Foreword

THE first Year Book of the State of Colorado, issued in 1918 by the Colorado State Board of Immigration, was received with favor by those who are interested in having statistical information relating to the state and its political subdivisions carefully tabulated and published so as to be easily available for the use of those who need it, and conveniently preserved as a permanent state record. Realizing the value of such a record and the necessity for maintaining its continuity, the Twenty-second General Assembly enacted a law requiring the department to compile and publish the Colorado Year Book annually in the future. The second Year Book was published in compliance with this law in 1919, and it has been published annually since.

In order to make room for the large amount of statistical information now available for the Year Book it became necessary, beginning with 1921, to omit the descriptive county stories which had been included in previous issues. These county stories are now available in other publications issued by the Immigration department. The additional statistical information available is obtained largely under an act passed by the Twenty-second General Assembly, clothing the Immigration department with authority to collect much information it had been unable to obtain before the law was enacted. Additions to and improvements in the Year Book will be made from time to time as the funds available for the work permit.

The department acknowledges with thanks the willing assistance of state, county and city authorities and commercial club executives, to whose co-operation much of the success of this work is to be attributed.

THE COLORADO STATE BOARD OF IMMIGRATION

Denver, Colorado, June 1, 1925

The Colorado State Board of Immigration

THE work carried on by the Colorado State Board of Immigration is best described by the statute creating the board, enacted in 1909, which provides that the duties shall be:

"To collect reliable information and statistics regarding agriculture, stock-growing and feeding, horticulture, mining, manufacturing, climate and health in Colorado, and to publish the same with a view to attracting health-seekers, tourists, investors and prospective settlers to the state; to prepare and cause to be circulated books, pamphlets, leaflets and other literature, illustrated or otherwise, regarding Colorado and the various localities of the state; to personally visit the various localities of the state, investigate the resources and possibilities thereof, and stimulate their proper advertising and exploitation; to personally and by deputies and employes visit other states and there distribute advertising matter, call personally upon intending investors, visitors or immigrants, install exhibits of Colorado views and products, give lectures on Colorado and in general further the advertising of Colorado."

Much difficulty has been experienced in the past in obtaining the "reliable information and statistics" referred to in this act, for the reason that the Immigration bureau was not clothed with any authority to collect them or require their collection. To correct this condition the Twenty-Second General Assembly enacted a law, supplementary to that of 1909, giving the bureau authority to require state, county, city, town, precinct and school district officers, owners, operators and managers of manufacturing, mining and other business establishments and certain other persons to furnish "such information as may be required for properly setting forth the resources of the state and their development." This law also provides for co-operation between the State Board of Immigration and the Division of Crop Estimates of the United States Bureau of Agricultural Economics in the collection and publication of information regarding livestock and acreage, condition and production of all crops, and requires county assessors, when making the annual property assessment, to collect for the bureau a wide variety of information regarding "farm op-

erations, the principal farm products, agricultural resources and livestock."

Under the authority vested in the board by this act blanks have been furnished annually to all county assessors, and reports have been made for all counties where agriculture is followed. Complete reports for 1924 are published elsewhere in this volume. In the Year Books for 1919 and 1920 acreage figures collected by county assessors for the current year were published, but the volume is now published before assessors' reports are complete and only figures for the past year are used. Acreage figures for 1925 will be published in the monthly crop bulletin as soon as they are available and will be published complete in the 1926 Year Book.

The State Board of Immigration, acting under the authority granted in the act of 1919, has also entered into a contract with the United States Department of Agriculture prescribing the conditions under which the board shall co-operate with the Bureau of Crop Estimates in the publication of agricultural statistics for the state and the several counties. The contract provides for the organization of the Colorado Co-operative Crop Reporting Service, which is now in operation, and which publishes a crop bulletin monthly, using the acreage information collected through county assessors and statistics on condition and production of crops collected through the regular reporters of the Bureau of Crop Estimates and through other channels.

The revised acreages as reported by assessors for 1924 are found in this volume, together with the production of the principal crops by counties, as determined by the Co-operative Crop Reporting Service. It has been found impracticable to give the production of all crops by counties, but a table will be found in this volume giving the total production of all crops for the state, as determined by the Crop Reporting Service, together with the values of these crops at prices prevailing on or about December 1, 1924. Beginning with the 1921 edition of the Year Book, statistics of the acreage and production of all crops are published annually, providing a permanent record of the agricultural development of the state and the various counties, which will be of great value to all who are interested in Colorado's growth.

Colorado—General Description

COLORADO lies in the east-central part of the Rocky Mountain region and contains the most elevated portions of the Rocky mountains in the United States, though there are higher altitudes in both California and Washington, in the Cascade mountains, than are found in Colorado. The United States geological survey, in its latest published reports, assigns to two peaks in Lake County the honor of being the highest points in the state. These are Mount Elbert and Mount Massive, each with an altitude of 14,402 feet. The United States coast and geodetic survey, however, fixes the altitude of Mount Massive at 14,419 and that of Mount Elbert at 14,404 feet. The highest point in the United States is Mount Whitney, California, 14,501 feet. Colorado has the highest mean altitude of any state, only about one-fourth of its area being below 5,000 feet, while approximately two-thirds of it ranges from 6,000 feet to 14,000 feet. It has at least 43 peaks that tower 14,000 feet or higher above sea level, and approximately 1,000 having altitudes of more than 10,000 feet. The eastern two-fifths of the state lies in the Great Plains, and is a level or broken prairie, crossed by the valleys of the Arkansas and South Platte rivers and their numerous tributaries, and rising gradually from the state line westward to the foothills of the Rockies. The main range of the Rocky mountains passes north and south through the central part of the state, with numerous secondary ranges and spurs running in all directions, giving Colorado the greatest extent and widest variety of mountain scenery found in any state. The western part lies in the Pacific water-shed and contains the largest streams in the state. Its surface is much more broken than that of the eastern part, embracing numerous high mesas and fertile, narrow agricultural valleys, and rising to the rugged and wonderfully picturesque San Juan mountains in the southwest. In outline the state is almost a perfect rectangle, having the most regular form of any state in the Union. It ranks seventh in size, with a land area of 66,341,120 acres or 103,656 square miles. Its water area is 290 square miles, making the total area 103,948 square miles. It is more than twelve times as large as the state of Massachusetts, nearly twice as

large as Iowa, and about the same size as New York, Ohio, Connecticut and New Hampshire combined. Its extreme length east and west is about 387 miles, or 37 miles more than the distance from New York City to Portland, Maine, and its width approximately 276 miles, about the same as the distance from Chicago to St. Louis.

Natural Divisions—As a result of its large size and the extreme irregularity of its surface, the state is divided into a number of districts that show considerable variation in topography, soil, climatic conditions, industries and products. The most important of these are the following: The non-irrigated prairie section in the eastern part of the state, popularly referred to as "Eastern Colorado;" the South Platte valley, in the north and northeast; the Arkansas valley, extending through the southern part of the eastern half of the state; the San Luis valley, a vast basin, the bed of an ancient lake, lying in the south-central part of the state, almost wholly surrounded by mountain ranges; the San Juan basin in the southwest; the valleys of the Colorado river and numerous tributary streams in the central-western part; the rugged plateau districts drained by the White and Yampa (Bear) rivers, in the northwest; the mountainous, mineral-bearing districts, extending in a broad, irregular belt across the central part of the state from the Wyoming to the New Mexico line; and the mountain park districts, chief of which are North park, in Jackson county; Middle park, in Grand county; and South park, in Park county. These last are very similar to the San Luis valley, but all have higher average altitudes and consequently enjoy less intensive agricultural development. In topography and climatic conditions the South Platte and Arkansas valleys are very similar to the non-irrigated sections of eastern Colorado, but by reason of the fact that a large supply of water is available in these valleys for irrigation, they enjoy the most extensive agricultural development found in the state and produce a wider range and greater yield of crops than the non-irrigated districts. The San Luis valley has very light rainfall, but an abundant water supply for irrigation is derived from the Rio Grande del

Norte and its tributaries. The average altitude is more than 7,500 feet, which limits the range of crops grown; but the fertile soil, abundant water supply and good climate make this valley one of the finest general farming and stockraising districts in the state. The San Juan basin is a region of from moderate to heavy rainfall, having a considerable area of irrigated land in the river valleys and much good non-irrigated agricultural land on the higher mesas. This is also an excellent stock-raising district. The valleys of the Colorado, Gunnison, Uncompahgre and other rivers and smaller streams of the Colorado river basin contain the principal fruit growing areas of the state, as well as a large amount of the fine general agricultural land. The rainfall in this area is generally inadequate for farming without irrigation, but the water supply is adequate for all land that can be irrigated, and recently farming without irrigation has been undertaken successfully on some of the higher mesa lands, where rainfall is somewhat heavier than in the valleys. The northwest part of the state is less developed than any other district, chiefly because of lack of transportation facilities, but it contains some of the best agricultural and grazing land in Colorado. The mineral area is very extensive, but the principal producing areas are somewhat restricted and are outlined in tables published elsewhere in this volume.

Early History—That part of Colorado lying east of the Rocky mountains was included in the territory acquired by purchase from France in 1803, usually referred to as the Louisiana Purchase. All the southeastern part of the state, lying south of the Arkansas river, and a narrow strip extending north through the mountain district into Wyoming, was claimed by the state of Texas and became a part of the United States when Texas was annexed in 1845. This included a considerable amount of the territory belonging to the Louisiana Purchase, but the controversy regarding the northern boundary of Texas was settled long before Colorado became a state. The western part of what is now Colorado and an additional strip lying west and south of the Rio Grande del Norte was ceded to the United States by Mexico in 1848, following the war with Mexico. The actual settlement of Colorado began

with the discovery of gold in the summer of 1858, at which time most of the eastern half of the state was included in Kansas territory under the name of Arapahoe county. The boundaries of this county were very imperfectly defined, and the settlers in the new gold camps, moreover, objected to being governed by a set of territorial officials 400 miles away. They appealed to the federal government for the organization of a new state or territorial government, and finally, in February, 1861, the territory of Colorado was organized, about a month after statehood had been conferred upon the territory of Kansas. The boundaries of the territory were substantially the same as are those of the state at present. In 1876 Colorado was admitted to the Union as the thirty-eighth state.

Population—The population of Colorado has increased steadily and rapidly since its actual settlement began immediately following the discovery of gold in 1858. The census bureau estimates the state's population as of July 1, 1925, at 1,019,286. It ranks thirty-third in population among the states of the Union.

The following table shows its growth from 1860 to the present time, as compared with the growth for the entire country, all figures being taken from census reports:

Year	Population	Pct. of Increase Over Previous Census	Pct. of Increase For United States
1860.....	34,277
1870.....	39,864	16.3	22.6
1880.....	194,327	387.5	30.1
1890.....	413,249	112.7	25.5
1900.....	539,700	30.6	20.7
1910.....	799,024	48.0	21.0
1920.....	939,629	17.6	14.9

During the two decades following 1860 the population was confined largely to the mining districts and to the city of Denver. The cities of Pueblo, Colorado Springs and Trinidad did not make their appearance in the census population statistics until 1880, when the three had a combined population of less than 10,000. During the early 80's the period of agricultural development began, and the decade ending with 1890 was in many ways the most important in the history of the state. During that period 24 new counties were organized and scores of new towns were laid out in the agricultural districts. The percentage of increase in population dropped off materially in the succeed-

ing decades, but remained considerably greater than the percentage of increase for the country at large. In 1910 the density of population for the state was 7.7 per square mile, as compared with 30.9 for the United States. Denver county ranked first in this respect, with 3,679, and Dolores and Jackson counties were tied for last place, with 0.6. The 1920 census showed the density of population for the state to be 9.06 per square mile. Denver still holds first place in this respect, with 4,422.26, and Jackson county ranks last, with 0.81. The rural population in 1910, including all people except those living in incorporated places of 2,500 population or more each, was 394,184, or 49.3 per cent of the total. The rural population as shown by the 1920 census was 486,370, or 51.76 per cent of the total. In 1910 the foreign-born white population was 15.9 per cent of the total, the principal foreign nationalities then being, in the order named, as follows: German, Italian, Russian, Austrian, English, Swedish, Canadian, Irish and Scotch. In 1920 the foreign-born white population was 12.4 per cent of the total, the principal foreign nationalities being Russian, Italian, German, Mexican and Swedish.

Land Classification—A table published elsewhere in this volume gives a classification of the 66,341,120 acres of land in the state as far as is practicable from available records. It is divided into 63 counties, of which Denver county is the smallest, with an area of 37,120 acres, and Las Animas county is the largest, with 3,077,760 acres. The records of the several county assessors showed a total of 34,122,665 acres of patented land on the tax rolls in 1924, including railroad rights of way and town and city lots and not including state land that has been sold but for which patent has not yet been issued. The records of the federal and state governments at the same time showed a total of 24,605,095 acres of non-patented land included in the national forests, homestead areas, national parks and monuments, Indian lands and state lands. From these records it is apparent that 51.4 per cent of the state's area consists of patented land, 42.5 per cent of state, federal and Indian land, and the remainder, amounting to 6.1 per cent, is principally unclassified as to ownership. This includes 642,733 acres of state land that had been sold

but not fully paid for on April 1, 1924, and 3,594,055 acres of government land temporarily withdrawn from homestead entry for various reasons, as of July 1, 1924. The remaining unclassified area consists principally of homestead land that has been filed upon but not yet proved up and therefore not yet appearing on the tax rolls. These areas upon which final proof had not been made on July 1, 1924, totaled 3,992,784 acres. In the mining counties there is some mineral land that has been filed upon under the mineral land laws but not yet patented. In three counties, Archuleta, Hinsdale and Lake, the amount of land shown in the various classifications is slightly more than the areas of these counties, as reported from government surveys. These discrepancies are perhaps due chiefly to inaccuracies in surveys, as considerable portions of the mountainous areas of the state have not yet been accurately surveyed, and all these counties contain mountainous areas. Of the land in private ownership in 1924 over 31,000,000 acres is classified as agricultural land. Of this amount 31,378 acres is producing fruit land, 2,253,955 acres is being farmed under irrigation and 260,458 acres is natural hay land. As all the orchards and most of the natural hay land are irrigated, the total amount of land classified for taxation purposes as irrigated amounts to something more than 2,545,000 acres, though the amount of land in the state for which water is actually available is considerably more than 3,000,000 acres. The non-irrigated farming area of the state is placed by the assessors at 11,054,786 acres, and 19,032,970 acres is classified as grazing land, much of which will eventually be placed under cultivation. These classifications include some waste and desert areas of no real value for agricultural purposes. The remaining privately owned area is principally patented mineral land, railroad rights of way, and town and city lots.

Drainage and Water Supply—Containing, as it does, the most elevated portions of the Rocky mountains, Colorado is quite naturally the source of many of the important streams in the West. The Continental Divide crosses the west-central part of the state, and the streams in the western part flow to the Pacific, while those in the east find their way to the Gulf

of Mexico. The streams of the western slope are all tributaries of the Colorado river, from which this state derives its name. The Colorado (Grand) river, the largest stream in the state, has its source in Grand county. The Green river, which was regarded as one of the two streams forming the Colorado when the upper course of the Colorado was called the Grand river, flows through the northwestern corner of Moffat county. The northwestern corner of the state is drained by tributaries of the Green river, chief of which are the Yampa (Bear) and White rivers. The principal tributary of the Colorado river is the Gunnison, which has its source in Gunnison county and enters the Colorado at the city of Grand Junction. The southwestern corner of the state is drained by the San Juan and Dolores rivers, both tributaries of the Colorado. The south-central part of the state, including the San Luis valley, is drained by the Rio Grande del Norte. The southeastern part is drained by the Arkansas river and its tributaries, and the northeastern part by the South Platte river. The North Platte river has its headwaters in Jackson county and unites with the South Platte in Nebraska to form the Platte river. The Republican river, a tributary of the Kansas, drains a considerable area in the eastern part of the state. These streams have hundreds of small tributaries, most of which have their sources in the mountains where the snowfall is heavy. They furnish the principal water supply for irrigation and for the development of hydro-electric power. Water for domestic purposes is obtained principally from these streams, but in most agricultural sections wells are utilized as a secondary source of domestic water supply. Most of these wells are pumped, but there is a well defined artesian belt in the San Luis valley, and artesian water is found in numerous other places. There are more than 500 artesian wells in the state, fully two-thirds of which are in the San Luis valley.

National Forests—Fifteen national forests located wholly within the state and two lying partially within its boundaries comprise about 20 per cent of the state's area. These forests embrace 13,248,256 acres, and are administered by the department of agriculture of the federal government. A detailed description of these forests

and their operations is given elsewhere in this volume.

National Parks and Monuments—There are two national parks and three national monuments in Colorado. Rocky Mountain national park, with an approximate area of 254,327 acres, lies in Larimer, Boulder and Grand counties, and includes some of the most picturesque portions of the Rocky mountains. It is one of the newest of the national parks, having been created by an act of congress, approved January 26, 1915. Its highest point is Longs peak, 14,225 feet, and there are within its boundaries thirteen other mountain peaks more than 13,000 feet above sea level. It is the most accessible of the large western parks, and this fact, together with its wide range of picturesque mountain scenery and its delightful climate, has made it the most popular of the nation's great public playgrounds. The report of the secretary of the interior places the number of visitors to this park in 1915 at 31,000. The following year the number had increased to 51,000, and in 1917 it was 117,186. In 1923 the number of visitors in the Rocky Mountain national park was about 218,000, and in 1924 the number was 224,211. The number of visitors in 1924 was larger than in any other national park, the nearest being the Hot Springs park, in Arkansas, with 164,175 visitors. The visitors to the Yellowstone national park the same year numbered 144,158. Government appropriations for the maintenance and improvement of the park for 1917-1925, inclusive, totaled \$385,200. In 1924, 58,696 private automobiles entered the park.

Mesa Verde national park is located in Montezuma county and is especially noted for the ruins of homes and villages of the ancient Cliff Dwellers, supposed to have been the earliest inhabitants of this part of the continent. Travel to this park has increased very materially in the past few years, as the result of the construction of good highways leading to it. It was established by an act of congress June 29, 1906. Its area is 48,966 acres. The park is interesting not only on account of its archaeological discoveries, but its attractive scenery. The number of visitors in 1924 was 7,109. Visitors came from every state in the Union and six foreign countries. The government appropri-

ations for the park totaled \$199,900 for 1917 to 1925, inclusive.

The Colorado national monument, in Mesa county, near Grand Junction, was established by presidential proclamation on May 24, 1911. Its area is 13,883 acres. The site is in a picturesque canon which has long been a popular scenic feature of that part of Colorado. The formation is similar to that of the Garden of the Gods at Colorado Springs, but it is generally conceded to be much more picturesque. There are many caverns in the monument, several of which have not yet been explored.

Wheeler national monument, located in Mineral county, northeast of Creede, was established by presidential proclamation on December 7, 1908. Its area is approximately 490 acres. It is especially noted for its weird and very picturesque rock formation, unlike anything found elsewhere in Colorado.

Hovenweep, an Indian name meaning "Deserted Valley," is the third of Colorado's national monuments. It was established by presidential proclamation on March 2, 1923, and is situated on the Colorado-Utah line in western Montezuma County, its area of 285 acres lying partly in Colorado and partly in Utah. It contains four remarkable groups of ruins similar to those found in Mesa Verde park.

Industries—The principal industries of the state are agriculture, stock-raising in its various branches, dairying, bee-keeping, manufacturing, mining, quarrying, lumbering and commerce. These are treated in detail elsewhere.

Climatological Data—As a result of its great size and the extreme irregularity of its surface, the climate of Colorado is wonderfully varied and cannot be described in detail here. Various tables contained in this publication show the most important climatic data for different sections of the state. The mean annual temperature for the entire state is 44.3 degrees, but it varies from about 31 degrees in some of the higher mountain districts to 54 degrees in parts of the Arkansas valley. The average annual precipitation for the state is 17.54 inches, but there is also a very wide range here in the different sections of the state. The lowest average precipitation is about 6.5 inches, in the San Luis valley, and the highest above 40 inches, in the San Juan

mountains and a few other mountain districts of restricted areas. The delightful and wonderfully healthful qualities of Colorado's climate are well known throughout the country. The tables before referred to show that the rainfall is comparatively light in all sections of the state and the percentage of sunshine is very high. The range of temperature is wide. The amount of moisture in the air is always low, and as a result the unpleasant effects of extremely low or high temperatures are greatly modified. The normal relative humidity ranges from 45 to 60 per cent, being lower than in any other state except Arizona. The high altitude is another important factor in governing climatic conditions in the state. As a result of this high altitude and the correspondingly low atmospheric pressure, impurities in the air are quickly dissipated and the depressing effects common at low altitudes, especially during periods of warm, damp weather, are entirely foreign to this state.

High and Low Points—The level of the sea is the basis upon which all geometrical altitudes are reckoned. The fifteenth step from the top leading to the main floor of the state capitol at Denver, at the west entrance, is exactly one mile, or 5,280 feet above sea level. Mount Elbert and Mount Massive, altitude 14,402 feet, or 2.73 miles above sea level, are the highest points in the state. The lowest point is the bed of the Arkansas river near the town of Holly, about three miles west of the Kansas line, in Prowers county, in the southeastern part of the state. Its altitude is 3,400 feet, or 0.64 miles above sea level.

The highest incorporated town is Kokomo, in Summit county, which has an altitude of 10,618 feet. The lowest incorporated town is Holly, in Prowers county, 3,400 feet above sea level.

Hazel lake, in La Plata county, in southwestern Colorado, has the highest elevation of the numerous lakes of the state, being 12,420 feet or almost 2½ miles above the level of the sea.

The deepest hole ever bored into the earth in Colorado, as far as records disclose, is a test well drilled for oil near Longmont, Boulder county, by the Roland Oil company, which reached a depth of over 7,000 feet before it was finally abandoned. The bottom of this hole is about one-

third of a mile below the level of the sea.

The deepest mine in the state is the Portland, in the Cripple Creek district, Teller county, which has been opened to a depth of 3,000 feet.

The approximate mean altitude of Colorado is 6,800 feet, or 700 feet higher than Utah and 100 feet higher than Wyoming.

Railroads, Telegraph and Telephone Facilities—There are 31 railroad companies represented in Colorado, operating an aggregate of 5,041.68 miles of main line track. Every county in the state except Baca county has some railroad mileage, though the railroad facilities of some other counties, particularly in the northwestern and southwestern parts of the state, are inadequate. The total value of railroad property in the state, as returned by the state tax commission for the year 1924, was \$160,669,940. The following table shows the main line tracks owned by the several railroad companies:

Road	Mileage
Atchison, Topeka & Santa Fe Railway Company	505.62
Book Cliff Railroad Company....	11.50
Chicago, Burlington & Quincy Railroad Company	395.39
Chicago, Rock Island & Pacific Railroad Company	165.85
Colorado Railway Company.....	108.49
Colorado-Kansas Railroad Co....	22.20
Colorado, Wyoming & Eastern Railway Company	43.88
Colorado & Southern Railroad Co.	729.15
Colorado & Southeastern Railroad Company	6.27
Colorado & Wyoming Railroad Company	42.65
Crystal River Railroad Company.	20.66
Crystal River & San Juan Co....	7.32
Denver & Inter-Mountain Railroad Company	15.01
Denver & Interurban Railroad Co.	9.48
Denver & Rio Grande Western Railroad Company	1,467.92
Denver & Salt Lake Railroad Co..	252.00
Great Western Railway Company	86.84
Greeley Terminal Railway Co....	1.60
Manitou & Pikes Peak Railway Company	8.70

Midland Terminal Railroad Co....	56.15
Missouri Pacific Railroad Co.....	132.11
Northwestern Terminal Railway Company	3.18
Rio Grande Junction Railway Co.	62.08
Rio Grande Southern Railroad Company	171.16
San Luis Central Railroad Co....	12.21
San Luis Southern Railway Co....	31.53
Silverton, Gladstone & Northerly Railroad Company	7.30
Silverton Northern Railroad Co..	8.52
Treasury Mountain Railroad Co..	4.00
Uintah Railway Company.....	50.80
Union Pacific Railroad Company.	582.51

Several of the companies above named operate extensively under leasing arrangements over tracks owned by other companies.

Ninety-seven telephone companies operate in the state, owning an aggregate total of 416,180 miles of telephone line. This is an increase of 44,680 miles over the amount reported to the tax commission for 1923. The valuation of all property owned by these companies, as returned by the state tax commission for the purposes of taxation in 1924, was \$13,880,860. Most of these companies are small and operate in but one or two counties. The Colorado and Eastern Telephone and Telegraph company operates in fifteen counties in the eastern part of the state, and the Mountain States Telephone and Telegraph company operates its own lines in all but two counties in the state, Baca and Dolores, and has a total of 403,405 miles of lines in Colorado. Four telegraph companies operate a total of 27,736 miles of line in the state. Five counties, Baca, Hinsdale, Jackson, Moffat and Rio Blanco, had no telegraph lines in operation when reports were made to the tax commission for 1924. A table published elsewhere in this volume shows the mileage of railroad, telephone and telegraph lines in the various counties of the state as returned to the state tax commission for 1924.

Colorado—Brief Land History

THE territory now included in the state of Colorado did not all become the property of the United States at the same time, nor was it all conveyed in the same manner or by the same nation. Parts of it have at times belonged to the territories of Kansas, Nebraska, New Mexico and Utah, and a very considerable section of it was claimed by the Republic of Texas when that enterprising little nation won its freedom from Mexico.

The Louisiana Purchase, a vast tract of land acquired by the United States from France in 1803, extended, in a general way, westward from the Mississippi river to the Rocky mountains. About half of the land now comprising the state of Colorado was included in this purchase, the entire cost of which was about \$27,250,000.

The area south of the Arkansas river and west of the Rocky mountains was first claimed by Spain and

later by Mexico. When Texas, after winning its independence from Mexico, was admitted to the Union in 1845, it claimed that part of what is now Colorado lying south of the Arkansas river, and in addition a rectangular strip extending north through the mountains into Wyoming, lying between the 106th and the 108th meridians. By reference to the map it will be seen that a considerable part of this territory claimed by Texas was included in the Louisiana Purchase, but the controversy over the northern boundary of Texas was amicably settled before Colorado territory was organized.

The western part of Colorado and the territory in the south lying west and south of the Rio Grande del Norte was included in the immense tract of land ceded to the United States by Mexico in 1848 following the war with that country. The eastern boundary of this ceded land was at about the 108th meridian, except on the south, where its boundary, as before stated, was the Rio Grande del Norte.

The territory of Utah was organized in 1850. It extended east to the main range of the Rocky mountains, including nearly one-half of what is now Colorado. In 1854 the territories of Kansas and Nebraska were created by the famous Kansas-Nebraska act. Kansas territory then extended west to the territory of Utah, the southern boundary being the territory of New Mexico, which at that time extended north to the Arkansas river, and the northern boundary being at the 40th parallel, which passes near the present site of the city of Brighton. That part of what is now Colorado, lying north of this parallel and extending west to the boundary of Utah territory, was included in Nebraska territory.

In 1855 that part of Colorado then included in Kansas territory was organized into Arapahoe county, and Allen P. Tibbitts, Levi Mitchell and Jonathan Atwood were named as commissioners to locate the county-seat of the new county, which was to be called Mountain City. They were likewise to act as commissioners for the new county, but there is no record available showing that they ever assumed their duties. In 1856 an election was held in Arapahoe county, K. T., and Benjamin F. Simmons was chosen as the first representative from this county in the Kansas territorial legislature.

But the people in the new towns and mining camps, dissatisfied with a government the seat of which was several hundred miles away, and could be reached only after a week's hard travel, soon started a movement for the organization of a new territory, to include that part of Kansas territory known as Arapahoe county. This movement gained strength rapidly, and some of the more ambitious conceived the idea that the creation of a new state was the proper procedure. They spent some months working on the plan and finally agreed that the new state should be called Jefferson and should extend north far into what is now Wyoming. An election held late in 1859 showed that a majority of the voters were in favor of trying a territorial government before attempting statehood, and Robert W. Steele was elected as the first governor of "Jefferson Territory." The following counties were provided for in the organization of the so-called "Jefferson Territory": Arapahoe, Cheyenne, El Paso, Fountain, Jackson, Jefferson, Mountain, North Park, Saratoga, Steele and St. Vrain.

In the meantime, however, steps were being taken at Washington to bring about the organization of a territory through the regularly constituted legislative channels. In February, 1861, Colorado Territory was regularly organized, its boundaries being substantially the same as those of the state today. On June 6, 1861, Mr. Steele formally abdicated as governor of "Jefferson Territory," and that unique political subdivision passed into history.

The organization of Colorado territory did not settle the numerous controversies regarding land titles that existed when the territory was organized. Within the area formerly claimed by the state of Texas, as well as that ceded by Mexico, there were numerous land grants, made by the Spanish and Mexican governments, all of which were confirmed by the United States when this area became a part of the Union. A special land court was created for the examination and adjudication of these titles, and in all cases where the records showed that the grants were properly made they were formally approved by this court. In addition to these old grants there were large tracts of land which had been set apart for Indian tribes who had long claimed this territory as their own. Those who are familiar

with the early history of the state will know that the controversies with these Indians were not settled without many bloody battles, which resulted in heavy loss of life among both the Indians and the pioneer settlers. In 1861 the federal government entered into a treaty with the Cheyenne and Arapahoe Indians, under which the Indians ceded to the government their lands in eastern Colorado. The Indians did not abide by this treaty, however, and they waged vigorous warfare against the white settlers for several years with a view to driving them from the plains of eastern Colorado. On October 28, 1867, they signed another treaty with the United States, ceding all their lands between the Platte and Arkansas rivers, and agreeing to their removal to Indian Territory.

In the western part of the state settlers came in contact with the Ute Indians. In 1868 a treaty had been made between these Indians and the government by which the government confirmed their title to a large tract of land in the southern and western parts of the state. After the discovery of rich metal deposits in the San Juan district, white settlers began to

come in rapidly, and steps were taken to recover the land that had been confirmed by the government as the property of the Utes. The Indians were strongly opposed to giving it up, but in 1873, largely through the influence of Chief Ouray, one of the most illustrious leaders of the red men in Colorado, a treaty was signed by which the Utes ceded to the government the mineral lands in the San Juan district.

They still retained, however, more than 15,500,000 acres of land on the western slope. Numerous encounters occurred between these Indians and the white men during the early settlement of the agricultural lands in this territory, and it was not until 1881 that the Indians in this region, usually known as the Uncompahgre Utes, were removed to the Uintah reservation, in eastern Utah.

An Indian reservation also was established in southwestern Colorado and northwestern New Mexico, to which most of the southern Utes were removed. This is the only Indian reservation in Colorado at present, though there is some Indian land in La Plata county belonging to Ute Indians.

COLORADO'S RANK AMONG THE STATES

(Note.—Figures for Colorado of a later date than those given in this table on some items mentioned may be found elsewhere in this volume. Those used in this table are for dates for which comparative data are available.)

DESCRIPTION	Colorado	United States	Colo. % of U. S.	Rank
Land area (square miles)-----	103,658	2,973,744	3.49	7
Population July 1, 1925 (Census est.)-----	1,019,286	113,493,720	0.90	33
Value all property (1922)-----	\$3,229,412,000	\$320,803,862,000	1.00	29
Value all farm property (1920)-----	\$1,076,794,749	\$77,924,100,338	1.38	23
Value manufactured products (1921)-----	\$221,324,285	\$43,653,282,833	0.51	34
Value livestock on farms (1924)-----	\$88,000,000	\$4,915,000,000	1.79	16
Value all crops (census 1919)-----	\$181,065,000	\$14,755,365,000	1.23	29
Value gold production (1923)-----	\$6,525,800	\$51,734,000	12.61	2
Hypothetical value all crops (1924)-----	\$128,318,000	\$10,326,769,000	1.24	30
Value silver production (1923)-----	\$4,533,879	\$60,134,839	7.54	6
Number wage earners (1920)-----	366,457	41,614,248	0.88	33
Water power, potential h. p. available 50 % of time (1924)-----	1,570,000	55,030,000	2.85	9
Mileage of railroads-----	5,170	250,412	2.07	22
Motor cars licensed (1923)-----	188,956	15,092,177	1.25	22
U. S. Income taxes paid (1924)-----	\$11,543,616	\$1,841,759,317	0.63	28
Personal (net) incomes (1922)-----	\$184,572,407	\$21,336,212,530	0.87	27
Troops in world war-----	42,898	4,727,988	0.93	33
National guard strength (July 1, 1924)-----	1,622	175,273	0.93	34
Population per square mile (1920)-----	9.1	35.5	---	41
Value of bread and bakery products manu- factured (1921)-----	\$9,309,156	\$1,089,971,652	0.85	21
Value butter, cheese and condensed milk manufactured (1921)-----	\$9,815,569	\$738,440,107	1.33	17
Slaughtering and meat packing (1921)-----	\$22,494,615	\$2,200,942,072	1.02	20
Value beet sugar manufactured (1921)-----	\$39,558,657	\$139,109,655	28.40	1
Mining machinery manufactured (1921)-----	\$2,315,467	\$30,290,171	7.64	5
Fluorspar recovered, tons (1921)-----	12,702	201,372	6.31	3
Tons coke produced (1921)-----	368,131	25,287,622	1.46	11
Value bituminous coal produced (1921)-----	\$32,377,000	\$1,199,983,600	2.70	8
Pounds copper produced (1845 to 1921)-----	290,605,186	30,107,655,570	0.97	10

Tourist Attractions

COLORADO has in its incomparable climate and wonderful scenery a natural resource of almost incalculable value from an economic standpoint. At the same time it furnishes recreation facilities for thousands of people from all parts of the United States and foreign countries. The invigorating low-pressure atmosphere of high altitudes, the cool and refreshing nights, the days of continuous sunshine and the accessibility of the attractive regions make ideal conditions for the tourist and pleasure seeker. Camping, hunting, fishing, mountain climbing and other outdoor sports may be enjoyed in regions remote from the cities and towns or close to inhabited places, as the visitor may choose. Excellent highways make automobile touring a pleasure in the mountains, through the valleys and wherever one desires to go. Federal, state and municipal governments contribute towards the furnishing of accommodations for visitors and have organized means of adding to their comfort and pleasure.

It is impossible to enumerate, even partially, in a volume of this character, all the tourist attractions of the state. That is left to the railroads serving Colorado, the Commercial clubs of the various cities and towns, the Denver Tourist Bureau, and similar corporations and organizations which publish annually hundreds of booklets and leaflets descriptive of the state's scenic attractions and recreation opportunities. Such literature may be obtained upon request from the various railroads and organizations.

Switzerland has been more successful than perhaps any other country in capitalizing its mountain scenery for profit. Circumstances have aided nature and the energy and enterprise of the Swiss people in making the scenery of that country return a substantial revenue every year. Before the war Switzerland was for many years on nearly all the direct routes of tourist travel through Europe and few persons who visited the continent failed to spend some time in the Alps and to visit the cities and lakes of Switzerland that are so familiar to all European travelers. Before the war estimates placed the revenue derived by the Swiss people from tourist travel as high as \$35,000,000 annually.

Yet Colorado is nearly seven times as large as Switzerland, and its mountain area is fully six times as great. Colorado has at least 43 peaks that tower more than 14,000 feet above sea level, while Switzerland has but eight. Colorado has fully 1,000 peaks 10,000 feet high and over, while Switzerland has fewer than one-eighteenth as many. Every peak in Colorado is accessible for any careful and reasonably strong mountain climber entirely to its summit, while the highest peaks in Switzerland are accessible to their summits only for hardy and expert climbers and then only under the direction of experienced guides.

There are thousands of beautiful lakes in the mountains of Colorado, many of them of large size and all of them of wonderful beauty. Some of Colorado's lakes, though far less famous than Lake Lucerne, are not surpassed by it in certain characteristics of natural beauty. If they were surrounded by beautiful villas and hotels scores of Colorado's lakes might soon have almost as many admirers as have the lakes of Switzerland. Some of the more easily accessible of our mountain lakes are beginning to be surrounded by the modern conveniences that many tourists and travelers demand, but there will always be in Colorado hundreds of picturesque lakes where fishing is good and where natural beauty is not too much marred by the art of man.

The United States government has recognized the value and importance of Colorado's scenery and natural recreation advantages by the creation of two national parks and three national monuments within the state. These are the Rocky Mountain national park, in the north-central part of the state, and the Mesa Verde national park, in the southwestern area, and the Colorado, Wheeler and Hovenweep national monuments, which are described in more detail under the title, "Colorado—General Description," in this volume. The government is constantly improving the highways, providing facilities for campers, automobile travelers and other visitors in these parks, while hotel and transportation facilities are all that may be desired. In 1924 there were 224,211 visitors to the Rocky Mountain national park, a greater number than

visited any of the other parks of the government.

Fifteen national forests are located wholly within the boundaries of the state and two others are partially within its borders. These forests embrace 13,248,256 acres and include nearly all the higher mountain peaks not within the national parks and a very large part of the most beautiful scenery in the state lies within their boundaries. The forest service is devoting more attention each year to popularizing these forests as national playgrounds and to improving them with roads, trails, shelter houses and other conveniences for travelers. The forest service estimates that about 1,501,561 people visited the national forests of the state in 1924, some of them remaining in the forest limits only a few hours, some remaining several weeks and some of them making several visits. The average time spent by each of the visitors within the forest limits, according to the records of the forest service, was three days. Most of them spent much more time than this in the state. Of course, a very considerable number of these forest visitors were Colorado people, but some idea of the vast and growing importance of the state's tourist business may be gathered from the figures here given. A great many of the visitors to the state do not enter the national forest limits except on railroad trains and hence are not counted in the forest service's enumeration. Many of the visitors to Rocky Mountain national park never enter the national forests.

Big game still is found rather abundantly in Colorado, including deer, antelope, bear, elk, mountain lion, gray wolf and coyote. In an article in this book devoted to the national forests of the state will be found approximate estimates of the numbers of various kinds of big game found within the national forests. The numbers found outside the forest boundaries bring the totals considerably above the figures there given, but no accurate survey has been made except within the forests. There is also much small game, including sage hen, grouse, pheasant, dove, wild duck, rabbit, squirrel and other varieties. In recent years the state has exercised strict supervision over the killing of game, and such protective measures as have been adopted and enforced have had the effect of increasing the supply of many kinds of the larger

game birds and animals which were in danger of extinction. There is open season on practically all game, and the regulations under which game may be killed may be obtained from the state game and fish commissioner at the state capitol.

There are now within the state protected areas in which game may not be killed at any time, except certain predatory animals, which may be trapped or hunted under special permits granted by the state game and fish commissioner. These are known as game refuges, the following having been created by the state legislature in 1921:

The Colorado State game refuge, in Larimer and Boulder counties, surrounding the Rocky Mountain national park on the north, east and south. Restrictions on hunting and trapping within the national park are even more rigid than in the game refuge. This refuge lies within the borders of the Colorado national forest.

The Pikes Peak game refuge, in El Paso and Teller counties, including much of the area about Pikes peak, and being within the Pike national forest.

The Spanish Peaks game refuge, in the southwestern part of Huerfano county and extending into western Las Animas county, in the San Isabel national forest.

The Denver Mountain Parks game refuge, west of the city of Denver, in Jefferson, Clear Creek and Park counties, including the Denver mountain parks.

The Colorado Antelope refuge, comprising four townships in Larimer and Weld counties, north of Wellington.

Eight additional game reserves were created by the State legislature in 1923, as follows:

Royal Gorge game refuge, west of Canon City, in Fremont county.

Poncha Pass game refuge, in Gunnison and Saguache counties, west of Salida.

Cochetopa game refuge, in the Cochetopa national forest, in Saguache, Mineral and Hinsdale counties.

Ouray game refuge, between Ouray and Telluride, in San Juan county.

Gunnison game refuge, partly in the Gunnison national forest, in Gunnison county.

Snowmass game refuge, in the Sopris national forest, in Pitkin county.

Williams Fork game refuge, surrounding Hot Sulphur Springs, in Grand county.

North Park game refuge, in the central-north part of Jackson county, adjoining the Wyoming boundary.

The legislature in 1925 created five additional reserves, as follows:

Newlon Creek game refuge, Fremont county; Waugh Mountain game refuge, west of Cripple Creek, in Fremont county; Buffalo Peak game refuge, at Leadville, in Lake county; White River game refuge, in White River national forest, Rio Blanco county; and the Cameron game refuge, in the south-central part of Jackson county.

In recent years excellent highways have been built into many of the most beautiful mountain districts, and many of the most magnificent mountain peaks which were unknown even to most of the people of Colorado are now coming to be almost as well known as Pikes peak, which in the past was practically the only mountain in Colorado known outside the state. Today there are five or more automobile routes across the state east and west, intersecting north and south highways, and travel is heavy on all of them. More tourists visit Colorado today by automobile than visit it by rail, and automobile travel to the state is increasing much more rapidly than travel by railroad.

Some of the mountain areas that are yet inaccessible because of lack of highways are of exceptional beauty and grandeur and Colorado will for many years be offering each season some new scenic attraction to its visitors. People no longer come to Colorado year after year to see Pikes peak alone, but each year they may visit some new peak, lake or mountain park and none of our visitors of today will live long enough to see all that is worth while in the Colorado Rockies by making one visit to the state each year.

The characteristics of the Colorado climate that make it so attractive to tourists and healthseekers are its dryness, high percentage of sunshine, moderate air movements, and moderate and equable temperatures. The high altitude affects the climate favorably for persons afflicted with pulmonary and similar diseases, the air being rarer, less humid and generally purer than the air in lower altitudes. The average annual precipitation for the state is about 17 inches, ranging from as low as 6 inches in some localities in the San Luis valley to above 30 inches in parts of the San

Juan mountains. The humidity of the atmosphere is generally very low in all parts of the state, which renders the climate much less oppressive during periods of high temperature than in districts of lower altitude and higher precipitation. Average humidity is lower in Colorado than in any other state except Arizona. Air movements are moderate in all parts of the state, though there is frequently considerable wind in some seasons of the year; cyclones are unknown, and the hot winds that cause great damage to crops in states immediately east and south of Colorado seldom reach into this state.

Colorado is rich in mineral waters, some of them acknowledged to be of high curative qualities. More than 250 mineral springs and wells in the state have been carefully studied and their waters analyzed by the state geological survey, and there are perhaps as many which have not been analyzed. The largest single group of mineral springs in Colorado is found in and about the city of Steamboat Springs, in Routt county. Among other well known groups of mineral springs are those at Glenwood Springs, Idaho Springs, Pagosa Springs, Hot Sulphur Springs, Manitou and Canon City. Many of these places are well known health and tourist resorts, some of them having large bathing pools, sanatoria, hotels and other conveniences. One of the springs at Pagosa Springs has an average flow of about 700 gallons per minute, being one of the largest mineral springs in the United States. The waters of many of the Colorado mineral springs are highly radio-active, comparing favorably with the most notable springs in the world in this respect. Temperatures of the waters vary greatly, the highest being that of the Hortense hot springs, near Mt. Princeton, in Chaffee county.

The economic features of the tourist business are important and contribute materially to the prosperity of the state. Expenditures by tourists represent new capital coming in, which is quickly absorbed into all channels of trade and exceeds the state's income from precious minerals many times each year. Municipalities contribute liberally towards the convenience and comfort of tourists and in many of the cities and towns public camp grounds are maintained, where running water, comfort stations, shelters, cooking equipment and other fa-

cilities are provided. In 1924 there were 276 of these camps in as many cities and towns and they furnished accommodations for 693,127 campers.

Accurate statistics as to the number of visitors and the economic value of the tourist business are not available, as many visitors register more than once in different localities, some never register, others make short stays in the state without visiting the national parks, municipal camps or national forests, and many visit only the resorts and cities. However, estimates made by the Denver Tourist Bureau throw some light upon that

subject. The bureau estimates that there were 700,000 rail and auto destination and stop-over travelers in Colorado in 1924 and that they expended approximately \$49,000,000 while within the state.

Visitors in the Rocky Mountain national park numbered 224,211; in the Mesa Verde national park, 7,213; and in the national forests, 1,501,565. There were approximately 850,000 visitors in the Denver mountain parks, and 4,055,165 persons passed through the gates of the Denver union passenger station.

Highways and Highway Revenues

COLORADO has been conducting an aggressive highway construction program for a number of years, which is resulting in giving the state a system of highways comparable with any in the Union. It is estimated that at least \$75,000,000 was expended for this purpose by all agencies engaged in highway construction in the state between 1910 and 1924, inclusive, covering the building of new roads, maintenance and administration expenses.

The state at the beginning of 1925 had 68,135 miles of state and county roads, according to a survey made by the United States bureau of roads. This total is exclusive of streets and roads in incorporated towns and cities. Of the total, 8,928 miles comprise what is known as state highways and 59,207 miles are county roads. The roads bisect the state in all directions, connecting all county seats and furnishing direct routes for travel on transcontinental highways going east and west and north and south.

Highway construction and maintenance in the state is carried on through several agencies. The principal agency is the state highway department, which consists of the governor, the state highway engineer, highway advisory board, and such assistants, clerks and employes as are necessary to comply with the state highway act.

The advisory board consists of one member from each of seven districts into which the state is divided, whose term is for three years and whose successor is appointed by the governor. The administrative head of the state highway department is the state highway engineer. The senior assistant engineer has complete charge of the

office and routine problems connected therewith. The assistant engineer has charge of all engineering covering location, design and construction. The maintenance engineer has direct control of all maintenance work, as well as mechanical equipment. The auditor has charge of all accounting and the purchasing agent has control of the purchase of supplies and equipment for the entire department. A division engineer in charge of location and construction, and a maintenance superintendent are assigned to each of the seven districts. The program of construction is mapped out by the state highway engineer, with the approval of the governor and the advisory board, and construction work is usually done by contract. All employes of the department are under the provisions of the civil service act.

The United States bureau of roads co-operates with the state highway department and maintains a district office in Denver. The federal government joins with the state in the cost of construction of numerous projects and furnishes a large part of the funds used for that purpose. In 1924 the government provided 31.34 per cent of the total revenues of the state highway department, while 61.22 per cent of the total expenditure by the department was on federal aid projects.

The United States forest service constructs numerous roads and trails in and adjacent to the national forests and expended for that purpose in 1924 a total of \$441,417. This department co-operates with the counties and state in this work and a certain per cent of its revenues from the operation of the forests go to the counties for road purposes.

The boards of county commissioners of the several counties have absolute jurisdiction over the construction and maintenance of county roads. The funds for this work come out of county revenues. The counties also co-operate with the state highway department in the construction of state highways in their counties and have charge of the maintenance of state highways. However, the state remits to the counties each year half of the cost of this maintenance work, and co-operates with the county officials in much of the work that is undertaken.

The total cost of highway construction and maintenance in Colorado in 1924 was approximately \$11,538,804, of which the counties expended \$5,432,820, the state highway department, including federal aid projects, \$5,664,567, and the forest service \$441,417. These figures are exclusive of road construction in incorporated cities and towns.

The sources from which funds of the state highway department come are shown in the following table of receipts for the fiscal year ending November 30, 1924:

Source	Amount	% of Total
Taxes:		
1/2 mill levy.....	\$ 860,974	17.27
Gasoline tax	844,247	16.94
U. S. Government:		
Federal aid	1,562,226	31.34
Internal imp.	72,300	1.45
County aid and misc...	145,434	2.91
Sale of bonds.....	1,500,000	30.09
Total	\$4,985,181	100.00
Receipts for year.....	\$4,985,181	
Balance first of year:		
Highway fund	1,142,405	
Federal aid bond.....	998,031	
County bonds	123,688	

Receipts and balance.....\$7,249,305

The distribution of funds by the state highway department for the fiscal year ending November 30, 1924, is shown in the following table of disbursements:

Purpose	Amount	% of Total
Construction:		
Federal aid projects.	\$3,467,942	61.22
State projects	1,014,422	17.91
County projects	107,030	1.89
Maintenance	804,727	14.21
Road signs and traffic census	22,041	0.39
Property and equipment	94,922	1.68
Administration:		
General office	67,464	1.19
Engineering	86,019	1.51
Total	\$5,664,567	100.00
Disbursements	\$5,664,567	
Balance end of year.....	1,584,738	
Total	\$7,249,305	

The funds supplied by the government towards the construction of federal aid projects are governed by certain regulations which result in a division of costs that varies on different projects but, as a rule, the government pays about 56.22 per cent of the cost of the projects. The state does the locating and engineering work at its own expense, and after a project is approved by the bureau of roads the government stands half the cost, not to exceed \$30,000 a mile.

Colorado's mileage of highways, according to classes of construction, is divided as follows:

	Miles
State roads:	
Hard surfaced	199.9
Gravel and sand-clay.....	3,123.5
Graded	5,604.6
Total	8,928.0
County roads:	
Gravel and sand-clay.....	5,341.4
Graded	28,118.1
Unimproved	25,747.9
Total	59,207.4
Grand total	68,135.4

The counties of the state provided revenues for highway purposes in 1924 aggregating \$5,905,217. The sources from which these revenues were received and the amounts were as follows:

Source	Amount
Bonds	\$ 50,986.25
Taxes or appropriations....	3,951,606.75
Motor vehicle tax.....	363,667.31
Gas tax	663,845.85
Miscellaneous	875,111.42
Total	\$5,905,217.58

The miscellaneous item includes donations, balances left over, receipts from the forest service, etc. Expenditures by the counties in 1924 were as follows:

Purpose	Amount
Construction:	
Roads	\$1,067,067.51
Bridges	514,595.33
Maintenance:	
Roads	2,576,722.47
Bridges	210,097.17
Equipment, repairs, etc....	588,095.77
Engineering and administrative	101,920.32
Miscellaneous	374,321.80
Total	\$5,432,820.37

Tables are published elsewhere in this volume showing mileage of highways by counties, revenues of counties for highway purposes, and disbursements by counties, giving details of county operations.

MILEAGE OF HIGHWAYS IN COLORADO AT BEGINNING OF 1925

Federal Lands and Reserves

THE United States government is by far the largest single land owner in Colorado. Exact figures as to the total area held by the federal government are difficult to obtain on account of the variety of lands administered by different departments, but the following table gives approximately the vast extent of the federal government's absolute ownership of lands and its control of sub-surface titles on patented lands:

Description	Acres
National forests	13,248,256
National parks and monuments	317,951
Withdrawn lands:	
Coal	4,238,497
Oil	222,977
Oil shale	41,560
Power sites	242,172
Public water reserves.....	1,740
Miscellaneous	1,727
For classification	3,594,055
Unappropriated and unreserved	7,596,970
Entered but not patented.....	3,992,784
Total	33,498,689

Most of these lands are available for the use of the public in some form.

The national forests, unappropriated homestead lands, the national parks and monuments and the water power sites are described in more detail in articles elsewhere in this publication, where information will be found concerning the availability of these lands for public use. The coal, oil and mineral lands are also subject to leasing for prospecting or development, and information concerning these may be obtained from the registers of the district land offices listed under a description of federal homestead lands.

The above table indicates that approximately half the area of the state belongs to the federal government. A proper interpretation of the figures will show a slightly different result, as the surface rights of some of the lands withdrawn may have passed to patent while the remaining surface rights, in some instances, are available for entry, the government retaining title in the sub-surface oils, minerals and coal.

Homestead Lands

THE United States government had 7,596,970 acres of unappropriated and unreserved public lands within the boundaries of Colorado on July 1, 1924, subject to entry under homestead and other classifications. Of that amount, 6,446,425 acres was surveyed land and 1,150,545 acres unsurveyed.

Exclusive of these vacant lands, there were 3,992,784 acres upon which final proof had not been made by entrymen and patent had not issued as of the above mentioned date. Upon the same date there were 3,594,055 acres of public domain temporarily withdrawn from entry pending surveys and classification.

The unappropriated and unreserved lands are open for entry under various classes of filings, including homestead, soldiers and sailors homestead rights, desert entry, timber and stone, and other classifications. The lands upon which final proofs had not been made are not subject to entry unless restored to the domain by forfeiture or otherwise.

Nearly one-third of this homestead land lies in two counties in the north-western part of the state, Moffat and Rio Blanco counties. It is in the Glen-

wood Springs land district and is classed by the officials of the land office as farming, grazing and mineral land, with no information given as to what portions belong to each of the three classifications. Practically all of it is from 25 to 90 miles from any railroad. Somewhat more than one-third of the homestead land of the state, approximately 3,000,000 acres, lies in the mountainous or semi-mountainous counties, at an altitude above 7,000 feet. Most of this is primarily useful for grazing purposes or for minerals it may contain. Small areas of agricultural land are to be found in the large homestead areas of these mountain counties, but practically all the land suitable for farming that lies within a reasonable distance from a railroad has been filed upon. About 200,000 acres of homestead land is to be found in the 25 counties lying east of the mountains. Perhaps not to exceed 10 per cent of this amount is suitable for farming, and nearly all of it is very small tracts, much below the size of a government homestead. It is safe to say that a dozen desirable full 320-acre government homesteads could not be found in this section of the state. The remainder of the avail-

able homestead land, somewhat less than 3,000,000 acres, is widely scattered over the western part of the state. A considerable amount of it is good farming area, but nearly all of it lies from 15 to 40 miles from any railroad. The rainfall in some sections is not sufficient to produce good crops without irrigation and no definite plans for its reclamation by the government have been announced.

It should be borne in mind by prospective settlers who are looking to the government domain as a possible location that these lands have been combed by homeseekers for many years and that in most cases the land most suited to farming has been filed upon long since. It must also be recognized that the task of subduing raw land and making it productive is one which seldom can be accomplished without some money and some acquaintance with the locality and its farming problems. Newcomers in the state are urged to use care and judgment in selecting homestead lands and are advised that it is far better to spend time in investigating the various tracts still open to settlement than to jump to conclusions and select a tract which later may be found to be unfit for farming or to be too remote from railroads and markets to make farming a financial success.

All these lands are administered by the general land office of the department of the interior, and contact with

the public is made through the district land offices, to which all applications should be made. These district land offices furnish general information and printed literature to the public upon application. A list of district land offices in Colorado is published herewith.

Since the 1924 edition of the Colorado Year Book was issued, there has been a consolidation of some of the district land offices and there are now only five, instead of nine, of these offices. The accompanying table shows the amount of homestead land, by counties, open to entry in the various land districts of the state on July 1, 1924.

Entries upon public lands in Colorado are gradually declining each year, due to the steady decrease in the desirable land available. Public lands entered in recent fiscal years are shown in the following table:

Year	Acres
1924	605,390
1923	892,140
1922	1,258,989
1921	1,911,049
1920	1,912,867

A total of 808,034 acres of public domain was patented in the fiscal year ending June 30, 1924. Of that total, 239,698 acres was in the Pueblo district, 174,435 in the Glenwood Springs district, and 117,244 in the Glenwood Springs district. The remainder was scattered generally among the other land districts.

National Forests

A LARGE portion of the mountainous area of Colorado is valuable primarily as forest land. Most of this rugged country, along both slopes of the Continental Divide and extending irregularly along spurs east and west therefrom, is now under the supervision of the United States forest service in the form of national forests. There are in all fifteen wholly in the state and two others which lie partially within its boundaries. These forests are administrative units into which suitable portions of this entire area, extending from Wyoming to New Mexico, have been divided for efficiency in handling. They average a little less than 1,000,000 acres each in area, or in all 13,248,256 acres.

As far as possible, these timber lands are handled as local industries. Although they are a part of an extensive system comprising 149 national forests scattered through 27 states, Porto Rico and Alaska, and although the forest service, as a part of the United States department of agriculture, has its headquarters in Washington, its organization is decentralized to such an extent that local supervision is charged with the handling of most of the business with users and purchasers on the ground.

These forests, together with part of those of Wyoming, those in South Dakota, Nebraska, Minnesota and Michigan, 26 in all, make up the Rocky Mountain district. Colonel Allen S. Peck is district forester, with headquarters in the new federal building, Denver. Assistant district foresters are in charge of branches of operation, including fire protection, forest management, grazing and lands. A district engineer and an inspector in charge of public relations complete the organization immediately under the district forester. The total of national forest officers in the state is a little over 300.

The forests in Colorado comprise a little more than 8 per cent in area of the 157,000,000 acres of national forest land in the United States. The first "reserve" was created by President Harrison in 1891 in Wyoming. It was known as the Yellowstone Park timberland reserve. This and all others, set aside until 1907, were known as reserves. Beginning in that year, however, they were all designated officially as national forests, in

which timber was to be grown and utilized instead of reserved. This was an important step in the development of the present system. The accompanying table gives the name of each national forest wholly or partly in this state, together with its net area within this state, and the headquarters of the supervisor.

Nat'l Forest	Headquarters	Acres

Uncompahgre	Delta	778,291
White River.	Glenwood Spgs...	884,974

*Lies principally in Wyoming.

†Lies principally in Utah.

The boundaries of these mountainous tracts are very irregular. Most of the forests lie in two or more counties while some of them are made up of two or more separated tracts. The location of the various forests wholly or partly in the state by counties is as follows:

Arapaho forest: Grand and Jackson counties.

Cochetopa forest: Chaffee, Gunnison, Hinsdale and Saguache counties.

Colorado forest: Boulder, Gilpin, Jackson, Jefferson and Larimer counties.

Grand Mesa forest: Delta, Garfield, Gunnison and Mesa counties.

Gunnison forest: Delta, Gunnison and Montrose counties.

Hayden forest: Jackson county.

Holy Cross forest: Eagle, Garfield, Gunnison and Pitkin counties.

La Sal forest: Mesa and Montrose counties.

Leadville forest: Chaffee, Lake, Park and Summit counties.

Montezuma forest: Dolores, La Plata, Montezuma and San Miguel counties.

Pike forest: Park, Clear Creek, Douglas, El Paso, Teller and Jefferson counties.

Rio Grande forest: Conejos, Hinsdale, La Plata, Mineral, Rio Grande, Saguache and San Juan counties.

Routt forest: Grand, Jackson, Moffat and Routt counties.

San Isabel forest: Alamosa, Chaffee, Custer, Fremont, Huerfano, Las Animas, Pueblo and Saguache counties.

San Juan forest: Archuleta, Conejos, Hinsdale, La Plata, Mineral, Rio Grande and San Juan counties.

Uncompahgre forest: Gunnison, Hinsdale, Mesa, Montrose, Ouray, San Juan and San Miguel counties.

White River forest: Eagle, Garfield, Moffat, Rio Blanco and Routt counties.

The national forests are administered by the secretary of the department of agriculture through an official created by act of congress and known as the national forester. The secretary of agriculture is authorized by act of congress to issue from time to time regulations governing the use and occupancy of national forest lands and the use of timber and other national forest resources.

Although dedicated primarily to the preservation and production of timber, these forests contain many other resources which recommend themselves to the attention of the public for conservation as well as timber. Among them are forage for live stock, water and recreation. It is the business of the forest service in Colorado to co-ordinate all of these with the first purpose of growing timber in such a way as to realize the greatest returns from each with the least sacrifice of other uses.

Timber—During 1924 a total of 41,663,000 board feet of timber was cut from national forest land in Colorado in 812 sales. The revenue received from this source amounted to \$112,795, of which 25 per cent will be returned to the state by the government.

Ten million, seven hundred and twenty-two thousand board feet of dead material was given away free of charge to local ranchers and settlers under 3,673 free use permits. The timber cut on the national forests of Colorado shows an increase in 1924 of about 23 per cent by volume over 1923. The amount cut is very small as yet, compared to the total amount of available timber in the national forests of the state, which is approximately 21,170,000,000 board feet. Nevertheless, the increased sale business is the forerunner of a large, permanent and steadily growing industry.

One of the larger recent sales is to

the New Mexico Lumber company which built the town of McPhee, Colorado, and established a large completely equipped modern plant at that point. This company has purchased a large amount of private and state timber in addition to that secured from the Montezuma forest in the southwestern part of the state. Other companies are buying stumpage in large quantities and producing a great variety of products—railroad ties, mine props, fruit boxes, lath, grain doors, coal doors, etc., as well as lumber.

The Trinchera Timber company's treating plant at Salida has just been completed and put into operation. This plant will begin with the treating of poles for the Mountain States Telephone company, and it is understood that this will be the main source of supply for this company for use in Colorado. This plant is treating some sample crossarms for the telephone company. It seems likely that this will develop a ready market for timber from the surrounding territory.

It is expected that the Salida plant will eventually be treating large quantities of fence posts and railroad ties in addition to telephone poles. The completion of the proposed Dotsero cut-off should add materially to the timbered territory tributary to the Salida plant.

All of this means an increasing consumption of Colorado timber, and the expansion of home industry with a lessened importation of timber products from other states, as well as furnishing employment for several thousand men.

All cutting of timber on the national forests takes place under close supervision of forest officers. Only mature trees are marked for cutting or such trees as it is necessary to remove in order to properly thin the stands. No greater amount is cut than the forest will produce. The methods employed assure that the forests will not only be kept in a perpetually productive condition, but will annually produce more and more as time goes on.

Reforestation—There are 13,250,000 acres of land in the national forests in the state of Colorado. Of this amount about 900,000 acres, or 7 per cent, is either denuded from severe fires and the clear cutting of the early mining days of the state, or is covered with brush or small trees of no value except in preventing erosion and the rapid run-off of rain and snow. This denuded land lies generally in the

most productive forest areas in the state and is capable of producing close to five billion feet of timber. This contrasts quite forcibly with the estimated present total stand of commercial timber in the national forests of this state of 21,170,000,000 feet.

During the past seventeen years a total of 28,534 acres of national forest land has burned over in this state, approximately one fifth of one per cent of the total area. This is a wonderful improvement over the conditions prevailing twenty-five years ago, when fires sometimes burned unchecked for weeks and the loss in one summer greatly exceeded the total area burned over during the past seventeen years of forest service administration.

Colorado's forests have even greater value in conserving water for the large irrigation interests and municipalities of the state. Water from the national forests irrigates 3,000,000 acres of land in this state, valued at \$300,000,000. Forests prevent the winter snows from melting during the first warm days of spring. Tests conducted at a government experiment station showed that when the snow had entirely melted in the open there was an average of 17 inches left in the woods, which took from one to six weeks longer to melt. The importance of this to Colorado is that irrigation water is insured throughout the entire summer instead of all the water rushing off in May and June.

Forests also retard the flow of water in times of floods. During the Pueblo flood in 1921, the flood waters from forested watersheds were retarded several days and this gave the waters from the plains a chance to subside before the crest of the mountain waters occurred. This is illustrated by the record of the inflow at Lake Cheesman, which is the source of Denver's municipal water supply. On the day that Pueblo was flooded the inflow from the South Platte river was 375 cubic feet per second, and the crest of the high water was not reached until four days later, when an inflow of 2,313 cubic feet per second was registered.

The forest service realizes the need for covering all denuded mountain lands with forests of merchantable timber but with the limited funds available for reforestation only a small area can be planted annually. During the calendar year 1924, 1,744 acres of denuded land was planted in this state. This is the largest area that

has ever been planted in one year. A forest service nursery is maintained at Monument, which could raise sufficient trees to plant double the area if funds were available to do the work.

Most of the reforestation is confined to planting denuded watersheds of municipalities, such as those of the cities of Colorado Springs, Denver, Trinidad and Salida. In addition, the importance of the irrigation interests of this state is so great that some planting should by all means be done on the watersheds and streams which furnish water for our largest irrigation projects. During ordinary seasons large survivals of the trees planted are secured and the work can be done quite effectively in the rockiest country at a cost which is not unreasonable in view of the difficulties encountered.

The average cost of planting an acre containing about 700 trees is ordinarily from \$10 to \$12. In view of the return which can be secured from the sale of the mature timber and the watershed protection value of these forested slopes this cost is very reasonable.

Fire Control—The fire season of 1924 was one of the most prolonged and driest the fire fighting organization has ever had to face. Two hundred and seven fires burned over 2,150 acres of timber land and 813 acres of open and brush land within the national forest boundaries. The damage amounted to \$24,329, and \$12,749 was expended from public funds in suppression work. That the cost and damage were not materially higher is due to the fact that forest officers spent the major part of their time on fire control, and to the splendid co-operation rendered by citizens, civic and military organizations. The moisture content of the air was frequently as low as 8 per cent in various parts of the state. There were periods extending over months without rainfall, and a high wind velocity was prevalent at times. A combination of these factors was conducive to the rapid spread of fire and 22 of the 207 fires covered more than ten acres each before they were controlled. The cost and damage were confined largely to three fires, one of which was caused by a camp fire at West Portal on the Arapaho national forest, another presumably by a smoker near Tolland on the Colorado forest, and the third by a sawmill man north of Steamboat Springs on the Routt for-

est. Thirty-three fires were set by lightning but no one of these gave any considerable difficulty.

Man-caused fires can and should be reduced. It is a matter for concern that man was responsible for 174 fires in the forests of the state in 1924. Careless smokers were responsible for 66 of these and campers and picnickers caused 47. So far the United States forest service has refrained from prohibiting smoking in this region and if people who enjoy smoking will use more care such a restriction may not be necessary. Vehicles should be provided with containers, which may be purchased at small expense, into which matches, pipe ashes and stubs may be put instead of dropping them on the highway. Foot and horse travelers must be particularly careful not to drop live matches, pipe ashes, cigar or cigarette stubs before they are dead and cold. Campers and picnickers can avoid the danger from camp fires if they will use gasoline or kerosene camp stoves. If open wood fires are used, extreme care must be observed, and every vestige of burned material completely drowned with water before leaving.

The Devil's Head lookout proved to be a great asset in fire detection during the year, but for nearly all regions fires were quickly detected by citizens, who took immediate measures to put out the fires or get into communication with a forest officer without delay. In co-operation with the city of Denver, a lookout will be placed on Squaw mountain in 1925. Thus, provision is made for the prompt discovery of fires in the Denver mountain parks and adjacent areas in the Pike national forest. An adequate program of trails, roads and telephone lines for fire protection purposes is rapidly nearing completion in Colorado. It is obviously essential that interior regions must be reasonably accessible and that there be a means of quick communication if fire damage is held to the desirable minimum. The help and interest of all the people in and near the forests is most needed to insure a reduction in man-caused fires and fire damage.

Other Resources: Forage—Intermixed with the stands of timber on the forests are many parks or open places covered with a heavy growth of forage. There is also much grass and other forage plant growth in the timber where the tree growth is not too heavy. Most of this forage can

be grazed by stock without injury to the timber. Some areas are closed to grazing in order to protect the slopes of streams, which furnish municipal water supplies, and other areas, rock slides, etc., are barren of any forage growth. About 10,000,000 acres of the 13,248,000 acres in the national forests of Colorado is used for pasturage, and feeds for the summer over 25 per cent of the cattle and 40 per cent of the sheep owned in the state. During 1924 this area supported approximately 296,300 cattle, 5,900 horses and 860,600 sheep grazed under paid permits. The average grazing season for cattle and horses is about five months and the fee for this period is 50 cents per head for cattle and 62 cents for horses. The average season for sheep is about three months and the fee is 8¼ cents per head. Up to the present time, and for the year 1925, the fees have been based on a flat annual rate regardless of variations in character of individual ranges. Intensive appraisal has been conducted, which is being considered as a basis for revision of the grazing fees beginning in 1926. This, if put into effect, will result in the revision fees being based upon the worth of the various individual ranges rather than on a flat rate for all ranges. Sheep are grazed in the extremely high portions of the forests, where the snow stays until the latter part of June and begins falling again in September. About 3,600 cattle and 3,500 horses were grazed free under a regulation which provides for grazing free not to exceed ten head of work and milk stock in actual use by settlers, prospectors, etc.

Larkspur Eradication—Certain poisonous plants on the range kill stock, but it has been found that about 90 per cent of this loss can be prevented by digging or grubbing the principal poisonous plant, which is larkspur. During the latter part of 1915, definite grubbing of larkspur was begun in Colorado. Since that time (1915) about 5,982 acres has been grubbed. at a cost of approximately \$3.85 per acre. It is estimated that this work effected a saving of \$20,000 to the livestock industry of the state during the past year.

Range Improvements—The construction of range improvements that are at present in use on the national forests of Colorado consist of: Fences, 424 miles, value \$48,019; corrals, 49, value \$2,946; improved stock driveways, 710 miles, value \$21,113; stock

bridges, 8, value \$1,949; water developments (improved springs), 172, value \$5,172.

Range Reconnaissance—Intensive range reconnaissance to determine just what forage the forests are growing has been carried on in several places, in order that the range may be stocked to the full carrying capacity without damage. Over 1,397,000 acres has been covered by this intensive investigation.

Game—Game animals are always interesting and the forest service game census for 1924 shows there are in the national forests of the state approximately 22,644 black-tailed or mule deer and 29 white-tailed deer, 4,860 mountain sheep and 6,404 elk, 581 mountain lions, 84 wolves and 28,734 coyotes, 2,720 black and brown bear, 6,838 lynx and wildcats, 3,913 foxes, 44,044 beaver, 25,335 muskrats, 7,817 marten, 5,427 mink and 3,620 badgers. Approximately 3,527,700 fish fry were planted by the forest officers in the state in 1924. Thirteen state game refuges have been established within the national forests of the state, the forest service co-operating with the state authorities in the protection of these areas.

Agricultural Lands—When the boundaries of the national forests originally were established, it was inevitable that some agricultural and non-forest land should be included. The boundaries, however, since have been readjusted from time to time until within the state of Colorado approximately 1,830,750 acres, or about 11 per cent of the original area, has been released; partly because of the agricultural possibilities of the lands and partly because it was not suitable or needed for timber production or other national forest purposes. In addition to this general contraction of the boundaries by eliminations from the outer edges, a total area of 268,128 acres, mostly in small tracts scattered throughout the interior of the forests, has been made available for entry under the forest homestead act of June 11, 1906, which authorized the secretary of agriculture to list with the interior department for entry under the homestead laws such lands in the national forests as in his opinion were chiefly valuable for agriculture and not needed for public purposes. By an act of congress passed August 10, 1912, the secretary of agriculture was directed to "select, classify and segregate, as soon as practicable, all

lands within the boundaries of national forests that may be opened to entry under the homestead law." This general classification now has been completed in the national forests of Colorado, and all the lands therein found to be chiefly valuable for agriculture have been listed for entry. The remaining lands were classified as permanently more valuable for national purposes, and no further applications for examination and listing are accepted by the forest service. Many of the areas already listed, however, still are vacant and where this is so, may be entered by qualified persons upon application to the local land office concerned as in ordinary cases.

Land Exchange—There are 1,490,190 acres of privately owned lands within the exterior boundaries of the Colorado national forests, acquired under the various land laws. Much of this is permanently adapted to the production of timber and is not desired by the owner; in some cases because it was taken up for the merchantable timber which has now been removed; in other cases it was taken up in the hope of making a successful farm and proved to be worthless; in still other cases it is mineral ground which has been worked out or proved to be valueless. Some of it is used for grazing; some not at all. Often a single owner has acquired a number of widely separated tracts. On March 20, 1922, the president approved the land exchange act, which authorizes in general language the exchange of private lands for government lands in the national forests, or authorizes the exchange of private lands for timber of equivalent value. This will make it possible for private owners to consolidate their holdings and to exchange timber producing land for land of greater value for grazing, and will at the same time permit the government to consolidate its holdings in more compact bodies of timber land, which will be easier of administration and less expensive to protect. Both the private land offered and the government land or timber to be selected must be within the same state and within the exterior boundaries of a national forest. Exchanges not conforming to these requirements cannot be made except where additional authority by special act of congress is secured. Private land which contains a relatively large proportion of agricultural soils or is distinctly mineral in character will not be accepted in

exchange; only lands primarily adapted to timber growing are de-seined as a rule. Persons interested in making such exchanges should apply to the forest supervisor of the forest concerned or to the nearest forest officer for detailed information as to procedure.

Recreation—Primarily, the forests of the United States should be protected and perpetuated because they are the source of the nation's future wood supply. But the forests have other values which justify the interest of the public in their protection. More and more people realize the value of the recreation center as a mighty factor in the development of both the youth and the adult of cities. Recreation grounds grow in importance as population increases. In 1924, 1,501,561 people visited the national forests of the state. There are under permit; 45 hotels, resorts and club houses, and 312 summer residences within the forests of Colorado. Areas intensively used as camping and picnic grounds have been reserved from appropriation for an exclusive use and the convenience and pleasure of the public thereby provided for.

Forest	Automobile Visitors
Arapaho	127,062
Cochetopa	36,299
Colorado	366,894
Grand Mesa	20,000
Gunnison	7,621
Holy Cross	34,454
Leadville	21,247
Montezuma	35,146
Pike	320,200
Rio Grande	43,990
Routt	26,815
San Isabel	120,180
San Juan	51,257
Uncompahgre	8,750
White River	8,760
	<hr/> 1,228,675

Roads—The forest service participates in building roads in and near the forests. Some roads it builds alone or in co-operation with the counties, using its own engineering organization, road-building machinery and government funds. During 1924 a total of 74 miles of new road was constructed by the expenditure of \$441,417. The large projects required \$342,415, and the small projects \$99,002. Trails cost \$39,714, 540 miles having been constructed. In constructing roads, the counties and the forest service choose the roads and provide the funds, and the bureau of public roads does the engineering and construction work on the large projects. Trails in the forests are necessary to protect the areas against fire by making it possible to get in with pack train loads of supplies.

Finances—The receipts from the sale of timber, grazing permits, special use permits, etc., during 1924, amounted to \$400,635.94. Of this amount, 35 per cent, or \$140,222.58 was used in the state for roads and schools, 25 per cent being sent the counties in which national forests are located, and 10 per cent spent directly by the forest service for roads. The total spent in operating the district office in Denver, the experiment stations, and the administration of the 15 forests in Colorado, including the amount spent by the forest service on roads, trails, telephone lines, ranger stations, etc., was \$657,521.02.

State or School Lands

WHAT is popularly known as state land in Colorado and other western public land states comprises the various areas turned over by the federal government to the state governments under general acts of congress and sundry special statutory grants, to be administered for the particular state interests in those states for which the grants were made. The most important of these grants were made under an act of congress passed in 1875, the year before Colorado became a state, by which the United States gave to each of the public land states an amount of land equal to one-eighteenth of the area of the state, for the benefit of the public

schools. This is known as school land and quite generally in public land states all state land is referred to as school land, though various grants were made to the states for purposes in no way connected with the schools. The various grants made to Colorado, with the purposes for which made and the area acquired under each, are as follows:

	Acres
Public Schools	3,754,061.72
Agricultural College	89,991.18
Internal Improvements	499,789.96
Penitentiary	31,985.49
Public buildings	31,904.62
University	45,844.43
Reformatory	520.00
Saline lands	18,830.22
Total	<hr/> 4,472,927.62

The original school land grant gave to the state sections 16 and 36 in every township. As there were large Indian reservations and extensive private land holdings in Colorado at the time the grant was made, the state was permitted to select other public lands in lieu of those within these reservations and public holdings. As a result, the state acquired large blocks of land in various localities, sometimes almost entire townships. When the national forests were created the state also exchanged considerable areas of state land within the forest boundaries for government land in other localities.

Of the land thus received by the state, a total of 1,375,211 acres had been sold up to November 30, 1924. The acreage belonging to the state on that date was as follows:

	Acres
Public Schools	2,865,127
Agricultural College	32,790
Internal Improvements	161,565
Penitentiary	9,929
Public buildings	5,077
University	9,209
Reformatory	520
Saline lands	13,499
Total remaining	3,097,716

The terms of the grants from the government provide that funds derived from the sale of the lands shall go into permanent funds and only the interest and the revenues derived from the administration of the unsold lands shall be used for the benefit of the schools or special interests for which the grants were made. These permanent funds are mostly invested in interest-bearing securities. The amounts in the various funds on November 30, 1924, were as follows:

Public School	\$7,950,249
Agricultural College	330,918
Internal improvements	264
Penitentiary	6,045
Public buildings	6,221
University	81,838
Saline	510
Total	\$8,376,045

The state lands are administered by the state board of land commissioners. State lands are leased and sold under regulations made by the board, which may be obtained from that body upon application. Leases are made for grazing purposes, for agriculture, for oils, minerals, etc. Before state lands can be sold, they must be appraised by representatives of the board and the applicant must agree to pay the price fixed by the appraiser. The land is then sold at public auc-

tion, selling at or above the appraised price. No state lands may be sold at less than \$3.50 an acre. Leases are made much in the same way, minimum prices being fixed at which state lands may be leased for various purposes.

Of the 3,097,716 acres of state land in Colorado, approximately 473,732 acres is coal land, according to estimates made by the mineral superintendent of the state land board. This is the most valuable asset owned by the state, practically all of which was granted to Colorado by the federal government for the benefit of the public school system. The value of this land is estimated at approximately \$100,000,000. It is distributed through nearly every coal-bearing district in the state as follows:

Canon City District	Acres
Fremont county	1,960
Northern Coal Fields	
Adams county	9,600
Arapahoe county	9,080
Boulder county	760
Denver county	1,920
Douglas county	13,180
Elbert county	30,020
El Paso county	44,700
Jefferson county	1,820
Weid county	75,560
Southern Coal Fields	
Huerfano county	11,400
Las Animas county	33,360
Yampa Coal Fields	
Moffat county	120,400
Routt county	69,720
Miscellaneous	
Archuleta county	732
Grand county	2,960
Gunnison county	3,440
Jackson county	25,080
La Plata county	9,960
Montezuma county	4,160
Park county	3,880
Total coal area	473,732

The estimates of the acreage and distribution of state coal lands are based on the reports of the United States geological survey. It is assumed that a very large percentage of the coal acreage will not be found to contain workable coal, and the estimates of value are based on this assumption. Government appraisers have placed the value of public coal land in Colorado at from \$100 to \$400 per acre, depending on the character of the deposits and their accessibility. The value of state coal land has been estimated at a little more than \$200 per acre, which is generally conceded to be very conservative.

Only a small amount of state coal land has ever been sold as such by the state board of land commissioners. When state land is sold for agricultural purposes the state reserves all coal, oil and minerals that may underlie it. The revenue derived from this land comes from rentals on non-operative leases and from royalties on producing leases. During the biennial period ending November 30, 1924, there was a total of 13,948 acres of coal land leased by the state, the revenue from which during the period was \$171,112. For the purpose of illustrating the development that is being made of state coal lands, it may be stated that the revenue derived by the state from rental of and royalties on state coal land during the biennial period ending November 30, 1916, was \$89,865.30, and for the preceding biennial period \$81,088.56. The coal leases are granted for a period of five years and require a minimum royalty of 10 cents a ton run of mine upon at least 1,000 tons annually, whether any coal is mined at all or not, and 10 cents a ton on all coal in excess of an amount sufficient to produce the minimum annual rental.

From the figures given above it will

be seen that only a very small percentage of the coal land owned by the state is under lease. This, of course, is due to the fact that most of it lies at a considerable distance from any railroad and cannot be worked profitably under existing conditions. The most important producing leases are located in the Canon City, Northern and Southern coal fields, in Fremont, Las Animas, Huerfano and Weld counties.

The state lands under lease for grazing and agricultural purposes on November 30, 1924, totaled 2,418,792 acres, from which the rentals for the biennial period ending November 30, 1924, amounted to \$664,455.

Lands leased for oil and gas development at the end of the last biennial period totaled 506,386 acres. Exploratory drilling is taking place on some of these lands and a considerable revenue is anticipated as development progresses.

The permanent funds are growing steadily, thus increasing the amounts available for the public schools and colleges. The total distribution to the public schools for the biennial period of 1923-24 amounted to \$1,777,314.

Irrigation Development

THE irrigation of land for the growing of crops by applying water to the soil as it is needed is as old as civilization itself, but in the United States the method is used, with few exceptions, only in the western half of the country in a district extending from the center of Kansas to the Pacific coast. The water used for this purpose is diverted to the soil direct from flowing streams, from reservoirs where it has been stored during flood seasons, or by pumping it from wells.

Farming under irrigation began in Colorado almost as soon as gold mining. Its development began on a small scale and was not very rapid at first but was steady and persistent, until today the annual output of the state's irrigated farms is more than ten times as great as that of its gold mines.

David K. Wall, one of the pioneer agriculturists of the state, farmed a two-acre tract of land at Golden in 1859, which he irrigated by direct flow from one of the small tributaries of Clear creek. His experiment proved so successful that he increased

his irrigated area to eight acres the following year. Again he was very successful and the story of his success spread rapidly.

Between 1860 and 1869 large community irrigation enterprises began to be undertaken. Up to this time only short ditches had been in operation, carrying water directly from the streams to the low lands lying in the narrow creek and river valleys. Most of these pioneer irrigation systems were individual enterprises, watering from 10 to 100 acres each. With the new era of development, large community enterprises were undertaken and ditches were constructed that carried water to the fertile uplands, far back from the narrow valleys. Irrigation on a large scale was first undertaken in the Greeley district, in northern Colorado, the water being taken from the South Platte river and its tributaries. The undertakings were generally successful and other districts immediately followed the example of northern Colorado. In 1889, when the United States census bureau made its first detailed report on irri-

gation enterprises, Colorado ranked second among the states in irrigation development, with 890,775 acres of land under ditch. California was first at that time, with 1,004,223 acres irrigated.

Colorado took first place in the area of land irrigated in 1899 and held that rank until 1919, when California went ahead of it as a result of the development of water from the drilling of wells. Colorado continues, however, to rank first among all the states in the area of land receiving its entire water supply from streams. The state lies at the top of the Continental Divide and its principal streams flow in all directions. To the east, the Arkansas and South Platte flow into Kansas and Nebraska; to the west, the Colorado flows into Utah; to the north, the North Platte flows into Wyoming; and to the South the Rio Grande del Norte flows into New Mexico. These streams, with their numerous tributaries, form the foundation of the state's irrigation system, not only from the normal stream flow, but as the channels through which water from melting snows in the mountain passes down to the lower lands during the summer months.

The administration of the public water supplies of the state is in the hands of a state engineer. For the purpose of administering the waters, the state is divided into six divisions, each in charge of a division engineer; the divisions in turn are divided into districts, of which there are 69 in the state, each in charge of a water commissioner. The state engineer is appointed by the governor, subject to civil service regulations; the division engineers are appointed by the governor, with the approval of the senate; and the water commissioners are appointed by the governor upon the recommendation of the county commissioners of the counties included in each district, all subject, of course, to civil service regulations prescribed by constitutional amendment and by statute, after the acts designating methods of appointing these officials were passed.

Under the laws of the state as they now stand, the state engineer has no authority to compel the furnishing of statistics, but through the co-operation of the division engineers and the water commissioners, the gathering of data each year has been put upon a more reliable basis. The records of the state engineer's office for 1924 show the following items:

Amount of arable land possible of

ultimate reclamation through all available water supplies, approximately 5,250,000 acres.

Amount of land now under ditch, 4,700,000 acres.

Amount of land actually irrigated, 3,400,000 acres.

Total quantity of water diverted from natural streams for irrigation purposes, 7,475,000 acre-feet.

Average quantity diverted for storage reservoirs, 1,800,000 acre-feet.

Apparent gross duty of water, about 2.20 acre-feet per acre of land irrigated.

Length of all main canals and laterals, approximately 28,000 miles.

Number of storage reservoirs and dams, about 1,000.

Capacity of storage reservoirs, 2,400,000 acre-feet.

Number of decreed water rights administered through state engineer's office, 17,100.

Total of all gauging stations maintained in the state, 126.

The United States census reports show that a total of \$88,302,442 had been invested in irrigation enterprises in the state up to 1920. Of that amount only 0.3 per cent had been invested prior to 1860. The period between 1860 and 1869 was particularly active, the investment reaching \$14,410,037, or 16.3 per cent of the total. The largest for any decade, however, was between 1880 and 1889, when \$17,150,419 was invested, or 19.4 per cent of the total up to 1920. There was considerable work done in the 10 years preceding the world war, but from 1915 to 1919 the investment dropped to \$550,890, or 0.6 per cent, the lowest since 1860.

The following table gives important irrigation statistics as compiled by the United States census bureau for 1919 and 1920:

Irrigation in 1919

Number of farms irrigated in 1919	28,756
Acreage irrigated in 1919....	3,348,385
Acreage enterprises were capable of irrigating in 1920	3,855,348
Acreage included in irrigation projects in 1920.....	5,220,588
Main ditches—Number, 1920..	8,867
Length, miles	19,022
Laterals—Number, 1920	6,185
Length, miles	8,571
Reservoirs—Number, 1920 ..	979
Capacity, acre-feet	2,406,372
Flowing wells—Number, 1920 ..	476
Capacity, gallons per minute ..	20,139
Pumped wells—Number, 1920 ..	527
Capacity, gallons per minute ..	210,094
Pumping plants—Number, 1920 ..	406
Capacity, gallons per minute ..	299,726
Average lift, feet.....	23
Cost of irrigation enterprises up to January 1, 1920.....	\$88,302,442
Estimated final cost of existing irrigation enterprises..	\$95,198,423

COLORADO IRRIGATION STATISTICS

(Compiled from Census Reports)

COUNTY	Acres Irrigated in 1919	Acres Cap- able of Irrigation in 1920	Number Enter- prises in 1920	Mileage Ditches and Laterals	Capital Invested to 1920	Estimated Final Cost

It is apparent that water is a commodity of great value in irrigation states, and where these streams originate in one state and flow into another disputes occasionally arise over the rights of citizens of the respective commonwealths. A particular instance of this is in the Colorado river, which may be used for irrigation and power purposes in six different states. In order to find an amicable way of avoiding disputes, the Colorado river compact was framed at Santa Fe, New Mexico, in November, 1922, as a result of legislation at Washington and by the states of Colorado, California, Nevada, New Mexico, Utah and Wyoming. This compact was ratified by the state legislatures in 1923 with the exception of Arizona, which, it is hoped, will ultimately ratify the pact.

Soil to which water is applied by irrigation as needed produces larger yields per acre than the non-irrigated lands as a rule. This fact may not readily be realized from a study of crop reports unless the distinction is closely watched, as average yields are based on lands both irrigated and non-irrigated. For instance, the average yield of corn in the state in 1919 was 13.4 bushels to the acre. The average on irrigated land was 25 bushels and on non-irrigated lands, 12.6 bushels to the acre. Winter wheat yielded an average of 13.3 bushels per acre for the state as a whole, while the average yield on non-irrigated lands was 12.1 bushels and on irrigated

lands, 22.9 bushels. The same rule applies generally in varying degrees to all irrigated crops.

The federal government has two reclamation projects in Colorado, the Grand Valley project, and the Uncompahgre project. The first provides for the diversion of water from the Colorado river in Mesa county by means of a diversion dam eight miles northeast of Palisades into a canal system on the north side of the Colorado river for irrigating 45,000 acres. The system consists of about 55 miles of main canal and 175 miles of laterals, the total area irrigated being around 13,000 acres. It is practically completed and the cost to date has been \$4,591,000.

The Uncompahgre project is in Montrose and Delta counties and the source of water is the Gunnison and Uncompahgre rivers. Land under the project includes 98,410 acres, of which 75,823 acres is privately owned. Total cost of the project was about \$8,000,000.

There is no government land under these projects open for filing, but lands are available for purchase the same as any private holdings or lands administered under the reclamation act.

Accompanying this article is a table showing areas irrigated in 1919, areas capable of being irrigated, number of enterprises, mileage of ditches and laterals, capital invested and estimated final costs, by counties in the state and state totals.

Water Power Resources

ONE of the most valuable of Colorado's natural resources is water power. Although the volume of water carried in the streams of the state is generally comparatively small, most of these streams have their sources at high altitudes and a vast amount of power is developed as they descend over precipitous courses from the mountain sides to the plains below. The principal river systems having their origin in the state and developing sufficient water power to be utilized commercially are: The Colorado, on the western slope, the principal tributaries of which are the Yampa, White, Grand, Gunnison, Dolores and San Juan; the Rio Grande, in the south, draining the San Luis valley; the Arkansas, in the south-

east, and the Platte, in the northeast. These streams have scores of comparatively small tributaries rising in the mountains, which drop from 1,000 to 6,000 feet in their courses. There is considerable variation in the amount of power available in these streams, due to the fact that the volume of water they carry differs widely at different seasons of the year. A maximum development could be obtained only through the storage of water in reservoirs during the flood seasons, so that a uniform flow of water could be obtained through the year.

The following figures, composed of estimates by the United States geological survey, furnish a good idea of the immense water power available for commercial use in the state:

Horsepower available without storage for 90 per cent of the time	765,000
Horsepower available without storage for 50 per cent of the time	1,570,000
Horsepower available from storage of water	2,568,200

The government had 242,172 acres of public land withdrawn from entry and held as water power sites on June 30, 1924. These sites are available for leasing, subject to the approval of the federal Power commission, which was created in 1920. Applications for sites on the public domain should be made to the United States geological survey, 403 Post Office building, Denver, Colo. Applications for sites within the national forests should be made to the national forest department, 462 Post Office building, Denver, Colo.

No important hydro-electric projects have been constructed in the state since the power commission was created, but applications for projects involving 78,000 horsepower are pending before the commission. One of these calls for the development of 57,000 horsepower in Gore canon, Grand county.

The development of water power in the state has not progressed as rapidly as in some other states, due in a

large measure to the immense deposits of coal available in Colorado for the development of power. It is generally conceded that the initial cost of hydro-electric installation is greater than for steam-developed power, though the cost of operation is considerably less. As the price of coal advances, the feasibility of hydro-electric projects increases, and power developed by water is expected to play an important part in the growth of the state in the future.

The presence of the coal deposits, on the contrary, offers some advantages in that it permits the construction of auxiliary plants in connection with hydro-electric projects upon economical terms so as to insure uninterrupted operation.

Hydro-electric power developed in the state, in plants of 100 h. p. or over, according to the geological survey, is as follows:

Summary	K. P.
Public utilities	76,383
Mining	10,882
Milling and private	576
Irrigation	2,695
Total	90,536

In addition, small plants of less than 100 h. p. in the state probably aggregate 5,000 horsepower.

Climatological Data

Colorado is noted for its rare and exhilarating atmosphere. Visitors arriving in the state from low altitudes often feel a tendency to run, jump and indulge in other exercises. This is due to the fact that the atmosphere exerts less pressure against the body than in localities where it is more dense. The feeling is very much like that of having a load lifted from the body, and that is, in fact, what takes place.

Normal atmospheric pressure at sea level is 14.7 pounds to the square inch. In other words, that is the pressure exerted against the body by the weight, or density, of the atmosphere. The greater the altitude above sea level, the lighter becomes the pressure. The atmospheric pressure in Denver is only 83 per cent of that at sea level, or 12.2 pounds to the square inch. Denver is 5,280 feet above sea level. Wagon Wheel Gap is 9,200 feet above sea level. Atmospheric pres-

sure at that point is only 72 per cent of that at sea level, or 10.5 pounds to the square inch. Denver's atmospheric pressure is 85 per cent of that at Indianapolis, Springfield and points of approximately the same altitude, and only 84 per cent of the average of the eight principal cities approximately on the same parallel due east from Denver to the sea coast.

A person breathes more deeply in a light atmosphere than in a locality where it is more dense, in order to fill the lungs with the quantity of oxygen necessary for the body. This is done automatically, without conscious effort, and causes all parts of the lungs to expand to full capacity. That is why climatic conditions in Colorado are considered especially beneficial to persons with a tendency toward pulmonary troubles. In lower altitudes parts of the lungs may lie dormant in persons of sedentary habits and thereby become susceptible to disease.

SNOWFALL IN THE MOUNTAINS

Visitors to the high mountain passes in Colorado in the spring and early summer are often surprised by the enormous banks of snow which they may observe. These snow banks are of almost incalculable value not only to Colorado but to adjoining states. They are mostly deposited during the winter months and form a moisture reserve that feeds numerous small streams flowing in all directions. These streams combine into creeks which broaden out into rivers that flow into the Pacific ocean and the Gulf of Mexico, forming the principal rivers in Wyoming, Nebraska, Kansas, New Mexico and Utah.

The quantity of snow required to maintain the flow of these streams during the entire year as it gradually melts is difficult to comprehend. Some idea may be formed, however, from the measurements of river discharges, made by the government. The Arkansas river had a mean or average discharge of 786 cubic feet of water per second at Pueblo over a period of about nine years. That is equal to an average of approximately 21,236,000 gallons of water an hour, and the Arkansas is only one of the numerous rivers which have their origin in the mountains of Colorado.

The area of greatest snowfall in Colorado, as shown by actual measurements under the direction of the weather bureau, is at Wortman, in Lake county, at an altitude of 11,250 feet above sea level. The average annual snowfall at that point over a period of 10 years was 276.5 inches, or a fraction more than 23 feet a year. The snow drifts into canons and ravines, where it packs and is gradually released by the warm sun during the spring and summer months.

At Fairview, in Custer county, elevation 9,500 feet, the annual snowfall averages 241.6 inches. Lake Moraine, in El Paso county, 10,265 feet above sea level, is in a district where the snowfall has averaged 160.2 inches a year for a period of twenty-one years. Cumbres pass, in Conejos county, at an elevation of 10,015 feet, which is traversed by a railroad, averaged 217.9 inches over a period of eight years. Silverton, San Juan county, elevation 9,285 feet, averaged 223.2 inches for a period of six years. Telluride, San Miguel county, elevation 8,800 feet, averaged 171.0 inches for nine years. Breckenridge, in Summit

county, elevation 9,534 feet, averaged 183.8 inches a year over a period of nineteen years.

The snows which fall in the mountains during the winter do not all melt in the following summer. When they pack hard in the ravines and remain for many years they become glaciers. Colorado has a number of glaciers, one of the largest being the Arapahoe glacier at the crest of the Continental Divide between North and South Arapahoe peaks at an altitude of 13,500 feet, in the Colorado national forest. In a former geological age it extended down towards the plains but now is about a mile wide. It flows at the rate of 27½ feet per year and its melting gives rise to a chain of beautiful lakes in the valley below. The St. Vrain glacier, on the east side of Mt. Hiamova, is supposed to contain the oldest ice of the group—that melting in 1924 having been deposited as snow before Columbus was born.

DENVER WEATHER CONDITIONS

Denver, being close to the center of the state and of approximately the same altitude as the principal cities, furnishes a fairly accurate index of weather conditions in Colorado. The following data was obtained from the United States weather bureau:

The maximum mean temperature in Denver in 1924 was 61.2 degrees Fahrenheit and the minimum mean temperature was 37.4 degrees. The warmest day of the year was August 2, when the thermometer registered 98 degrees. The coldest day was on December 24, when the temperature dropped to 15 degrees below zero. There were, however, only 24 days in the year when the thermometer went above 90 and only 10 days in which it reached zero or below. The thermometer registered below 32 degrees 134 days.

The total precipitation during 1924 was 11.07 inches, or 2.95 inches below normal. The total snowfall for the year was 71.8 inches. The maximum precipitation in any 24-hour period was 1.42 inches, on May 26-27. In February, June, July, August and November, the precipitation was less than half an inch. The greatest snowfall was in March, when there was 20.7 inches.

The average velocity of the wind in Denver in 1924 was 7.4 miles an hour. The maximum velocity occurred on February 3, when a gale blew at the rate of 48 miles an hour. There

were only three days in the year, however, when the wind reached the velocity of a gale, or 40 miles per hour, or over. The total wind movement was 64.278 miles.

The sky was clear in Denver 159 days in 1924; partly cloudy, 143 days; and cloudy, 64 days. There were 3,217.5 hours of sunshine, which was 72 per cent of the possible amount and 6 per cent greater than normal. Only 12 days in the entire year were entirely devoid of sunshine. Dense fogs occurred on 3 days, hail on two days and thunder was heard on 27 days.

The greatest rainfall recorded in Denver since 1872 was in 1909, when the precipitation was 22.96 inches. The lowest precipitation for any one year was 7.75 inches, in 1911. The highest temperature recorded was in August, 1878, when the thermometer registered 105 degrees, and the lowest was in January, 1875, when the thermometer dropped to 29 degrees below zero. The lowest temperature during the month of July was reached in 1873, when the mercury went down to 42 degrees. January is the coldest month of the year and July the warmest. The highest temperature ever recorded in January was 76 degrees, in 1888.

On July 14, 1912, a total of 0.91 inches of rain fell in Denver in five minutes, the absolute maximum over a period of 29 years. On the same day, 1.36 inches fell in ten minutes, 1.54 inches in 15 minutes and 1.72 inches in 30 minutes. A rainfall of 2.20 inches in one hour occurred on May 23, 1921. The heaviest rainfall in a 24-hour period in 53 years occurred on May 21-22, 1876, when the total was 6.53 inches.

The average monthly temperatures in Denver over a period of forty years were as follows:

Month	Mean	Min.	Max.
January	31.0	17.7	42.9
February	32.7	19.9	44.2
March	40.3	26.9	51.7
April	48.2	34.9	59.5
May	56.5	44.0	69.0
June	66.5	52.8	80.3
July	72.0	58.7	85.4
August	70.9	57.4	84.3
September	62.6	48.5	76.7
October	51.0	37.5	64.5
November	39.3	27.1	52.4
December	32.0	19.7	44.3

VELOCITY OF WINDS

The average velocity of winds in Colorado as computed by the U. S.

weather bureau from measurements taken at stations named, in miles per hour, is as follows:

Denver	7.3
Pueblo	7.2
Wagon Wheel Gap.....	6.3
Durango	5.6
Grand Junction	5.4
Las Animas	7.9
Pike's Peak	20.7

The highest velocity ever recorded in Denver was 75 miles an hour, on August 6, 1877. Wind with a velocity of 3 to 5 miles an hour is classed as light air; of 10 miles an hour, a light breeze; of 20 miles an hour, a gentle breeze; of 70 miles an hour, a storm; and 80 miles an hour, a hurricane. Under this classification, it will be observed that the wind of August 6, 1877, did not quite reach the velocity of a hurricane. The force of that storm was approximately 22,000 pounds per square foot. The wind traveled at the rate of about 7,000 feet a minute.

GROWING SEASONS

The records of the weather bureau show that Grand Junction has the longest growing season recorded anywhere in the state, the period between first and last frosts in that district averaging, over a period of 20 years, 183 days. In Canon City the average growing season is 161 days, in Boulder 159, in Denver 168, in Lamar 171 and in Pueblo 168. These are the regions of longest periods between late and early frosts, but in many of the higher altitudes, where the growing season is seemingly too short to make agriculture possible, crop growth is remarkably rapid and many of the crops mature in considerably less time than is required in other regions. This is true of potatoes, small grains, head lettuce and similar crops.

The weather-reporting station of lowest mean annual temperature is at Fraser, in Grand county, where the yearly average is 31.9 degrees, and the highest mean temperature is recorded at Lamar, in Prowers county, where the annual average is 54.4. At Fraser the month of January shows an average of 11.6 degrees, compared with 31.2 degrees at Lamar, while July averages 53.2 degrees, compared with 77.8 degrees at Lamar.

NORMAL MONTHLY AND ANNUAL MEAN TEMPERATURE IN DEGREES FAHRENHEIT

Agriculture

COLORADO was best known as a mining state for a quarter of a century following the first discovery of gold, but its agricultural development has gone forward at such a rapid pace in the past fifty years that the products of its farms now overshadow all other industries in value. Its importance as an agricultural state has hardly been fully appreciated by its own citizens until within recent years.

The first attempts at farming in what is now Colorado date back to the fur-trading period early in the nineteenth century, when small acreages of grain were planted at the various trading posts. Mexican settlers further developed tillable land along the Arkansas river in 1840 to 1855, but the first actual settlers to cultivate the soil within the present boundaries of the state were a party whose names were Fisher, Sloan, Spaulding, Kinkaid and Simpson, according to Stone's History of Colorado. These men raised a crop of corn on the site of Pueblo in 1842. However, the pioneers of 1858-1859 gave little thought to agriculture, as they were searching for gold. Farming began to increase shortly thereafter, though hindered by the Civil war and Indian troubles, and not until 1870 did the federal government consider the industry of sufficient importance to commence the collection of statistics.

The growth of agriculture in Colorado is illustrated by the increase in the value of all farm property as shown by the census returns as follows:

Year	Value	Per Cent. Increase
1870.....	\$ 5,223,563	
1880.....	41,991,650	703.9
1890.....	117,439,558	179.7
1900.....	161,045,101	37.1
1910.....	491,471,806	205.2
1920.....	1,076,794,749	119.1

This enormous increase in the value of all farm property has placed Colorado far up in the scale among the agricultural states of the Union. Its standing in 1920 among the 48 states was twenty-fourth, there being twenty-four states with all farm property valued at less than Colorado and twenty-three states which ranked higher.

The principal crops grown in Colorado and the rank of the state among

the states of the Union in 1920 was as follows:

Crop	Rank
Sugar beets	1st.
Potatoes	9th.
Barley	11th.
Apples	13th.
Peaches	14th.
Rye	14th.
Wheat	17th.
Hay and forage.....	17th.
Oats	19th.
Vegetables	22nd.
Small fruits	26th.
Corn	28th.

In 1920 the per cent of the farms in the state operated by native whites was 83.2, compared with 80.6 per cent native whites in 1910. The population of Colorado is about evenly divided between rural and urban. A smaller percentage of the population of the state was in the rural than urban centers, as compared with the United States as a whole, up to 1920, when the census reports showed a larger per cent on the farms in Colorado than in the entire country. The percentages of the rural population by years are as follows:

Year	Colorado	U. S.
1890.....	55.0	63.9
1900.....	51.7	59.5
1910.....	49.3	54.2
1920.....	51.8	48.6

The growth of the land area in farms and ranches in Colorado by years was as follows:

Year	Acres	Per Cent. Increase
1890.....	4,598,941	
1900.....	9,474,588	106.0
1910.....	13,532,113	43.0
1920.....	24,462,014	81.0

The value of all farm crops by years and per cent of increase was as follows:

Year	Value	Per Cent. Increase
1899.....	\$ 16,970,588	
1909.....	50,110,677	200.4
1919.....	181,065,239	261.3

Reports on agricultural and livestock activities in the state are carried in considerable detail in other parts of this volume and the reader is referred to these tables for further information. The purpose here is merely to give data on the industry as a whole, the position of the state as compared to other states, and figures which will show the progress of the industry.

Under a law enacted by the Twenty-second General Assembly early in

1919, county assessors are required to collect annually for the state immigration department a large quantity of information regarding agricultural operations, including the acreage cultivated to all crops each year. The work was first undertaken in 1919, assessors being furnished blanks for obtaining reports on the acreage of all crops planted for the 1919 harvest. These blanks are prepared jointly by the state immigration department, the division of livestock and crop estimates of the United States bureau of agricultural economics, and the Colorado Agricultural college. All county assessors obtained remarkably complete reports on these schedules in 1919, considering the short time available for preparation, as the law was signed less than a week before the annual property assessment was begun and it requires that all agricultural data be gathered when the property assessment is being made. The reports have shown an improvement each year since 1919.

The same law referred to above provides for co-operation between the state immigration department and the division of livestock and crop estimates of the United States bureau of agricultural economics in collecting, compiling and publishing information relating to acreage, condition and production of all crops. Under the au-

thority thus granted the immigration department has entered into a contract with the United States department of agriculture specifying the manner in which this work shall be done and authorizing the establishment of the Colorado Co-operative Crop Reporting Service, which publishes monthly bulletins showing the progress and development of all crops from planting time to harvest.

Through this service accurate information is available showing the production of all important crops by counties and of all farm and orchard crops for the state as a whole. Elsewhere in this volume will be found, in addition to the agricultural tables mentioned above, a table showing the acreage and production of all crops for 1924 and 1923, and the values of these crops, according to prices prevailing on or about December 1 of each year. It is the purpose of the Crop Reporting Service to maintain a uniform set of statistical agricultural production tables from year to year, so that it will be possible in the future to trace the agricultural development of the state and of each county in the state, a thing which has not before been possible in Colorado with available records. In the past accurate statistics of agricultural production were collected only once in ten years, by the census bureau.

Statistics of Colorado Agriculture

UNDER the law of Colorado the task of collecting and disseminating information concerning the progress and development of agriculture, as indicated by the acreage and production from year to year, is delegated to the State Board of Immigration and is executed in part through the assessors of the various counties and by virtue of a co-operative contract between the state department and the Division of Crop Estimates of the Bureau of Agricultural Economics, a subdivision of the federal Department of Agriculture. This joint state and federal service is known as the Colorado Co-operative Crop Reporting Service.

In the tables and charts on succeeding pages is the detailed statement of the agricultural and livestock industries in the state in 1924. This statistical information, as in preceding years, is based on the reports of county assessors, the data for farm crop acreages being taken on schedules prepared by the co-operative serv-

ice and that for livestock being based on either United States census figures or on the returns of county assessors for taxation purposes. Up to this time no plan has been devised for securing livestock information which is more accurate than that taken for assessment purposes, and in an effort to avoid duplication the crop reporting service has made no effort to secure a separate set of livestock statistics. Average and total crop yields are estimated by the federal branch of the service.

This volume differs from former editions of the Year Book in that it contains few comparative statements of agricultural acreages and yields for 1924 and preceding years. This is due to the fact that the co-operative service undertook this year for the first time to revise the reports of some of the assessors so that allowance might be made for the failure of the assessors to secure complete data for their counties. As the reports from the

various counties show names and addresses of individual farmers for all whose acreage is reported, none of the totals in their reports could be lowered without varying from the known facts. It was apparent, however, that in some of the counties the reports fell somewhat short of the true totals, so the co-operative service revised the figures for those counties, adding such acreages as the situation seemed to warrant and distributing such additional acreage among the various crops in proportion to the returns made in detail by the assessors.

In this way results were achieved which are believed to represent the true situation more accurately than the unrevised reports of previous years. While it was recognized and admitted in former numbers of the Year Book that the farm totals published were under actual totals, no effort has been spared in this volume to make the reports represent the true situation in every county, and it is certain that for the present, at least, no better estimates of the actual situation in Colorado agriculture can be made than are presented herein.

The number of tables also has been slightly reduced, several consolidations having been effected in the interests of economy of space and some tables which seemed to be too involved to be of general interest having been dropped. It is believed, however, that no information of general value included in former editions has been omitted from this volume. Among the tables dropped are those showing average yield upon all classes of land. These tables apparently mean little, as the inclusion of both irrigated and non-irrigated acreages and yields lead to no average which is of value in considering either class of land.

The Co-operative Crop Reporting Service appreciates the increasing interest which county assessors are displaying in the collection of statistics for their respective counties. Through their better understanding of the importance of the work and their increasing willingness to give it their time and attention, the reports each year are becoming more valuable to the state.

COMPARATIVE CROP PRODUCTION, YIELD, AND RANK, 1924

*This includes the entire acreage of corn harvested in every way and the value estimated as if it were all harvested for grain. For purposes of information the acreage of corn for silage is estimated to be about 5 per cent of the total area. It is estimated there are about 4,000 silos in the state with an average capacity of about 110 tons each. There is also much corn used for pasture and corn harvested by some class of stock, particularly in some sections by lambs.

†The total acreage of cauliflower reported by assessors in 1924 was 750 acres, but only 400 acres is counted as commercial production.

‡The total acreage of peas for commercial canning and market was 4,480 acres.

§Acreage of millet seed and alfalfa seed are included in hay totals, so these acreages are not carried into the totals.

¶The varieties of tame hay with the estimated acreage of each variety for 1924, including the portions cut for seed, are as follows: Alfalfa, 803,000; timothy, 44,000; red clover, 5,000; timothy and clover, mixed, 122,000; sweet clover, 18,785; sudan grass, 39,442; all millet, 93,229; other tame grasses, 34,095; field peas, 72,145; grains cut green, 16,304; total, 1,248,000. (Note: Not all the millet and field peas acreage is cut for hay. These are partly harvested for seed and grain.)

°Only the estimated value of farm gardens is given.

||This acreage is all accounted for in the acreage of sugar beets harvested and is not included in the total acreage figure.

ACREAGE OF WINTER WHEAT, 1924

Each dot represents 3,000 acres. The cross (X) is used in counties reporting less than 1,500 acres.

ACREAGE OF SPRING WHEAT, 1924

Each dot represents 1,000 acres. The cross (X) is used in counties reporting less than 500.

ACREAGE AND PRODUCTION OF CORN, 1924

DISTRIBUTION OF TAXABLE WEALTH, 1924

Each dot represents \$2,000,000 of assessed valuation. The valuation of Hinsdale county is \$926,077. Denver county, with an assessed value of \$405,106,910, cannot be shown in dots because of lack of space.

DISTRIBUTION OF POPULATION—U. S. CENSUS ESTIMATE, 1925

Each dot represents 1,000 population. Hinsdale and Mineral counties have less than 1,000 population each.

Agricultural Extension Service

CO-OPERATIVE extension work in agriculture and home economics in Colorado is conducted by the Colorado Agricultural college at Fort Collins in co-operation with the United States department of agriculture under the provisions of the Smith-Lever act. This act provides definitely for co-operation between the federal and state governments in carrying on a common enterprise and permitting participation by counties, local governments, associations and individuals.

In the extension service, scientific data developed by the state experimental station are given to the people through the demonstration method of teaching. This is mostly done through selected volunteer leaders in rural communities who agree to put into practice a method recommended by the extension service after it has been proved scientifically correct either by long farm practice elsewhere or through experiment station research. The service is headed by a director with a central office force of specialists, district leaders and representatives in various agricultural counties which are organized for extension work. The county representatives are known as extension agents. The work is carried on intensively only in such counties as make financial provision for its support, a part of which is met out of federal funds under the agricultural extension act known as the Smith-Lever law. However, counties that do not elect to employ an extension agent also receive benefit from the general work done by the state staff of leaders and specialists.

These specialists cover the following lines of work: Livestock, crops, poultry, farm management, marketing, agricultural engineering, human nutrition, clothing, home improvement and boys' and girls' club work.

The total expenditure in Colorado during 1923 and 1924 for extension work was \$111,101.07, exclusive of county appropriations, of which \$50,000 was from state funds and \$61,101.07 from federal funds.

Under present arrangements \$1,200 a year is uniformly paid on salaries from Smith-Lever and from department of agriculture funds to county extension agents. The balance of salaries and stipulated amounts for expenses, ranging from \$1,200 to \$1,500 a year for each worker, is paid from county funds direct to the county workers monthly, upon presentation to the board of county commissioners of itemized bills, after the same have been audited and approved by the director of extension service. Funds for all projects are budgeted for the fiscal year and expenditures are limited to the sums appropriated for each worker.

The rural population of the state is approximately 450,000. The total population both rural and urban of the counties organized for extension service is approximately 484,162. The rural population of these counties is 232,000. The extension service works with 350 organized communities and 1,231 organized groups in Colorado.

The extension staff and list of county extension agents in the state, with their addresses, follow:

EXTENSION STAFF

Roud McCann	Director
F. A. Anderson	Assistant to Director
R. H. Felts	District Extension Agent
E. D. Smith	District Extension Agent
R. W. Schafer	District Extension Agent
Maude Sheridan	State Leader of Club and Home Demonstration Work
Mrs. Blanche E. Hyde	Clothing Specialist
B. W. Fairbanks	Specialist in Animal Husbandry
Waldo Kidder	Specialist in Agronomy
Thos. H. Summers	Farm Management Demonstrator
O. C. Krum	Specialist in Poultry
A. T. Steinel	Specialist in Rural Development
F. L. Cooper	Specialist in Agricultural Engineering
Eva Floy Smith	Nutrition Specialist

Stockraising

STOCKRAISING is, next to mining, Colorado's oldest industry. In the territorial days, when perhaps not one person in one hundred who knew anything about Colorado had any confidence in its agricultural possibilities, the stockmen were already establishing themselves on the free range and were pasturing thousands of cattle and sheep on the rich native meadows of the mountain parks and the more favored lowlands. Almost the entire state was open range then and cattle and sheep were pastured at very small expense during the summer and shipped east to be finished for the packers' markets. At first stockraising was confined largely to the mountain valleys and the lowlands near the foothills, but gradually the herds overran the plains of eastern Colorado, where government land was abundant and there was almost no farming. In the late 70's and early 80's homesteaders began to take up the free range and to restrict somewhat the activities of the stockmen. There was really plenty of land for all, however, and open range stockraising continued to thrive in all parts of the state until far into the 90's. Since that time the settlement of farming lands has been very rapid, and at the present time range pasture is confined largely to the national forests and the government land in the northwestern part of the state. Range

regulations within the national forest are strict and are carefully enforced, while the remaining homestead land is being filed upon so rapidly under the grazing homestead act that free government range will become obsolete in Colorado within a very few years.

But the passing of the range has proved a blessing to the stockraising industry in this state. While it has greatly diminished the number of stock cattle marketed, it has made Colorado one of the leading states in the production of high grade fat cattle, hogs and lambs. The production of feeder stock has given place largely to a more intensive industry, that of producing finished animals of the best grades, ready for selling to the packers at the highest market price.

Colorado ranks seventeenth among the states of the Union in the total value of all live stock on the farms, there being 16 states in which the total value is greater and 31 states in which the value is less than in Colorado. In the value of its sheep, Colorado ranks seventh, there being 41 states in which the total value of their sheep is less. The state ranks twenty-second in the value of horses; twenty-sixth in the value of swine; and fifteenth in the value of cattle.

There is published herewith a table compiled from census reports for the purpose of showing the progress of

the industry, giving the number and value of all live stock on farms on January 1, 1920; April 15, 1910, and June 1, 1900. These figures do not include live stock not on farms, such as are produced in cities and towns, which would increase the totals slightly on some of the items. The table shows that the number on farms increased from 4,882,726 on June 1, 1900, to 7,497,700 on January 1, 1920, a gain of 2,614,974, or 53.6 per cent. In the same interval, the value of all live stock on farms increased from \$49,753,000 to \$160,543,241, a gain of \$110,790,241, or 222.6 per cent. The table shows that the greater value on January 1, 1920, was due not only to an increase in numbers, but to increased prices for live stock during the period under consideration.

The percentages of increase in numbers and values as shown by classes between June 1, 1900, and January 1, 1920, were as follows:

	Number	Value
Horses	78%	335%
Mules	359%	940%
Asses and burros....	*44%	219%
Cattle	23%	167%
Sheep	*11%	247%
Goats	*23%	125%
Swine	345%	1,516%
Poultry	194%	644%
All	53.6%	222.6%

* Decrease.

A table published elsewhere in this volume gives the number of domestic animals of all kinds in the state, as reported to the county assessors for assessment purposes in 1924. These figures are considerably below the actual number of domestic animals in the state, but they are of great value in showing the distribution of these animals by counties. The following tabulation, taken from reports published by the United States department of agriculture, shows the estimated number of domestic animals in the state on January 1, 1924, and January 1, 1925:

	1924	1925
Horses	400,000	384,000
Mules	33,000	36,000
Milk cows	261,000	271,000
Other cattle	1,279,000	1,202,000
Sheep	2,360,000	2,616,000
Swine	622,000	466,000

In 1920 and 1921 a generally unsatisfactory condition began developing in the live stock industry, which materially decreased the number of beef cattle through large movements to the markets. There has also been a decrease in the number of horses and

swine, but sheep and milk cows have shown an increase. There is generally a hopeful feeling in regard to beef cattle, as the conditions appear to be improving gradually. Wool production from the shearing of sheep is quite an extensive industry in the state, the total wool clip for 1919 as reported by the census being 9,755,312 pounds. The co-operative crop reporting service estimates the wool clip for 1924 at 6,580,000 pounds or about 4.5 per cent of the quantity produced in 11 far western states and 2.7 per cent of the total produced in the United States.

Receipts of live stock at the Denver Union stock yards in 1924 were:

Cattle	571,703
Calves	53,650
Hogs	569,038
Sheep	2,039,660
Horses and mules.....	36,844

Total receipts from 1886 to 1924, inclusive, were:

Cattle	12,970,395
Calves	722,687
Hogs	7,969,480
Sheep	28,346,225
Horses and mules.....	617,381

The largest receipts for any one year were:

Cattle, 1919.....	823,727
Hogs, 1924.....	569,038
Sheep, 1919.....	2,087,152
Horses and mules, 1915.....	71,870

Receipts at the Pueblo stock yards in 1924 were:

Cattle	108,463
Hogs	37,699
Sheep	874,806
Horses	2,671

The live stock industry is the basis for large dairying and slaughtering and packing industries in Colorado. The total output of butter in the state in 1923 was valued at \$9,410,141 and the value of the packing house products in that year was \$23,290,903. Details of these industries are given in special articles on dairying and manufacturing, in this volume.

Detailed information regarding the localities where the various branches of the live stock industry are being followed most extensively cannot be given in this volume, but such information will be found in district booklets published by this department describing the several sections of the state.

In a general way it may be stated here that very large numbers of feeder cattle are produced on the excellent

NUMBER OF SHEEP REPORTED BY COUNTY ASSESSORS FOR 1924

Each dot represents 2,000 sheep. The cross (X) is used in counties reporting less than 1,000 sheep.

NUMBER OF SWINE REPORTED BY COUNTY ASSESSORS FOR 1924

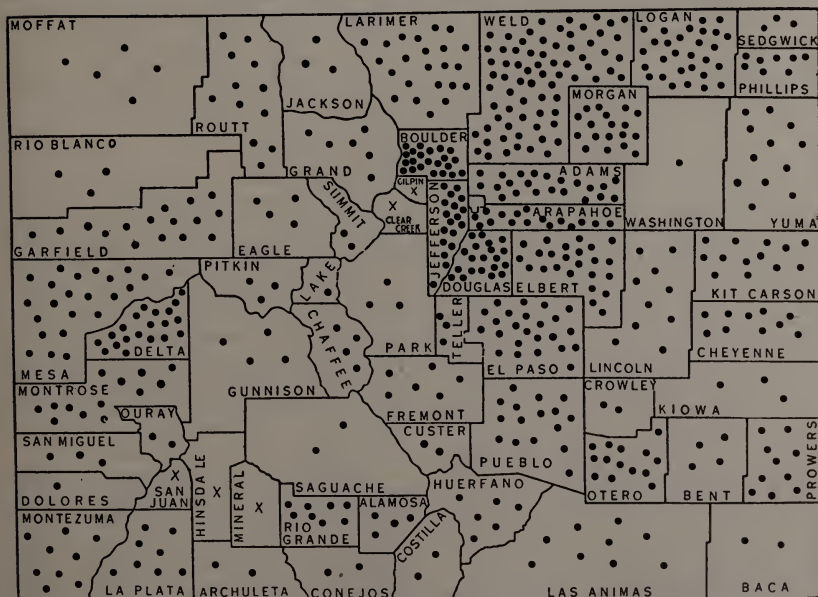

Each dot represents 1,000 swine. The cross (X) is used in counties reporting less than 500 swine.

**NUMBER OF RANGE CATTLE REPORTED BY COUNTY ASSESSORS
FOR 1924**

Each dot represents 1,000 range cattle. The cross (X) is used in counties reporting less than 500 range cattle.

**NUMBER OF MILK COWS REPORTED BY COUNTY ASSESSORS
FOR 1924**

Each dot represents 250 milk cows. The cross (X) is used in counties reporting less than 125 milk cows.

Dairying

THE breaking up of the cattle ranges, followed by the increased growing of dairy stock on the farms, is rapidly making Colorado a leading state in the dairying industry. Colorado is now a butter-exporting state, though the quantity of milk and other products produced is still below the demand. A pronounced tendency towards the raising of better grades of dairy stock has been fostered during recent years by state and national organizations and by bodies composed of dairymen, and this has had a beneficial effect in increasing the quantity of milk, butter, cheese and other products.

The number of dairy cattle in the state is showing an increase each year, especially in the non-irrigated districts, though the number of beef cattle continues to decrease. The United States department of agriculture estimates there were 271,000 milk cows on the farms on January 1, 1925, which compares with 261,000 on the same date in 1923, an increase of 3.8 per cent, and 253,000 on January 1, 1922. The same authority places a total value of \$12,195,000 on the milk cows of the state, as compared with \$13,050,000 in 1923, a slight decrease having resulted in the unit value. The number of milk cows not on farms will increase these totals to a small extent.

The state dairy commissioner of Colorado estimates from data compiled under his direction that the total value of all dairy products for the fiscal year ending June 30, 1924, was \$28,543,590, compared with \$23,348,256 for the preceding year, an increase of \$5,195,334. Of that amount, the largest item of value in factory products was butter, of which 19,387,908 pounds with a value of \$8,627,619 was produced. This amount was exceeded, however, by the value of the milk consumed on the farms, which is placed at 52,833,156 gallons, worth \$11,522,700.

The same authority gives the establishments in the state on July 1 of the years named as follows:

	1924	1923
Creameries making butter...	81	80
Condensaries	5	5
Cheese factories	17	7
Ice cream plants.....	115	69
Goat cheese factories.....	24	21
Dried milk plants.....	1	1

In 1923 the Chicago market received 1,239,000 pounds of high grade butter from Colorado, while 30,000 pounds was shipped to the market at San Francisco. While the 1924 figures are not yet available, the increase in receipts of Colorado butter at these markets is estimated to have been 80 per cent over 1923.

The manufacturing phase of the dairying industry is given in detail in tables published in this volume on that subject. The census for 1921 gave the number of establishments at 69, persons engaged, 689; salaries, \$361,208; wages, \$546,245; value of products, \$9,845,569, and value added by manufacture, \$1,964,496.

In 1921 Colorado produced 32,749,674 pounds of butter, cheese and evaporated milk, which compares with 29,510,627 pounds in 1919, a gain of 11.3 per cent in two years, and 13,960,334 pounds in 1914, a gain of 134.6 per cent in seven years. The statistics embrace products manufactured in factories and do not include products made on the farms, which are listed in separate tables.

The creameries of the state produced 16,406,283 pounds of butter in 1921, with a value of \$6,379,515, which compares with 13,982,711 pounds in 1919 and 8,862,705 pounds in 1914. Butter production doubled in the seven years. The output of cheese was 1,942,911 pounds in 1921, with a value of \$751,215, which compares with 1,163,140 pounds in 1919 and 106,335 pounds in 1914. Evaporated milk produced in 1921 amounted to 14,400,480 pounds, valued at \$1,413,106, which compares with 14,365,276 pounds in 1919 and 4,991,294 pounds in 1914. This product was almost three times as great in 1921 as it was in 1914.

The distribution of dairy herds in the state is indicated by the number of milk cows assessed by county assessors in 1924 for taxation purposes, and while the numbers taxed are below the actual figures, they serve this purpose. The leading counties were as follows:

County	Number	Value
Weld	17,907	\$748,820
Logan	7,150	250,035
El Paso	6,111	244,460
Elbert	5,873	237,334
Boulder	5,673	229,820
Larimer	5,649	262,140
Mesa	5,635	232,235
Adams	5,569	215,740
Douglas	5,032	244,935

County	Number	Value
Delta	4,821	178,330
Jefferson	4,573	193,100
Morgan	4,500	163,935
Arapahoe	4,163	201,315
Kit Carson	4,127	143,790
Pueblo	4,120	195,370
Garfield	3,911	154,680

The most rapid development in the dairy industry during the past decade has been in the non-irrigated districts of eastern Colorado. This has been largely the result of a very general change in farming methods in these districts. Forage crops are now being grown extensively and nearly all farmers are keeping a few dairy cattle to consume this forage. Few sections

of the country have shown more rapid increase in the number of silos during the last five years than eastern Colorado, and they are being built rather rapidly in all sections of the state, principally to preserve winter feed for dairy cattle. The number of silos in the state is above 4,000. During the past year the increase has been much less rapid than it would have been normally, because of the high cost of construction, the difficulties in obtaining necessary materials and the low prices prevailing for farm products. It is generally conceded that no branch of agriculture offers better opportunities in the state than dairy farming.

COLORADO DAIRY INDUSTRY (State Dairy Commissioner)

	Year Ending June 30, 1924		Year Ending June 30, 1923	
	Quantity	Value	Quantity	Value
Butter, lbs.	19,387,908	\$ 8,627,619	15,319,765	\$ 6,587,498

Other dairy products	-----	27,972	-----	54,680
Total value factory products	-----	\$14,004,422	-----	\$11,354,477
Est. value milk consumed, gals.	52,833,156	\$11,522,700	48,390,900	\$ 9,238,790
Est. value farm butter, lbs.	6,778,580	3,016,463	6,406,952	2,754,989
Total value all dairy products	-----	\$28,543,590	-----	\$23,348,256

NOTE—The last two items include milk and butter consumed on farms and not marketed.

Poultry

CLIMATIC conditions are especially favorable for poultry raising in Colorado. Comparatively little rain and an abundance of sunshine make it possible for fowls to spend much of the time out of doors, with the result that diseases are less prevalent than in most sections of the country and young fowls make quick and vigorous growth.

Since Colorado is a comparatively new state, however, the poultry industry is not yet extensively developed and offers exceptional opportunities for good profits in nearly all sections of the state except the mountainous counties, where the climate is too severe. The state does not at

present produce sufficient numbers of poultry or large enough quantities of eggs to supply its own needs, but rapid progress has been made in the last few years. There is a gradual increase in the number of commercial poultry farms to which the owners devote all their time instead of regarding poultry as a side line.

Rocky Ford, Canon City and Colorado Springs are developing into important poultry centers, while commercial establishments are on the increase in the outskirts of Denver. A few years ago the poultry raised in the state was generally of inferior quality due to a lack of proper care and feeding. The flocks were allowed

to run loose and were not fed the proper grain rations. In recent years, however, there has been a general improvement in the quality due to the introduction of better breeds and more attention to the needs of the flocks. This movement has been fostered by the organization of poultry raisers, the holding of annual poultry shows and conducting egg-laying contests. Wholesale dealers are constantly calling for better quality of eggs and urging the poultrymen to pay more attention to the handling of their flocks.

The value of the poultry on farms and of eggs produced in 1924 is estimated at about \$8,000,000, but these figures are merely an index as to the size of the industry, as the statistics are not reliable. It is estimated that at least \$5,000,000 worth of poultry and products are imported into the state from neighboring states each year.

The most reliable data on the industry in the state are contained in the census figures for 1919 and 1920, which are shown in an accompanying table.

Elsewhere in this volume will be found reports by county assessors of the number of poultry assessed in the various counties in 1924, and the number of hens on farms when assessments were made in 1924. The assessment figures are evidently far below the actual number of poultry in the state and the figures showing the number of hens on farms last year are undoubtedly 20 per cent below the

actual number. They are of much value, however, as showing the comparative importance of the poultry industry by counties, but are not entirely reliable in this respect, as the reports for some counties are far more nearly complete than for others.

In 1920, according to the census reports, the principal poultry-producing counties, with the number of fowls in each, were as follows:

Weld	294,948
Yuma	160,114
Washington	137,772
Logan	126,418
El Paso	97,996
Boulder	95,899
Kit Carson	95,279
Pueblo	95,057
Larimer	92,400
Morgan	91,276
Adams	90,062
Mesa	86,643
Baca	86,191
Jefferson	85,841

It will be seen from the table above that most of the poultry in Colorado is raised in the important agricultural counties. In recent years, special attention has been given to poultry raising in and around Lamar, Prowers county. This locality is now one of the leading poultry-raising sections of the state. In all the counties of the non-irrigated section of eastern Colorado, poultry raising is developing very rapidly in connection with farming. In all the irrigated districts considerable poultry has been raised for a good many years, and within the past four or five years the poultry industry has made rapid advances in the northeastern part of the state, where formerly cattle raising was about the only industry followed.

POULTRY ON FARMS: 1920 AND 1910
(Census Reports)

ITEM	Farms Reporting 1920		Number Reported*		Value 1920	Average value, 1920
	Number	Per- cent of all farms	1920 (Jan. 1)	1910 (Apr. 15)		
Chickens	51,693	86.2	2,874,721	1,644,471	\$2,680,983	\$0.93
Turkeys	10,122	16.9	57,687	26,430	183,113	3.17
Ducks	4,166	7.0	20,687	12,250	22,391	1.08
Geese	2,597	4.3	10,296	4,455	25,879	2.51
Guinea fowls	1,857	3.1	7,317	3,668	5,326	0.73
Pigeons	1,274	2.1	23,639	29,998	6,314	0.27
Total	71,709	86.6	2,994,347	1,721,272	\$2,924,006	\$0.98

* Numbers of different classes of poultry are not strictly comparable for the two censuses, since a considerable number of fowls are killed between January 1 and April 15.

The census bureau estimated the total production of hen eggs in 1919 at 14,172,375 dozen, with a total value of \$5,668,950, compared with 10,652,396 dozen, valued at \$2,444,006 in 1909. The number of chickens raised in 1919 was estimated at 3,880,873, with a total value of \$3,104,698, and chickens sold, 784,711, with a value of \$635,954.

Horticulture

SOIL and climatic conditions in certain areas of Colorado are especially suited to the production of nearly all orchard and small fruits adapted to this latitude. The value of the annual fruit and berry crops ranges between \$6,000,000 and \$8,000,000. The state ranked sixteenth among the states of the Union in the production of orchard fruits in 1919 and twenty-sixth in small fruits. Its rank among the states in that year in the production of apples was fourteenth; peaches, sixteenth; pears, thirteenth; and cherries, fourteenth.

The orchard fruits named are the principal crops produced. Other fruits and berries grown extensively include strawberries, raspberries, loganberries, blackberries and currants.

While the state ranks relatively high in quantity production, its reputation as a fruit-growing state lies principally in the quality of the product, which commands the highest market prices. This is due in a large measure to the quality of the soil in the fruit-growing districts, the abundance of sunshine, water for irrigation, and the atmospheric conditions existing in high altitudes. The areas in which the industry is profitable are restricted as to size, and fruit orchards are mostly located in the valleys surrounded by mountain ranges which protect them from hard winters and early and late frosts.

There are published herewith two tables compiled from the census reports, showing number of trees of bearing and non-bearing ages and production and value of orchard crops in 1919, with comparative figures for 1909, and similar data on the small fruits. These figures may create a false impression of horticultural conditions in the state unless certain facts regarding the industry are taken into consideration. Shortly before the census of 1910 was taken the state experienced somewhat of a boom in the fruit growing industry on account of the unusually fine quality of the fruit and the large profits that were realized. Many orchards were planted under the impetus of this boom without a proper realization that fruit growing can be carried on successfully only in those areas especially adapted to the industry as to climatic conditions and where the land is not too high-priced to yield satisfactory

returns. The census of 1910 reflected this abnormal condition, which was adjusted in succeeding years, and the figures for 1920 more correctly show the status of the industry under normal conditions. It is now well-established and conducted upon profitable economic lines.

The total value of the fruit and berry crops is steadily increasing each year. In 1922, the value was \$5,160,750. In 1923, it increased to \$5,987,620 and in 1924 it again increased to \$6,801,000. The following table gives the quantity and value figures for 1924:

	Quantity	Value
Apples, bu.	3,024,000	\$3,931,000
Peaches	920,000	1,472,000
Pears	550,000	770,000
Cherries	21,660	78,000
Miscellaneous fruits.		550,000
Total		\$6,801,000

The figures for 1923 were as follows:

	Quantity	Value
Apples, bu.	3,010,000	\$2,799,300
Peaches	792,000	1,354,320
Pears	400,000	624,000
Cherries	183,000	660,000
Other fruits		550,000
Total		\$5,987,620

The most important fruit-growing districts are the western slope, in the valleys of the Grand and Gunnison rivers and tributary streams, comprising parts of Garfield, Mesa, Delta and Montrose counties; the Canon City district, comprising a part of Fremont county; the Arkansas valley, comprising parts of Crowley, Otero, Pueblo, Bent and Prowers counties; southwestern Colorado, comprising parts of La Plata and Montezuma counties, and comparatively small areas near the foothills along the eastern side of the mountains. The western slope area ranks first in importance from the standpoint of production, with the Canon City district second. Apples, peaches and pears are principal fruit crops in the Grand valley and in the valleys of tributary streams, though practically all fruits grown in the state are produced here. This district produces nearly all the commercial peach crop of the state and a very large proportion of the apple crop. Southwest Colorado produces as fine a variety of all kinds of fruit as is grown in any part of the state, but lack of adequate transportation facili-

ties has retarded development of the fruit-growing industry in this district. In the Canon City district the principal crop is apples, with a considerable production of cherries and small fruits. Some apples, cherries and small fruits are grown in the Arkansas valley, especially in Crowley and Otero counties, and cherries are grown rather extensively in several of the counties just east of the mountains, particularly in Larimer county. Apples have been grown to a considerable extent in this same area for a good many years, but the yield is not so dependable as on the western slope and the quality of the fruit is not so high. In the irrigated district immediately north of Denver, including parts of Boulder, Adams, Larimer and Weld counties, berries and other small fruits are grown successfully and always find a good market in Denver. Routt county is especially

famous for its strawberries, which come into market late in the summer, after the berries from most other districts are gone, and for that reason command exceptionally high prices.

Some attention has been paid in the past few years to the growing of orchards in the non-irrigated districts of eastern Colorado, and a few small trees of hardy varieties are being grown on many of the farms. In the irrigated sections of eastern Colorado apples and some other tree fruits are grown successfully. Late spring frosts frequently damage fruits in all sections of the state, but the organization of community forces in the principal fruit-producing districts to heat orchards with specially devised heaters on nights when the temperature falls below the frost point has in a large measure eliminated the danger of loss from this source.

FRUIT ORCHARDS, PRODUCTION AND VALUES (From Census Reports)

	Trees of Bearing Age		Production (Bu.)		Value	
	1920	1910	1919	1909	1919	1909

Bees and Honey

COLORADO produces approximately 3,000,000 pounds of honey each year. Reliable statistics on the output are difficult to obtain, as weather conditions influence the crop to a very large extent. Honey is produced

in the state from the lowest elevations of the valleys up to and including 7,500 to 8,000 feet above sea level.

The high and dry climate and types of sources provide a honey of flavor and body unexcelled anywhere in the

United States, and the state's output is in considerable demand in the southern and eastern states on account of its superior quality. The color varies somewhat but, as a rule, ranges from white to a light amber and commands top prices on eastern markets.

The census bureau reported 63,253 hives of bees on 3,990 farms on January 1, 1920. This compared with 71,434 hives on 2,694 farms on April 15, 1909. The honey produced in 1919 was 2,493,950 pounds, valued at \$573,610, which compares with 2,306,492 pounds, valued at \$225,883, in 1909.

The county assessors listed 53,990 hives in 1924 and 58,900 hives in 1923. These figures are under the actual number and are valuable from a statistical standpoint principally in showing the rank of the counties in the production of honey. These figures by counties are published elsewhere in this volume. The number of hives in the state is believed to be increasing, but the surplus honey per hive has not been so favorable for the past three years due to weather conditions which not only affected the condition of the bees, but reduced the quantity of flora for nectar secretions.

In 1921 the surplus production of honey per hive was estimated at 58 pounds, compared with an average of about 44.2 pounds for the country. In 1922 the surplus honey per stand was approximately 55 pounds, but in the following year it dropped to 31 pounds, where it remained in 1923, and in 1924 the average was about 30 pounds. A season of favorable weather conditions probably will raise the average.

Approximately 60 per cent of the honey production of the state is in the hands of professional bee keepers. The principal producing areas

are in the sections devoted to the growing of alfalfa and sweet clover in the irrigated districts. The non-irrigated areas of the state, as distinguished from the irrigated districts, are not so inviting to the commercial apiarists, owing to the scarcity of flowers to furnish the nectar. The fruit-growing sections of the state do not offer the possibilities they formerly possessed, owing to the practice of spraying fruit trees, which often poisons the bees and makes the industry rather hazardous. New methods of harvesting alfalfa have also restricted the desirable areas. However, the spread of sweet clover along ditch banks, roadsides and railways has helped the crop and sweet clover is now looked upon as the principal feeding crop.

The tax commission's report for 1924 shows the principal honey-producing counties and the number of hives assessed to be as follows:

County	Stands
Weld	5,746
Delta	5,410
Larimer	4,629
Garfield	4,129
Montrose	3,777
Otero	3,650
Boulder	3,535
Mesa	3,211
Jefferson	3,079
La Plata	2,153
Crowley	1,815

Colorado ranked twenty-fifth among the states in the number of hives of bees in 1920 and twenty-third in 1910 and 1900. The deputy state apiary inspector estimates the number of stands in the state in 1924 at 100,000, which is considerably above the number assessed and a large increase over the census figures of 1920. This estimate includes hives not on farms, as the raising of bees also is carried on extensively in towns and villages.

The Manufacturing Industry

MANUFACTURING in Colorado ranks next to agriculture in the value of products and is considerably ahead of mining, which for many years occupied first place. The industry is steadily growing in importance and may reasonably be expected to continue expanding on a large scale as the state's advantages as a manufacturing commonwealth become better known.

Colorado, in common with the newer states of the West, has had an

epochal growth. It was first known as a mining state. Its mineral output ranked first in importance and its prosperity centered around the mining industry. Then came an epoch of railroad building which opened the territory for settlement. That was followed by stock-raising on a large scale, and then came the development of agriculture, which soon advanced to first place in importance.

Manufacturing in Colorado commenced as an industry incidental to

the state's development in other lines. Mining operations created a demand for mining machinery, which soon resulted in the manufacture of that product in considerable quantities. The industry prospered and continued to grow and in 1921, according to the census reports, Colorado ranked fourth among the states as a producer of mining machinery, its products going to all parts of the world where mining was in progress.

The era of railroad building brought with it the necessity for repair shops, and this industry, first established on a small scale, grew with the state until in 1923 the operation of steam-railroad repair shops provided employment for a greater number of wage earners than any other industry in Colorado.

In the same manner, the stock-raising industry paved the way for the slaughtering and meat-packing business, which has continued to grow in size and importance from the beginning, until in 1923 it ranked about third in value of products, the wholesale value of its output in that year reaching the enormous sum of \$23,290,903.

Agriculture brought with it more manufacturing enterprises, such as flour and grain mills, which in 1923 turned out products valued at \$11,574,113. The largest manufacturing industry resulting from agricultural development, however, was the production of beet sugar, which occupies first place among Colorado manufacturing industries in the value of products and makes this the largest beet sugar producing state in the Union.

The industries named were specifically mentioned to show how manufacturing in Colorado has grown along with its growth in population, the development of other industries and the opening of new trade territory. The list might be extended but other examples are given in detail in tables found elsewhere in this volume. It is important to point out, however, that the era of railroad building brought with it the establishment of steel mills, which, with affiliated businesses, has grown into one of the state's largest industries, occupying second place in the number of wage earners given employment. Colorado's growth in agriculture and other lines is steadily opening new opportunities for manufacturing, which justify the belief that the state has a bright future before it in that direction.

Colorado had 1,323 manufacturing establishments in 1899. The number increased each census year up to 1919, when there were 2,631 establishments. That year was the peak and the trend was undoubtedly influenced by war demands and the peculiar geographical position of the state. In 1921 the number dropped to 1,491 and in 1923 it again decreased to 1,377, or just a few more than in 1899. The figures are significant only as indicating that there has been a concentration of business in larger establishments, as the average number of wage earners increased from 19,498 in 1899 to 31,226 in 1923, the peak being reached in 1919, when there were 35,256 wage earners.

The index to the growth of the industry is contained in the value of products, which increased from \$89,067,879 in 1899 to \$255,182,504 in 1923, a gain of \$166,114,625, or 187 per cent. The value of products increased each census year until the total in 1919 was \$275,391,000. War prices prevailed at that time and, if that factor is taken into consideration, the figures indicate that there has been no let-up in the progress of the industry. In 1921 the value of products was \$221,324,285, and in 1923 that item increased to \$255,182,504, indicating that after the post-war adjustment the industry continued on its upward stride.

A comparative table showing the status of industry by years from 1909 to 1923, inclusive, is published elsewhere in this volume. The 1923 figures are incomplete, as the detailed statistics had not been released by the census bureau at the time this report was prepared.

Colorado ranked thirty-fourth among the states of the Union in 1921 in value of manufactured products. It occupied thirty-second place in 1914. Among the eight states comprising the Mountain district, as designated by the census bureau, it ranked first, its \$221,324,285 value of products being about one-third of the \$616,843,000 for all the eight states. The state stands relatively low among the states of the Union as a whole, however, in value of products, having produced in 1921 only 0.51 per cent of the output for the entire country.

In specific industries, Colorado ranks first among the states in the production of beet sugar, fourth in mining machinery, about tenth in steel and iron products, and twentieth in the slaughtering and meat-packing

business, while only twenty states had a greater output of bread and bakery products, butter, cheese and condensed milk.

In addition to the general table published elsewhere in this volume showing the progress of manufacturing by years, there is also a table showing manufacturing by industries in the state in 1921. Another table shows the manufacturing by counties as compiled from the census returns for

1919. Details by counties for a later date have not yet been released.

Data on manufacturing possibilities in Colorado may be obtained from other articles in this volume. The state contains most of the raw materials, agricultural products, minerals, clays, timber, stone, iron, coal, and other products used in manufacture, and these, with water power, railroad facilities, taxes, and other data, will be found described in considerable detail on other pages.

PRELIMINARY FIGURES ON PRINCIPAL INDUSTRIES, 1923
(U. S. Census Bureau)

Industry	Number of establishments	Wage earners (average number)	Wages	Value of Products
Steam-railroad repair shops-----	28	5,158	\$ 8,102,778	\$ 15,649,087
Sugar, beet -----	16	1,820	2,261,635	30,165,810
Foundry and machine-shop products not elsewhere specified -----	63	1,818	2,327,795	10,967,650

Mineral Resources

COLORADO'S output of minerals, both metal and non-metal, has a total value of between \$55,000,000 and \$60,000,000 a year at the present rate of production. The capital investment is in excess of \$150,000,000 and the average number of wage earners employed is between 17,000 and 18,000.

Coal leads in the value of output, and gold, zinc, lead, silver and copper come next in the order named, on the basis of 1924 output, though silver normally ranks next to gold. The state ranked fifteenth among the states of the Union in the value of mineral output according to the census of 1919. It ranks ahead of all other states in the value of gold and silver combined mined since the industry was inaugurated and in 1924 it ranked second in gold production and seventh in silver. In 1915 Colorado held first place in gold production, but its total was exceeded the next year by the California output. Silver has held fifth place during most of the recent years.

Colorado has a wider variety of mineral resources than any other state with the exception of California. This is largely due to the extreme irregularity of the state's surface and the wide range of geological formations exposed for examination and development. Approximately 250 useful metallic and non-metallic minerals and compounds have been reported in the state, and undoubtedly numerous others are yet to be found. Up to the present time approximately 30 metals have been produced in commercial quantities, of which gold, silver, copper, lead and zinc are the most important. The range of useful non-metals found in Colorado is almost as wide as that of the metals, but their production has not been so extensive, with the exception of coal.

The accompanying table on the principal mining industries in Colorado shows the number of enterprises, average number of wage earners, value of products and per cent of distribution.

METALS

Metal mining is Colorado's oldest industry. Gold was the first metal produced and has surpassed all others in the total value of its output. The first important discovery of gold was made in the summer of 1858, and

since that time the value of the state's gold output has been more than \$681,555,000. The production of silver began soon after that of gold and the white metal ranks second, the total value of the state's output to date being more than \$503,900,000. At the present time zinc ranks second in the annual volume of its output, only a little way behind gold. The zinc production, on a commercial scale, did not begin, however, until 1899. Copper has been produced steadily since 1868 and lead since 1869. The total value of gold, silver, lead, copper and zinc marketed in Colorado to the beginning of 1925 is approximately \$1,549,450,700.

While these are the principal metals being produced in Colorado, almost every useful metal found in the United States exists here. Tungsten has been produced commercially, when marketing conditions warranted it, since 1904, and uranium, vanadium and radium have been produced since 1906. Colorado ranks first in the production of these metals. Molybdenum is also being produced in considerable quantities and promises soon to take an important place in the statistics of the state's metal output.

There was a considerable falling off of metal production in Colorado in 1919, followed by a slight increase in 1920 and another drop in 1921, when the value of the total output reached the lowest figure in 43 years. This was due very largely to unsatisfactory markets for practically all metals and post-war adjustments in the industry. A slight recovery set in in 1922, when the total value of the output of gold, silver, copper, lead and zinc showed an increase of \$1,296,198 over the preceding year. This recovery was more pronounced in 1923, when there was a gain of \$3,169,892 over 1922. In 1924 the output just about held its own with that of 1923.

Advance figures of the U. S. geological survey give the total value of the output of the five metals for 1924 at \$18,448,716, distributed as follows: Gold, \$8,493,540; silver, \$2,173,168; copper, \$370,336; lead, \$3,681,757; zinc, \$3,729,915. These figures show increases of nearly \$2,000,000 for gold, \$483,000 for lead and \$47,000 for zinc, but decreases of \$2,200,000 for silver and \$254,000 for copper.

The production of metals in Colorado is confined largely to the mountainous counties in the central and western parts of the state. The metals occur usually in compound ores found in well-defined veins or lodes. Free gold is the principal output of the placer mines, and Summit county has led all other counties in the state for fifty years in the output of its placer mines. There is a wide variety in the gold ores found in Colorado. Among the compound ores from which gold is obtained are amalgam, calaverite, petzite and sylvanite.

Zinc is the predominant metal in many of the ores which carry gold. The principal compound ores carrying zinc are aurichalcite, calamine, chalcophanite, hetaerolite, hydrozincite, nicholsonite, smithsonite and sphalerite.

Silver is found very commonly associated with both zinc and gold as well as with lead. The principal compound ores in which silver is found are acanthite, amalgam, calaverite, cosalite, galena, massicot, mimehessite, krennerite, pearceite, petzite, polybasite, proustite, pyrargyrite, stephenite, stromeyerite and sylvanite.

Lead is perhaps more widely distributed than any other metal found in the state, and is often associated with both gold and silver. The principal compound ores from which lead is produced are altaite, anglesite, cerussite, cosalite, galena, massicot, mimetite, minium, plumbojarsite and pyromorphite.

Copper is very widely distributed, but usually occurs in comparatively small quantities. The principal compound ores containing copper are azurite, bornite, brochantite, chalcantite, chalcocite, chalcopyrite, chrysocolla, covellite, cuprite, enargite, malachite, melacconite, stromeyerite, tenantite and tetrahedrite.

The following tabulation gives the principal metals found in Colorado and the counties in which they occur:

Aluminum (alunite, bauxite, cryolite) — Chaffee, Conejos, Custer, El Paso, Fremont, Gunnison, Hinsdale, Lake, Mineral, Ouray, Rio Grande, Saguache.

Antimony (bournonite, polybasite, stibnite) — Boulder, Clear Creek, Dolores, Grand, Gunnison, Ouray, Pitkin, San Juan, San Miguel, Teller.

Arsenic (arsenopyrite) — Gilpin, Gunnison, Pitkin, San Juan, San Miguel.

Barium (barite) — Boulder, Mineral, Pitkin, San Miguel.

Bismuth (beegerite, bismuthinite, bismutite, cosalite, tetradyminite) — Boulder, Chaffee, Fremont, Grand, Gunnison, Jefferson, Lake, La Plata, Larimer, Montezuma, Ouray, Park, San Miguel.

Cadmium (greenockite) — Lake.

Cerium (allanite, gadolinite, monazite) — Boulder, Chaffee, Costilla, Douglas, Routt, Washington.

Cobalt (erythrite, smaltite) — Gunnison.

Copper — Archuleta, Baca, Boulder, Chaffee, Clear Creek, Conejos, Custer, Dolores, Eagle, Fremont, Garfield, Gilpin, Grand, Gunnison, Hinsdale, Huerfano, Jackson, Jefferson, Lake, La Plata, Larimer, Mesa, Mineral, Moffat, Montezuma, Montrose, Ouray, Park, Pitkin, Rio Grande, Routt, Saguache, San Juan, San Miguel, Summit, Teller.

Gold — Archuleta, Boulder, Chaffee, Clear Creek, Conejos, Costilla, Custer, Dolores, Douglas, Eagle, Fremont, Garfield, Gilpin, Grand, Gunnison, Hinsdale, Huerfano, Jackson, Jefferson, Lake, La Plata, Mineral, Moffat, Montezuma, Montrose, Ouray, Park, Pitkin, Rio Grande, Routt, Saguache, San Juan, San Miguel, Summit, Teller.

Iron (brown iron ore, hematite, magnetite, marcasite, pyrite, pyrrhotite, siderite) — Chaffee, Costilla, Dolores, Fremont, Gunnison, Hinsdale, Jefferson, Lake, Ouray, Pitkin, Routt, Saguache, San Juan, San Miguel, Summit, Teller.

Pyrite is found in nearly every metal-producing county in the state.

Lead — Archuleta, Boulder, Chaffee, Clear Creek, Custer, Dolores, Eagle, Fremont, Gilpin, Gunnison, Hinsdale, Lake, La Plata, Mineral, Montezuma, Ouray, Park, Pitkin, Routt, Saguache, San Juan, San Miguel, Summit, Teller.

Lithium (amblygonite) — Fremont.

Manganese (alabandite, chalcophanite, psilomelane, pyrolusite, rhodochrosite) — Boulder, Chaffee, Custer, Dolores, Eagle, Gunnison, Hinsdale, Lake, Park, Saguache, San Juan, Summit.

Mercury (amalgam) cinnabar, quicksilver) — Boulder, La Plata.

Molybdenum (molybdenite) — Boulder, Chaffee, Clear Creek, Grand, Gunnison, Lake, San Juan, Summit, Teller.

Nickel (annabergite, nicolite) — Custer, Fremont, Gunnison.

Platinum — Clear Creek, Chaffee, Gunnison, Pitkin, Saguache, San Miguel.

Silver — Archuleta, Baca, Boulder, Chaffee, Clear Creek, Conejos, Costilla, Custer, Dolores, Douglas, Eagle, Fremont, Garfield, Gilpin, Grand, Gunnison, Hinsdale, Jackson, Lake, La Plata, Mineral, Moffat, Montezuma, Montrose, Ouray, Park, Pitkin, Rio Grande, Routt, Saguache, San Juan, San Miguel, Summit, Teller.

Tantalum (columbite) — Fremont, Jefferson, Teller.

Tellurium — Boulder, Teller.

Tin (cassiterite) — Garfield.

Titanium (ilmenite, rutile, perovskite) — El Paso, Gunnison.

Tungsten (ferberite, hubernite, scheelite) — Boulder, Chaffee, Clear Creek, Gilpin, Gunnison, Lake, Ouray, San Juan, San Miguel, Summit.

Radium, Uranium, Vanadium (carnotite, pitchblend, volborthite) — Clear Creek, Custer, Dolores, Eagle, Garfield, Huerfano, Jefferson, La Plata, Mesa, Moffat, Montrose, Park, Rio Blanco, San Miguel.

Yttrium (allanite, gadolinite) — Boulder, Douglas, Washington.

Zinc — Archuleta, Chaffee, Clear Creek, Conejos, Dolores, Eagle, Fremont, Gilpin, Hinsdale, Lake, Mineral, Ouray, Park, Pitkin, Saguache, San Juan, San Miguel, Summit.

Zircon — El Paso.

COAL

The range of useful non-metals found in Colorado is almost as wide as that of the metals, but their production has not been so extensive up to the present time, with the exception of coal, which leads all products of the mines in volume and value of output. Coal also ranks first in the value of known deposits.

The coal output in Colorado in 1924 was approximately 10,500,000 tons, with a total value at the mine estimated at \$35,000,000. The greatest output in recent years was in 1920, when the total production was 12,514,000 tons, with a value in excess of \$40,000,000.

Colorado, through its ownership of state school lands, profits extensively from its coal deposits, its holdings of coal lands being estimated at 473,732 acres, of which 13,948 acres is under lease and produced 1,610,354 tons in the biennial period ending November 30, 1924. Rentals and royalties from its coal leases yielded the state during that period \$171,112.

The state ranks fourth among the states in available coal supply and eighth in annual output. The United States geological survey estimates that the coal fields of the state cover approximately 19,750,000 acres and the available coal supply at about 317,500,000,000 short tons. At the

rate of production in 1921, this quantity is ample to supply the entire United States for about 500 years.

The Colorado state geological survey estimates the area of Colorado's coal fields somewhat below the estimates of the United States geological survey, but places estimated tonnage considerably higher. The following tabulation shows the area of the various fields and the estimated tonnage, according to this authority:

	Area (Square Miles)	Estimated Tonnage
Denver region....	4,300	13,590,000,000
Durango field....	1,900	21,428,000,000
North Park.....	500	453,000,000
Trinidad	1,080	24,462,000,000
Uinta region	6,000	271,810,000,000
Yampa field.....	3,700	39,639,000,000
Scattered fields...	350	388,000,000
	17,830	371,770,000,000

Colorado coal ranges in quality from black lignite and sub-bituminous varieties through various grades of bituminous to true anthracite. The bituminous varieties include high-grade coking coal found in the Trinidad district, in the Glenwood Springs area, and in Gunnison county. High-grade bituminous coal is also found in Jackson, Routt, Moffat, Rio Blanco, Mesa, Delta, Montezuma, La Plata, Fremont and Huerfano counties. True anthracite coal is found near Crested Butte, in Gunnison county, and is found in several localities in Routt and Moffat counties.

OIL AND OIL SHALE

Petroleum, natural gas and oil shales are listed among the more important of the Colorado non-metal mineral resources. While the state has never ranked high in petroleum output, it has been a steady producer since 1862, when oil was discovered in what is now known as the Florence field, in Fremont county. That was only three years after the first producing oil well was drilled in this country, Colorado being the second state in the Union to produce that mineral. In 1902 oil was discovered near Boulder, in Boulder county, and about the same time some discoveries were made in what are known as the Rangely field in the northwestern corner of Rio Blanco county, and the De Beque field in Mesa county. Most of the production in these fields came from shale formations or thin sand strata and, with the exception of Florence, were commercially unimportant. The total petroleum production in Colorado up to the end of 1924 was more than 12,000,000 barrels, of which 90 per cent was from the Florence field.

Prospecting continued almost without interruption from the date of these discoveries down to the present time, without any important results until 1923. On January 1, 1923, there were 80 producing wells in the state with a daily average production of 3.2 barrels each. In addition to these wells, mostly in the Florence field, there had been drilled outside the proven areas 137 tests by numerous companies in 32 counties of the state without opening any new pools.

The present oil activity dates from November 11, 1923, when the Union Oil Company of California brought in

a large gas and oil well on the Wellington dome, 15 miles north of Fort Collins, in Larimer county. This was followed by the Texas company's completion of a large oil producer on the Moffat dome, 16 miles south of Craig, in Moffat county, on March 3, 1924. These developments opened a new era of prospecting in the state under the auspices of many of the leading oil companies of the country. During 1924 there were 98 test wells started on 56 separate structures in 23 different counties of the state. In addition to these, there were a number of test wells drilling which had been started in previous years and not finished. Six of these wells, classed as structural tests, were completed and abandoned during the year and 10 other wells which were not conclusive tests were also abandoned. Most of the other wells are in various stages of drilling at this writing.

The proven oil fields of the state on January 1, 1925, were the Wellington and Fort Collins domes in Larimer county, the Moffat and Iles domes in Moffat county, the Tow Creek dome, in Routt county, the Florence field in Fremont county, the Boulder field in Boulder county, and the Rangely dome in Rio Blanco county. Natural gas in commercial quantities has also been proven on the Wellington dome in Larimer county, the Garmesa dome in Mesa county, and the White River dome in Rio Blanco county and in less important quantities near Berthoud, in Larimer county; Wray, in Yuma county, and on the Tow Creek and Sage Creek domes in Routt county. The White River gas is being used commercially in the production of carbon black, but the other production is so closely identified with petroleum

development that the marketable value of the output is of an indeterminable nature.

The development of the proven structures above mentioned has not yet progressed to the point where the productive area can be determined or the ultimate recovery be reliably estimated, for the reason that so far only one or two wells have been drilled to the objective horizons in any except the older fields. Development work is in progress on all the proven structures and during 1925 it is confidently expected that the state will become an important economic factor in crude oil production. In addition to the numerous structures now being tested, there are many other known structures which have been mapped and upon which leases have been obtained and which will be tested during 1925. Most of the companies are maintaining large scouting forces in the field in search of new structures. It is estimated that at least \$10,000,000 is being expended in the state at the present time in search for new oil production.

Exploration work is not confined to any particular section of the state, but is under way in almost every district except in the mountains, where geological conditions offer no hope for production. A wide range of geological formations exists in the state within reach of the drill, including the horizons which are productive in the principal fields in Wyoming, Montana and New Mexico and also deeper formations from which most of the production comes in the Mid-continent fields.

The counties in which drilling was in progress at the close of 1924 were: Arapahoe, Boulder, Cheyenne, Delta, El Paso, Fremont, Huerfano, Jefferson, Kiowa, La Plata, Larimer, Las Animas, Mesa, Moffat, Montrose, Montezuma, Prowers, Pueblo, Routt, Rio Blanco, Saguache, Weld and Yuma.

Production actually being marketed on January 1, 1925, was approximately 2,070 barrels per day, divided as follows: Moffat, 900; Fort Collins, 700; Florence, 245; Rangely, 200; Boulder, 25. This production came from one well on the Moffat dome, from leakage between casings in one well on the Fort Collins dome, and the remainder from the older fields. The Iles and Tow Creek wells were estimated to be capable of making 600 and 240 barrels on that date, but neither was classed as a completion. The Tow Creek well was still off the objective

sand and neither had been placed on production. The figures are important principally in showing that the development in these fields is in its infancy and indicating that in 1925 the state will establish a new record in petroleum output.

One of the greatest undeveloped natural resources in Colorado is the immense acreage of oil shale lands located upon the western slope of the main range of the Rocky mountains, mostly in Mesa, Garfield and Rio Blanco counties. The shales do not contain crude oil similar to that which comes from petroleum wells, but the material from which oil is made by completing the processes of nature. The shale beds lie mostly in horizontal strata ranging in thickness from a few feet to 50 feet or more.

The area of shale lands in Colorado is estimated at approximately 900,000 acres, and competent authorities place the probable average recovery at 75,000 barrels of crude oil to the acre. These figures indicate an ultimate recoverable content of known shale lands of 67,500,000,000 barrels of crude oil, or about six times more than all the petroleum produced in the world in the past.

Production of oil from shale has been in progress in Scotland and other European countries for many years upon a profitable basis but it is a comparatively new and undeveloped industry in this country, though considerable progress has been made in recent years in working out processes, acquiring shale lands and other preliminary operations. The federal government has been especially active in conducting experiments and processes have been developed to the point where federal authorities have recommended to congress the appropriation of funds for the construction of an experimental plant upon a commercial scale. The principal hindrance to development has been the low price of well oil as compared with the cost of producing oil from shale; but the outlook for increased crude prices is such as to indicate that this handicap will gradually disappear. Some of the larger oil companies of the country have made provisions for their future requirements by acquiring large tracts of shale lands in the state, upon which active development is expected to begin in the not very distant future.

The federal government has two shale reserves in Colorado, which were set aside primarily with a view

to insuring an ample supply of oil for the future needs of the navy. President Wilson created Naval Oil Reserve No. 1 in Colorado by an executive order issued on December 6, 1916. This reserve is located in Garfield county, near Rifle and Grand Valley, and embraces 45,440 acres, which the geological survey estimates to contain at least 2,500,000,000 barrels of crude oil. President Coolidge issued a similar order on November 22, 1924, creating No. 3 reserve adjoining No. 1 and containing approximately 22,000 acres. No. 2 reserve is located in Utah. Since the first withdrawal was made, 3,880 acres in No. 1 reserve have been restored to the public domain as investigations disclosed that the acreage is not oil shale land.

Colorado's oil shales are found principally in what is known as the Green River formation. Tests made by the United States geological survey have shown a recovery of 10 to 68 gallons of oil from a ton of shale. Many by-products are recoverable from shale, among which is ammonium sulphate. The survey estimates that 300,000,000 tons of that product can be recovered in the process of recovering the other contents.

STONE AND OTHER NON-METALS

Colorado ranks first among the states in the wide variety and size of deposits of high-grade stone. Sandstones, granites and basalts are, perhaps, most abundant, but marbles, lavas, abrasives, limestones, slates and shale are common. The production of stone has ranged between 300,000 and 500,000 tons a year in recent years.

Sandstone, granite and marble have been extensively quarried for building purposes and the last two are widely used for interior decorating and monumental purposes. The most extensive marble deposits are in Gunnison county, near the town of Marble. Several large buildings in Denver are constructed of marble from that district, as are also the Lincoln Memorial in the nation's capital, New York City's municipal building, and structures in other large cities. The deposits are said to be the largest in the world. A recent reorganization of the operating company is expected to be followed by a much larger development of the deposits than has taken place in the past.

Minerals used in the manufacture of Portland cement are being developed in the state on an extensive scale. Brick clay is found in practically every county in the state and has been dug to some extent in perhaps two-thirds of the counties. Fire clay, plastic clay and kaolin are also rather widely distributed. Many varieties of high-grade pottery are being manufactured at Golden, chiefly from clays mined in Jefferson county, near that city. Colorado pottery is rapidly making for itself a wide reputation, and there are several known deposits of good pottery clay that have not yet been developed.

The accompanying tabulation shows the principal valuable non-metals found in the state, together with the counties where they have been reported:

Abrasive Stone—Gunnison.

Amber—Boulder.

Asbestos—Boulder, Chaffee, Fremont, Rio Grande

Asphalt—Garfield, Grand, Jefferson, Mesa, Routt, Rio Blanco.

Basalt—Boulder, Delta, Eagle, Garfield, Grand, Huerfano, Jefferson, Las Animas, Mesa, Rio Blanco.

Cement Materials—Boulder, Chaffee, Fremont, Larimer, and many others.

Corundum—Chaffee, Clear Creek.

Coal—Adams, Arapahoe, Archuleta, Boulder, Delta, Dolores, Douglas, Elbert, El Paso, Fremont, Garfield, Gunnison,

* Includes molybdenum, tungsten, uranium, and vanadium.

† Includes enterprises in industries as follows: Fluorspar, 4; granite, 8; graphite, 1; gypsum, 2; petroleum, 10; pyrite, 1.

THE DENVER MINT

The United States government mint at Denver coined 20,686,750 pieces of money in 1924, with a total value of \$62,677,900. This compares with a coinage of \$40,931,000 in 1923, an increase of \$21,746,900. The greatest value was in double eagles, of which 3,046,750 coins were made with a value as money of \$60,935,000. No dollars

were coined during the year. The largest coinage in number of pieces was dimes, of which 6,770,000, worth \$677,000, were made. The mint operated on \$14,584,295.01 worth of gold and \$940,559.98 worth of silver, of which \$5,976,814.84 in gold and \$35,560.88 in silver were received from Colorado and the remainder from sources outside the state.

Colorado's Educational System

COLORADO ranks favorably among the states of the Union in educational facilities and in some specialized lines it stands near the top of the list. The state has a large and elaborate public school system, which is undergoing rapid expansion. In addition, it has a number of colleges, universities and professional schools for the higher education of students and numerous commercial and business colleges, nurses' training schools and parochial schools and private institutions offering specialized courses in music, the arts and sciences.

Illiteracy, the inability to read or write any language, is steadily declining in the state as shown by the federal census, due, in a large measure, to the state's excellent educational system. In 1920 the percentage of illiterates 10 years of age and over was only 3.2 per cent, compared with 3.7 per cent in 1910 and 4.2 per cent in 1900. The 3.2 per cent illiteracy in Colorado in 1920 compares with 6.0 per cent for the entire country. Twenty-nine states had a larger per cent of illiterates in that year than Colorado, while 18 states had a smaller per cent.

Public School System

The state has a large and elaborate public school system, which brings facilities for acquiring a fundamental education within reach of all. The system embraces elementary schools, grade schools, high schools and in some of the larger cities, junior high schools, opportunity schools and other special facilities.

The state is divided into 1,992 school districts, with a total of 3,391 schools and 3,587 school buildings. The government of the schools is largely centered in boards of directors chosen for each district by the voting population of the district. The minimum number of directors is three, while in the larger cities the number is five and in Denver, seven.

The revenues for the operation of the schools are derived from three sources. The largest revenue is derived from district school levies. The directors in each district make annual budgets of funds required and their budgets are certified by the county superintendents to the county commissioners, who make levies through the regular tax-collecting channels.

In addition, the state is a large owner of school lands, from the sale and operation of which funds are derived. These revenues are maintained in a permanent school fund and the interest therefrom becomes available for the support of the state educational institutions. The third source of revenue is from levies made by counties under a minimum teachers' salary law which is limited to not to exceed five mills a year. School districts may authorize the issuance of school bonds upon vote of taxpaying electors, and many of the school buildings of the state have been and are being constructed through bond issues.

While authority in the conduct of public school affairs is principally centered in the directors in each district and in the county school superintendents, the state has a superintendent of public instruction who acts in an advisory capacity.

Tables published elsewhere in this volume, taken from the records of the state superintendent of public instruction, show the number of school districts, schools, buildings, teachers and enrollment by counties, annual per capita cost of education, teachers' salaries and other data.

Public school property in Colorado in the school year of 1921-1922, as reported by the federal bureau of education, is as follows:

Value of sites and buildings.	\$29,028,840
Value of equipment, libraries, etc.	4,489,294
Total	\$33,518,134

Construction of new school buildings has progressed since 1922 on a large scale, and later figures will show a large increase in the above total amount.

School enrollment has shown a steady increase each year during the past five years except in 1924, when there was a slight decrease. Totals by years are as follows:

Year	Enrollment	Increase
1924	247,195	*2,618
1923	249,813	6,809
1922	243,004	10,247
1921	232,757	3,249
1920	229,508

* Decrease.

Total receipts for school purposes from all sources have shown substantial increases each year over the preceding year for the past five years.

The figures by years, taken from the records of the state superintendent of public instruction for the fiscal years ending June 30, are as follows:

Year	Amount	Increase
1924	\$27,380,817	\$1,310,133
1923	26,070,684	3,919,143
1922	22,151,541	2,672,027
1921	19,479,514	4,418,347
1920	15,061,167

Total receipts from all sources for the year ending June 30, 1924, by counties, are as follows:

State\$27,380,817.88

The state owned on November 30, 1924, a total of 3,082,206 acres of land, of which 2,418,792 acres was under

lease on that date. The revenue from these leases goes into the public school income fund, which is distributed among the schools of the state. The state also has a permanent school fund, composed of receipts from the sale of school lands. Interest upon this fund, likewise, goes into the income fund and is similarly distributed. The principal of the permanent school fund is held by the state in perpetuity for the benefit of the schools.

The permanent school fund is steadily increasing. The fund is mostly invested in bonds, warrants and farm loans and the remainder is in cash. Its status on November 30 of the years named was as follows:

Year	Total	Increase
1924	\$7,950,249	\$714,981
1922	7,235,268	618,501
1920	6,616,767

The status of the income fund on November 30 of the years named was as follows:

Year	Total	Increase
1924	\$ 345,238	\$ 33,652
1922	311,586	30,056
1920	281,530

Distributions to the schools from the income fund for the biennial periods ending on November 30 of the years named were as follows:

Year	Total	Increase
1924	\$1,777,314	\$195,217
1922	1,582,097	61,702
1920	1,520,395	*363,453
1918	1,156,942

* Decrease.

The total of bonds issued by school districts of the state outstanding on January 1, 1925, was \$25,993,562. Interest charges on these bonds are now in excess of \$1,000,000 annually, while the sinking fund requirements are steadily increasing.

The annual per capita cost of education in the public schools, as reported by the state superintendent of public instruction, based on enrollment and on average attendance, is as follows:

Year	Enrollment	Attendance
1924	\$94.03	\$129.51
1923	83.53	119.59
1922	80.57	114.88
1921	70.56	97.97

UNIVERSITIES AND COLLEGES

Among the principal universities, colleges and professional schools of the state devoted to higher education, exclusive of three important state educational institutions which do not re-

port to the federal bureau of education and for which detailed statistics are not published by that bureau, are the following:

Name	Location	Year of Opening
University of Colorado	Boulder	1877
Colorado Agricultural College	Ft. Collins	1881
Colorado School of Mines	Golden	1874
Colorado College	Colo. Springs	1874
Regis College	Denver	1888
Colorado Woman's College	Denver	1909
University of Denver	Denver	1864
Loretto Heights College	Loretto	

The first three named are publicly controlled and are mostly supported by legislative appropriations and state tax levies. Colorado Agricultural college and State university derive some revenue from the sale and administration of school land grants made by the federal government for their benefit. These funds are administered through the state land board in the same manner as the public school land funds.

Professors and instructors employed in the eight institutions named above for the school year of 1921-22 as reported by the federal bureau of education were:

	Men	Women	Total
Publicly controlled..	420	123	543
Privately controlled.	191	49	240
Total	611	172	783

Student registration for these uni-

versities and colleges for the school year of 1921-22 was as follows:

	Men	Women	Total
Publicly controlled..	3,273	1,177	4,450
Privately controlled.	2,368	1,137	3,505
Total	5,641	2,314	7,955

A table is published elsewhere in this volume giving details of property valuations, receipts, etc., of these institutions.

In addition to three publicly-controlled universities included in the above list, the state conducts the Colorado State Teachers' college at Greeley and the Western State college of Colorado at Gunnison, for which no detailed statistics are published by the United States bureau of education. The Adams State Normal school, also a state institution, will commence operations in the fall of 1925.

In addition to the public schools, universities, colleges and professional schools already mentioned, there are in the state 10 private and secondary schools reporting to the bureau of education, 18 private commercial schools and 20 nurses' schools. The list is not complete, however, as there are a number of law schools, theological universities, business institutions and schools of other classes which do not report.

Private and parochial schools reporting had an attendance in the school year of 1921-22 of 1,677 boys and 2,153 girls, a total of 3,830.

PROPERTY OF UNIVERSITIES, COLLEGES AND PROFESSIONAL SCHOOLS

(Includes eight institutions reporting to the U. S. Bureau of Education)

	Publicly Controlled	Privately Controlled	Total
Volumes in library	203,355	163,845	367,200
Fellowships and scholarships	32	170	202
Value of library, apparatus, machinery, etc. .	\$1,497,019	\$ 405,577	\$1,902,596

Revenue and Taxation

A COMPILATION of revenues collected from the people of Colorado for federal, state, county, city and other civil divisions in the form of taxes, licenses and permits and special assessments shows a total of \$65,119,000 for a period of one year covering, as far as possible, the year 1922. That sum is equivalent to a per capita tax of \$79.02.

The aggregate sum from all sources may appear large, but an analysis of the figures shows that the collections are not as burdensome as may at first appear. Of the \$15,988,000 collected by the United States through the internal revenue department, for instance, \$10,920,000 represents taxes on incomes and profits of individuals, partnerships and corporations after all deductions allowed by law. The figures in reality measure the prosperity of the people. Likewise, \$2,999,000 represents special assessments in cities and towns for local improvements such as streets and sewers, which directly affect only the comparatively few people who benefit from the improvements, while \$512,000

came from inheritance taxes derived from a very minute proportion of the total population. The same is true in varying degrees of many other items going to make up the total. The purpose of the compilation is to arrive at the aggregate cost of government to the people in the form of taxes of all kinds.

Tables accompanying this article show in detail the sources of revenues received and the civil divisions by which they are collected or used. Round figures are used for convenience in giving totals, but the per capita figures are based on actual amounts. The totals do not agree in some instances with figures of other departments of government, but this is due to the method of distributing them and not to any discrepancy. Denver county, for instance, is co-extensive in area with the city of Denver and county figures are included with those for the city. Likewise, general school funds collected by the state and returned to the counties are included in county figures, while general property taxes for school districts are included under a separate heading.

SUMMARY OF ALL TAXES, LICENSES AND PERMITS, SPECIAL ASSESSMENTS, INTERNAL REVENUE AND CUSTOMS DUTIES, 1922

Source	Total	Per Cent of Total	Per Capita
United States internal revenue receipts.....	\$15,988,000	24.55	\$16.41
United States customs receipts.....	200,000	0.31	0.20
State	9,515,000	14.61	9.76
Counties	12,305,000	18.90	17.23
Incorporated places	11,091,000	17.03	18.98
School, irrigation and drainage districts.....	16,019,000	24.60	16.44
Total, all sources.....	\$65,119,000	100.00	\$79.02

The following tables are based on the figures for fiscal years ending in 1922 for the state, counties, incorporated places and special civil divisions, and for the fiscal year ending June 30, 1923, for the internal revenue and customs receipts.

Comparisons with averages for the country as a whole are not made because conditions governing a new commonwealth which is faced with a

constant need for expansion to meet normal growth are entirely different from those of old and settled commonwealths. It will be found, however, that comparisons with western states affected by similar conditions are most favorable for Colorado and its subdivisions.

The population figures used are the census bureau's estimates for the middle of the fiscal year.

COLORADO GASOLINE TAX

Colorado commenced the collection of a tax of one cent a gallon on gasoline to provide revenues for highway construction, on May 1, 1919. This tax was increased to two cents a gallon on April 30, 1923. Fifty per cent of the amount collected goes to the state highway fund and the remaining 50 per cent is apportioned among the counties according to the mileage of state highways. Dealers pay the tax

to the state inspector at the time it is inspected.

Collections, tax only, exclusive of inspection fees, for calendar years were as follows:

1924.....	\$1,773,361.66
1923.....	922,643.73
1922.....	644,865.94
1921.....	556,489.60
1920.....	497,971.60
1919 (8 mos.).....	310,869.90
Total.....	\$4,706,202.43

Population of State Institutions

Population of state institutions on November 30, 1924, as reported by the department of charities and corrections, was as follows:

Penitentiary	882
Reformatory	183
Boys' industrial school.....	316
Girls' industrial school.....	215
Dependent and neglected children..	154
Insane hospital	2,422
Mental defectives:	
Ridge	78
Grand Junction.....	235
Soldiers' and Sailors' home.....	134

STATE PENITENTIARY

The state penitentiary had a population of 858 on December 1, 1922, and between that date and November 30, 1924, a total of 856 prisoners were received and 832 were outgoing, leaving a population on December 1, 1924, of 882. Of that number, 800 were received by sentence of court, 21 were escaped prisoners returned and 35 were paroled prisoners returned. Of the 832 outgoing, 103 were discharged by expiration of sentence, three were pardoned, one was released by court order, 33 escaped, 14 died at the prison, one was executed and 677 were paroled. Of the 800 received by court sentence during the two years, 31 were for definite sentence, 24 were for life sentences, 3 for death sentences and 742 for indeterminate sentences.

There were 38 women prisoners in the penitentiary on December 1, 1922, and between that date and November 30, 1924, a total of 25 were received by court sentence, nine received from the state of Wyoming, and 30 received from the United States government. During the two years 34 were discharged and 31 paroled, leaving 37 in prison on November 30, 1924.

Of the 800 prisoners received during the biennial period under sentences of courts, 494 were serving first terms, 269 second terms, 28 third terms, five fourth terms, two fifth terms and two sixth terms.

COUNTY JAILS

The county jails of the state had a population on June 30, 1923, of 329, and on June 30, 1924, the aggregate population was 335. During the year ending June 30, 1923, the number admitted was 7,141 and during the year ending June 30, 1924, the number admitted was 8,530.

INSANE HOSPITAL

Population of the state hospital for the insane at the beginning of 1924 was 2,343, of which number 1,308 were males and 1,035 females. The number admitted during the year was 451 and the number discharged was 372, leaving the population at the close of 1924 at 2,422. Of the 372 discharged, 50 had recovered, 74 showed improvement, 27 were unimproved and 221 had died.

THE MOFFAT TUNNEL

The Moffat tunnel, a railroad project, is being cut under a shoulder of James peak, 50 miles west of Denver, for the purpose of eliminating heavy railroad grades over the continental divide and shortening railroad distances. It is a public improvement being constructed by the Moffat Tunnel Improvement district created by the state legislature on April 29, 1922. The Moffat Tunnel commission, elected by the district, is in charge of the enterprise. The work is being done under contract.

The district includes Denver, Grand, Moffat and Routt counties and portions of Gilpin, Jefferson, Eagle, Adams and Boulder counties. The cost is being defrayed by proceeds of two bond issues of \$6,720,000 and \$2,500,000. Total receipts from the sale of bonds, premiums, interest, operation of plant and other sources up to July 7, 1925, were \$10,498,933. Disbursements were \$5,760,142 and cash on hand on that date was \$4,738,790, which the commission considers ample to complete the tunnel, equip it and place it in operation.

The tunnel will be 6.4 miles long, 24 feet in height and 18 feet in width. A pioneer tunnel is being bored parallel with the main tunnel to facilitate the work. This tunnel will be 8 feet high and 8 feet wide and, after the main tunnel is finished, will be used to transport water from the western to the eastern slope. The tunnel is more than half finished and the commission expects to have it completed in 1926. The privilege of operating trains through the tunnel may be acquired by any railroad. Projected railroad connections through the tunnel will shorten the distance between Denver and the Pacific coast by 176 miles.

Elected State Officials

THE accompanying list gives the names of all governors of Colorado since the creation of Colorado territory in 1861. The lists of other state officials include only the names of those elected to the various offices since the admission of Colorado into the Union as a state, in 1876, and the time each served.

Territorial Governor

William Gilpin	1861-1862
John Evans	1862-1865
Alexander Cummings	1865-1867
A. C. Hunt	1867-1869
Edward McCook	1869-1873
Samuel H. Elbert	1873-1875
John L. Routt	1875-1876

State Governor

John L. Routt	1876-1879
Frederick R. Pitkin	1879-1883
James B. Grant	1883-1885
Benjamin H. Eaton	1885-1887
Alva Adams	1887-1889
Job A. Cooper	1889-1891
John L. Routt	1891-1893
Davis H. Waite	1893-1895
Albert W. McIntire	1895-1897
Alva Adams	1897-1899
Charles S. Thomas	1899-1901
James B. Orman	1901-1903
James H. Peabody	1903-1905
Alva Adams	1905-—
James H. Peabody	1905-—
Jesse F. McDonald	1905-1907
Henry A. Buchtel	1907-1909
John F. Shafroth	1909-1913
Elias M. Ammons	1913-1915
George A. Carlson	1915-1917
Julius C. Gunter	1917-1919
Oliver H. Shoup	1919-1921
Oliver H. Shoup	1921-1923
William E. Sweet	1923-1925
Clarence J. Morley	1925-—

Lieutenant Governor

Lafayette Head	1877-1879
Horace A. W. Tabor	1879-1881
Horace A. W. Tabor	1881-1883
William H. Meyers	1883-1885
Peter W. Breene	1885-1887
Norman H. Meldrum	1887-1889
William G. Smith	1889-1891
William Story	1891-1893
David H. Nichols	1893-1895
Jared L. Brush	1895-1897
Jared L. Brush	1897-1899
Francis Carney	1899-1901
David C. Coates	1901-1903
Warren A. Haggott	1903-1905
Arthur Cornforth	1905-1907
E. R. Harper	1907-1909
Stephen R. Fitzgarrald	1909-1911
Stephen R. Fitzgarrald	1911-1913
Stephen R. Fitzgarrald	1913-1915
Moses E. Lewis	1915-1917
James E. Pulliam	1917-1919
George Stephan	1919-1921
Earl Cooley	1921-1923
Robert F. Rockwell	1923-1925
Sterling B. Lacy	1925-—

Secretary of State

William M. Clark	1877-1879
Norman H. Meldrum	1879-1881
Norman H. Meldrum	1881-1883
Melvin Edwards	1883-1885
Melvin Edwards	1885-1887
James Rice	1887-1889
James Rice	1889-1891
Edwin J. Eaton	1891-1893
Nelson O. McClees	1893-1895
Albert B. McGaffey	1895-1897
Charles H. S. Whipple	1897-1899
Elmer F. Beckwith	1899-1901
David F. Mills	1901-1903

James Cowie	1903-1905
James Cowie	1905-1907
Timothy O'Connor	1907-1909
James B. Pearce	1909-1911
James B. Pearce	1911-1913
James B. Pearce	1913-1915
John E. Ramer	1915-1917
James R. Noland	1917-1919
James R. Noland	1919-1921
Carl S. Milliken	1921-1923
Carl S. Milliken	1923-1925
Carl S. Milliken	1925-—

State Treasurer

George C. Corning	1877-1879
Nathan S. Culver	1879-1881
W. S. Sanders	1881-1883
Fred Walsen	1883-1885
George R. Swallow	1885-1887
Peter W. Breene	1887-1889
W. H. Brisbane	1889-1891
James N. Carlile	1891-1893
Albert Nance	1893-1895
Harry E. Mulnix	1895-1897
George W. Kephart	1897-1899
John H. Fesler	1899-1901
James N. Chipley	1901-1903
Witney Newton	1903-1905
John A. Holmberg	1905-1907
Alfred E. Bent	1907-1909
William J. Galligan	1909-1911
Roady Kenehan	1911-1913
Michael A. Leddy	1913-1915
Allison E. Stocker	1915-1917
Robert H. Higgins	1917-1919
Harry E. Mulnix	1919-1921
Arthur M. Stong	1921-1923
Harry E. Mulnix	1923-1925
William D. MacGinnis	1925-—

Auditor of State

David C. Crawford	1877-1879

CIGAR MANUFACTURES

While Colorado is not a tobacco-growing state, the manufacture of cigars has developed into an industry of considerable importance. There were 56 cigar factories in operation in the state on January 1, 1924, compared with 64 on the same date in 1923; 67 in 1922; and 57 in 1921. Statistics on quantities of materials used and cigars manufactured for the calendar years named, are as follows:

Year	Tobacco Pounds	Number of Cigars
1923.....	394,816	18,219,382
1922.....	356,930	16,643,058
1921.....	556,467	27,272,697
1920.....	732,179	34,902,482

HOLIDAYS IN COLORADO

The laws of Colorado provide for the following legal holidays in the state:

- January 1—New Year's day.
- February 12—Lincoln's birthday.
- February 22—Washington's birthday.
- May 30—Memorial day.
- July 4—Independence day.
- August 1—Colorado day.
- September—First Monday, Labor day.
- October 12—Columbus day.
- November—First Tuesday after first Monday, general election day.
- November—Thanksgiving day, by proclamation, last Thursday.
- November 11—Liberty day.
- December 25—Christmas day.
- Arbor day is not a legal holiday, but is set apart for observance by proclamation for the third Friday in April. It is a public school holiday.

Good Roads day is not a legal holiday, but is set apart by proclamation for the second Friday in May.

Saturday from 12 o'clock noon, until midnight, is a legal holiday during June, July and August in every city having 25,000 or more population.

REPRESENTATIVES OF FOREIGN GOVERNMENTS

- Belgium—Jean Mignolet, consul, 1661 Larimer St., Denver.
- Bulgaria—See Greece.
- Denmark—J. F. Rasmussen, consul, 605 Commonwealth Bldg., Denver.
- France—Dr. A. Bourquin, consular agent, Commonwealth Bldg., Denver.
- Great Britain—Harry Crebbin, vice consul, 921 Equitable Bldg., Denver.
- Greece—Nikias C. Calogeras, vice consul, 525 Foster Bldg., Denver. Also represents Bulgaria and Macedonia.
- Hungary—Coleman Jonas, consul, 1035 Broadway, Denver.

- Italy—Gualtiero Chilesotti, consul; Louis Cavallerro, secretary; 600 Central Savings Bank Bldg., Denver.
- Japan—Representative, Japanese Society, Barclay Block, 18th and Larimer Sts., Denver.
- Macedonia—See Greece.
- Mexico—Jose Eorres Elizarraras, consul, 402 Mercantile Bldg., Denver.
- Norway—Viggo E. Baerresen, vice consul, 31 E. 18th Ave., Denver.
- Portugal—James J. Sullivan, vice consul, 819 Ernest & Cranmer Bldg., Denver.
- Sweden—Walter A. Peterson, vice consul, 538 Seventeenth St., Denver.
- Switzerland—Paul Weiss, consul; Albert Frey, secretary; 307 American National Bank Bldg., Denver.

STANDARD MOUNTAIN TIME

The 105th meridian west of Greenwich, which divides standard central time from standard mountain time as determined by congress, passes in a north and south line through Denver. However, congress gave authority to the interstate commerce commission to readjust the boundaries of time zones and under a readjustment made by the commission, all of Colorado operates on standard mountain time. The eastern boundary of this zone goes through Mandan, North Dakota; Pierre, South Dakota; McCook, Nebraska; Dodge City, Kansas, and along the western boundaries of Oklahoma and Texas. The western boundary is along the western boundary of Montana; follows the Salmon river westward; western boundary of Idaho westward; southern boundary of Idaho eastward; passes southward through Ogden and Salt Lake City, Utah, and Parker and Yuma, Arizona.

Twelve o'clock noon, U. S. standard mountain time in Colorado, compares with clocks in other cities of the United States and foreign countries as follows:

Boston	2:00 P. M.
Chicago	1:00 P. M.
Cincinnati	1:00 P. M.
Dallas	1:00 P. M.
El Paso	12:00 Noon
Kansas City	1:00 P. M.
London	7:00 P. M.
Los Angeles	11:00 A. M.
Melbourne	*1:00 A. M.
Memphis	1:00 P. M.
New Orleans	1:00 P. M.
New York	2:00 P. M.
Rome	8:00 P. M.
Paris	7:00 P. M.
Salt Lake	12:00 Noon
Seattle	11:00 A. M.
Washington	2:00 P. M.
Yokohama	12:00 Midn.

* Next day.

Data compiled by the State Board of Library Commissioners: Malcolm Weir, Denver, president; Elfreda Stebbins, Fort Collins, secretary.

* 1923 figures.

Colorado Commercial Organizations

ACTIVE commercial organizations in all parts of the state are doing excellent work toward building up their respective communities and developing the rich resources of the entire state. Almost every county in the state now has one or more of these organizations, which are prepared to furnish direct and detailed information concerning resources, opportunities and attractions in the communities which they serve. The officer listed after the name of each organization, unless otherwise specified, is the secretary and the proper person to be addressed.

The following list includes those organizations which are members of the State Association of Commercial Organizations of Colorado, of which Elmore Petersen of the State university at Boulder is secretary, and additional organizations of a similar character from the list compiled by the Colorado Manufacturers and Merchants association. In addition to those organizations of a local nature it includes sev-

eral of regional or statewide scope, and there are many luncheon clubs and similar groups which are doing splendid community and sectional work, but which cannot be included in a condensed tabulation.

STATE AND REGIONAL ORGANIZATIONS

State Association of Commercial Organizations of Colorado—A. F. Moriarty, Alamosa, president; Elmore Petersen, Boulder, secretary.

Colorado Manufacturers and Merchants Association—W. J. H. Doran, Denver, president; E. C. Dawson, Denver, executive secretary; office, City Auditorium, Denver.

Western Colorado Chamber of Commerce—F. J. Hartman, Montrose, president; Charles E. Hall, Durango, secretary.

Federation of Commercial Clubs of Northwestern Colorado — E. L. Harsh, Hot Sulphur Springs, president; W. C. Broomell, Steamboat Springs, secretary.

Colorado Mortality Statistics

THE total number of deaths in Colorado from all causes in 1922, as reported by the bureau of the census, was 13,216. Of that number, 6,116 were in the cities and 7,100 in rural districts. The largest number of deaths, 1,830, was of persons under one year of age, and the smallest number, 83, were 4 years old. The second largest number of deaths, 1,731, was of persons 65 to 74 years of age. Of the 13,216 deaths, 1,666, or 7.9 per cent, occurred at the age of 75 years and over.

Tuberculosis ranked first as the cause of 1,789 deaths; diseases of the heart, second, 1,091; accidental and undefined, third, 843; chronic nephritis, fourth, 721; cancer, fifth, 720; lumbar pneumonia, sixth, 714; and cerebral hemorrhage, seventh, 714.

The death rate for Colorado in 1922 was 13.3 per 1,000 population, which compares with 12.2 in 1921 and 14.4 in 1920.

The following table gives the death rate per 100,000 population from causes named for the year 1922, with the rate for the same causes in the same year in the registration area, which includes 37 states, District of Columbia and 13 cities in the non-registration states:

CAUSE	Colo.	Regis- tra- tion Area
All causes -----	1,354.3	1,181.7
Typhoid and para-typhoid fever -----	11.4	7.5
Malaria -----	0.2	3.6
Smallpox -----	27.8	0.7
Measles -----	0.7	4.3
Scarlet fever -----	5.4	3.5
Whooping cough -----	6.0	5.6
Diphtheria -----	27.4	14.6
Influenza -----	59.3	31.4
Erysipelas -----	4.6	2.5
Meningococcus meningitis -----	0.3	1.0
Tuberculosis of the respiratory system -----	170.9	84.8
Tuberculosis of the meninges, etc. -----	4.6	4.4
Other forms of tuberculosis -----	7.8	7.8
Cancer and other malignant tumors -----	73.8	86.8
Rheumatism -----	4.8	4.4
Diabetes mellitus -----	14.6	18.4
Cerebral hemorrhage and softening -----	77.2	86.0
Diseases of the heart -----	133.5	165.7
Bronchitis -----	6.0	9.4
Pneumonia -----	131.7	102.1
Diarrhea and enteritis (under 2 years) -----	43.6	32.5
Appendicitis and typhlitis -----	30.5	14.2
Hernia, intestinal obstructions -----	12.5	10.6
Cirrhosis of the liver -----	6.4	7.5
Nephritis -----	78.4	88.5
Puerperal septicemia -----	7.8	5.7
Other puerperal causes -----	10.2	10.0
Congenital malformations and diseases of early infancy -----	82.1	78.2
Suicide -----	18.0	11.9
Homicide -----	11.7	8.4
Accidental and unspecified external causes -----	86.4	70.0
Unknown or ill-defined -----	4.5	17.7
All other causes -----	194.2	182.2

The death rate in Colorado as shown by the census figures may be mislead-

ing in some instances unless considered with regard to certain local conditions. Colorado is acknowledged to be one of the most healthful states in the Union, and thousands of people come to the state to seek relief from diseases contracted elsewhere. Many of these people become citizens and their lives are prolonged by the change. It is noteworthy that the three cities with more than 100,000 population which led all others in the number of deaths per 100,000 population from tuberculosis are centers for health seekers. These cities, in the order of their highest death rates, are San Antonio (250.6 per 100,000), Denver (188.7) and Los Angeles (169.6).

The report shows that Colorado has a higher death rate from old age than the average of all states in the registration area. With the exception of 1918 and 1920, Colorado's rate has been higher than that for the registration area for 14 years, or 1909 to 1922, inclusive.

The influenza epidemic in 1918 took a heavy toll of life in Colorado, as in the nation. The death rate in that year in Colorado from influenza and pneumonia in all forms was 766.5 per 100,000 population, which compares with 130.4 in 1921, the year after the epidemic had spent its force. The rate for the registration area was 587.0 in 1918 and 99.8 in 1921.

DEATHS FROM AUTOMOBILE ACCIDENTS

The census bureau reports 159 deaths from automobile accidents in Colorado in 1922, which compares with 121 in 1921 and 117 in 1920. The rate in 1922 was 16.3 per 100,000 population, which compares with a rate of 12.5 for all states comprising the registration area. The death rate in Colorado was exceeded by California, which stood first with 26 out of every 100,000; New York with 16.7 and New Jersey with a rate of 16.4.

Of the 159 deaths from automobile accidents in the state in 1922, the report shows that 76 occurred in cities and 83 in rural districts. Twenty-eight of these deaths were of children under 10 years of age.

More than half of those meeting death from automobile accidents, or 81, were under 20 years of age or 55 years or over.

The death rate from this cause per 100,000 population for the years named, compared with the death rate

for the entire registration area, was as follows:

Year	Colorado	Reg. Area
1922	16.3	12.5
1921	12.6	11.5
1920	12.4	10.4
1919	12.7	9.4
1918	13.1	9.3
1917	10.5	9.0

DEATH RATES FROM STRONG DRINK

Colorado became a prohibition state on January 1, 1916, when laws prohibiting the manufacture, sale and possession of intoxicating liquors became effective. The federal constitutional amendment prohibiting the sale of liquors became effective on January 16, 1920. Colorado was, therefore, a "dry" state four years before prohibition became a national law.

Data from the census bureau shows that in the year Colorado prohibited the sale of liquors deaths from alcoholism decreased 58 per cent under the preceding year and continued to decrease until 1920, when the total decrease amounted to 90 per cent. The next two years showed substantial increases. The following table shows the death rate per 100,000 population from strong drink by years in Colorado, with averages for all states:

Year	Colorado	U. S.
1914	8.3	4.9
1915	7.2	4.4
1916	3.0	5.8
1917	2.3	5.2
1918	1.4	2.7
1919	0.8	1.6
1920	0.7	1.0
1921	3.2	1.8
1922	4.2	2.6

DEATHS FROM SUICIDE

Colorado had 176 deaths from suicide in 1922, according to the census bureau. Of that number 175 were white persons and one was colored. Eighty-one suicides took place in the cities and 95 in rural districts. Firearms provided the principal means of committing suicide, 88 using that method. Poison came second with 40. Only four suicides by drowning took place, of which one was in a city and three in rural districts.

The death rate by suicide in Colo-

rado in 1922 was 18 per 100,000 population, the highest rate for any year since 1915, in which year it was 18.8 per 100,000 population. Only three states showed a higher rate in 1922 than Colorado. These were California (25.3), Oregon (21.8) and Washington (19.3).

The suicide rate per 100,000 population in Colorado by years, compared with the rate in the registration area of the entire country, is as follows:

Year	Colorado	Reg. Area
1922	18.0	11.9
1921	14.8	12.6
1920	15.7	10.2
1919	14.2	11.4
1918	14.6	12.2
1917	13.7	13.4
1916	13.3	14.2
1915	18.8	16.7
1914	19.2	16.6
1913	22.1	15.8

DEATHS FROM HOMICIDE

The death rate from homicide in Colorado showed a slight decrease in 1922, compared with 1921, according to the bureau of the census, but in 1921 the rate was the highest for any year since 1914. The term "homicide" as here used includes murder, manslaughter, justifiable homicide and incendiarism, but not legal execution.

The total number of deaths from homicide in 1922 was 114, of which 96 were by firearms, 7 by cutting or piercing instruments and 11 by other means. Of the 114 homicides, 43 were in cities and 71 in rural districts.

The death rate by homicide per 100,000 population is rather high in Colorado, compared with states in the registration area. The rate for the year named, compared with the rate in the registration area for the same year, is as follows:

Year	Colorado	Reg. Area
1922	11.7	8.4
1921	11.8	8.5
1920	9.2	7.1
1919	10.6	7.5
1918	7.5	6.8
1917	8.9	7.7
1916	8.2	7.1
1915	10.6	7.0
1914	16.0	7.4
1913	11.9	7.2

STATE'S LYNCHING RECORD

Colorado is one of the seven states in the Union in which no lynchings occurred in the five years ending with 1924, according to the annual sum-

mary of the Tuskegee Institute. Of 4,203 lynchings reported in the United States since 1885, only 29 were in Colorado, of which 24 were whites and five negroes. Colorado's proportion of the total was a fraction less than seven-tenths of 1 per cent.

COLORADO TROOPS IN WORLD WAR

Official figures place the number of troops furnished by Colorado for the World war, including commissioned and enlisted men, at 42,898. The number includes enlistments in the army, navy and marine corps. The total number for the country was 4,727,988, of which Colorado furnished approximately 1 per cent. Official figures on casualties among the Colorado troops probably will not be available for at least one or two years, as the state's quota was scattered among many units and the men were frequently transferred from one unit to another, making the compilation of data for the states incomplete and subject to frequent corrections. However, total casualties for the country have been computed and casualties among the Colorado troops, estimated on a percentage basis, were approximately 1,089 killed in action, died of wounds, disease, accident, or other causes, and 1,797 wounded, or a grand total of killed and wounded of approximately 2,886.

POST OFFICE OPERATIONS

Total receipts at the Denver post office for the calendar year of 1924 were \$3,220,990.69, compared with \$3,053,166 in 1923 and \$1,858,727 in 1914.

Postal money orders issued during the year amounted to \$3,273,069. Money orders paid aggregated \$8,206,790, exclusive of district orders paid at Denver amounting to \$1,283,645. This compares with orders paid in 1914 amounting to \$4,237,979. International money orders paid by the Denver office in 1924 amounted to \$15,094.

The average number of post office employees at Denver at the end of 1924 was 650, compared with 441 in 1914.

Postal savings deposits at the end of 1924 were approximately \$600,000.

Total receipts of the post office at Colorado Springs for 1924 were \$236,616, compared with \$232,354 in 1923 and \$131,360 in 1914. Colorado Springs receipts almost trebled between 1900 and 1924. The year 1924 showed the largest receipts of any year in the history of the office.

NOTE—The detailed figures in the foregoing total, which are taken from the 1925 estimate of the United States census bureau, do not agree with the total of 1,019,286 shown as the estimated population of the state. This is due to the fact that the bureau does not estimate population in counties which show a decrease in population, but uses the 1920 figures. The estimated increase in population for the state as a whole is indicated by the figure 1,019,286, but the population of counties marked with a (*) is considered to be less than the 1920 figure shown for such counties, thus accounting for the apparent discrepancy between the total and the detailed figures.

GOVERNMENT OFFICES

Denver is the center from which numerous activities of the federal government in western states are directed. Government employes number approximately 2,000. Departments represented, exclusive of the post office, include the departments of agriculture, commerce, interior, justice, labor and treasury department, the interstate commerce commission, civil service commission, and navy and war departments. Three buildings housing govern-

ment employes, the post office and federal court house, customs house and mint have a valuation of approximately \$8,000,000 including land and equipment. Investment at Fort Logan, a military post near Denver, and Fitzsimons hospital, also close to the city, are almost as large. A number of departments occupy quarters in business blocks owing to lack of room in government buildings to accommodate them. The government has the largest representation in Denver of any city outside of Washington.

Cost of Living in Colorado

A STUDY of available figures on the cost of living clearly establishes the fact that it is no more expensive for the individual or family to live in Colorado than in other parts of the country. On the contrary, the cost is shown to be less in typical communities than the average for the country as a whole.

Conditions governing the cost of living vary to such an extent in different localities as to make it next to impossible to prepare tables composed of arbitrary figures covering all of them, but sufficient data has been compiled by several agencies to permit general comparisons. The United States department of labor has an elaborate organization for gathering statistics on the average retail price of food and other commodities throughout the country. These figures show that the average of the average retail prices on 44 items of food products in the United States on October 15, 1924, was 25.1 cents. The average of the average retail price of the same 44 food products in Denver on the same date was 23.1 cents, or 2 cents less. In other words, the retail price of the 44 commodities averaged 8 per cent less on October 15, 1924, in Denver than the average for the United States.

A similar comparison on 23 items of food products on October 15, 1913, shows an average for Denver of 19.1 cents as compared with an average of 19.7 cents for the United States, which indicates that the prices from the consumers' standpoint have been favorable for Denver over a period of 12 years. The federal government uses the Denver prices as an index

for the state, and for that reason comparisons for other cities in Colorado are not given. A table showing the items of food embraced in these totals and the average price is published herewith.

The same authority reports the average retail price of bituminous coal in Denver on October 15, 1924, sold for household use, at \$9.49 per ton, delivered, which compares with \$9.20 for the United States. On July 15, 1913, the Denver price was \$4.88, compared with \$5.88 for the United States on the same date.

The net price for the first 1,000 cubic feet of manufactured gas for household purposes in Denver on March 15, 1924, was 95 cents. Out of 42 cities in which prices were quoted, the prices in 36 of them were higher than in Denver, one was the same and four were lower. Prices on electricity were given under so many varying conditions as to make comparisons of little value.

In 1918-19 the department of labor, through the bureau of labor statistics, working in co-operation with the national war labor board, made an investigation into the cost of living in industrial centers in the United States. This investigation covered white families in 92 cities or localities in 42 states, of which four were in Colorado. The results of this investigation were published in 1924. This investigation disclosed that the total average yearly expenditure per family was less in Denver and Cripple Creek than the average for the 92 cities, while Trinidad and Pueblo were slightly higher. The figures are given in detail in an accompanying table.

INSECT PLAGUES

Colorado has suffered from only two plagues of insects in a period of fifty years and both of these occurred in the same year. The first of these occurred on April 10, 1875, when great

swarms of grasshoppers made their appearance in the state following the destruction of crops in states to the east. The second took place on August 17, 1875, when the locust plague added to the difficulties of the farmers.

FEDERAL COURTS IN COLORADO

The state comprises a federal judicial district known as the District of Colorado. Headquarters are in the Post Office building, Denver. John F. Symes, of Denver, appointed in 1922, is district judge. His salary is \$7,500 per year. The clerk of the court is Charles W. Bishop. George Stephan is district attorney and William A. Dollison is marshal.

The court has sittings in Denver, Pueblo, Montrose, Grand Junction, Durango and Sterling. Dates for the beginning of terms of the court are as follows:

Denver, first Tuesday in May and first Tuesday in September.

Pueblo, first Tuesday in April.

Montrose, third Tuesday in September.

Grand Junction, second Tuesday in September.

Durango, fourth Tuesday in September.

Sterling, second Tuesday in June.

Terms of court at Denver, Pueblo, and Montrose are fixed by statute. Sessions at Grand Junction, Durango and Sterling are not necessary unless there is sufficient business upon the dockets to justify them.

Colorado belongs to the eighth judicial district of the federal circuit court, which embraces besides this state, Iowa, Kansas, Minnesota, Missouri, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Utah and Wyoming. The salaries of circuit judges are \$8,500 per year. Circuit judges for the eighth district are: Walter H. Sanborn, St. Paul, Minn.; W. S. Kenyon, Fort Dodge, Ia.; Kimbrough Stone, Kansas City, Mo.; and Robert E. Lewis, Denver, Colo.

The circuit court of appeals consists of the district and circuit judges in the respective circuits, together with a justice of the supreme court assigned to that circuit. Justice Willis Van Devanter of Wyoming is the justice assigned to the eighth district.

The regular term of the court in Colorado begins the first Monday in September and is held in Denver.

CHURCH POPULATION OF COLORADO

The number of communicants, or members of churches of all denominations in Colorado is approximately 255,000, or a little more than 25 per cent of the entire population. The Roman Catholic church, the largest body in the country and in the world, also leads in Colorado, with the Methodist church taking second place, Presbyterian third, Baptist fourth, Congregationalist fifth, and Episcopalian sixth. These six bodies have a total membership of 211,496, and the membership of other bodies not named in the list is estimated at 43,504.

These figures are not those of sectarian population, but, so far as they can be obtained, of communicants. The Roman Catholic church reports officially only "population," which includes practically all baptized persons; but in these figures it is represented by estimated communicants, which constitute 85 per cent of its population. The official Catholic population for Colorado is 114,729. In estimating the number of communicants, the accompanying table is made up on the basis adopted by the Christian Herald in compiling its church census of the country, which gives the number of Catholic communicants in the state as approximately 97,510.

The figures on the six largest bodies given in the following table are all obtained from official sources, with the exception mentioned, and except that the estimate for "all others," which estimate is based on the percentages for the entire country.

Denomination	Minis-	Communi-	
	tters	Churches	cants
Catholic	211	259	97,510
Methodist . . .	170	187	44,808
Presbyterian .	159	142	25,539
Baptist	165	140	22,203
Congregational	88	102	12,957
Episcopal . . .	63	91	8,479
All others . . .	174	174	43,504
	1,030	1,095	255,000

Marital Conditions in Colorado

THE male population of Colorado of 15 years of age and over has always been considerably in excess of the female population of marriageable age. This has resulted in a much larger percentage of married females than males. However, the division as to sexes is gradually becoming more nearly equal.

The population of the state has steadily increased during the past 20 years, but the excess of males of marriageable ages over females 15 years of age and over has gradually decreased during the same period. There were 43,355 more males of marriageable ages than females in the state in 1920 as compared with an excess of 59,686 males in 1910 and 49,761 in 1900.

This more nearly equal division of sexes is reflected in the percentages of single and married males and females. The percentage of single males decreased from 44.0 in 1900 to 41.2 per cent in 1910 and to 35.2 per cent in 1920. Married males increased from 49.7 per cent in 1900 to 53.2 per cent in 1910 and 57.2 per cent in 1920.

The comparatively small percentage of single females in the state is due to the preponderance of the male population, only 23.8 per cent of the females 15 years of age and over being reported single in 1920, compared to 35.2 per cent males. The per cent of married females in that year was 63.5 per cent, compared with 57.2 per cent males.

The rural population shows a larger per cent of married people, both male and female, than the urban population. Of the rural population, 69.9 per cent of the females were married, compared with 57.8 per cent male. These figures compare with 58.2 per cent married females in the urban population and 65.7 per cent males.

In an accompanying table, compiled from census reports, the terms "married," "widowed" and "divorced" refer only to the marital status of the population at the time the census was

taken. A person who has been widowed or divorced but has remarried is reported as married, so the returns for widowed and divorced persons do not represent the total number of living persons who have been widowed or divorced.

The reports show that there were 30 males and 45 females in the state in 1920 under 15 years of age who were married. The per cent of married males 15 years of age and over in the United States in 1920 was 59.2, compared with 57.2 per cent in Colorado. The per cent of married females 15 years of age and over in that year was 60.6 for the country, compared with 63.5 per cent in Colorado.

The number of marriages in Colorado in 1922 was 25.2 per cent greater than in 1916 and in 1923 was 5.4 per cent greater than in 1922. Marriages in the United States as a whole increased only 5.1 per cent between 1916 and 1922 and 8.4 per cent between 1922 and 1923.

The number of divorces in the state in 1922 was 94.7 per cent greater than in 1916 and in 1923 was 12.2 per cent greater than in 1922. The United States showed an increase in divorces in 1922 of 31.2 per cent over 1916, but only 11 per cent in 1923 over 1922.

Of the 2,075 divorces granted in 1922 in Colorado, 248 were contested, 1,823 were uncontested and 4 were unknown as to contest. The husband was granted the divorce in 548 cases and the wife in 1,527. The causes upon which divorces were granted were: Adultery, 26; cruelty, 890; desertion, 415; drunkenness, 3; neglect to provide, 280; combination of preceding causes, 434; all other causes, 27.

Eight hundred and five divorces were granted in 1922 to couples having 1,442 children, an average of 1.8 children per couple; 1,237, or 59.6 per cent, reported no children; and 33 did not report as to children. In 1923 there were 899 divorces granted, 1,595 children being involved.

Motor Vehicle Licenses

THE number of automobiles, including passenger cars and trucks, for which licenses were issued in Colorado in 1912 was 13,135. The number of licenses issued in 1924 was 213,247. Within these 12 years the use of motor vehicles in Colorado increased 1,524 per cent. In other words, there were 16.24 cars in use in the state in 1924 for each car in 1913. Each year showed a gain in the number of licenses issued.

A comparison of these figures with figures for the United States shows that the use of motor vehicles in Colo-

rado has increased at a more rapid pace than in the country as a whole. Licenses issued by all states in 1913 were 1,248,056, and in 1924 the total was 17,731,486, an increase of 16,483,430, or 1,321 per cent as compared with 1,524 per cent for Colorado. In other words, there were 14.24 cars in use in the United States in 1924 for each car in 1913, compared with 16.24 cars in Colorado in 1924 for each car licensed in the state in 1913.

Registration and fees in Colorado for the years 1913 to 1924, inclusive, are shown in the accompanying table:

MOTOR VEHICLE REGISTRATION IN COLORADO BY YEARS

Year	Passenger Cars	Trucks	Motor-cycles	Drivers	Total Receipts
1913 -----	13,135	*	2,753	1,980	\$ 60,833.00

Total -----					\$6,718,231.35

* Trucks included with passenger cars for these years.

ARCHAEOLOGICAL DISCOVERIES

The Colorado State Historical Society, under the direction of J. A. Jeancon, is engaged in unearthing ruins of an ancient race on the Chimney rock mesa, 22 miles west of Pagosa Springs, believed to be the oldest of the numerous ruins found in the state. The work is being done under a permit from the federal government which owns part of the land and title to any ruins found on private lands.

The area being explored is one by

one and one-fourth miles in size. Numerous ruins have been discovered including one chamber 209.7 feet long and more than 80 feet wide. They were inhabited in the period of the post-basket makers culture dating back approximately 3,000 years. Among the discoveries were two human skulls, one of the roundhead and the other the longhead types. The society has recently completed an archaeological map showing the location of all known antiquities in Colorado.

INDEX

- A**
- Accidents (see Mortality statistics)
- Acreage (see Area)
- Agricultural college (see Education, Institutions)
- Agricultural implements, val. of. 110-111
- Agricultural lands (see Land)
- acreage assessed, by years. 92-93, 96-105
- area, by counties. 12-A
- assessed value, 1924. 91, 110-111
- assessed value, 1914-1924. 94-95
- distribution of. 106-107
- general description. 7
- in national forests. 35
- Agriculture (see Stockraising, Dairying, Horticulture, Poultry, Bees and honey, and all farm crops by name)
- agricultural extension service. 113
- history and progress of. 52
- rank of counties in. 13
- Alfalfa
- acreage distribution chart. 75
- acreage, production, value. 55, 69
- av. no. acres per farm. 80
- number farms reporting. 87
- per cent of cultivated area. 81
- per cent of farms reporting. 88
- Alfalfa seed
- acreage, production, value. 55, 69
- Altitudes
- of lakes and reservoirs. 51
- of mountains. 48-50
- of mountain passes. 50
- of state, general. 9
- of towns and cities. folder in pocket
- Apples (see Horticulture)
- production, value. 54, 55
- Area (see Land)
- of cities and towns. folder in pocket
- of counties. 12-A, 14, 196
- of cultivated land. 85
- of farms. 84, 89
- of federal lands. 28
- of homestead land. 12-A, 14, 29-30
- of irrigated land. 12-A, 40, 96-97
- of national forests. 12-A, 31
- of national parks. 8, 12-A
- rank of counties in. 13
- of state. 7, 12-A
- of state land. 36, 14
- Assessed valuations
- agricultural lands by classes, 1924. 91
- cities and towns. folder in pocket
- comparative, 1919-1924. 170
- counties. 162, 165, 166-A, 170
- farm lands 1914-1924. 94-95
- farm property. 110-111
- livestock. 121-122, 123-125
- livestock distribution chart. 116
- per capita. 196
- railroads and public utilities. 168-169
- rank of counties in. 13
- Automobiles (see Motor vehicles)
- camps and campers. 20, 36
- B**
- Banks
- clearings of principal cities. 181
- deposits, by towns. folder in pocket
- deposits, per capita. 196
- deposits, rank of counties in. 13
- general data, 1923-1924. 195
- names and location. 197-199
- Barley
- acreage, production, value. 55, 56-57
- av. no. acres per farm. 80
- av. yield for 5 years. 82
- distribution chart. 68
- irr. and non-irr. acreage, yield and prod. 65
- number farms reporting. 87
- per cent irr. and non-irr. 83
- per cent of farms reporting. 88
- per cent of cultivated area. 81
- rank of counties in. 58
- Beans
- acreage distribution chart. 75
- acreage, production, value. 55, 56-57, 76
- rank of counties in. 58
- Bees and honey
- assessed value. 110-111
- number stands on farms. 117, 133
- progress of industry. 132-133
- Beets
- acreage, production, value. 55, 56-57, 69
- distribution chart. 70
- number farms reporting. 87
- per cent of farms reporting. 88
- per cent of cultivated area. 81
- rank of counties in. 58
- sugar industry. 134, 135
- Bonded indebtedness
- of counties, 1925. 174, 175
- of counties for roads, 1924. 24-25
- of school districts. 157, 175
- for state highways. 21
- of towns and cities. 175, folder in pocket
- Broom corn
- acreage, production, value. 55, 69
- Burros (see Livestock)
- number and value. 115, 116
- Butter and cheese (see Dairying)
- C**
- Cabbage
- acreage, distribution chart. 77
- acreage, production, value. 55, 76
- Camps and campers (tourists). 20, 36
- Cantaloupes
- acreage distribution chart. 79
- acreage, production, value. 55, 78
- Cattle (see Livestock, Cows)
- assessed value, 1924. 121-122
- average value by years. 124
- distribution chart. 127
- number, value, receipts. 115, 116, 117, 119
- rank of counties in. 13
- Cauliflower
- acreage, production, value. 55, 78
- Celery
- acreage, production, value. 55, 78
- Cherries (see Horticulture)
- production, value. 55
- Chinese, population by counties. 16
- Charts
- alfalfa acreage. 75
- barley acreage. 66
- bean acreage. 75
- beet acreage. 70
- cabbage acreage. 77
- cantaloupe and melon acreage. 79
- cattle and cows distribution. 127
- Colorado geology. 196-A
- corn acreage. 66
- distribution of population. 112
- distribution of taxable wealth. 112
- land classification by counties. 15
- lettuce acreage. 77
- livestock distribution. 116
- oats acreage. 66
- onion acreage. 79
- pea acreage. 70
- potato acreage. 72
- rye acreage. 68
- sheep and swine distribution. 126
- sorghum acreage. 72
- wheat acreage. 63
- Church population. 202
- Cigar manufacturing. 183
- Cities (see Towns and cities)
- Clay deposits. 150
- Climatological data
- characteristics. 19

- length of growing seasons. 44, 47
- precipitation. 43, 46
- temperatures. 45

velocity of winds	44
Clover, acreage	74
Coal	
coal lands	12-A, 147
federal reserves	28
production by years	148
production by counties	147
rank of counties in mining	13
state coal lands	37
Colleges (see Education)	
location, properties, revenue	153-154
disbursements, enrollment	171-172
Colorado (see History)	
brief land history	10
cost of living in	200-201
elected officials, executive and legislative	176-178
general description	5
land classification by acreage	12-A
legal holidays	183
population	6, 16
rank among states	12
revenues and disbursements	163-164
standard time in	183
troops in world war	194
Colorado state board of immigration, work of	4
Commercial failures	181
Commercial organizations	185-188
Commissioners, county	180
Committees, national and state	180
Congressmen (see Officials, elected)	
Consuls in Colorado	183
Copper (see Mines and minerals)	
production to end of 1923	142-143
production by years	144-145
production in 1923 by counties	146
Corn	
acreage, production, value	55, 56-57
av. no. acres each farm	80
average yield, 5 years	82
distribution chart	66
irr. and non-irr. acreage, yield and production	64
number farms reporting	87
per cent of farms reporting	88
per cent irr. and non-irr.	83
per cent of cultivated area	81
rank of counties in	58
sweet, acreage	76
Cost of living	200-201
Counties	
assessed valuation, 1924	165
bonded indebtedness	174
chart of land classification	15
commercial organizations in	185-188
county commissioners	180
county seats, railroad distances, pop.	173
disbursements for highways	26-27
elected officials	180-A
highway mileage and classification	22-23
highway revenues	24-25
irr. area, irr. enterprises and inv.	40
land classification, area, home-steads in	12-A, 14
population, composition and characteristics of	16
rank in crop values	58
rank in area, pop., assessed val., bank deposits, agriculture, livestock, manufacturing, automobiles, highways, railroads, etc.	13
school revenues	153
tax distribution, 1923	166
tax distribution, 1924	166-A
taxes, licenses, permits, 1922	162
County seats, pop. and distance from Denver	173
Courts, federal	202
Cows (see Livestock)	
assessed value, 1924	121-122
average value by years	124
distribution chart	127
heifers broken for milk, 1924	90

number reported by assessors	117-119
rank of counties in	13
Creameries (see Dairying)	
Crops (see individual crops)	
comparative state production, yield and rank	54
acreage, production, value	55
rank of counties in	58
Crop reporting service	4
Cucumbers	
acreage, production, values	55, 76
Dairying	
heifers broken for milk, 1924	90
history and growth	128-129
number milk cows on farms	117
Death rates (see Mortality statistics)	
Debt, public (see Bonded indebtedness)	
Denver mint	151
Distances	
between towns in state	179
between Denver and county seats	173
Divorce (see Marital conditions)	
Drainage and water supply	7
Dry farming land	
acreage assessed, 1913-1924	100-101
acreage assessed, 1924	12-A
assessed value, 1924	91
average value by years	108
per cent of total	106-107
Education	
Colorado's educational system	152-159
cost per capita by years	156
permanent school fund	153
libraries in state	184
school revenues by counties	153
school enrollment by years	152

Rivers of Colorado	7-8
Rocky Mountain national park (see National parks and monuments)	
Roads (see Highways)	
Root crops, acreage, produc., value	55, 69
Ruins, archaeological (see National parks)	
discoveries in state	205
Rye	
acreage distribution	69
acreage, production, value	55, 56-57
av. no. acres each farm	80
distribution chart	68
number farms reporting	87
per cent of cultivated area	81
per cent of farms reporting	88
rank of counties in	58

S

Scenic attractions	17
Schools (see Education)	
School lands (see State lands)	
Senators (see Officials, elected)	
Shale (see Oil shale)	
Sheep	
assessed value, 1924	121-122
distribution chart	126
number, value, receipts	115, 116, 117, 120, 125
rank of counties in	13
Silver (see Mines and minerals)	
coinage at Denver mint	151
production, by years	144-145
production in 1923	146
production to end of 1923	142-143
Silos on farms	90, 129
Size of farms (see Farms)	
Snowfall	43
Sorghums	
acreage, production, value	55, 56-57
acreage distribution chart	72
av. no. acres each farm	80
irr. and non-irr. acreage	73
number farms reporting	87
per cent of farms reporting	88
per cent of cultivated area	81
rank of counties in	58
Standard time	183
State (see Colorado)	
State lands	
areas unappropriated	12-A, 14
assessed val. of equities in	110-111
general description	7, 36
permanent school funds	153
State officials, elected	176-178
State penal, eleemosynary and educational institutions (see Institutions)	
Stockraising (see Livestock)	
Stockyards, receipts at	115
Stone deposits	150-151
Sudan grass, acreage	74
Sugar beets (see Beets)	
Sugar industry (see Manufacturing)	
Suicides in state	193-194
Sunflowers, acreage	76
Swine (see Livestock)	
assessed value, 1924	121-122
brood sows on farms	90
distribution chart	126
number, value, receipts	115, 116, 117, 120, 125
rank of counties in	13
Taxation	
counties, 1922	162
disbursements of state, 1921-1924	164
distribution chart	112
distribution general taxes, 1923	166
distribution general taxes, 1924	166-A
incorporated places (towns)	161, folder in pocket
motor vehicles	205, 206-207
per capita val. and assessments	196
sources, amt. state revenues, 1921-1924	163
state gasoline tax	171
summaries and tables	160-166
summary all government rev.	160, 161
U. S. internal rev. by years	162
valuations, taxes, mill levies, 1923	165
Teachers (see Education)	
Telegraph companies (see Telephone)	
Telephone and telegraph companies	
general	10
mileage and valuation, 1924	167, 168-169
Temperature (see Climatological data)	
Tenure, farm	84, 85, 86
Timber	
acreage land assessed	12-A
in national forests	32
Time, standard	183
Timothy, acreage	71

Tomatoes, acreage, val., production	55, 78
Tourists, attractions, number of	17, 20
Towns and cities (see Postoffices, County seats)	
area assessed	12-A
bank clearings	181
bonded indebtedness	175, folder in pocket
distances between	173, 179
gazetteer, valuations, location, population, officers, etc.	folder in pocket
highest and lowest altitudes	9
tax distribution, 1924	166-A
tax distribution, 1923	166
taxes, licenses, etc., of principal, 1922	161
Tractors and trucks on farms	90
Transportation (see Railroads)	
Turkeys (see Poultry)

United States government (see National parks and monuments, Homestead lands, National forests)	
area of lands and reserves in state	28
federal aid road projects	21
federal courts in Colo.	202
highway construction	20
internal rev. from Colo.	163
prohibition operations	181
representation in Denver	199
Universities (see Education)	
disbursements, enrollment	171-172
loc., properties, revenue	153-154

V

Value (see Assessed valuations)	
coal on state lands	37
dairy products	129
farm crops	55, 56-57
farm property	52, 110-111
fruits	55, 56-57
irrigation projects	40
livestock	116, 121-122
manufactured products	135, 136-137
mineral output	140, 142-143, 144-145, 146
Visitors (see National parks, National monuments)	

W

Wages and wage earners (see Manufacturing)	
in mines	151
Waters, mineral	19
Water power	
federal sites and reserves	28
general information	41
Water supply and drainage	7
Weather (see Climatological data)	
Winds, velocity of	44
Wheeler national monument (see National parks and monuments)	
Wheat	
acreage, production, value	55, 56-57
av. no. acres each farm	80
av. yield, 5 years	82
distribution of acreage	61, 63
distribution of production	62
irr. and non-irr. acreage, yield and production	59-60
number farms reporting	87
per cent farms reporting	88
per cent of cultivated area	81
rank of counties in	58

Y

Yield (see Individual crops by name)	
five-year crop averages	82

Z

Zinc (see Mines and minerals)	
production to end of 1923	142-143
production by years	144-145
production in 1923	146
