Hutchison Incorporated

ProAG – Morris Industries (USA) Inc.

Scimetrics Ltd. Inc.

The Colorado Hay Directory is provided as a service to hay producers and buyers. A listing in this directory does not constitute an endorsement by the Colorado Department of Agriculture.

Every effort has been made to include all Colorado hay producers who direct market their hay. If you are not listed and would like to be included in the next edition, please complete and return the form in the back of this book or contact the Markets Division.

**For current hay price information call:**

E:mail: [Greeley.LGMN@ams.usda.gov](mailto:Greeley.LGMN@ams.usda.gov)

The Livestock and Grain Market News Branch (LGMN) of the Livestock and Seed Program (LSP) provides a timely, high-quality, unbiased service to help facilitate the orderly marketing and distribution of agriculture products.

The primary function of the Livestock and Grain Market News Branch is to compile and disseminate information that will aid producers, consumers, and distributors in the sale and purchase of livestock, meat, grain, hay and other related products nationally and internationally. LGMN information is free by visiting our website at [www.ams.usda.gov/L\\_Smarketnews](http://www.ams.usda.gov/L_Smarketnews).

# Hay Sampling Tips

*Courtesy of the Colorado Hay and Forage Association*

**Identify a single ‘lot’ of hay.** A hay lot should be identified, which is a single cutting, a single field and variety, and generally less than 200 tons. Don't mix cuttings or fields.

**Choose a sharp coring device.** Use a sharp coring device 3/8"-3/4" diameter. Never send in flakes or grab samples. Corer should have tip 90 degrees to shaft, not angled. Sharpen frequently. See list of probes at National Forage Testing Association web site, [www.foragetesting.org](http://www.foragetesting.org).

**Sample at random.** Walk around stack - try to represent all areas of the stack. Don't avoid bales or select certain bales. Choose bales at random.

**Take enough cores.** We recommend a minimum of 20 cores for a composite sample to represent a hay lot. Take more than 20 cores in highly variable lots, e.g. weedy fields.

**Use proper technique.** Sample butt ends of hay bale, between strings or wires, not near edge. Probe should be inserted at 90 degree angle, 12"-18" deep. On round bales, sample towards middle of bale. A greater number of core samples is better.

**Not too big, not too small.** Sample so that you produce about 1/2 pound of sample. Too-small samples don't fairly represent the variation in the hay lot. Very big samples (common with large length or diameter probes) cannot be easily ground by the labs. If a probe is too big or small to produce about 1/2 pound in 20 cores - get a different one!

**Handle samples correctly.** Seal composite sample in a sealed plastic bag and protect from heat. Double bagging is beneficial, especially for DM measurements. Deliver to lab as soon as possible.

**Never split samples without grinding.** To test two labs, ask for your ground sample back to send to another lab. Unground samples are not a fair split. Use several samples to test average bias between labs. Don't work with labs that are unwilling to do this.

**Choose a National Forage Testing Association Certified Lab.** Some labs have volunteered to participate in NFTA's quality proficiency tests. To be certified, labs must match the true mean within an acceptable range of variation. NFTA labs have demonstrated their commitment to good results, are more likely to be interested in accuracy.
