## OVERVIEW

Colorado Measures of Academic Success (CMAS) is a newly developed standards-based assessment designed to measure what students should know and be able to demonstrate at each grade level. At the elementary and middle school levels, it was first administered in spring 2014 and standards were subsequently set in July in order to aid the interpretability of scores. For high school, the first administration was in fall 2014 and standards were set in February 2015. The purpose of this document is to provide a detailed report of the standard setting process for the fall 2014 administration of the high school assessments. It should be noted that while science standards were approved by the Colorado State Board of Education for 2014 only, social studies standards were not.

CMAS is aligned with the Colorado Academic Standards (CAS) for Science and Social Studies (located at http://www.cde.state.co.us/coscience/statestandards and http://www.cde.state.co.us/cosocialstudies/statestandards, respectively). Each test contains selected-response items (SR), a variety of technology-enhanced items (TEI), and constructedresponse items (CR). The subject and grade combinations for CMAS are shown in Table 1. The first operational administration for grades 4, 5, 7, and 8 was in April 2014 and for high school in November of 2014. The majority of students took the assessment online with the paper test serving as an accommodated form for a very small percentage of students.

Table 1: CMAS Subjects and Grades

|  | Grade |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{H S}$ |
| Science |  | X |  | X | X |
| Social Studies | X |  | X |  | X |

To support the interpretation of student results, student performance on the CMAS is described in terms of four performance levels: Limited Command, Moderate Command, Strong Command, and Distinguished Command. The standard setting meeting was held in order to obtain cut score recommendations to assist the state in delineating thresholds for each of these four levels.

The methodology implemented was the commonly-used Bookmark, or Item-Mapping, method (Lewis, Mitzel, Green \& Patz, 1999). This method is an item response theory-based item mapping procedure and makes use of an Ordered Item Book (OIB)—a collection of items ordered by difficulty. Panelists use performance level descriptors (PLDs) to conceptualize "threshold" students (those students just barely in a particular performance level) in order to determine the appropriate location of each cut score.

## PREPARATION FOR STANDARD SETTING

Preparation for the standard setting started months before the actual meeting. This section provides details about the selection of panelists, the development of PLDs, the various materials that were created for the meeting, and the training of those who facilitated the meeting and analyzed the data.

## Panelist Selection and Composition

The standard setting meeting included 14 panelists for each grade grouped in tables of four or five. Panelists were selected for participation by the Colorado Department of Education (CDE) to represent the state in terms of gender and ethnicity as well as relevant demographic characteristics (e.g., school size, geographic location). The majority of panelists for a given grade were teachers but in addition, there was administrator, Special Education, English Learners (EL), and higher education representation at each grade level. Appendix A describes panel composition for each grade level.

## Development of PLDs

PLDs are an important tool for the Bookmark method. Prior to the standard setting meeting, PLDs were developed by Pearson content experts and then reviewed and edited by a committee of Colorado educators. PLDs are provided in Appendix B.

## Creation of Materials

A standard setting meeting requires a considerable amount of materials, some paper-based and some electronic. This section outlines the primary materials and points to where the documents are provided.

## Slides and Script

There were two main components of the meeting: the general session and the breakout sessions. For the general session, a PowerPoint presentation was created to provide a general overview of the meeting for all panelists in a large-group setting.

For the breakout sessions (where each grade/subject is in a separate room), slides and accompanying detailed scripts were developed. Because it is important that the process be standardized for each grade/subject, slides and associated script allow for the breakout sessions to be run in parallel fashion.

## OIB

Since CMAS is primarily an online assessment and contains item types that require an online format to fully experience them (i.e., technology-enhanced items and simulations), the OIB was presented to panelists online. Operational items that appeared on the fall 2014 assessment were included in the OIB along with a handful of field test items to fill any gaps. Each item was presented on a separate page in item difficulty order according to its scale location using a response probability (RP) of 0.67. In addition, a metadata spreadsheet was provided indicating each page number, item ID, item type, content alignment, key (for multiple-choice items), and maximum points. In addition, space was provided for panelists to record their "yes" or "no" for each round. The metadata spreadsheet for each grade can be found in Appendix C.

## Rubrics and Sample Responses

A booklet of rubrics and sample responses was created for each grade. The booklet included the rubric for each constructed-response item along with a sample response of each score point.

## P-value Reports

As part of the feedback provided to panelists after Round 1 recommendations, p-value reports were provided. For one-point items, the p-value provided indicates the percentage of students who got the item correct during the fall 2014 administration. For constructed-response items, the p-value indicates the percentage of students who earned at least a particular score point during the fall 2014 administration. P-value reports for each grade can be found in Appendix D.

## External Data

As part of the feedback provided to panelists after Round 2 recommendations, some external data were shared with panelists to provide a point of reference. The performance of Colorado students on the ACT in relation to the college readiness benchmark were provided. For science, science data were provided; for social studies, reading data were provided since there is no social studies component of the ACT. Data can be seen in Appendix E.

## Forms

Numerous forms were created for panelists to complete and include the following:

- Panelist Information Sheet: While some demographic information was already included in the database of Colorado educators, the panelist information sheet was used to collect some additional information.
- Readiness Survey: A brief questionnaire was provided to panelists before each round of the standard setting process, in which panelists are asked to verify that they understand the task at hand and are ready to move forward. The readiness survey is provided in Appendix F.
- Bookmark Recommendation Form: This form was used to collect a panelist’s recommendations for each round. It is provided in Appendix G.
- Standard Setting Evaluation: An evaluation was administered after the standard setting had been completed to gather information on panelists' perceptions on the meeting. The evaluation and its results are provided in Appendix H.

## Training of Facilitators and Data Analysts

Several meetings were held with the facilitators and data analysts to properly train and prepare them for the meeting. For the facilitator training, the breakout session slides and script were walked through in detail and discussed to ensure that all four facilitators were in sync in terms of how to lead the panelists through the standard setting process and the logistics of the meeting. For data analysts, it was important the spreadsheets be set up properly to ensure accurate and
rapid analysis of panelists’ recommendations. Although not specifically trained for the meeting, it should be noted that content specialists attended the meeting and were available to answer any content-related questions.

## STANDARD SETTING MEETING ACTIVITIES

The CMAS standard setting took place February 16-17. During the two-day meeting, panelists were responsible for placing the bookmark in the OIB to establish proposed standards, reviewing feedback data, and making final cut-score recommendations. The specific procedures involved in the implementation of the Bookmark method are described in the sections that follow.

## General Session

The meeting began with a session in which all panelists from both subjects convened to listen to introductory comments and receive directions for the meeting. First, a representative from CDE provided the context for the meeting by presenting details on CMAS and describing the importance of standard setting in the assessment development process. Next, a member of Pearson Psychometric Services staff (Dr. Jennifer Beimers) provided a brief overview of the Bookmark standard setting process including the rationale behind the procedure and the types of decisions panelists will be asked to make. Once the general overview was completed, panelists were dismissed to their designated committee rooms.

## The Standard Setting Process

The standard setting tasks took place over the course of two days as outlined in this section of the report. Each grade was facilitated independently but the same standardized process was used across all grades.

## Review and Discuss PLDs

After introductions and general housekeeping tasks were completed, each panelist was provided with a document listing the PLDs (Appendix B). Panelists were asked to review the labels and specific PLDs in light of the content frameworks.

## Development of Threshold Descriptors

Panelists were reminded that the main purpose behind reviewing and discussing PLDs was to operationalize the performance levels to support the standard setting task. The focus was on the threshold student: those who "just barely" make it into a particular performance level. The goal was to gain a common understanding so that when panelists were asked to think about a threshold student, they were all in agreement regarding what such a student can/cannot do.

To develop the threshold descriptors, panelists were asked to identify concepts and skills in a given PLD that should describe the threshold student. Questions that helped guide the discussion included:

- Do any concepts and skills listed in the PLD do this outright?
- How could you modify or constrain the PLD to better reflect the limited capabilities of the "just-barely" student?
- What should the "threshold" student be able to do relative to these particular skills?

Each table worked together to create specific descriptions that separate students who are just barely in a particular performance level (threshold students) from students who are at the top of the previous performance level. Once drafted at the table level, the entire room shared and discussed their threshold descriptors and agreed on a final set of threshold descriptors for their specific grade. Once final, the threshold descriptors were printed for each panelist to use throughout the remainder of the standard setting activity.

## Review Test Questions

Panelists were given time to review the OIB in order to familiarize themselves with the nature of the assessment. This provided an opportunity for panelists to gain an appreciation of the assessment experience, understand the manner in which the content standards are operationalized in test items, and get an overall feel for the difficulty of the test. Panelists were instructed to work on their own to review each of the items in the OIB keeping in mind the concepts and skills required to answer each item correctly. Upon completion, scoring keys for multiple-choice items were provided so that panelists could score their work.

## Standard Setting Training and Practice Round

Panelists received detailed training on how to place a bookmark in the ordered item book in order to determine the transition from one performance level to the next. For each performance level, panelists were instructed to work through the OIB to determine the last "yes" page where all preceding items would define the concepts and skills that a just barely Strong Command student, for example, is expected to know. It is equivalent to the place in the OIB that accurately divides the items into those that all students at a given level SHOULD, with $2 / 3$ chance or greater, answer correctly from those that they are not expected to answer correctly. The following outlines the specific steps that were to be followed for the "Moderate Command" cut.

1. Think about the skills that characterize a threshold "Moderate Command" student.
2. Start on page 1 of OIB and ask yourself, "SHOULD a threshold 'Moderate Command' student have at least a $2 / 3$ chance of answering this item correctly?"
3. If yes, move on to the next item.
4. Do this until you get to your first "no."
5. Continue on to a couple more items to make sure these are also "no."
6. Record page associated with last "yes" on your recommendation form.

The same steps were repeated for "Strong Command" and "Distinguished Command." Panelists were reminded that since the content standards are new, they may not yet be fully implemented so it was important that panelists consider threshold students who have been instructed in the new standards.

Following the training session, panelists engaged in a practice round of standard setting using a small set of sample items. The purpose of this exercise was to have panelists get a chance to
practice placing of their bookmarks and to make sure everyone is comfortable with the task. This practice and training session was followed by a brief group discussion where panelists discussed their ratings and the general process employed. Based on discussion, facilitators provided additional instruction/guidance as needed.

## Readiness Survey

To evaluate whether the training activities successfully helped panelists understand the task, a readiness survey was completed by each panelist prior to each round of recommendations (Appendix F). The readiness survey asked panelists to report if they understood the task Pearson facilitators asked of them as well as any feedback data provided. Results of the readiness survey indicated that panelists unanimously understood their tasks for each round and the data presented.

## Round 1

After completing the readiness survey, the panelists began Round 1 of the standard setting. Panelists worked independently to determine which items in the OIB separated the performance levels. In reviewing each item, panelists were reminded to ask themselves, "Given the skill required to answer this item correctly, SHOULD a threshold level student answer the item correctly two thirds of the time?" Panelists recorded the page of their recommendation for each level on their Bookmark Recommendation Form (Appendix G), submitted it to the facilitator, and were dismissed for the day.

## Round 1 Feedback

To begin Day 2, panelists were provided with several pieces of feedback information. With each piece of data, the panelists were reminded that the data was intended to inform their decisions, but not to dictate them.

First, each table was provided with a summary of their table's recommendations including the minimum, maximum, mean, standard deviation, and median. Panelists were instructed to consider how close their recommendation is to that of others in the group and discuss why they placed the bookmark where they did. Table-level discussions were had around this information and then the facilitators projected the same statistics at the room level. In addition, a bar chart reflecting the panelist agreement was displayed. During both table-level and room-level discussions, the group tried to determine the factors underlying the variability in recommendations by discussing the items associated with and around the recommended cuts. While panelists were encouraged to reassess their cut recommendations based on these discussions, the main purpose of this activity was to allow panelists to think through and discuss the recommendation process; it was not to arrive at a consensus.

The second report provided to the panelists before Round 2 was the item difficulty (p-values) report (Appendix D). For selected-response items, this report showed the percentage of fall 2014 examinees who answered each item correctly; for constructed-response items, it showed the percentage of fall 2014 examinees who earned at least a particular score point. This report was intended to be used to validate panelists’ perceptions of item difficulty. Panelists were cautioned not to modify their ratings based on the item difficulty data alone.

## Round 2

After discussing Round 1 feedback and completing the readiness survey for Round 2, panelists worked independently to re-evaluate their recommendations and decide whether they wanted to revise them. Panelists then recorded their Round 2 recommendations on their Bookmark Recommendation Form and submitted them to the facilitator.

## Round 2 Feedback

Three pieces of feedback data were provided based on Round 2 recommendations. As before, panelists were reminded that their recommendations should be grounded in content and what students should know and be able to do, not what they can do or are currently doing.

First, panelists received the same summary statistics as in Round 1, but this time they were based on the page recommendations from Round 2. Table-level and group-level discussions were again conducted around these data.

Second, impact data were provided. Based on Round 2 recommendations, graphs indicating the percentage of students who would score in each of the performance levels was displayed. Overall fall 2014 test taker impact was provided but it was also disaggregated by ethnicity (African American, Hispanic, White, and other), gender, socio-economic status (SES), students in special education, and students who are ELs. Panelists were asked to discuss whether the percentage of students falling in each performance level meets their expectations given what they know about the population of students tested and the test content. Impact data were intended to provide a reasonableness check but panelists were reminded that any modifications to cut score recommendations should be based in content and not driven by impact data.

Third, external benchmark data were provided. To serve as a point of reference, the percentage of Colorado students meeting the college readiness benchmark was provided (Appendix E). For social studies, ACT reading information was shared; for science, ACT science data were displayed. These data were discussed at the room level.

## Round 3

After discussing Round 2 feedback and completing the readiness survey for Round 3, panelists worked independently to again re-evaluate their recommendations and decide whether they wanted to revise them. Panelists then recorded their Round 3 recommendations on their Bookmark Recommendation Form and submitted them to the facilitator.

## Evaluation

After all panelists were finished and final results were determined, panelists were asked to complete a short evaluation. The evaluation asked about panelists’ level of comfort with the standard setting procedure, their understanding of the performance levels, and their satisfaction with final cut scores. The evaluation and results can be found in Appendix H. Upon completing the evaluations, panelists were thanked for their time and participation and dismissed.

## Round 3 Recommended Cut Scores

This section provides results from the standard setting meeting. Table 2 shows the median of panelists' recommendations by round. There was relatively little fluctuation across rounds.

Table 2. Panelist Recommendations by Round

|  |  | Moderate <br> Command | Strong <br> Command | Distinguished <br> Command |
| :---: | :---: | :---: | :---: | :---: |
| Science | Round 1 | 14 | 39 | 74 |
|  | Round 2 | 13 | 37 | 71 |
|  | Round 3 | 9 | 37 | 67 |
|  | Round 1 | 23 | 57 | 76 |
|  | Round 2 | 25 | 60 | 75 |
|  | Round 3 | 22 | 58 | 75 |

Based on Round 3 recommendations, Figures 1 and 2 show the percentages of students who would fall into each performance level based on the fall 2014 administration. For both subjects, the majority of students scored in the Limited Command and Moderate Command performance levels. A very small percentage of students scored in the Distinguished Command performance level.

Figure 1. Round 3 Impact for Social Studies

Figure 2. Round 3 Impact for Science

Based on the recommended science and social studies cut scores, the resulting scale score ranges for each performance level can be seen in Table 3.

Table 3. Scale Score Ranges based on Recommended Cut Scores

|  | Limited <br> Command | Moderate <br> Command | Strong <br> Command | Distinguished <br> Command |
| :--- | :---: | :---: | :---: | :---: |
| Social Studies | $300-593$ | $594-723$ | $724-810$ | $811-900$ |
| Science | $300-542$ | $543-672$ | $673-773$ | $774-900$ |

## POST STANDARD SETTING ACTIVITIES

The cut score recommendations from the standard setting meeting were then presented to the State Board of Education along with a set of modified cut scores. The modified cut scores were derived by adjusting the panelists' recommended cut scores down by a conditional standard error of measurement. On the theta metric, the conditional standard error at each particular cut was subtracted from each respective theta cut score. These adjusted cuts were approved by the State Board of Education for the Science assessment only.

Figure 3. Impact for Adjusted Science Cut Scores

Based on the approved science cut scores, the resulting scale score ranges for each performance level can be seen in Table 4.

Table 4. Scale Score Ranges for Approved Cut Scores

|  | Limited <br> Command | Moderate <br> Command | Strong <br> Command | Distinguished <br> Command |
| :--- | :---: | :---: | :---: | :---: |
| Science | $300-542$ | $543-672$ | $673-773$ | $774-900$ |

## APPENDIX B: PERFORMANCE LEVEL DESCRIPTORS

## Colorado Measures of Academic Success: High School Social Studies Performance Level Descriptors (PLDs)

Students demonstrate mastery of social studies concepts and skills aligned to the Colorado Academic Standards at various performance levels. The performance level descriptors are organized in a manner that assumes students demonstrating higher levels of command have mastered the concepts and skills within the lower levels. For example, a student at Moderate Command has also mastered the concepts and skills at Limited Command.

## At Distinguished Command, a student typically can

- construct and defend positions or make predictions about topics in U.S. and world history by gathering, analyzing, and evaluating information from primary and secondary sources, distinguishing among fact, opinion, and reasoned judgment;
- analyze significant events in world and United States history;
- analyze the interconnectedness of the world, including how the movement of people, goods, and ideas can enrich cultures or create tensions, and how the uneven distribution of resources can lead to conflict, competition, or cooperation;
- analyze economic goals and predict how scarcity of resources affects choices made by individuals, businesses, and governments;
- formulate and defend civic positions by researching issues and critiquing media and government sources; and
- assess the effectiveness of executive actions, the legislative process, and the justice system in preserving and promoting the ideals of the U.S. system of government.

## At Strong Command, a student typically can

- analyze the significance of ideas as powerful forces throughout history, such as the impact of major religions, philosophies, political thought, and technological innovations;
- analyze primary and secondary social studies sources to synthesize information and draw conclusions;
- explain and interpret geographic variables-such as climate, terrain, population density, and natural resources-that influence the interactions among people, places, and environments;
- assess and explain the relationship between economic goals and policies and the allocation of scarce resources; and
- explain and evaluate how the founding documents-such as the Constitution and the Bill of Rights- embody the principles of democracy and values such as freedom, security, equality, and individual rights.

## At Moderate Command, a student typically can

- summarize the causes, consequences, and outcomes of significant events and/or actions of significant individuals in U.S. and world history, including how conflict, compromise, and cooperation have shaped issues of unity and diversity;
- interpret and draw conclusions from maps, graphs, tables, and charts;
- explain how government activities, such as taxation and monetary policy, affect the economic choices of individuals and businesses; and
- explain how individuals and groups monitor and shape public policy at various levels of government.

## At Limited Command, a student typically can

- discuss the significance of events and individuals in U.S. and world history;
- gather data and locate information on maps, graphs, tables, and charts;
- identify the economic choices that affect government, business, and personal financial planning decisions; and
- identify the structures and functions of various levels of government in the United States.

Note: The time frame for U.S. history is from approximately Reconstruction to the present, and world history is from approximately the Renaissance to the present.

# Colorado Measures of Academic Success: High School Science <br> Performance Level Descriptors (PLDs) 

#### Abstract

Students demonstrate mastery of science concepts and skills aligned to the Colorado Academic Standards at various performance levels. The performance level descriptors are organized in a manner that assumes students demonstrating higher levels of command have mastered the concepts and skills within the lower levels. For example, a student at Moderate Command has also mastered the concepts and skills at Limited Command.

## At Distinguished Command, a student typically can

- justify and predict the effects of force and mass on an object's motion, discuss conflicting results, and identify force pairs in interacting objects;
- using historical models, justify an evidence-based explanation for the current model of the atom and predict the amount of product formed in a nuclear or chemical reaction;
- justify an evidence-based explanation that demonstrates how ecosystems follow the laws of conservation of matter and energy;
- use evidence to develop a logical argument explaining how specialized tissues are formed, cloning occurs, and how environmental toxins cause genetic mutations;
- explain how genetic changes over time are the result of interactions within populations, heritability, genetic variation, and differential survival and reproduction;
- use data to analyze how forces and energies beyond Earth's have influenced the history of the universe and provide feedback on the validity of alternative explanations;
- analyze evidence to answer questions regarding changes to Earth, including those that result in shifts in climate and natural hazards; and
- predict impacts of resource exploration, development, and consumption and design a plan to reduce resource use.

## At Strong Command, a student typically can

- explain how force and mass affect the acceleration of an object;
- identify reactants, predict products, and balance equations in chemical and nuclear reactions;
- analyze evidence to describe energy transformations and conservation;
- evaluate scenarios regarding human population growth and sustainability;
- differentiate between conditions for optimal enzyme and photosynthetic activity;
- model and describe how homeostasis is maintained in cells, organs, and organisms;
- analyze how organisms use passive and active transport;
- explain the processes of DNA replication, transcription, translation, and gene regulation;
- model relationships among organisms demonstrating common ancestry;
- infer the history of the universe, solar system, and Earth using evidence from past events;
- explain the historical development of the theory of plate tectonics; and
- use data to evaluate impacts of resource exploration, development, and consumption, and draw conclusions about sustainable use.

At Moderate Command, a student typically can

- use evidence to demonstrate how mass and distance affect the force of gravity between objects;
- develop models of atoms, molecules, elements, compounds, pure substances, and mixtures and identify the types of bonds that occur in molecules and compounds;
- use data to measure and compare energy transformations and efficiency;
- model how carbon, nitrogen, phosphorus, and water cycle in an ecosystem;
- recognize the importance of keystone and non-native species in an ecosystem;
- identify the relationship between photosynthesis, cellular respiration, and energy;
- differentiate between and give examples of passive and active transport;
- explain the relationship between genes and proteins and provide examples of how mutations can affect organisms;
- describe how changes in genetic traits lead to population adaptations;
- explain how external forces and energies influence Earth;
- recognize the interactions within Earth's geosphere, atmosphere, hydrosphere, and biosphere, including those that result in shifts in climate and natural hazards; and
- compare and contrast the costs and benefits of using resources provided by Earth and the Sun.

## At Limited Command, a student typically can

- use Newton's laws to describe the relationship among forces, masses, and the motion of objects;
- identify the properties of matter and understand that mass and energy are conserved;
- investigate energy transformations and the conservation of energy;
- describe how energy flows through trophic levels;
- identify primary and secondary succession in an ecosystem;
- identify biomolecules, their building blocks, and their functions;
- interpret data to identify transport mechanisms;
- recognize that DNA controls traits;
- identify how genetic traits can be passed down through generations;
- use media and technology to investigate the universe, solar system, and Earth;
- use data to describe the theory of plate tectonics; and
- identify how factors interact to determine climate.

## APPENDIX F: READINESS SURVEY

# Colorado Measures of Academic Success (CMAS) Standard-Setting Round Readiness Survey 

## Panelist ID:

$\qquad$

Instructions: Please circle your response to the following questions.

| Round 1 |  |  |
| :--- | :---: | :---: |
| I understand that my task for Round 1 is to use my content expertise, my <br> experience with Colorado students, the threshold student descriptors, and <br> the ordered item book to make cut score recommendations. To make my <br> recommendation, I will indicate the last "yes" page on the recommendation <br> sheet. | No | Yes |
| I am ready to begin Round 1. | No | Yes |

| Round 2 |  |  |
| :--- | :--- | :--- |
| I understand that my task for Round 2 is to use my content expertise, my <br> experience with Colorado students, the threshold student descriptors, and <br> the ordered item book to make cut score recommendations. To make my <br> recommendation, I will indicate the last "yes" page on the recommendation <br> sheet. | No | Yes |
| I understand the panelist feedback data that were presented from Round 1. | No | Yes |
| I understand the item difficulty data (i.e., p-values) that were provided. | No | Yes |
| I am ready to begin Round 2. | No | Yes |

| Round 3 |  |  |
| :--- | :---: | :---: |
| I understand that my task for Round 3 is to use my content expertise, my <br> experience with Colorado students, the threshold student descriptors, and <br> the ordered item book to make cut score recommendations. To make my <br> recommendation, I will indicate the last "yes" page on the recommendation <br> sheet. | No | Yes |
| I understand the impact data that were presented from Round 2. | No | Yes |
| I am ready to begin Round 3. | No | Yes |

## APPENDIX G: BOOKMARK RECOMMENDATION FORMS

## Bookmark Recommendation Form

Directions: For each level, write down the page number corresponding to the last YES item. No cells should be left blank within a given round.

Panelist ID: $\qquad$

Table Number: $\qquad$

| :---: | :---: | :---: | :---: |
|  | Moderate <br> Command | Strong <br> Command | Distinguished <br> Command |
| Round 1 |  |  |  |
| Round 2 |  |  |  |
| Round 3 |  |  |  |

## APPENDIX H: STANDARD SETTING EVALUATION

# Colorado Measures of Academic Success (CMAS) <br> Standard Setting Evaluation Form 

The purpose of this evaluation form is to collect information about your experience in recommending performance cut scores for CMAS. Your opinions provide an important part of our evaluation of this meeting. Please do not write your name on this evaluation form as we want your comments to be anonymous. Thank you for your willingness to participate in this survey.

In which standard setting meeting did you participate?ScienceSocial Studies
Indicate your response by checking the appropriate box.

|  | Do not support | Support with some reservation | Moderately support | Strongly support | (Other) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. To what degree do you support the recommended cut score for "Moderate Command?" | $\square$ | $\square$ | $\square$ | $\square$ |  |

|  | Strongly Disagree | Disagree | Agree | Strongly Agree | (Other) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7. The Bookmark Method was explained clearly by the group facilitator. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 7\% | 93\% |  |
| Social Studies | 0\% | 0\% | 36\% | 64\% |  |
| 8. I had a solid understanding of what the test was intended to measure. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 43\% | 57\% |  |
| Social Studies | 0\% | 0\% | 14\% | 86\% |  |
| 9. I could clearly distinguish between performance levels. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 79\% | 21\% |  |
| Social Studies | 0\% | 0\% | 64\% | 36\% |  |
| 10. After the first round of recommendations, I felt comfortable with the standard setting procedure. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 50\% | 50\% |  |
| Social Studies | 0\% | 0\% | 43\% | 57\% |  |
| 11. I found the feedback on the comparison of all panelists' recommendations to be useful in standard setting. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 21\% | 79\% |  |
| Social Studies | 0\% | 7\% | 50\% | 43\% |  |
| 12. I found the $p$-value information to be useful in standard setting. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 57\% | 43\% |  |
| Social Studies | 0\% | 7\% | 50\% | 43\% |  |
| 13. I found the feedback on the percentage of the students tested that would be classified at each performance level to be useful in standard setting. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 21\% | 50\% | 29\% |  |
| Social Studies | 0\% | 21\% | 43\% | 36\% |  |
| 14. Table and group discussions were open and honest. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 0\% | 100\% |  |
| Social Studies | 0\% | 0\% | 36\% | 64\% |  |
| 15. I believe that my opinions were considered and valued by my group. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 0\% | 100\% |  |
| Social Studies | 0\% | 0\% | 43\% | 57\% |  |
| 16. The facilitator led the group through the standard setting process without imposing ideas about where cut scores should be. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 0\% | 7\% | 93\% |  |
| Social Studies | 0\% | 0\% | 29\% | 71\% |  |
| 17. I am confident that the final cut score recommendations reflect the performance level descriptors associated with CMAS. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 14\% | 43\% | 36\% | 7\% |
| Social Studies | 0\% | 7\% | 36\% | 57\% |  |
| 18. I am confident that the final cut score recommendations reflect high expectations consistent with the Colorado Academic Standards. | $\square$ | $\square$ | $\square$ | $\square$ |  |
| Science | 0\% | 14\% | 43\% | 43\% |  |
| Social Studies | 0\% | 7\% | 36\% | 57\% |  |

## APPENDIX B: SAMPLE CMAS SCORE REPORTS

## Science Performance Level Descriptions

Students demonstrate mastery of science concepts and 21 st century skills aligned to the Colorado Academic Standards at various performance levels. The performance level descriptors are organized in a manner that assumes students demonstrating higher levels of command have mastered the concepts and skills within the lower levels. For example, a student at moderate command also masters the concepts and skills of limited command.

At Distinguished Command, a student typically can

- evaluate and provide feedback on scientific evidence and reasoning about the separation of mixtures and how separation affects the total weight/mass;
- develop hypotheses about why similarities and differences exist between the body systems and parts of humans, plants, and animals;
- evaluate scientific claims about natural resources, in terms of reasonability and validity; and
- assess and provide feedback, through reasoning based on evidence, on scientific explanations about weather and factors that change Earth's surface.

At Strong Command, a student typically can

- explain why certain procedures that are used to separate simple mixtures work and discuss any unexpected results;
- evaluate evidence and models of the structure and functions of human, plant, and animal organs and organ systems;
- investigate and generate evidence that human systems are interdependent;
- analyze and interpret data to explore concerns associated with natural resources; and
- formulate testable questions and scientific explanations around weather and factors that change Earth's surface

At Moderate Command, a student typically can

- discuss how the mass/weight of a mixture is a sum of its parts and design a procedure to separate simple mixtures based on physical properties;
- create models of human, plant, and animal organ systems, and compare and contrast similarities and differences between the organisms;
- explore and describe the origins and usage of natural resources in Colorado; and
- interpret data about Earth, including weather and changes to Earth's surface.

At Limited Command, a student typically can

- select appropriate tools and follow procedures to separate simple mixtures;
- identify how humans, plants, and animals address basic survival needs;
- identify the functions of human body systems;
- distinguish between renewable and nonrenewable resources; and
- use appropriate tools and resources to gather data regarding weather conditions and Earth processes.

Science
This score report provides information about your student's performance on the Colorado Measures of Academic Success (CMAS) Science Assessment.

- Your student's performance is represented by a scale score. Scores are placed on a scale so that student performance can be compared across years.
- School, district, and state averages are provided so that you can compare your student's performance to the performance of others. The percentage of students in each performance level across the state is reported below the graph.
- Scores are represented by diamonds. The arrows around the student's diamond show the range of scores that your student would likely receive if the assessment was taken multiple times.

| Science |  | Limited Command | Moderate Command | Strong Command | Distinguished Command |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
| Percent of CO students by | erformance Le | 60.7\% | 18.6\% | 13.1\% | 7.6\% |

The Colorado Academic Standards include expectations for student performance. Your student demonstrates a strong command 5th grade level concepts and skills in science.

## Subscale Performance

Colorado Measures of Academic Success Student: FIRSTNAME25 B.

LASTNAME25
SASID: 0505880002 Birthdate: 02/02/2006
School: SAMPLE1 SCHOOL (0011)
District: SAMPLE1 DISTRICT (7203)

Purpose
This report describes your student's mastery of the Colorado Academic Standards in Science.

## Colorado Measures of Academic Success

## Science

Performance by Prepared Graduate Competencies (PGCs) and Grade Level Expectations (GLEs)

- Within each standard, PGCs are identified. PGCs represent the concepts and skills that students
need to master in order to be college and career ready
- GLEs are grade-specific expectations that indicate a student is making progress toward the PGCs.
- The figure below shows the percentage of items that your student answered correctly for each GLE represented in the grade. If there is more than one GLE for a PGC, the percentage of items your student answered correctly by PGC is also provided.
 ale energy. Weather changes are measured by dififerences in temperature, air pressure, wind,
and water in the atmosphere and type of precipitation ,
Parcent correct scores cannot be compared across years because individual items change from year to year. They also cannot be compared across PGCs because the Pumber of items and the difficulty of tems may not be the same

## Performance by Item Type

CMAS assessments are made up of selected-response and constructed-response items. The figure below shows the student's scale score for each item type in relation to school, district, and state averages.

Note: Students with no scores are not included in summary calculations.

[^0]Purpose: This report presents each student's performance on the prepared graduate competencies and grade level expectations for your school or district. Percent correct for each GLE is presented. If there is more than one GLE within a PGC then percent correct by PGC is also provided.

Prepared Graduate Competencies (PGC) and Grade Level Expectations (GLE) Performance
