchased totaled \$1.74 billion, up 2 percent from \$1.71 billion the previous year. Those items represented 50 percent of all production expenses. Expenditures for manufactured inputs such as fertilizer, pesticides, fuel and oil, and electricity, at \$260.0 million, were down 8 percent from the \$282.5 million spent for those items in 1991. Other expenditures such as those for repair and maintenance, machine hire and custom work, and other miscellaneous expenses totaled \$616.5 million compared with \$613.6 million the previous year. Interest expenses were down 6 percent to \$259.4 million. Contract and hired labor expenses, at \$168.8 million were also down 6 percent.

Colorado's farm balance sheet showed a small improvement from the previous year. Total farm assets were up 4 percent to \$15.82 billion while total farm debt declined 2 percent to \$2.78 billion. The largest asset item, real estate, was valued at \$11.26 billion and was 4 percent higher than a year earlier. This item represented 71 percent of the total farm asset value. The value of livestock and poultry, at \$2.06 billion, was up 6 percent from \$1.94 billion in 1991. The value of purchased inputs increased 20 percent from the previous year to \$75.2 million and financial assets increased 11 percent to \$833.5 million. The value of machinery and motor vehicles declined 1 percent, from \$1.28 billion in 1991 to \$1.26 billion in 1992. The value of crops, at \$336.5 million at the end of 1992, was down 12 percent from a value of \$384.0 million at the end of 1991.

Total farm debt was down 2 percent to \$2.78 billion with real estate and non-real estate debt declining 2 percent and 1 percent, respectively. Real estate debt was down to \$1.48 billion from \$1.51 billion in 1991. Non-real estate debt decreased from \$1.32 billion in 1991 to \$1.30 billion for 1992. Overall farm equity increased 5 percent to \$13.04 billion. The debt/equity ratio declined to 21.4 compared with 22.7 the previous year and the debt/assets ratio of 17.6 was down from 18.5 a year earlier.

Livestock and livestock products continued to be the leading contributor to Colorado's cash receipts with a total value of \$2.96 billion in 1992. This was up 11 percent from \$2.66 billion the previous year and represented 73 percent of the total cash receipts from all commodities, at \$3.76 billion. Receipts from cattle and calves totaled \$2.53 billion in 1992 which accounted for 85 percent of the total livestock receipts and over 62.5 percent of the total cash receipts from all commodities. Receipts from crops totaled \$1.08 billion in 1992, down 1 percent from the previous year, representing nearly 27 percent of the total. Corn was the state's second leading contributor to cash receipts with \$268.5 million followed by wheat with \$237.2 million. The value of milk sold wholesale and retailed directly by producers totaled \$189.4 million and remained the fourth leading contributor to cash receipts. Hay was fifth with \$135.9 million; onions ranked sixth with \$77.1 million; hogs were seventh with \$73.4 million; potatoes were eighth with \$67.1 million; floricultural products were ninth with \$48.1 million; and dry beans ranked tenth with \$44.0 million. Cash receipts from sheep and lambs and eggs were just under \$44 million and \$43 million, respectfully.

* Less than 0.05 percent.

Note: Reprinted from Economic Indicators of the Farm Sector, January 1994, USDA Economic Research Service. Cash receipt data reflect income derived from the sale of agricultural commodities during a calendar year for only that portion of the commodity that is sold.

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

Marketing year average prices, by commodity, Colorado, 1985-93

1993 LIVESTOCK REVIEW

SUMMARY - Colorado farmers and ranchers had 2 percent more cattle and calves on hand as of January 1, 1994 and 2 percent fewer sheep and lambs than they did one year earlier. The December 1, 1993 inventory of all hogs and pigs was 10 percent larger than a year earlier while the December 1, 1993 inventory of all chickens was down 3 percent. Colorado ranks 10th in the number of cattle and calves, 4th in the number of sheep and lambs, 19th in the number of all hogs and pigs, and 26th in the number of all chickens. It is also the 4th largest cattle feeding state with marketings of more than 2 million head of fed cattle annually in each of the past 12 years. Colorado is the largest lamb feeding state, and more than 1 million head of sheep and lambs have been slaughtered in the state in each of the last 14 years. Since the closing of a major slaughter plant for hogs in 1988, this is the first year that annual hog slaughter has been above 50,000 head.

The state's dairy industry has been very stable for more than 20 years, with an annual average number of milk cows fluctuating between 70 and 80 thousand head. Bee keepers have had about 50 thousand colonies of bees in the state for the past several years and have produced more than 3 million pounds of honey in each of the last 8 years. The state's trout producers have sold about 2 million fish of various sizes each year since estimates were begun in 1989.

The total inventory value of the cattle, sheep, hogs, and chickens on hand at the beginning of the year (using the January 1 and December 1 reference dates) was \$2.07 billion, up 1 percent from the comparable value of \$2.05 billion one year earlier. Total inventories for cattle and hogs increased and sheep and chickens declined. The value per head decreased for cattle and increased for hogs, sheep, and chickens.

Pasture and range feed conditions were rated fair to mostly good at the beginning of the 1993 grazing season. During May temperatures were generally at or below normal and adequate rainfall improved the June 1 condition rating to good to excellent. Normal or below normal temperatures and rainfall during June improved the condition rating to excellent all month. In the first half of July rainfall declined and normal temperatures prevailed. During the third week of the month severe weather with numerous hail storms struck many areas of the state and condition ratings declined to fair to good and were mostly fair during the month of August. Ratings were fair to good during September, October, and November. Precipitation during the fall varied greatly from district to district and areas with less rainfall were stressed.

CATTLE AND CALVES - The January 1, 1994 inventory of all cattle and calves increased 2 percent from a year earlier to 2.90 million head. The number of cattle and calves in feedlots being fed for the slaughter market increased 1 percent to 1.01 million and accounted for 35 percent of the state's total inventory. During 1993, there were 295 feedlots in operation in Colorado. Those feedlots marketed 2.34 million head of fed cattle for slaughter compared with 2.21 million marketed from 295 lots in 1992. The 18 largest feedlots marketed 66 percent of the annual total in 1993. The number of beef cows increased 3 percent from the previous year to 820,000 while the number of milk cows remained the same as 1993, at 80,000 head.

There were 770,000 heifers 500 pounds and over on hand at the beginning of 1994, up 3 percent from the 750,000 head on hand at the beginning of 1993. Of that total, 150,000 were being kept for beef cow replacement (up 7 percent from last year) and 40,000 head were for milk cow replacement (unchanged from 1993). The remaining 580,000 were other heifers (up 2 percent from the previous year) of which 395,000 were in feedlots for the slaughter market. The January 1, 1994 inventory also included 920,000 head of steers weighing 500 pounds or more (down 1 percent from the previous year) of which 590,000 were in feedlots. The number of bulls weighing 500 pounds or more was unchanged from the previous year at 50,000 head. The number of calves (steers, heifers, and bulls weighing under 500 pounds) was up 8 percent from the previous year to 260,000 head. The 1993 calf crop in Colorado, at 850,000, was 2 percent larger than the 1992 crop of 830,000 head.

Milk production during 1993 was up 3 percent from a year earlier to a new record high of 1.45 billion pounds. This marked the 9th consecutive year of record production. The annual average number of milk cows on hand remained the same as last year at 80 thousand for 1993. Producers obtained a record high production of 18,175 pounds per cow in 1993.

The total inventory value of all cattle and calves in Colorado as of January 1, 1994 was estimated at \$1.99 billion, 1 percent higher than the \$1.97 billion inventory value for January 1, 1993. The average value of \$685 per head represented a decrease of \$5 per head but the increase in inventory more than offset the smaller price to increase total value. The number of operations with cattle at any time during 1993 declined to 13,000 compared with 14,000 in 1992. Beef cow operations were down 500 to 9,500 and the number of milk cow operations remained at 1,500 for 1993.

SHEEP AND LAMBS - The January 1, 1993 inventory of all sheep and lambs in Colorado declined 2 percent from the previous year to 645,000 head. The stock sheep inventory was down 7 percent to 320,000 while the number of sheep and lambs on feed for the slaughter market increased 3 percent to 325,000 head. The number of ewes one year old and older, at 270,000, was down 4 percent from January 1, 1993 and the number of rams and wethers one year old and older remained constant at 9,000. The number of ewe lambs under one year of age declined 24 percent from a year earlier to 34,000 head and the inventory of rams and wethers under one year of age declined 36 percent to 7,000. The 1993 lamb crop of 320,000 head was down 9 percent from 1992 and was 17 percent below the 385,000 born in 1991. There were 2,000 new crop lambs on hand January 1, 1994.

The sheep and lambs on feed estimating program was expanded in 1992 to include placement and marketing data as well as estimates for lambs being fed in dry feedlots and on pasture or crop residue by specific weight groups. Reports are to reflect numbers on feed as of January 1, March 1, and November 1. These data will be included in future bulletins as more years of data are obtained. Of the 430,000 sheep and lambs on feed November 1, 1993, only 5,000 were sheep and the remaining 425,000 were lambs, 417,000 of which were on feed in dry feedlots. On January 1, 1994, the 325,000 head of sheep and lambs on feed consisted of 3,000 sheep and 322,000 lambs of which 320,000 were in dry feedlots. Lamb feeders marketed 200,000 fed lambs during November and December 1993 and placed 110,000 on feed during the same time period. On March 1, 1994, there were no sheep on feed estimated but there were 255,000 lambs on feed of which 245,000 were in feedlots. During January and February 1994, feeders placed 118,000 head of lambs on feed and marketed 180,000 for slaughter.

The January 1, 1994 inventory value of all sheep and lambs in Colorado was estimated at \$49.66 million, up 5 percent from a year earlier. The average value of \$77.00 per head was \$5.00 higher than the previous year which more than offset the smaller inventory. The number of operations with sheep remained the same as last year at 1,800.

HOGS AND PIGS - The December 1, 1993 inventory of all hogs and pigs in Colorado was 450,000 head. This was a 10 percent increase over the December 1, 1992 level. Except for one year, inventories have been increasing since 1987. The breeding hog inventory increased 36 percent from a year earlier to 75,000 head. The market hog inventory of 375,000 head increased 6 percent. The state's total pig crop for 1993, at 877,000, was up 20 percent from the 1992 pig crop of

731,000 head. The December 1992 - May 1993 pig crop was 19 percent above the previous year and the June - November 1993 pig crop was up 21 percent. The number of sows farrowed increased 24 percent from the previous year in both of these two time periods.

The December 1, 1993 inventory value of all hogs and pigs was placed at \$38.25 million, 12 percent higher than a year earlier. The average value of \$85.00 per head was \$2.00 higher than a year earlier. The number of operations with hogs remained at 1,600 for 1993.

CHICKENS AND EGGS - The all chicken inventory in Colorado as of December 1, 1993 totaled 4.04 million birds, down 3 percent from the 4.16 million on hand one year earlier. The number of hens and pullets of laying age declined 5 percent to 3.28 million. Of that total, 1.68 million were hens (down 6 percent) and 1.61 million were laying pullets (down 4 percent). The total inventory also included 353 thousand pullets 3 months or older but not yet of laying age, 337 thousand pullets under 3 months of age, and 67 thousand other chickens. During the period from December 1, 1992 through November 30, 1993, the state's laying flocks produced 837 million eggs, the same production as was recorded a year earlier.

The total inventory value of all chickens was \$8.08 million, up 8 percent from a year earlier. The smaller inventory was more than offset by an 11 percent increase in the inventory value per head. The average value per bird was \$2.00, up 20 cents from the December 1, 1992 average.

BEEES AND HONEY - Honey production in Colorado during 1993 totaled 3.87 million pounds, up 1 percent from the 3.85 million pounds produced in 1992. The number of colonies increased 1 thousand from the previous year to 53,000. The yield per colony dropped from 74 pounds in 1992 to 73 pounds in 1993. The 1993 honey crop was valued at \$2.36 million compared with \$2.27 million for the 1992 crop. Producers received an average of 61 cents per pound for honey sold in 1993, up 2 cents from a year earlier. Producer stocks of honey on hand as of December 15, 1992 totaled 1,161 thousand pounds, 37 percent higher than the 847 thousand pounds on hand one year earlier.

TROUT - There were 30 operations in Colorado during 1993 which had trout sales of \$2.13 million compared with 33 operations with sales of \$2.38 million in 1992. Producers marketed 910 thousand pounds of foodsize, stocker, and fingerling fish during 1993 and received an average price of \$2.34 per pound. That compares with 1.03 million pounds sold in 1992 at an average price of \$2.31 per pound.

ANNUAL REPORT

COLORADO DEPARTMENT OF AGRICULTURE

FISCAL YEAR 1993-1994

The Honorable Roy Romer, Governor

Thomas A. Kourlis, Commissioner

ANNUAL REPORT

OF THE

COLORADO DEPARTMENT OF AGRICULTURE

Fiscal Year 1993-1994

Roy Romer, Governor

Thomas A. Kourlis, Commissioner

Robert G. McLavey, Deputy Commissioner

Introduction

The Colorado Department of Agriculture was created as a department of state government in 1949, with historical roots dating back to before the turn of the century. Currently, the department employs about 250 individuals around the state performing a multitude of services to the crop and livestock industry as well as providing numerous services for Colorado consumers.

Organization

The Colorado Agricultural Commission, a body of nine persons appointed by the Governor, serves to advise, counsel and direct the Commissioner of Agriculture, also appointed by the Governor. The commission is comprised of individuals of both political parties and represents a cross section of the state's agricultural community.

The department is organized into five divisions, Animal Industry, Plant Industry, Stock Inspection, Markets, and Inspection and Consumer Services. These five divisions provide regulatory, inspection, and marketing assistance to Colorado's agricultural industry and provide valuable consumer protection services to the state's citizens.

Office of the Commissioner

Thomas A. Kourlis, Commissioner of Agriculture
Robert G. McLavey, Deputy Commissioner

Ongoing activities in the Commissioner's Office include the programs of the Resource Analysis Section, Public Information, Personnel, Administrative Services, and the Agricultural Commission.

In November of 1993, Dr. Steven W. Horn resigned his post as Commissioner of Agriculture to assume the duties of dean of the College of Agriculture at the University of Wyoming. Dr. Horn led the department for four years following two years as the department's deputy commissioner.

In January of 1994, Thomas A. Kourlis of Craig, Colorado, was named by Governor Roy Romer to succeed Dr. Horn. Mr. Kourlis is a sheep and cattle producer and has a distinguished record of service to the sheep and wool industry as well as contributing years of time and effort on behalf of range improvement and conservation programs. Mr. Kourlis was confirmed to the post of Commissioner of Agriculture on February 25, 1994 by a unanimous vote of the Colorado Senate.

During the 1994 legislative session, the Colorado General Assembly enacted two laws that will assign important, new authorities to the department. The department's Division of Animal Industry will begin to implement statutes to inspect and license all commercial pet shops and kennels in the state. The Pet Shop and Kennel program is a substantially modified program formerly administered by the Colorado Department of Health.

The General Assembly also adopted legislation to give the department greater responsibilities in the area of commercial elk and game breeding. The new program will require the department's Division of Stock Inspection to inspect game breeding facilities, and the Division of Animal Industry will retain its responsibilities for animal health and disease control.

The third annual Governor's Agricultural Outlook Forum was held at the Colorado Convention Center in Denver on February 18, 1994. The forum's theme was "Shaping Agriculture's Future: New Players, New Realities." Speakers at the forum addressed the forces at work influencing agricultural policies for the years to come.

The first annual Ag Family Appreciation Day was held in July of 1993. The event celebrated family agriculture and the inaugural season for the Colorado Rockies baseball team. The event was sponsored by the Colorado Department of Agriculture, the Wyoming Department of Agriculture, the University of Wyoming and Colorado State University. The AgriWeather Network of Cheyenne, Wyoming, was the principal organizer of the celebration. Over 400 people attended a barbecue and auction prior to the ball game. Proceeds from the auction were used to fund scholarships for deserving students of agriculture at the University of Wyoming and Colorado State University.

In 1993, Agriculture Commissioner Steven Horn presented the first Friend of Agriculture Award to television personality Bill Kuster of KUSA, Channel 9 in Denver. The award recognized Mr. Kuster's six-year effort to recognize Colorado's food and agricultural products. Each Wednesday, Bill Kuster features a new or different Colorado product bringing valuable exposure to small companies from around the state. The program is an important part of the marketing efforts of the Division of Markets.

Colorado Agricultural Commission

The Colorado Agricultural Commission held six meetings in fiscal year 1993-94, the June meeting being a telephone conference. Mr. Dennis Hoshiko was re-elected Chairman, and Mr. David Ford was again chosen to serve as Vice Chairman. In April, Ms. Penny M. Verhoeff of Lamar resigned her appointment to the Commission due to a move which took her from District 3.

The commission addressed several important topics including: tuberculosis in domestic game herds; adjustment of inspection fees for fruit and

vegetable grading, the Commodity Handler Examination fee schedule, and the Feed Inspection fee schedule; adopted rules and regulations for the Colorado Seed Act; amended regulations to the animal health rules and organic certification. Appointments were made to the numerous boards and advisory committees, which included three new advisory committees focusing on updating the Fertilizer Program, and developing the Weed Free Forage and Seed Act programs.

Resource Analysis

This two-person section analyzes key issues and trends affecting Colorado agriculture and develops and manages special programs at the direction of the Commissioner.

During 1993-94, the department aggressively sought legislation to improve the implementation of Colorado Central Filing System--the only system nationwide operated by a private company. The legislation was adopted, and the system should now meet it's potential as a convenient and cost-effective method to record and discover liens on agricultural products. The new legislation also will serve as a first step toward a centralized system whereby liens can be perfected as well as discovered. The Resource Analysis Section took the lead in securing this important legislation.

Section staff also: monitored regulations and prepared materials to help promote the use of ethanol as a motor fuel; helped identify and fund studies to assess the impact of the Summitville mine on agricultural productivity in the San Luis Valley; developed and managed a contract with Colorado State University to document the contribution of agriculture to Colorado's economy; helped plan and implement the 1994 Governor's Agricultural Outlook Forum; and participated in conferences and meetings on agriculture and the environment.

Administrative Services Section

The Administrative Services Section has focused on quality in the accounting, budgeting, purchasing, data processing, and business support services provided to our divisions and the public.

Administrative Services has continued to prioritize the implementation of the Strategic Information Management Plan designed to create a department-wide computer network in the Denver metro area. Section staff programmed software for the new seed dealer licensing program, enhanced the pesticide applicator software, and rewrote the predatory assessment and the Agriculture Outlook Forum registration programs.

The Department was appropriated a \$6.5 million capital construction project for the new indoor State Fair Arena. Administrative Services has worked with the State Fair Authority to coordinate and provide the State administrative process for payment of the project costs. This project began January 1, 1994, and will be completed in the fall of 1994.

In 1993, the Administrative Services Section was awarded the Certificate of Achievement for performance excellence in the prior year fiscal-year close.

Division of Markets

Jim Rubingh, Division Director

The Markets Division is responsible for developing new marketing opportunities for Colorado producers and processors as well as retaining existing markets for the full array of Colorado products. The division also develops promotional programs and materials, assists in expanding the state's food and agriculture processing industry, administers the Seal of Quality Program, and collects livestock and produce market news from around the state. The division provides staff assistance to the Colorado Agricultural Development Authority.

Marketing Orders Program

Marketing orders are producer-funded programs which collect funds from the point of first sale of certain farm commodities. The funds are used for crop research, market development, as well as for promotion, advertising, and education programs. These activities provide greater utilization of commodities and increased profitability for producers. In some cases, the marketing orders

provide for commodity inspection and grading in order to assure that only high-quality commodities reach the marketplace. Marketing orders generally work to solve marketing problems and conduct programs that would be impossible for individual producers to accomplish.

Colorado has marketing orders for eight commodities produced in the state covering apples, corn for grain, potatoes, dry edible beans, sweet corn, broccoli, milk, and wheat.

The department's responsibilities involve establishing, enforcing, and overseeing the administration of the marketing orders. In addition, the program serves to enforce the marketing order rules and regulations by conducting investigations, holding hearings, and reviewing audits of the orders. The agency reviewed budgets for the eight marketing orders and approved expenditures totaling over \$3 million.

International Marketing

The goal in the international marketing program is to increase the export sales of Colorado grown and processed agricultural products. The section works with individual companies as well as in developing industry specific marketing efforts. The office also provides access to the USDA Foreign Agricultural Service programs. This section coordinates the agricultural access to the State of Colorado offices in Japan, Korea, Taiwan and Europe.

Individual counseling ranges from market assessment utilizing research reports, computer data sources and other research, to assistance in obtaining branded trade promotion grants for overseas marketing and assistance with Colorado's Agricultural International Trade Promotion Program which provides financial assistance for international promotion.

A key element of the section's international trade development effort is coordinating state participation in WUSATA, the Western U.S. Agricultural Trade Association. Through WUSATA Colorado companies have access to international trade development funds and industry and market projects. The department is

currently managing one project which is promoting the sale of processed foods in Japan through the development of private label product sales. The Colorado livestock industry and CDA are also active in the WUSATA breedstock promotion in Mexico.

The international section continues to build the resource library for international trade which provides marketing data for most major markets. The section is also active in recruiting buying missions to Colorado to meet with Colorado companies. This includes processed foods as well as livestock missions. An additional project this year is coordination with JETRO (Japan External Trade Office) in bringing a senior trade advisor for processed foods to Colorado on a monthly basis for the next two years.

Domestic Marketing

The mission of the domestic marketing program is to increase awareness and demand for Colorado food and agricultural products in local, regional and national markets.

In the 1993-94 fiscal year, the domestic marketing staff published and distributed five marketing directories for Colorado producers: the Hay Directory, the Farm Fresh Directory, the Fresh and Processed Food Trade Directory, the Livestock Export Directory and the Food & Beverage Gift Guide. The Markets Division also published a handbook, *Developing a Marketing Plan for Your Food Product*, and a quarterly newsletter.

Ongoing marketing activities included a weekly television segment that featured 52 different Colorado food products; the annual Governor's Award foodservice promotion, which honored two restaurants and one institution for excellence in promoting and serving Colorado products; the Seal of Quality Program, a labeling and inspection program that differentiates super-grade apples; and the Centennial Farms Program, which recognizes 100-year-old farms in the state.

New programs included the "Gimme 5 Colorado" produce campaign. The Markets Division organized a coalition of government agencies, private companies and commodity groups, which

sponsored a statewide campaign to increase awareness of the importance of fruits and vegetables in the diet. The promotion included three components: the education program, a media campaign and tie-in activities with the Colorado Rockies. The campaign, funded through private donations, made more than one million impressions of the 5 A Day message in Colorado.

In the spring of 1994, the Markets Division initiated a public relations program to inform the media and consumers when select Colorado crops come into season.

The division continues to serve as the lead agency for aquaculture development in the state. As of May 1994, Colorado has 37 licensed aquaculture facilities.

Food Processing

To assist in increasing food processing in the state, the Markets Division administers the Agricultural Processing Feasibility Grants Program to assist local governments and entrepreneurs in evaluating the potential for developing or expanding agricultural processing facilities. The program is funded by the Colorado Economic Development Commission.

Assistance is also given to farmers wishing to diversify their operations through processing, to existing Colorado food companies interested in expansion, and to out-of-state food companies considering locating in Colorado.

Special projects have included: organization of regional workshops on starting a food processing business, facilitating local economic renewal workshops; recruitment of food processors at state attended trade shows; placement of a Colorado food supplement in a national food magazine; Colorado Co-Pack Directory, a listing of companies which provide contract packing services; *From Growing to Processing - A Start-Up Guide for Food Processors*; *Directory of Commercial Kitchens*, a listing of health department inspected facilities available to processors; and *Checklist for Start-Up Food Processors*, a concise listing of steps in developing a food processing business.

Market News

Personnel of the Colorado Department of Agriculture's Markets Division attend livestock sales at the major sale yards around the state to report the movement and price of livestock exchanged in open trading. This information is made available to livestock producers. The staff also monitors and reports hay, fresh produce and nursery marketings.

Brand Inspection Division

J. G. Shoun, Brand Commissioner

The Brand Inspection Division has a long history in Colorado beginning around 1865 in what was then the Colorado Territory. Today, the division administers more than 35,000 livestock brands to identify ownership of cattle, sheep, mules, burros, and horses. Brand inspection is crucial to verify ownership in cases of strayed or stolen livestock, and animal health programs are strengthened by the ability to trace animals to their herd of origin.

The division is administered by the State Board of Stock Inspection comprised of five members, appointed by the Governor, representing all segments of the industry. The members of the board during the 1993-94 period were Mr. Dick Tanner of Yoder, Mr. Dean Davis of Lindon, Mr. Lee Spann of Gunnison, Ms. Linda Ingo of Ridgway, and Mr. Robert E. Bledsoe of Wray.

The division employs 65 brand inspectors located throughout the state, eight brand foremen, and nine administrative personnel, including Brand Commissioner J.G. Shoun. The annual budget for the division exceeds \$2.5 million and is completely funded by inspection fees levied to livestock owners and brand registration fees levied every five years. In 1993-94, division personnel travelled in excess of 1.3 million miles in the course of their duties.

The division is assigned four principal regulatory responsibilities: to record and administer livestock brands; inspect livestock and verify ownership before sale, transportation beyond 75 miles, or slaughter; inspect and license livestock sale rings and inspect all consignments before sale to verify ownership; and prevent and return strayed or stolen livestock and investigate reports of lost or stolen livestock.

In addition, brand inspectors collect beef promotion and research funds. The division is also the trustee for all surety bonds issued to licensed markets and packing houses doing business in Colorado.

In 1993-94, the division inspected approximately 4.8 million head of livestock. In addition, they identified ownership of lost, stolen, or strayed and questionably owned livestock valued at \$19 million. The division conducted 80,000 horse inspections and issued twice as many permanent horse travel permits than previous years.

The Brand Division has concentrated on educational programs in the past few years. The focus of the educational program is on teaching brand law and theft prevention to the public and law enforcement agencies. Fifteen separate classes were given in 1993-94, all in different areas in Colorado.

Division of Plant Industry

Robert I. Sullivan, Director

The Colorado Department of Agriculture's Division of Plant Industry performs a wide array of services to the public and engages in several important environmental and public health protection programs.

Beginning as the Bureau of Plant and Insect Control in 1937, the agency was under the direction of the State Entomologist. The division is organized into the Biological Pest Control, Pesticides, and the Plant and Insect sections. The division's staff of 37 includes 13 field inspectors (10 of whom are cross-trained in multiple inspection), eight biological pest control specialists, and three chemigation inspectors.

Biological Pest Control

In 1947, the Bureau of Plant and Insect Control developed the state's initial biological pest control program in Palisade, Colorado, at the Colorado Department of Agriculture Insectary.

Biological pest control affords the opportunity to decrease agriculture's reliance on chemical pest control technology thereby decreasing production

costs, reducing a portion of the chemicals entering the environment, and when colonies of beneficial insects are established, it offers a permanent pest control solution.

In 1993-94, the staff of the Biological Pest Control Section conducted 461 releases of 32 species of beneficial insects. This was an increase in activity of approximately 25% over FY 1992 (1992's activity level was an increase of 14% over the previous year). The releases were designed to assist in the control of twelve weed species and six insect pests throughout the state.

Plant and Insect Section

This section provides the following services:

- Inspection of plants and plant products intended for export to provide certification required by receiving states and countries;
- Registration of sellers of nursery stock, providing inspection of that stock to aid in control of insects and diseases, and aiding consumers in purchasing high quality stock;
- Performs request inspections of apiaries for bee diseases;
- Conducts pest surveys and works with private and public agencies to control certain pests;
- Administration and enforcement of the Colorado Chemigation Act to avoid pollution of groundwater sources;
- Registers and inspects commercial seed dealers to assure truth in labeling of seed as to content and germination claims;
- Administers the Organic Production Certification Program to assure buyers of organically-grown produce that their produce conforms with state standards required before making such claims;
- Administers fruit and vegetable pesticide residue monitoring under contract with USDA; and

Implemented new request program for certification of weed free forage crops including hay and mulch crops in May of 1994.

In 1993-94, the section issued approximately 2,000 phytosanitary inspection certificates on plant products for international export valued between \$5 and \$10 million. Inspectors conducted approximately 1150 inspections of nurseries and greenhouses and the section issued approximately 1,450 registrations to sellers of nursery stock. Approximately 8,000 stop sales orders were issued on nursery stock in 1993-94.

The Plant and Insect Section's implementation of the chemigation program, which began in 1989, this year resulted in the issuance of approximately 3,100 permits. Approximately 550 inspections of seed dealers were conducted, and 450 stop sales orders were issued for violations of labeling. About 1,100 seed sellers and custom seed conditioners were registered. The section issued 107 organic certification licenses.

In 1992, the Colorado Department of Agriculture entered into an agreement with the U.S. Department of Agriculture to collect samples of fresh produce from Colorado distribution points. The program is designed to identify any possible contaminants to the food system. A total of 456 samples were taken in 1993-94.

Pesticides Program

The Pesticides Section regulates pesticides, pest control devices, pesticide application, pesticide applicators and is the lead agency for the protection of groundwater quality from contamination by agricultural chemicals. Its services include: ensuring proper labeling, packaging, display, formulation, and effectiveness of pesticide products; handling special local needs pesticide registrations and emergency exemption requests for pesticides; ensuring competency of commercial pesticide applicators, and under certain circumstances, limited commercial and public applicators; and to ensure the protection of groundwater and the environment from impairment or degradation due to the improper use of agricultural chemicals while allowing for their proper and correct use.

In 1993-94, approximately 9,403 pesticide products were registered in Colorado; approximately 606 applicators were tested for competency; approximately 646 commercial pesticide application firms were licensed and 122 limited commercial and public applicators were registered; 2,252 applicators were licensed as qualified supervisors or certified operators; 27 complaints of misuse of pesticides were investigated; and administrative actions were finalized in 43 complaints ranging from letters of warning to license suspensions, civil fines, assurances of discontinuance, and injunctions.

An in-depth review of the pesticide applicator enforcement for the last five years with a comparison of data for the last ten years revealed the following:

- total numbers of complaints have decreased while total numbers of applicators have increased;
- there has been a significant decrease in the percent of complaints related to applications of 2,4-D leading to the conclusion that complaints related to 2,4-D are cyclical in nature and relate directly to weather, pest pressure and crop stress;
- although the numbers of complaints as a whole have decreased, the numbers of complaints in urban areas has increased, this coincides with the increase in urban population and corresponding increase in ornamental applicators.

The findings would seem to validate the state's basic approach to enforcement--that of compliance through cooperation and relying on routine inspections.

To ensure groundwater quality, a coordinated effort is essential in dealing with this issue since numerous federal, state and local agencies are involved. The department ensures a coordinated approach by maintaining contact with the other agencies and attending meetings to keep abreast of what work is being performed.

Education and public outreach is the key to the division's groundwater program. Presentations to

industry, professional organizations and interested groups are ongoing to both inform and seek advice. A citizens advisory committee consisting of representatives from the general public, producers and agribusiness has been instrumental in providing user and public involvement into program development and implementation as well as helping to determine priorities.

Groundwater was monitored in the San Luis Valley. The development of universal best management practices continues while the localization committees are adapting these for the San Luis Valley and portions of the South Platte. The standards laboratory has been equipped to analyze the monitoring samples. Work on the generic portion of the state management plan for EPA has begun. Hearings were held around the state concerning the rules and regulations for bulk storage facilities and mixing and loading areas with a projected adoption date of May 1994.

Inspection and Consumer Services Division

Ronald Turner, Director

The Division of Inspection and Consumer Services consists of five sections. The division employs approximately 95 individuals in a variety of inspection programs designed to assure fairness in the marketplace and quality, safety, and financial soundness in other commercial transactions.

The Office of the Director governs the five sections of the division. Under the director, the Facility Operations Program oversees two state-owned buildings occupied by the division with one goal in mind, to make sure that the buildings maintain an environment of safety and security for the employees.

Technical Services

The Division's Technical Services Section is responsible for field inspections, testing and/or sampling for the following programs: Feed, Fertilizer, Eggs, Measurement Standards (small devices), Farm Products, and Meat Inspection. Each inspector in the section has been trained to perform inspections in all six program areas.

Fourteen inspectors, strategically located in the state, perform the various inspections required for each program. The inspectors are empowered to enforce the laws and regulations relating to each program.

In addition to the section functions in the field, the Technical Services Section is responsible for the administration of the feed, fertilizer, egg, and meat inspection statutes.

The Feed Program registers and selectively samples commercial animal feeds throughout the state. In 1993-94, 732 companies registered 10,467 products. These numbers reflect an increase of 21 companies and 681 products over last year. This increase is attributed to an education and enforcement effort targeting nonregistration or late renewals on products. As part of this effort, over 800 stop sales were issued this year compared to 500 last year on products not in compliance with the Feed Act. There were also 4,600 (increase of 200) inspections conducted and approximately 4,800 (increase of 500) samples taken, representing 33,316 (increase of 22,000) tons of feed. This year the number of samples not meeting the labeled guarantees when analyzed by our laboratory, decreased from thirteen to twelve percent. Inspection (tonnage) fees were collected on 1,505,702 tons of feed (increase of 40,000 tons). Under a cooperative agreement with the U.S. Food and Drug Administration, 20 medicated feed mills were also inspected.

The Egg Inspection Program assures compliance pertaining to quality and labeling standards for eggs at the retail and wholesale level. In the 1993-94 license year over 990,650 dozens were inspected, and of that amount, 17,963 dozens were rejected. The Department continues to work with the industry to improve the quality of eggs on the market, and the rejection rate has continued to decline from 6 percent two years ago to 2.6 percent last year and 1.8 percent this year. A new inspection summary report the department sends monthly to each egg producer has generated positive comments from the industry and seems to be making an impact on the freshness and quality of eggs reaching the consumer.

The Fertilizer Program registers and selectively samples fertilizers, soil conditioners, and related products to determine nutrient content and to

assure labeling accuracy in accordance with state laws. In 1993-94 the department registered 370 companies and 2,695 products. Approximately 2,673 inspections were made and 1,425 samples representing 30,926 tons of product were taken and analyzed. Inspectors issued 63 stop sales on deficient products. This program has requested and received approval from the Agricultural Commission for the appointment of an advisory board to assist the Department in updating this statute. This board should be in operation by August of 1994.

The Fertilizer Program also inspects anhydrous ammonia tanks and assists in safety training in the use of this potentially dangerous product. Inspectors examined 3,283 ammonia tanks and rejected 695 of them as unsafe.

The Meat Inspection Program licenses and inspects meat processors and food plan operations. In addition, the agency protects the public from unsanitary or fraudulent practices in meat processing and bulk meat sales. In 1993-94, this program issued licenses to 146 facilities in the state. Thirteen cease and desist orders were issued to meat processors in the fiscal year. In addition, 207 facility inspections were made. One license was denied due to statute violations. Two businesses were fined for statute violations and were licensed under probation.

Farm Products

The Farm Products Section is responsible for the enforcement of statutes licensing and regulating those who buy, store, or transport agricultural products produced in Colorado. The agency assures that dealers and state-licensed warehouses are bonded and adequately capitalized. The section licensed over 6,500 firms and holds surety bonds in excess of \$100,000,000.

The section investigates complaints by producers against dealers. Issues cease and desist orders and/or other regulatory sanctions in the event a firm appears to be financially unable to meet its commitments. In addition, the section conducts investigations of complaints regarding timely payment for farm products purchased. In 1993-94, 203 such orders were issued, and over 300 investigations were conducted.

Laboratory Services

The Laboratory Services Section analyzes animal feeds and fertilizer product samples obtained by multiple inspectors in the division, and the lab also analyzes pesticide samples for the Plant Industry Division.

The laboratory checks animal feeds and pet foods registered in the state to assure that feed products conform to the manufacturer's labels for both nutrients and that they are free of contamination. The lab conducts the analysis of pesticides to assure that they meet manufacturers' guarantees and claims for label consistency.

The lab, under contract with the U.S. Environmental Protection Agency, analyzes pesticide residue samples to aid in the investigation of possible misuse or misapplication.

The lab also analyzes a limited number egg samples for pesticide residues and examines a limited number of meat samples for bacterial contamination and to assure that they meet manufacturers' claims for label consistency.

The lab has set up a state groundwater monitoring lab in cooperation with the state health department and funded by a grant from EPA. Most of our new equipment is in the lab and training is underway to operate the various new pieces of equipment. The lab plans to analyze about 200 groundwater samples for pesticides and nitrates during the summer of 1994. This monitoring is to be done over a 5-10 year period to be sure that the state's groundwater is clean and free of pesticides and nitrates from the application of pesticides and fertilizer in the agricultural community in the state.

In 1993-94, the section conducted 30,000 different analyses on 7,500 samples.

Measurement Standards

This program licenses all weighing and measuring devices in commercial use in Colorado and certifies individuals operating public scales. The State Metrology Laboratory maintains custody of Colorado's official weight and measure standards, and the laboratory provides testing, certification,

and calibration of mass, frequency, length, and volume for public and private agencies that require standards traceable to the National Institute of Standards and Technology.

This section tests packages for truth in labeling as required by the Measurement Standards Act, and it tests and inspects the accuracy of measuring devices used commercially. More than 28,000 small weighing devices were tested in 1993-94, and of those, 13.2 percent were inaccurate. Inspectors examined 65,311 packages and found 14.6 percent to be short measure.

The section's large scale testing units tested and inspected 4456 scales (a 10.5 percent increase), rejecting 36.8 percent. The vacant position in northeastern Colorado was filled in November of 1993. This accounts for the 10.5 percent increase in scale tests over 1992-93.

The Metrology Laboratory calibrated 6,766 mass standard, performed 405 other tests, and certified 657 tuning forks. Tuning forks are used by local law enforcement agencies to calibrate radar speed detectors. Production is down in the metrology laboratory due to the retirement of the chief metrologist in December. The laboratory has operated at 50 percent since 1 January, 1994.

Fruit and Vegetable Inspection

The Fruit and Vegetable Inspection Program is a cooperative effort by the U.S. Department of Agriculture and the Colorado Department of Agriculture to assure consumers of high quality Colorado produce. The program operates under federal standards, rules, and regulations to provide official inspection, grading, and certification of produce. The certification concerns quality, condition, size, and other pertinent factors of fresh fruits and vegetables grown in the state.

Inspections are performed on either a mandatory or non-mandatory basis. Mandatory produce inspection is required by statute to promote quality standards which depict certain Colorado produce as desirable products in the marketplace. Non-mandatory inspections are conducted on other commodities for shippers which wish to market an inspected product. Inspection certificates are issued by the state to certify grade and condition of the product at the time of inspection.

In 1993-94, the section inspected an estimated 21,600,000 hundredweight (cwt.) of potatoes and 99,068 bushels of peaches, resulting in the issuance of approximately 45,000 certificates of mandatory inspection for the commodities. Other fruits and vegetables inspected totaled 638,569 cwt. resulting in 3,200 certificates issued for non-mandatory commodities.

Division of Animal Industry

James Williams, DVM, Director

The Division of Animal Industry is responsible for animal health and control activities in the state. The division has 17 employees.

The division works in close cooperation with the livestock industry and veterinary medical organizations, as well as other state and federal agencies, to protect the health, welfare, and marketability of Colorado livestock.

Veterinary Section

This section is responsible for monitoring and minimizing brucellosis and other contagious diseases which could threaten Colorado livestock. The staff concentrates on diseases that are a threat to public health, would significantly impact the more than \$3 billion livestock economy in Colorado, and which cannot be easily controlled by individual livestock owners. Disease surveillance programs at slaughter plants and at livestock concentration points are conducted in cooperation with the USDA. Control of diseases is achieved through required inspections, vaccination, supervised treatments, and other appropriate activities. The section also licenses and inspects establishments engaged in processing, handling, or transporting inedible meat products for pet foods and rendering establishments to assure compliance with sanitary standards necessary for disease control and to assure that such products are clearly labeled.

The Bureau of Animal Protection investigates complaints concerning animal cruelty or neglect. Division staff assist local animal control officials and law enforcement officials and law enforcement

organizations in training and investigations of complaints. In 1993-94, approximately 344 complaints of animal neglect or abuse were investigated by department personnel.

State-Federal Brucellosis Laboratory

The State-Federal Brucellosis Laboratory provides support for livestock disease identification, control, and prevention programs. The lab facilitates interstate and international livestock shipments through laboratory confirmation of disease-free status. Lab staff also trains public livestock market veterinarians in test procedures and confirms testing of livestock at such markets.

In 1993, approximately 421,000 serological and other tests for livestock diseases were performed on the 371,000 submissions received from packing plants, private veterinarians, state and federal field personnel and others. These tests were performed for disease surveillance, interstate movement, and to qualify animals for export to other countries.

Rodent/Predator Control Section

In Colorado, 3 million acres of private lands are damaged to some degree by prairie dogs, gophers, and other rodents. The Animal Industry Division's Rodent/Predator Control Section provides training, services, and supplies to private citizens and local, state, and federal officials to control vertebrate pests. The section assists producers in controlling livestock predation losses through cooperative agreements with local producer associations, counties, and the United States Department of Agriculture.

 Value 92, 102

Slaughter, livestock: 92, 93

Sorghum, all: 4, 7, 15

Sorghum, grain:

- Acreage 4, 7, 12, 15, 38-41
- Cash receipts 79
- County estimates 38-41
- District estimates 38-41
- Prices 7, 15, 80, 81
- Production 7, 12, 15, 38-41
- Stocks 65
- Value 7, 15
- Yield 7, 12, 15, 38-41

Sorghum, silage:

- Acreage 7, 15
- Prices 7, 15, 80
- Production 7, 15
- Value 7, 15
- Yield 7, 15

Spinach:

- Acreage 73
- Prices 73, 80
- Production 73
- Value 73
- Yield 73

Sugar beets:

- Acreage 4, 9, 15, 48
- Cash receipts 79
- County estimates 48
- District estimates 48
- Prices 9, 15, 80
- Production 9, 15, 48
- Value 9, 15
- Yield 9, 15, 48

Sunflowers:

- Acreage 15
- County estimates 49-51
- District estimates 49-51
- Prices 15, 80
- Production 15, 49-51
- Value 15
- Yield 15, 49-51

Sweet corn:

- Acreage 73
- Cash receipts 79
- Prices 73, 80
- Production 73
- Value 73
- Yield 73

Tomatoes:

- Acreage 73
- Prices 73, 80
- Production 73
- Value 73
- Yield 73

Trout: 99

Vegetable crops: 71-73, 75, 79, 80

Wheat, all:

- Acreage 4, 5, 11, 15
- Cash receipts 79
- Prices 5, 15, 80, 81
- Production 5, 11, 15
- Stocks 64
- Value 5, 15
- Yield 5, 11, 15

Wheat, spring:

- Acreage 5, 11, 15, 20-23
- County estimates 20-23
- District estimates 20-23
- Prices 5, 15, 80
- Production 5, 11, 15, 20-23
- Value 5, 15
- Yield 5, 11, 15, 20-23

Wheat, winter:

- Acreage 5, 11, 15, 16-19
- County estimates 16-19
- District estimates 16-19
- Prices 5, 15, 80
- Production 5, 11, 15, 16-19
- Value 5, 15
- Varieties 67, 68
- Yield 5, 11, 15, 16-19

Wool:

- Cash receipts 79
- Prices 80, 84, 91
- Production 91
- Value 91
- Weight per fleece 91

WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts, and crop and livestock reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing.

They are essential in enacting wise legislation affecting Agriculture.

They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

They are the basis for analysis of agriculture and other business conditions.

They give producers the same foresight to future price trends that organized dealers possess.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools, local communities, Economic Development Councils, and others in planning constructive programs.

They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They indicate potential buying power, enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.

They reduce the risk for ownership of buyers of farm products which enables them to do business on a smaller margin. Under the stimulus of competition, they pay producers higher prices than could be paid if uncertainty of production existed.

They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official crop reports reduce uncertainty which limits speculation.

They are indispensable in times of war because food is as essential as ammunition and weapons of war.

They provide an accurate, unbiased picture of Colorado's agriculture. The facts on present and prospective supplies furnish a sound basis for judgment and action by farmers, ranchers, other individuals, agribusiness, railroads, crop and livestock interests and governmental agencies.

The Colorado Agricultural Statistics Service is a state-federal agency which gathers and publishes information on agricultural production, livestock inventories, prices, farm income and other economic indicators. These reports are based on surveys of farmers, ranchers and other agribusinesses. Please contact our office for information on subscribing to these reports.

About the Cover

Colorado's Biological Pest Control Program, administered by the Colorado Department of Agriculture's Division of Plant Industry, rears and releases natural pest control insect agents to aid in the control of nearly two dozen major weed and insect pests around the state.

Shown in the upper left is the *Macrocentrus ancylivorus*, a tiny wasp that has controlled the damaging Oriental fruit moth in the Palisade peach-growing area since 1948. The center photo shows the new Colorado Insectary Facility in Palisade. The Insectary, constructed in 1991, enabled the department to expand the state's total biological pest control program four-fold with existing staff and resources.
