COLORADO HAY DIRECTORY

Published by
The Colorado Department of Agriculture
Markets Division
700 Kipling Street, Suite 4000
Lakewood, CO 80215-8000
(303) 239-4114
www.coloradoagriculture.com

In cooperation with
Participating Colorado Hay Producers
Ag Biz Solutions, LLC
Colorado Hay and Forage Association
Colorado Tanners, Inc.
Colorado State University Extension
Hutchison Incorporated
ProAG – Morris Industries (USA) Inc.
Scimetrics Ltd. Inc.

Listings with the  logo are members of the Colorado Hay and Forage Association.

The Colorado Hay Directory is provided as a service to hay producers and buyers. A listing in this directory does not constitute an endorsement by the Colorado Department of Agriculture.

Every effort has been made to include all Colorado hay producers who direct market their hay. If you are not listed and would like to be included in the next edition, please complete and return the form in the back of this book or contact the Markets Division.

For current hay price information call:
U.S.D.A. Livestock and Grain Market News, (970) 353-9750 or (970) 353-8031.

**ATTENTION! HAY DEALERS
 DEALERS of FARM PRODUCTS
 (LIVESTOCK, HORSES, HAY & PRODUCE)**

Colorado state law (C.R.S. 12-16-104) requires that anyone who purchases farm products for processing or resale MUST have a valid Colorado Farm Products dealer license prior to the purchase of same. Failure to have a valid license is a Class 6 Felony.

For information contact the Colorado Department of Agriculture, Farm Products Section, 2331 West 31st Avenue, Denver, CO 80211 or call (303) 477-0054.

The Livestock and Grain Market News Branch (LGMN) of the Livestock and Seed Program (LSP) provides a timely, high-quality, unbiased service to help facilitate the orderly marketing and distribution of agriculture products.

The primary function of the Livestock and Grain Market News Branch is to compile and disseminate information that will aid producers, consumers, and distributors in the sale and purchase of livestock, meat, grain, hay and other related products nationally and internationally. LGMN information is free by visiting our website at www.ams.usda.gov/LSmarketnews.

COLORADO HAY AND FORAGE ASSOCIATION MEMBERS

The Colorado Hay & Forage Association is a non-profit organization established in 1987 for persons involved in all facets of the hay and forage industry in the state of Colorado. Since the organization's establishment, CHFA continues to sponsor regional seminars in locations around the state as well as an annual convention with industry speakers on subjects of interest for those involved in the industry.

At CHFA, our mission is to advance and develop the hay and forage industry throughout the state of Colorado by encouraging quality production and promoting Colorado's excellent hay and forage products.

Every member of the Colorado Hay & Forage Association receives the following: Colorado Hay Directory listing, CHFA Newsletter, association gift, CHFA display decal, framed membership plaque and AFGC's quarterly Forage Leader Magazine.

For more information on how to become a member contact:

Kaput-D

POCKET GOPHER BAIT

This product may only be used to control pocket gophers in manual, below-ground applications.

Keep Out of Reach of Children
CAUTION
Harmful if swallowed.
See back panel for additional precautionary statements.

ACTIVE INGREDIENT:
Diphacinone 2-(4-diphenylbutyl)-1,3-benzoxazole 0.005%
OTHER INGREDIENTS 99.995%
TOTAL 100.000%

USA Reg. No. 12884-1
EPA Reg. No. 7288-05-4

Kaput-D

Hay Sampling Tips

Courtesy of the Colorado Hay and Forage Association

Identify a single ‘lot’ of hay. A hay lot should be identified, which is a single cutting, a single field and variety, and generally less than 200 tons. Don’t mix cuttings or fields.

Choose a sharp coring device. Use a sharp coring device 3/8”-3/4” diameter. Never send in flakes or grab samples. Corer should have tip 90 degrees to shaft, not angled. Sharpen frequently. See list of probes at National Forage Testing Association web site, www.foragetesting.org.

Sample at random. Walk around stack - try to represent all areas of the stack. Don’t avoid bales or select certain bales. Choose bales at random.

Take enough cores. We recommend a minimum of 20 cores for a composite sample to represent a hay lot. Take more than 20 cores in highly variable lots, e.g. weedy fields.

Use proper technique. Sample butt ends of hay bale, between strings or wires, not near edge. Probe should be inserted at 90 degree angle, 12”-18” deep. On round bales, sample towards middle of bale. A greater number of core samples is better.

Not too big, not too small. Sample so that you produce about 1/2 pound of sample. Too-small samples don’t fairly represent the variation in the hay lot. Very big samples (common with large length or diameter probes) cannot be easily ground by the labs. If a probe is too big or small to produce about 1/2 pound in 20 cores - get a different one!

Handle samples correctly. Seal composite sample in a sealed plastic bag and protect from heat. Double bagging is beneficial, especially for DM measurements. Deliver to lab as soon as possible.

Never split samples without grinding. To test two labs, ask for your ground sample back to send to another lab. Unground samples are not a fair split. Use several samples to test average bias between labs. Don’t work with labs that are unwilling to do this.

Choose a National Forage Testing Association Certified Lab. Some labs have volunteered to participate in NFTA’s quality proficiency tests. To be certified, labs must match the true mean within an acceptable range of variation. NFTA labs have demonstrated their commitment to good results, are more likely to be interested in accuracy.

HAY QUALITY GUIDELINES FOR NATIONWIDE MARKET NEWS REPORTING

Livestock and Grain Market News branch has revised the hay quality guidelines for use in the nationwide Market News reporting program. These revised guidelines establish specific objective measurements of value attributes for each quality category of Alfalfa hay. The revised guidelines include all parameters commonly used to measure hay quality and also have all parameters in proper relationship to each other.

Nationwide uniformity of price information is the goal of revising these guidelines for quality designations. It is important for hay buyers in any part of the United States to be able to read any of USDA's hay reports and know the hay prices quoted are consistent from area to area for quality. So that producers and buyers from different areas, can be talking about hay in the report and feel confident they are talking about the same quality.

Market News reporters from several states formed the task force that collected information and input from hay and forage industry representatives, that information was used to form the revised quality designations and parameters numbers associated with each of the quality designations. USDA and State Departments of Agriculture market news reporters will be using the revised guidelines in market reporting across the country.

The following are the revised national hay guidelines on Alfalfa. Guidelines are also included for Grass Hay. Reporters will be using test parameter(s) prominent in their trade area, **visual characteristics**, as well as the **intent of sale (usage)** to determine hay quality.

Table 1: Alfalfa Guidelines (for domestic livestock use and not more than 10% grass)

Quality	ADF	NDF	*RFV	**TDN-100 %	**TDN-90%	CP
Supreme	<27	<34	>185	>62	>55.9	>22
Premium	27-29	34-36	170-185	60.5-62	54.5-55.9	20-22
Good	29-32	36-40	150-170	58-60	52.5-54.5	18-20
Fair	32-35	40-44	130-150	56-58	50.5-52.5	16-18
Utility	>35	>44	<130	<56	<50.5	<16

*RFV calculated using the Wis/Minn formula. **TDN calculated using the western formula. Quantitative factors are approximate, and many factors can affect feeding value. Values based on 100% dry matter (TDN showing both 100% & 90%). Guidelines are to be used with visual appearance and intent of sale (usage).

Table 2: Grassy Hay Guidelines

Quality	Crude Protein Percent
Premium	Over 13
Good	9-13
Fair	5-9
Utility	Under 5

Quantitative factors are approximate, and many factors can affect feeding value. Values based on 100% dry matter.
End usage may influence hay price or value more than testing results.

Hay Quality Designation's Physical Descriptions:

Supreme: Very early maturity, pre-bloom, soft fine stemmed, extra leafy. Factors indicative of very high nutritive content. Hay is excellent color and free of damage.

Premium: Early maturity, i.e. pre-bloom in legumes and pre-head in grass hays, extra leafy and fine stemmed-factors indicative of a high nutritive content. Hay is green and free of damage.

Good: Early to average maturity, i.e., early to mid-bloom in legumes and early head in grass hays, leafy, fine to medium stemmed, free of damage other than slight discoloration.

Fair: Late maturity, i.e., mid to late-bloom in legumes, head-in grass hays, moderate or below leaf content, and generally coarse stemmed. Hay may show light damage.

Utility: Hay in very late maturity, such as mature seed pods in legumes or mature head in grass hays, coarse stemmed. This category could include hay discounted due to excessive damage and heavy weed content or mold. Defects will be identified in market reports when using this category.
