Colorado Department of Education Mission Statement

“To lead, to serve, and to promote quality education for all”

Our mission is to provide leadership and service to Colorado’s education community and, through collaboration with this community, to promote high-quality learning environments, high academic performance standards, and equitable learning opportunities for all Colorado’s diverse learners.

SCHOOL LIBRARY
BENCHMARKS
COLORADO 2003

The benchmarks for school libraries in the state are ratios that should make it easier to compare your school library with other school libraries, either individually or grouped by school level or enrollment range. These ratios address both library resources (e.g., staffing, the collection, funding) and services (e.g., cooperation between library staff and classroom teachers, circulation).

The benchmarks are produced by weighting the survey sample figures to reflect the universe of school libraries in Colorado. This survey includes only traditional K-12 public educational institutions. (Alternative schools and kindergarten-only schools are not included, so the universe numbers for this survey may differ from figures from the Colorado Department of Education).

STAFFING RATIOS

Benchmarks for school library staffing are provided by two ratios: endorsed school librarian hours per 100 students and total library staff hours per 100 students.

Hours of Endorsed School Librarians per 100 Students

Hours of endorsed school librarians per 100 students is calculated as follows: the number of hours per week of school librarians endorsed by the Colorado Department of Education divided by the number of students enrolled in the school, divided by 100:

$$\text{Endorsed School Librarian hours} \div (\text{Students Enrolled} \div 100) = \text{Endorsed School Librarian hours per 100 Students}$$

This ratio is a measure of the extent to which a library's operations are supervised by a library professional whose training has been endorsed by the state.

Total Library Staff Hours per 100 Students

Total library staff hours per 100 students is calculated as the total number of weekly hours of library staff, both endorsed school librarians and other paid staff, divided by the number of students enrolled in the school divided by 100:

$$\text{Library Staff Hours} \div (\text{Students Enrolled} \div 100) = \text{Library Staff Hours per 100 Students}$$

BENCHMARKS FOR SCHOOL LIBRARIES IN COLORADO 2003

This ratio is a measure of the extent to which a library is adequately staffed, taking into consideration the number of students served by the library.

WEEKLY SERVICE RATIOS

Benchmarks for weekly library services are provided by six ratios: library visits per student, library group visits per 100 students, information skills instruction (IS) visits per student, IS group visits per 100 students, circulation transactions per student, and the interlibrary loan (ILL) per 100 items circulated ratio.

Library Visits by Individual Students and by Groups

Library visits per student is calculated as the number of visits to the library by individual students divided by the number of students enrolled in the school. Each of the weekly service ratios is calculated in the same manner as library visits per student. For example:

$$\text{\# of Student visits to Library} \div \text{Students Enrolled} = \text{Library Visits per Student}$$

This ratio is a measure of the frequency with which students use the library in general. In lieu of figures on uses of electronic information resources, this ratio is an important supplement to the circulation ratio.

Circulation Transactions per Student

Circulation transactions per student is calculated as the number of times library materials are charged out to users divided by the number of students enrolled in the school:

Charge-outs \div Students Enrolled = Circulation Transactions per Student

This ratio is the traditional library use measure, but also includes non-book formats such as issues of print magazines, video materials, and computer software packages, when such items are circulated.

Interlibrary Loans per 100 Circulation Ratio

The *ILL/100 circulation ratio* is calculated as the number of items borrowed or rented by the library divided by circulation of materials from the library collection, divided by 100:

$$\text{Items Borrowed/Rented} \div (\text{Items Circulated} \div 100) = \text{ILL per 100 Circulation Ratio}$$

This ratio is another measure of the extent to which the school library participates in resource sharing among libraries and exploits other resources available commercially.

Caution: While generally it is good for a library to have a high figure for this ratio, an excessively high one--especially if coupled with low collection and circulation ratios--may indicate the need to review the library's collection development policy.

PERCENTAGE OF WEEKLY LIBRARY STAFF HOURS SPENT IN LEADERSHIP OR COLLABORATIVE ACTIVITIES

In 1999, the Library Research Service did a major study of Colorado school library statistics, evaluating the impact of school library staff, services, and resources on test scores.

BENCHMARKS FOR SCHOOL LIBRARIES IN COLORADO 2003

Published in 2000, *How School Librarians Help Kids Achieve Standards* clearly demonstrates that library staff involvement in leadership activities, such as committee service and technology management, as well as increased staff collaboration with faculty and students, positively impacts test scores.

Time spent in Leadership

There were four variables identified as leadership hallmarks: meeting with library staff, working with or meeting with school principal/administration, attending faculty meetings, and participating in standards and/or curriculum committees. Survey respondents calculated and reported the percentage of total staff hours per week spent in each type of leadership activity for their libraries.

Time spent in Collaboration

There were six variables identified as hallmarks of a collaborative approach: planning with teachers, teaching cooperatively with teachers, providing in-service to faculty, offering reading incentive activities, developing collections, and managing technology that links the students to the library or to other information resources. Survey respondents calculated and reported the percentage of total staff hours per week spent in each type of collaboration for their libraries.

COLLECTION RATIOS

Benchmarks for library collection development are provided by five ratios: volumes per student, print subscriptions per 100 students, audio materials per 100 students, video materials per 100 students, and computer software per 100 students.

Volumes per Student

Volumes per student is calculated as the number of print volumes in the library collection divided by the number of students enrolled in the school:

$$\text{Print Volumes} \div \text{Students Enrolled} = \text{Volumes per Students}$$

This ratio indicates the size of the library's book collection in relation to the size of the student body it is designed to serve.

It is important to consider this ratio in relation to collection ratios for other formats (e.g., electronic subscriptions, videos, software), as well as the circulation ratio. If volumes per student is relatively high, the percentage of non-circulating materials in the collection is relatively low. If circulation per student is relatively low, it may be time to consider weeding the collection and/or revising the library's collection development policy.

Print Subscriptions per 100 Students

Print subscriptions per 100 students is calculated as the number of periodicals (magazines and newspapers) to which the library subscribes in print divided by the number of students enrolled in the school divided by 100:

$$\text{Print Periodicals} \div (\text{Students Enrolled} \div 100) = \text{Print Subscriptions per 100 Students}$$

This ratio indicates the scope of the library's print periodical holdings in relation to the size of the student body.

BENCHMARKS FOR SCHOOL LIBRARIES IN COLORADO 2003

Over the next few years, it will be particularly important to monitor changes in this ratio relative to those for electronic subscriptions. Changes in the ratio should also be related to the change in per student spending for print and electronic subscriptions, as well as the capital investment in equipment required to access electronic formats.

Video Materials per 100 Students

Video materials per 100 students is calculated as the total number of video materials (e.g., video cassettes, DVDs) in the library collection divided by the number of students enrolled in the school divided by 100:

$$\text{Video Materials} \div (\text{Students Enrolled} \div 100) = \text{Video Materials per 100 Students}$$

This ratio indicates the size of the video collection in relation to the size of the student population. Notably, unlike electronic subscriptions and computer software, video materials tend to be used by whole classes or groups of students rather than by individuals.

Audio Materials per 100 Students

Audio materials per 100 students is calculated as the total number of audio materials in the library collection divided by the number of students enrolled in the school divided by 100:

$$\text{Audio Materials} \div (\text{Students Enrolled} \div 100) = \text{Audio Materials per 100 Students}$$

Computer Software Packages per 100 Students

Computer software packages per 100 students is calculated as the total number of licensed computer software packages included in the library collection divided by the number of students enrolled in the school divided by 100:

$$\text{Licensed Software Packages} \div (\text{Students Enrolled} \div 100) = \text{Software Packages per Student}$$

FUNDING RATIOS

Benchmarks for library funding are provided by five ratios: print materials expenditures per student, electronic format expenditures per student, non-print materials expenditures per student, electronic access expenditures per student, and total operating expenditures per student.

Print Materials Expenditures per Student

Print materials expenditures per student is calculated as total spending for print formats divided by the number of students enrolled in the school:

$$\text{Print Expenditures} \div \text{Students Enrolled} = \text{Print Expenditures per Student}$$

This ratio indicates the level of spending on print materials relative to the size of the student body. From year to year, maintenance of a library's buying power depends on increases in such funding to account for increases in enrollment and/or increases in costs for books and periodicals.

Electronic Format Expenditures per Student

Electronic format materials (e.g., software, CD-ROM, laser disk, locally mounted databases) expenditures per student is calculated as total spending for electronic formats divided by the number of students enrolled in the school:

$$\text{Electronic Format Expenditures} \div \text{Students Enrolled} = \text{Electronic Format Expenditures per Student}$$

BENCHMARKS FOR SCHOOL LIBRARIES IN COLORADO 2003

This ratio indicates the level of spending on electronic format materials relative to the size of the student body. As with print expenditures, maintenance of a library's non-print buying power relies on increases in such funding to support increases in enrollment and/or increased charges from vendors of electronic resources.

Non-Print Materials Expenditures per Student

Non-print materials expenditures per student is calculated as total spending for non-print formats (e.g., audio, video, microform) divided by the number of students enrolled in the school:

$$\text{Non-print Expenditures} \div \text{Students Enrolled} = \text{Non-print Expenditures per Student}$$

This ratio indicates the level of spending on non-print materials relative to the size of the student body.

Potentially, the shift from "just in case" print collections to "just in time" electronic access to information could stabilize--even reduce--the costs of library operation. Whether or not savings occur as a result of the shift from print to electronic resources may depend largely on how electronic information is "packaged" (e.g., CD-ROM, laser disk, mini-disk, online access) and priced (e.g., quarterly or annual subscriptions, fee-for-use).

Total Operating Expenditures per Student

Total operating expenditures per student is calculated as the sum of print materials, electronic format acquisitions, electronic access, and other non-print materials costs and supplies and other operating costs divided by the number of students enrolled in the school:

$$\begin{aligned} &(\text{Print} + \text{Non-print} + \text{Access} + \text{Other Operating Costs}) \div \\ &\text{Students Enrolled} = \\ &\text{Total Materials Expenditures per Student} \end{aligned}$$

This ratio indicates the overall cost to the library of providing access to its collection and electronically networked information.
