AGRICULTURAL STATISTICS DISTRICTS

ASD by Number: Northwest and Mountains = 10; Northeast = 20; East Central = 60; Southwest = 70;
San Luis Valley = 80; Southeast = 90

COLORADO

The Centennial State, admitted to the Union in 1876, is the eighth largest state in area and has the highest average elevation. The highest point is at Mount Elbert, 14,433 feet above sea level, one of the 53 "fourteeners" rising above 14,000 feet. The lowest elevation is 3,350 feet in extreme eastern Prowers County.

Approximate Land Area: 66.3 Million Acres *
 Approximate Cropland Area: 10.5 Million Acres *
 Approximate Irrigated Area: 3.4 Million Acres *
 Number of Farms and Ranches (2001): 30,000
 Land in Farms and Ranches (2001): 31.3 Million Acres
 Average Size of Farm and Ranch (2001): 1,043 Acres

Farms by Type *

82% Individual
 10% Partnership
 7% Corporate
 1% Other

Farms By Tenure *

58% Full Owners
 30% Part Owners
 12% Tenants

Farms By Class *

57% Livestock & Poultry
 43% Crops

* 1997 Federal Census of Agriculture

Farm Marketing Receipts (2000):	\$ 4,561.3	Million
Livestock & Livestock Products:	\$ 3,332.4	Million (73.1% of the total)
Field, Fruit, & Vegetable Crops:	\$ 1,228.9	Million (26.9% of the total)

July 2002

Dear Friends,

Thank you for your contributions to this year's Colorado Agricultural Statistics book. Without the input of farmers, ranchers and producers, we couldn't accurately show how much you give to this state, the nation and the world. Many people don't realize that our farms and ranches encompass nearly half of this state's land and the contributions we've made to open space, food, water and wildlife habitat.

This year's drought conditions have heightened the public's awareness of our industry's volatility, especially in regards to Mother Nature. At times like these, the information you provide is even more important than at other times because this data impacts a wide range of issues ranging from crop insurance to federal emergency disaster aid.

If predictions hold true, the road ahead will continue to be a rough one for our farmers and ranchers this year. I encourage each of you to take the time out of your busy days to speak up on behalf of agriculture to your state legislators, your neighbors and your press. Together, our message will have more strength as we look towards the future of agriculture.

You are always welcome to call us at (800) 886-7683 and give us your comments. Thank you for supporting Colorado's agricultural industry.

Sincerely,

Don Ament
Colorado Commissioner of Agriculture

COLORADO SUNFLOWER

The 2002 *Colorado Agricultural Statistics* bulletin recognizes the State's newest commodity organization, Colorado Sunflower Administrative Committee (CSAC), which was approved in March 2001 by sunflower producers. The marketing order specifies a producer funded assessment of 3 cents per hundredweight to be collected by the "first handler". Producers who do not favor the check-off may request a refund of the paid assessment. The CSAC receives operational guidance from the National Sunflower Association and operates under regulatory and policy guidelines for Marketing Orders through the Colorado Department of Agriculture. Four districts were set up in Colorado and two farmer directors from each district have been elected for representation on CSAC. The directors will direct the distribution of the check-off funds which are to be used for research, education, and promotion activities only. Such things as crop rotational studies, herbicide and insect control studies, fertility and irrigation practices will assist producers in production plans while educational and promotional programs will assist in the marketing of the sunflower crop. Marketing order funds cannot be used for any lobbying or political interests.

Sunflower has been produced in Colorado for many years, but production was limited by distance from processing facilities that were located primarily in the east. Some of the early producers that experimented with flower production were frequently discouraged by low prices and/or their "learning experiences" in finding the correct production practices to obtain desired yields and to control diseases.

The production level for sunflower in the state was not of sufficient volume to be included in the official estimates data series by the United States Department of Agriculture's National Agricultural Statistics Service (NASS) until 1991 when just over 58.0 million pounds valued at nearly \$5.6 million were harvested from 60,000 acres. Sunflower acreage increased for four consecutive years following the 1991 crop and totaled 110,000 acres harvested for the 1995 crop which yielded over 103 million pounds valued at \$13.2 million. Acreage declined slightly for the 1996 crop to 107,000 acres but per acre yields, at 1,185 pounds per acre, averaged 247 pounds above the previous year resulting in a total crop of 126.8 million pounds. Prices were also the highest in 1996 since records began in 1991 or have been since 1996. The 1996 crop was valued at \$16.8 million. Acreage dropped again for the 1997 crop to just 80,000 acres but jumped to 150,000 acres in 1998 and reached a record high of 265,000 acres harvested in 1999. With per acre yields averaging 1,315 pounds per acre, the 1999 crop totaled nearly 348.5 million pounds, nearly 6 times larger than the first crop of record in 1991.

As production increased, a number of producers led by Alan Foutz and Dean Sonnenberg, long time sunflower producers in the Akron and Flemming areas, began working on programs to assist producers in the production and marketing of sunflower. As with numerous other commodity groups, the initial efforts were focused on the establishment of a marketing order to regulate the handling of sunflower grown in the state. Two public hearings were held in June 2000 by the Colorado Department of Agriculture to hear and record testimony from producers

BOARD MEMBERS

Garrett Mitchel

Jim Stahlecker

James Hume

Scott Scheimer

on the need for a marketing order for sunflower. Verbal and/or written testimony was accepted during each meeting. Producers not attending either of the public hearings were also given the opportunity to provide written testimony via mail or fax directly to the Colorado Department of Agriculture.

In early March 2001, referendum ballots were mailed to all known sunflower producers in Colorado to make an official determination as to whether or not a marketing order was to be established in Colorado. Each voting producer was required to sign a Certification Statement indicating that 20 acres or more of sunflower had been harvested or were intended to be harvested during any year since 1998 and that he/she was entitled to share in the proceeds of such sunflower production as owner-operator, cash tenant, standing rent or fixed rent tenant, landlord of a share tenant, share tenant or share-cropper. Marked Ballots were returned directly to the Colorado Department of Agriculture in an official envelope which was pre-printed with the Certification Statement on the outside of the envelope for the producer to sign prior to mailing.

Following voter approval for the marketing order, the CSAC Board members appointed by CDA Commissioner, Don Ament, quickly organized themselves by electing Leon Zimbelman from Keesburg as the first CSAC president. Early activities of the Board centered around the rules, regulations, bylaws and other aspects of setting up a sound basis for doing business as a commodity organization. The early commitment of check-off funds was towards research and promotion. The CSAC operating budget for 2001 was just over \$4,300 with a refund request rate of just 0.6 percent, fully reflecting the commitment and support of Colorado producers for their industry.

The new budget year started January 1, 2002. Colorado processors and most buyers from surrounding states have been cooperative about collecting check-off funds. Colorado producers who sell directly to an out-of-state market that does not collect the assessment are responsible for paying the assessment themselves.

Money for two research projects have been partnered for funding in 2002. The first is a "*Sunflower Head Moth Monitoring Project*" performed by Dr. Assefa Gebre-Amlak who is Colorado State University Cooperative Extension's pest management specialist for the Golden Plains Area located in Akron, Colorado. The second project is "*A Sunflower Water Use Study*" that will use irrigation treatments in both oil and convection type sunflower awarded to Joel Schneekloth, Colorado State University Cooperative Extension's water management specialist. These research funds are being leveraged at a current rate of \$1.00 to \$10.00. That is, for every dollar CSAC awards to these researchers, approximately \$10 was matched by other sources such as High Plains Sunflower Committee, the National Sunflower Association and others. Further research projects will be addressed as future funding allows.

Plans are also underway to host a Taiwan delegation of TV broadcasters who are promoting NuSun cooking oil to their viewers. They want to show their audience sunflower blooming in front of the Colorado Rockies. Hopefully, this event scheduled for late July will be covered by the Colorado media as well. CSAC and the National Sunflower Association are working together on this sunflower promotion project.

Other issues that affect Colorado sunflower producers are being given attention as well. These include herbicide registrations, crop insurance and sunflower market promotions. As success is achieved, the CSAC will communicate with producers through, *Colorado Sunflower News*, a periodic newsletter. The first issue was distributed in April of this year. The CSAC is eager to receive input from producers as to how they may best serve the needs of the sunflower industry in Colorado. The interim Executive Director for CSAC is Ron Meyer, Colorado State University Cooperative Extension Agent for the Golden Plains Area. Contact with CSAC may be made through Ron Meyer's office in Burlington (719-346-5571, rmeyer@coop.ext.colostate.edu) through Vickie Root in the Administrative Office at 1193 West 132nd Place in Denver (303-457-2097, csac@seqnet.et).

2001 CROP REVIEW

The combined value of production for small grain, hay, and late season row crops (excluding sugar beets) produced in 2001 totaled \$1.38 billion, up 21 percent from the comparable value of \$1.10 billion for the 2000 crops. The value of production from the state's four leading crops (hay, corn, potatoes and wheat) totaled \$1.26 billion for the 2001 crops and accounted for 91.2 percent of the total value from all crops (excluding sugar beets).

Hay was the states leading crop in value of production, increasing 36 percent from the previous year to \$472.2 million, the second highest level on record. Value of the 2001 all hay crop accounted for 34 percent of the total value from all crops produced excluding sugarbeets. The alfalfa hay crop was valued at a new record high of \$361.0 million, up 26 percent from 2000. The value of production for all other hay increased 81 percent to \$111.2 million, its third highest level since the all other hay data series was began in 1964.

Corn was the state's second leading crop produced in the state in terms of total value of production. The combined value of corn for grain and corn for silage was estimated at \$380.3 million for the 2001 crop, up 8 percent from the comparable value of \$351.0 million for the 2000 crop. The 149.8 million bushel corn for grain crop was valued at \$322.1 million, representing nearly 85 percent of the total corn value and 23 percent of the total value from all crops excluding sugar beets. The value of the 2.65 million tons of corn silage produced in 2001 was \$58.2 million, up 17 percent from the previous year.

Potatoes ranked third in terms of value of production with the 2001 crop value estimated at just under \$217.0 million, a new record high. Both the summer and fall crops produced in 2001 were significantly smaller than the previous year, but sharply improved prices are expected to boost the value of the two crops to more than twice as high as the previous year. Total value of production for the 21.36 million cwt fall crop, at a record high \$204.0 million, is expected to be nearly 2.5 times larger than the value of the 2000 crop. The 2001 summer potato crop of 1.92 million cwt was valued at \$13.0 million, down 14 percent from the previous year.

Wheat was reduced to a fourth place ranking in value of production for 2001 with a total value of \$190.0 million, down just 1 percent from the previous year. The value of the winter wheat crop, at \$181.5 million, was down 1 percent while the value of the spring wheat crop increased 7 percent to \$8.6 million. The 2001 winter wheat crop of 66.0 million bushels was down 3 percent from the 2000 crop and was the smallest crop since 1989. The 2001 spring wheat crop totaled 3.2 million bushels, down 2 percent from the previous year. Overall wheat prices for the 2001 crop are expected to average \$2.75 per bushel, up just 5 cents per bushel from a year earlier.

The 2001 **dry edible bean** crop, at 1.78 million cwt, was valued at \$36.1 million, up 16 percent from the previous year. Dry edible bean producers harvested the lowest acreage of that crop since 1906. However, much improved prices over the previous year more than offset the lowest production since 1983.

The 2001 **barley** crop of 8.56 million bushels has an estimated value of \$24.0 million, down 35 percent from the 2000 crop value of \$37.2 million. Producers harvested 24 percent fewer acres than a year earlier, experienced an 8.0 bushel decline in the average yield and received lower average prices for the latest crop. Each of these factors contributed to the decline in value.

Sugarbeet production totaled just 824,000 tons in 2001, down 32 percent from the 2000 crop of 1.2 million tons and the smallest crop since 1995. The 36,800 acres harvested was down 31 percent from the previous year, mostly the result of a 42 percent reduction in planted acres but also the result of some acres being put into the PIK program. No value has yet been determined for the 2001 crop.

The combined production of **grain and silage sorghum** had an estimated value of \$21.1 million for the 2001 crop, up 34 percent from the previous year. Sorghum for grain production in 2001 was up 39 percent from the 2000 crop as growers increased the harvested area and realized higher per acre yields. Total value of production of grain sorghum totaled \$17.0 million, up 38 percent from the previous year. Total value of the 2001 sorghum silage crop was estimated at just under \$4.1 million, up 18 percent from the value of the 2000 crop.

The 2001 crop of **sunflower** was valued at just under \$20.0 million, up 40 percent from \$14.37 million a year earlier. Production of oil varieties increased 15 percent to 136.8 million pounds and production of non-oil varieties increased 32 percent to 71.3 million pounds. Prices for the 2001 crop also averaged higher than the previous year. Value of the oil crop is estimated at \$11.4 million and the non-oil crop is placed at \$8.6 million, up 41 percent and up 38 percent, respectively from the 2000 crop..

Proso millet production in 2001 had a estimated value of \$16.1 million, up 18 percent from the value of the 2000 crop. Total production, at 8.05 million bushels, was nearly three times larger than the previous year's crop of 2.85 million bushels. However, prices for the 2001 crop averaged just \$2.00 per bushel, less than half the \$4.80 per bushel received for the 2000 crop which nearly offset the larger output.

The value of **oats** production in Colorado for the 2001 crop totaled \$4.0 million, down 4 percent from \$4.2 million for the 2000 crop. Total production, at 1.92 million bushels was 13 percent below the 2.21 million bushel crop produced in 2000.

Colorado producers seeded 2.35 million acres of winter wheat during the fall of 2001 for harvest in 2002, unchanged from the area seeded for the 2001 crop. Planting began on schedule under generally favorable moisture conditions. Germination and emergence was good and the crop got off to a good start. Subsequent warm and dry conditions since seeding, however had top soils very dry for entering the winter dormancy period. Snow cover was limited during the winter across the Eastern Plains. The continued lack of significant moisture during April and May combined with freezing temperatures in mid-May resulted in heavy abandonment of acreage. The May 1 production forecast of 54.0 million had declined to 41.4 million bushels as of June 1.

Field Crops: Acreage, production and value, Colorado, 2000-2001

Colorado Fruit Crops – 2001

Value of Production and Percent of Total

(Value in \$1,000)

FRUIT CROPS - 2001

Fruit production in Colorado during 2001 declined from the previous year for each crop with apple production being most affected by freezing temperatures early in the season. Utilized production of Colorado's four fruit crops had a combined value of nearly \$15.3 million for 2001, up 17 percent from \$13.1 million a year earlier. While total production for each crop was lower than the previous year, producers received higher prices per unit for each crop produced in 2001 than they received the previous year.

Peaches was the leading fruit crop produced in the state for the 2001 season in terms of value of production. The 18.0 million pounds produced was down 5 percent from the previous year but the value of the 17.5 million pounds of product utilized increased 18 percent from the previous year to \$9.45 million. Producers received an average price of 54 cents per pound for the latest crop compared with 47 cents per pound for the 17.0 million pounds of utilized production from the 2000 crop. The 2001 peach crop ranked second in terms of total production.

Apples ranked first in terms of total production but second in terms of value for the 2001 crop. Production totaled 26.0 million pounds in 2001, down 13 percent from the 30.0 million pounds produced for the 2000 crop. The utilized production of 25.0 million pounds was valued at \$4.61 million, up 22 percent from the \$3.77 million received for the 27.0 million pounds of utilized production from the 2000 crop.

The 2001 **pear** crop totaled 1,900 tons, down 37 percent from 3,000 tons produced in 2000. Although producers received \$500 per ton for their 2001 crop compared with \$375 per ton in 2000, the total value of the crop, at \$950,000, was down 14 percent from the previous year.

Tart cherry production in 2001 totaled 800,000 pounds, down 11 percent from 900,000 pounds in 2000. The 2001 crop was valued at \$260,000, up 23 percent as producers received an average of 32.5 cents per pound in 2001 compared with 26.5 cents per pound for the 2000 crop.

^{1/} In certain years, production includes some quantities not harvested because of economic conditions which are excluded in computing values.
^{2/} Beginning in 1998, price excludes any value added ingredients, processing or alteration of the raw product.

Colorado Vegetable Crops – 2001

Value of Production and Percent of Total

(Value in \$1,000)

VEGETABLE CROPS - 2001

Vegetable growers in Colorado harvested 9.52 million cwt of produce from seven fresh market crops during 2001 which had a total value of \$98.30 million, down 7 percent from the \$105.61 million received for the 9.42 million cwt of vegetables produced from the same crops in 2000. Production was higher than the previous year for cabbage, cantaloupe, lettuce, onions and sweet corn while smaller crops were produced for carrots and spinach. Acreage and production estimates are prepared for only seven vegetable crops. Numerous other vegetable crops are produced in the state but are not surveyed for acreage and production data.

Production of **dry storage onions** in 2001 totaled just over 4.1 million cwt, up 1 percent from the previous year. The harvested area increased 4 percent to 12,000 acres but the average yield of 345 cwt per acre was 10 cwt below the 2000 average. The quantity of onions expected to be marketed had an estimated value of \$43.2 million compared with \$45.3 million received for the 2000 crop. Onions represented 43 percent of the total production and 44 percent of the total value from the seven crops.

Carrots, the second largest vegetable crop produced in the state, accounted for 22 percent of the total production and 21 percent of the total value. Production declined 6 percent from 2000 to 2.11 million cwt. The 3,700 acres harvested was down 14 percent, but the average yield of 660 cwt per acre increased 110 cwt per acre from the previous year. Value of the 2001 crop, at just over \$21.1 million, was 2 percent below a year earlier.

Sweet corn was the third leading vegetable crop, accounting for 12 percent of the total production and 9 percent of the total value. Harvested acreage was up 6 percent to 8,300 acres; average yields were up to 140 cwt per acre; production increased 10 percent to 1.11 million cwt; but with sharply lower prices, the total value of the crop was down 30 percent to \$8.52 million.

Cabbage ranked fourth in production and third in value. Production increased 5 percent from 2000 to 990,000 cwt as a 200 acre increase in acreage harvested more than offset lower per acre yields. The value of production, at \$8.61 million, was up 13 percent from a year earlier as higher prices accompanied the larger output.

Lettuce had the fifth highest production and ranked fifth in value of production. Production increased 3 percent from year earlier to 700,000 cwt. However the value of production, at \$8.40 million, was 23 percent below the previous year as lower average prices more than offset the increased production.

Cantaloupe ranked sixth in both production and value. Harvested area was up 13 percent; per acre yields declined 4 percent; production was up 9 percent to 391,000 cwt; and value was up 25 percent to \$5.98 million. **Spinach** placed seventh with total production down 14 percent to 84,000 cwt. The 1,200 acres harvested was down 200 acres from 2000, but the average yield of 70 cwt per acre was unchanged. Lower prices resulted in the value of production being down by 14 percent to \$2.52 million.

1/ The data in the table represents production and sales only from operations with sales of \$100,000 or more. During 2000, there were 149 operations that had sales of \$10,000 or more. The **total covered growing area** for all 149 operations of 11,215,000 square feet consisted of the following: 517,000 square feet of glass; 7,492,000 square feet of fiberglass and other rigid greenhouses; 2,939,000 square feet of film plastic (single/multiple) greenhouses; 267,000 square feet of shade and temporary cover. In addition, plants were produced on 82 acres of **open ground**. The estimated value of sales at wholesale from all 149 operations with sales of \$10,000 or more totaled \$87,375,000 in 2000.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Value based on equivalent wholesale value of all sales for all crops except potted foliage plants which are based on net value of sales.

4/ The sum of the values for individual items may not add to the group total because some data is not published separately to avoid disclosure.

Colorado Agriculture from **A** to **Z**

Each year, Colorado produces fresh, quality products for millions of Colorado residents as well as consumers nationally and internationally. Here are just a few items grown in our Centennial state.

- ♦ Alfalfa Hay ♦ Alligators ♦ Anasazi Beans ♦
- ♦ Apples ♦ Apricots ♦ Barley ♦ Bison ♦ Broccoli ♦
- ♦ Cabbage ♦ Canola ♦ Cantaloupe ♦ Carrots ♦
- ♦ Cashmere ♦ Cattle ♦ Cherries ♦ Chickens ♦
- ♦ Chili Peppers ♦ Christmas Trees ♦ Corn ♦
- ♦ Cucumbers ♦ Dry Beans ♦ Eggs ♦ Emu ♦
- ♦ Fallow Deer ♦ Flowers ♦ Garbanzo Beans ♦
- ♦ Garlic ♦ Goat Cheese ♦ Herbs ♦ Hogs ♦ Honey ♦
- ♦ Horses ♦ Ice Cream ♦ Jalapeno Peppers ♦ Kale ♦
- ♦ Lettuce ♦ Milk ♦ Milo ♦ Mushrooms ♦ Nectarines ♦
- ♦ Oats ♦ Onions ♦ Ostrich ♦ Peaches ♦ Pears ♦
- ♦ Pinto Beans ♦ Plums ♦ Potatoes ♦ Proso Millet ♦
- ♦ Pumpkins ♦ Quinoa ♦ Rye ♦ Seed ♦ Sheep ♦ Sod ♦
- ♦ Sorghum ♦ Spinach ♦ Squash ♦ Strawberries ♦
- ♦ Striped Bass ♦ Sugar Beets ♦ Sunflowers ♦
- ♦ Tomatoes ♦ Trout ♦ Ungulates ♦ Vegetables ♦
- ♦ Watermelons ♦ Wheat ♦ Wine Grapes ♦ Wool ♦
- ♦ Xenias ♦ Yaks ♦ Zucchini ♦

Quick Facts About Colorado Agriculture

❖ Agriculture continues to be a vital part of Colorado's future, providing more than 105,000 jobs, 4.4 percent of the state's total, and bringing in \$16 billion.

❖ Between 1987 and 1997, 1.4 million acres of ag land was converted to other uses. This acreage is equal to an area 20 miles wide and 109 miles long (about the distance from Denver to Pueblo).

❖ To keep up with population growth, between now and 2050, the world must produce as much food as it has in the past 12,000 years.

❖ Agriculture helps feed the nation and the world, provides wildlife habitat, protects the environment and fuels the state economy.

Colorado agriculture is more than just food. Farmers and ranchers help create products in construction, manufacturing, health care, education, transportation and personal care.

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

Marketing year average prices, by commodity, Colorado, 1993-2001

2001 LIVESTOCK REVIEW

SUMMARY: Colorado farmers and ranchers had 3.05 million head of all cattle and calves on hand as of January 1, 2001, down 3 percent from the 3.15 million on hand one year earlier. The number of sheep and lambs was down 12 percent to 370,000 head. The December 1, 2001 inventory of all hogs and pigs declined 7 percent from a year earlier to 780,000 head. The December 1, 2001 inventory of all chickens was up 1 percent to 4.21 million birds. Colorado ranks 10th in the number of all cattle and calves, 5th in the number of all sheep and lambs, 15th in the number of all hogs and pigs, and 26th in the number of all chickens. The state also ranks as the 4th largest cattle feeder with marketings of more than two million head of fed cattle annually in each of the past 20 years. Colorado ranks 3rd in the number of market sheep and lambs. More than one million head of sheep and lambs have been slaughtered in the state in each of the last 22 years, making Colorado the Nation's largest producer of lamb.

The state's dairy cow numbers continue to increase while the number of operations with milk cows continues to decline. Disease and other problems within the bee industry during the last few years have reduced the number of colonies and honey production to record or near record lows. The state's trout producers have sold more than \$2 million of fish of various sizes each year since estimates were begun in 1989.

The total inventory value of the cattle, sheep, hogs, and chickens on hand at the beginning of the year (using the January 1 and December 1 reference dates) was \$2.22 billion, down 8 percent from the comparable value of \$2.42 billion one year earlier. The value per head averaged below the previous year for cattle, sheep and chickens but was higher than the previous year for all hogs.

Pasture and range feed conditions were rated as mostly fair at the start of the season in mid-March. Condition improved only into the mostly good to fair range with some statewide moisture in early May but hot and mostly dry weather through June and into early July continued to limit forage growth. With mid-July moisture, range feed condition showed some brief improvement but deteriorated again during more hot, dry weather during August. Late season moisture was never sufficient enough to replenish soil moisture or stimulate late season forage growth, and with a somewhat dry winter, early season grazing prospects for the 2002 season will be similar to the start of the 2001 season.

CATTLE AND CALVES: Colorado's farm and ranch operators had 3.05 million head of all cattle and calves on hand as of January 1, 2002, down 3 percent from the 3.15 million head on hand one year earlier. The total inventory included 1.21 million head of cattle and calves on feed for the slaughter market as of January 1, 2002, down 2 percent from the previous year. The on feed total at the beginning of this year represented 39.7 percent of the total inventory

compared with 38.0 percent one year earlier. More than 98 percent of the total number on feed (1,180,000 head) were in 165 feedlots that have a capacity of 1,000 head or more. In addition, there were 30,000 head of cattle and calves on feed on 120 operations having a feedlot with a capacity of less than 1,000 head. Total marketings of fed cattle from all feedlots in the state for 2001 totaled 2,535,000 head, down 7 percent from the record high 2,725,000 head marketed during 2000. The 25 largest feedlots marketed 76 percent of the annual total in 2001.

The total number of all cows and heifers that have calved, at 890,000 head, declined 4 percent from 930,000 head a year earlier. The number of beef cows declined 5 percent from the previous year to 799,000 head while the number of milk cows increased 1 percent to 91,000 head.

There were 910,000 heifers weighing 500 pounds and over on hand at the beginning of this year, down 1 percent from a year earlier. Of that total, 120,000 were being kept for beef cow replacement (down 14 percent), and 40,000 were for milk cow replacement (down 11 percent). The remaining 750,000 were other heifers (up 3 percent) of which 500,000 were on feed for the slaughter market in feedlots with a capacity of 1,000 head or larger.

The January 1, 2002 inventory also included 1.01 million head of steers weighing 500 pounds or more (up 1 percent) and 675,000 of those were on feed for the slaughter market in feedlots with a capacity of 1,000 head or larger. The number of bulls weighing 500 pounds or more declined 10 percent from a year earlier to 45,000 head. The number of calves (steers, heifers, and bulls under 500 pounds) on hand January 1, 2002, at 195,000 head, was down 24 percent from the 255,000 on hand the previous year. The 2001 calf crop in Colorado, at 840,000 head, was down 5 percent from the 2000 calf crop.

The number of operations with cattle at any time during 2001 was down 3 percent from the previous year to 14,600. The number of beef cow operations was down 4 percent to 11,000 and the number of milk cow operations in 2001 declined 7 percent to 800, down 60 operations from the previous year.

The total inventory value of all cattle and calves in Colorado as of January 1, 2002 was \$2.10 billion, 8 percent below the \$2.30 billion for January 1, 2001. The average value of \$690 per head represented a decline of \$40 per head from the previous year.

SHEEP AND LAMBS: The January 1, 2002 inventory of all sheep and lambs in Colorado totaled 370,000 head, down 12 percent from January 1, 2001. The number of breeding sheep and lambs was up 5 percent to 205,000 head. There was a 21 percent increase in the number of replacement lambs

to 29,000 head. The number of ewes one year old and older increased three percent to 170,000 head, while the number of rams one year old and older remained unchanged from last year at 6,000. The 2001 lamb crop, at 190,000 head, was down 5 percent from the 2000 lamb crop of 200,000.

The number of market sheep and lambs decreased 27 percent from a year earlier to 165,000. Of that total, 1,000 head were market sheep and 164,000 head were market lambs. There were 2,000 lambs weighing less than 65 pounds this year compared with 3,000 the previous year; 5,000 were in the 65-84 pound weight group, down from 7,000 last year; 17,000 weighed 85-105 pounds, down from 37,000 last year; and 140,000 weighed over 105 pounds compared with the 175,000 head in this weight group on January 1, 2001.

Wool production in Colorado during 2001 totaled 3.08 million pounds, down seven percent from 3.31 million pounds produced in 2000. The number of sheep and lambs shorn, at 430,000 head, was down 4 percent from 450,000 a year earlier. The average price paid for wool sold in 2001 was \$0.33 per pound for a total value of \$1.02 million, down 1 percent from \$1.03 million in 2000.

The January 1, 2002 inventory value of all sheep and lambs in Colorado was estimated at \$31.45 million, down 26 percent from a year earlier. The overall average for all sheep and lambs, at \$85.00 per head, was \$16.00 per head lower than a year earlier. The number of operations in the state with sheep was 2,000 for 2001, up from 1,900 operations a year earlier.

HOGS AND PIGS: Colorado's inventory of all hogs and pigs as of December 1, 2001 totaled 780,000 head, down 7 percent from a year earlier. This is the second December to December decline following fourteen consecutive years in which inventory numbers were unchanged or higher than the previous year. The latest inventory consisted of 175,000 breeding hogs and pigs, down 8 percent from the 190,000 on hand one year earlier. The number of market hogs and pigs, at 605,000, declined 7 percent from the previous year.

The 2001 pig crop in Colorado totaled 2.66 million head, down 10 percent from the previous year. There were 315,000 sows farrowed during the year, down 10 percent from last year. The average litter size of 8.4 pigs in 2001 was virtually the same as a year earlier.

There were just 400 operations with hogs in Colorado during 2001, down from 500 the previous year. The major portion of the Colorado hogs and pigs are under the control of a small number of large operations, following the trend in the United States.

The December 1, 2001 inventory value of all hogs and pigs was placed at \$76.44 million, up 6 percent from the

previous year. The average value, at \$98.00 per head, increased \$12.00 per head from the previous year and was enough to offset the smaller inventory.

CHICKENS AND EGGS - The all chicken inventory in Colorado as of December 1, 2001 totaled 4.21 million birds, up 1 percent from the 4.17 million on hand one year earlier. The number of layers increased 4 percent from the previous year to 3.56 million. Of that total, 1.56 million were one year old and older (up 8 percent) and 2.00 million were less than one year of age (up 1 percent).

The total inventory also included 598,000 pullets (down slightly from 601,000 as of December 1, 2000) that were less than 20 weeks of age. Of that total, there were 456,000 less than 13 weeks of age (up 15 percent) and 142,000 between 13 and 20 weeks of age (down 31 percent). The remaining inventory of 55,000 other chickens represented a decline of 65 percent from the previous year.

During the period December 1, 2000 through November 30, 2001, Colorado laying flocks produced 955 million eggs. This was down 3 percent from the 988 million eggs produced during the comparable period a year earlier. The number of layers averaged 3.57 million for the year with an average laying rate of 268 eggs per layer.

The December 1, 2001 inventory value of all chickens was estimated at just under \$8.0 million, down 20 percent from \$10.01 million a year earlier. The average value per bird, at \$1.90, was 50 cents per bird lower than the December 1, 2000 value per bird.

BEEES AND HONEY: The number of colonies in Colorado during 2001 declined 10 percent from a year earlier to 26,000. In addition, the total honey production of 1.43 million pounds for 2001 was down 18 percent as the yield per colony dropped from 60 pounds per colony in 2000 to 55 pounds per colony in 2001. The total value of the 2001 honey crop was just over \$1.00 million, down 7 percent from the previous year. The average price received for the 2001 crop was 70 cents per pound compared with 62 cents per pound for the 2000 crop. December 15, 2001 honey stocks of 529,000 pounds were down 45 percent from 957,000 pounds a year earlier.

TROUT: There were 15 operations in Colorado during 2001 which had trout sales totaling \$2.79 million and 19 operations that distributed trout valued at \$7.64 million. Producers marketed and/or distributed nearly 3.32 million pounds of foodsize, stocker, and fingerling fish during 2001 and received an average price of \$3.12 per pound. The value of foodsize fish totaled just under \$2.34 million. Producers received an average price of \$2.98 per pound for foodsize trout. The value of stockers totaled \$6.73 million. The average price received for stockers was \$2.88. The value of fingerlings totaled \$1.37 million. Producers received an average price of \$178.00 per 1,000 fish for fingerlings.

1/ Defined as fish being 12 inches or longer.

2/ Defined as fish being from 6-12 inches in length.

3/ Defined as fish being from 2-6 inches in length.

COLORADO COUNTY PROFILES 2001

The information contained on the following County Profiles pages is taken from the latest Census of Agriculture and the latest county data available for specific commodities.

The Census of Agriculture is taken every five years and provides the most comprehensive detailed information about the agricultural industry for each county. More details for a specific county are available on the Internet at: <http://www.nass.usda.gov/census> From that location, details can be obtained for every State and County in the Nation with options for viewing, printing and downloading of specific data. The next Census will be taken in 2003 covering the 2002 production year.

County data for specific commodities is prepared annually and is presented in the second column of the County Profile. More detailed information about the county data is available on other pages in this issue of *Colorado Agricultural Statistics*.

089	Otero
099	Prowers
101	Pueblo

^{1/} Broomfield County was established in November 2001 and was formed from portions of Adams County, Boulder County and Jefferson County. As with the City and County of Denver, the new area will be referenced as the City and County of Broomfield.. No Census data is available for Broomfield County and no county data for specific commodities will be shown for either Denver County or Broomfield County. While there is known to be a few agricultural operations in each of the two counties, as with a few other counties in the state, the agricultural data in the minor counties is combined with an adjoining county to avoid disclosure of individual operations.

County Profiles 2001
