

# CONEJOS COUNTY PROPERTY ASSESSMENT STUDY

September 15, 2022

Ms. Natalie Mullis Director of Research Colorado Legislative Council Room 029, State Capitol Building Denver, Colorado 80203

**RE:** Final Report for the 2022 Colorado Property Assessment Study

Dear Ms. Mullis:

Wildrose Appraisal Inc.-Audit Division is pleased to submit the Final Reports for the 2022 Colorado Property Assessment Study.

These reports are the result of two analyses: A procedural audit and a statistical audit.

The procedural audit examines all classes of property. It specifically looks at how the assessor develops economic areas, confirms and qualifies sales, develops time adjustments and performs periodic physical property inspections. The audit reviews the procedures for determining subdivision absorption and subdivision discounting. Valuation methodology is examined for residential properties and commercial properties. Procedures are reviewed for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests, and non-producing patented mining claims.

Statistical audits are performed on vacant land, residential properties, commercial/industrial properties and agricultural land. A statistical analysis is performed for personal property compliance on the eleven largest counties: Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo and Weld. The remaining counties receive a personal property procedural study.

Wildrose Appraisal Inc. – Audit Division appreciates the opportunity to be of service to the State of Colorado. Please contact us with any questions or concerns.

Harry J. Fuller Project Manager

Harry J. Dulla

# INTRODUCTION

The State Board of Equalization (SBOE) reviews assessments for conformance to the Constitution. The SBOE will order revaluations for counties whose valuations do not reflect the proper valuation period level of value.

The statutory basis for the audit is found in C.R.S. 39-1-104 (16)(a)(b) and (c).

The legislative council sets forth two criteria that are the focus of the audit group:

To determine whether each county assessor is applying correctly the constitutional and statutory provisions, compliance requirements of the State Board of Equalization, and the manuals published by the State Property Tax Administrator to arrive at the actual value of each class of property.

To determine if each assessor is applying correctly the provisions of law to the actual values when arriving at valuations for assessment of all locally valued properties subject to the property tax.

The property assessment audit conducts a two-part analysis: A procedural analysis and a statistical analysis.

The procedural analysis includes all classes of property and specifically looks at how the assessor develops economic areas, confirms and qualifies sales, and develops time adjustments. The audit also examines the procedures for adequately discovering, classifying and valuing agricultural outbuildings, discovering subdivision build-out subdivision discounting procedures. Valuation methodology for vacant land, improved residential properties commercial and properties is examined. Procedures for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests and non-producing patented mining claims are also reviewed.

Statistical analysis is performed on vacant land, residential properties, commercial/industrial properties, agricultural land, and personal property. The statistical study results are compared with State Board of Equalization compliance requirements and the manuals published by the State Property Tax Administrator.

Wildrose Audit has completed the Property Assessment Study for 2022 and is pleased to report its findings for Conejos County in the following report.

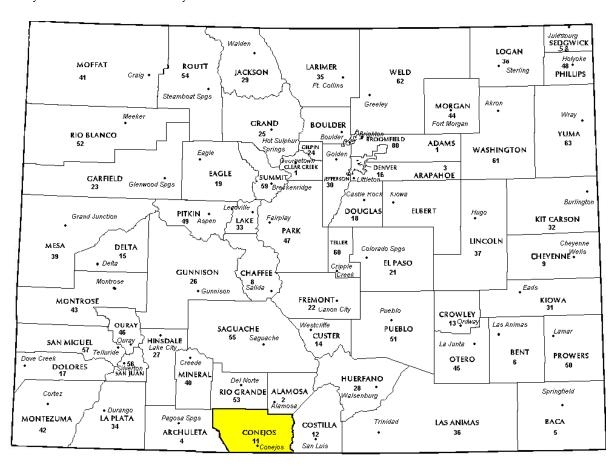

# REGIONAL/HISTORICAL SKETCH OF CONEJOS COUNTY

#### **Regional Information**

Conejos County is located in the San Luis Valley region of Colorado. The San Luis Valley is a large, broad, alpine valley in the Rio Grande Basin of south-central Colorado. The valley is drained to the south by the Rio Grande

River which rises in the San Juan Mountains to the west of the valley. The San Luis Valley includes Alamosa, Conejos, Costilla, Mineral, Rio Grande, and Saguache counties.

#### **Historical Information**

Conejos County has approximately 1287.4 square miles and an estimated population of approximately 8,205 people, according to the U.S. Census Bureau's 2020 estimated census data. This represents a -0.6 percent change from April 1, 2010 to July 1, 2019.

In the early 1800's, current day Conejos County was in the possession of Mexico. In 1848, the war between Mexico and the United States was settled with the signing of the Treaty of Guadalupe Hidalgo. After the United States victory, the Conejos Land Grant became the territory of the U.S. When the territory of Colorado was created in 1861, the major part of the San Luis Valley was divided into two counties, Costilla County to the east and Guadalupe County to the west. Once the Colorado Territory was established, Guadalupe County was quickly renamed Conejos County.

Conejos County was one of the original 17 counties created by the General Assembly of the Territory of Colorado on January 11, 1861. Its name came from the spanish term conejo, meaning rabbit, for the large abundance of rabbits in the area. Also early in its existence, the county seat was moved from the town of Guadalupe to Conejos.

In 1874, most of the western and northern portions of the county were broken away to form parts of Hinsdale, La Plata and Rio Grande counties, and Conejos County achieved its modern borders in 1885 when its western half was taken to create Archuleta County.

The town of Conejos boasts the oldest church in Colorado. Conejos County continues to be an ever-changing melting pot of cultures and perspectives. Although Guadalupe is considered the first established settlement (1851) in the county, other villages were being created at the same time. Guadalupe held the county seat until 1863 when its new neighbor, the town of Conejos, was established on the south side of the Conejos River.

Antonito, Spanish for "little Anthony," was first called San Antonio Junction. Founded by the Denver & Rio Grande Western (D&RGW) Railroad in 1880, Antonito is located in the south central part of Conejos County. When the railroad was extending south from Alamosa, company officials failed to get the desired concessions at the old town of Conejos, so they laid out a site of their own to the southeast of Conejos. Since that time, the town has been a shipping center for the southern end of the San Luis Valley and northern New Mexico. For many years, it was the junction for two branches of the railroad, one west over Cumbres Pass into the San Juan country and Durango, and the other into the ancient capital of Santa Fe, New Mexico. In the late 1930's, the southern branch was discontinued. Today, the San Luis and Rio Grande Railroad runs a freight train connecting perlite mine operations and lava rock to the north by hauling rail-cars loaded with these materials out of the area. The narrow gauge sections through the mountains are still in use as a historic tourist train.

(Wikipedia.org & conejosvacation.com)

# RATIO ANALYSIS

#### Methodology

All significant classes of property were analyzed. Sales were collected for each property class over the eighteen month period from January 1, 2019 through June 30th, 2020. Property classes with less than thirty sales had the sales period extended in six month increments up to an additional forty-two months. If this extended sales period did not produce the minimum thirty qualified sales, the Audit performed supplemental appraisals to reach the minimum.

Although it was required that we examine the median and coefficient of dispersion for all counties, we also calculated the weighted mean and price-related differential for each class of property. Counties were not passed or failed by these latter measures, but were counseled if there were anomalies noted during our analysis. Qualified sales were based on the qualification code used by each county, which were typically coded as either "Q" or "C." The ratio analysis included all sales. The data was trimmed for counties with obvious outliers using IAAO standards for data analysis. In every case, we examined the loss in data from

trimming to ensure that only true outliers were excluded. Any county with a significant portion of sales excluded by this trimming method was examined further. No county was allowed to pass the audit if more than 5% of the sales were "lost" because of trimming.

All sixty-four counties were examined for compliance on the economic area level. Where there were sufficient sales data, the neighborhood and subdivision levels were tested for compliance. Although counties are determined to be in or out of compliance at the class level, non-compliant economic areas, neighborhoods and subdivisions (where applicable) were discussed with the Assessor.

Data on the individual economic areas, neighborhoods and subdivisions are found in the STATISTICAL APPENDIX.

#### Conclusions

For this final analysis report, the minimum acceptable statistical standards allowed by the State Board of Equalization are:

ALLOWABLE STANDARDS RATIO GRID						
Property Class	Coefficient of Dispersion					
Commercial/Industrial	Between .95-1.05	Less than 20.99				
Condominium	Between .95-1.05	Less than 15.99				
Single Family	Between .95-1.05	Less than 15.99				
Vacant Land	Between .95-1.05	Less than 20.99				

#### The results for Conejos County are:

Conejos County Ratio Grid								
Number of Unweighted Price Coefficient Qualified Median Related of Time Tre Property Class Sales Ratio Differential Dispersion Analy								
*Commercial/Industrial	N/A	N/A	N/A	N/A	N/A			
Single Family	123	1.013	1.015	12.7	Compliant			
Vacant Land	77	1.000	1.059	10.7	Compliant			

<sup>\*</sup>Due to the small number of sales, a procedural audit was performed

After applying the above described methodologies, it is concluded from the sales ratios that Conejos County is in compliance

with SBOE, DPT, and Colorado State Statute valuation guidelines.

Recommendations

# TIME TRENDING VERIFICATION

#### Methodology

While we recommend that counties use the inverted ratio regression analysis method to account for market (time) trending, some counties have used other IAAO-approved methods, such as the weighted monthly median approach. We are not auditing the methods used, but rather the results of the methods used. Given this range of methodologies used to account for market trending, we concluded that the best validation method was to examine the sale ratios for each class across the appropriate sale period. To be specific, if a county has considered and adjusted correctly for market trending, then the sale ratios should remain stable (i.e. flat) across the sale period. If a residual market trend is detected, then the county may or may not have addressed market

trending adequately, and a further examination is warranted. This validation method also considers the number of sales and the length of the sale period. Counties with few sales across the sale period were carefully examined to determine if the statistical results were valid.

#### **Conclusions**

After verification and analysis, it has been determined that Conejos County has complied with the statutory requirements to analyze the effects of time on value in their county. Conejos County has also satisfactorily applied the results of their time trending analysis to arrive at the time adjusted sales price (TASP).

#### Recommendations

# SOLD/UNSOLD ANALYSIS

#### Methodology

Conejos County was tested for the equal treatment of sold and unsold properties to ensure that "sales chasing" has not occurred. The auditors employed a multi-step process to determine if sold and unsold properties were valued in a consistent manner.

We test the hypothesis that the assessor has valued unsold properties consistent with what is observed with the sold properties based on several units of comparison and tests. units of comparison include the actual value per square foot and the change in value from the previous base year period to the current base year. The first test compares the actual value per square foot between sold and unsold properties by class. The median and mean value per square foot is compared and tested for any significant difference. This is tested using non-parametric methods, such as the Mann-Whitney test for differences in the distributions or medians between sold and unsold groups. It is also examined graphically and from an appraisal perspective. Data can be stratified based on location and subclass. The second test compares the difference in the median change in value from the previous base year to the current base year between sold and unsold properties by class. The same combination of non-parametric and appraisal testing is used as with the first test. A third test employing a valuation model testing a sold/unsold binary variable while controlling for property attributes such as location, size, age and other attributes. The model determines if the sold/unsold variable is statistically and empirically significant. three tests indicate a significant difference between sold and unsold properties for a given class, the Auditor may meet with the county to determine if sale chasing is actually occurring,

or if there are other explanations for the observed difference.

If the unsold properties have a higher median value per square foot than the sold properties, or if the median change in value is greater for the unsold properties than the sold properties, the analysis is stopped and the county is concluded to be in compliance with sold and unsold guidelines. All sold and unsold properties in a given class are first tested, although properties with extreme unit values or percent changes can be trimmed to stabilize the analysis. The median is the primary comparison metric, although the mean can also be used as a comparison metric if the distribution supports that type of measure of central tendency.

The first test (unit value method) is applied to both residential and commercial/industrial sold and unsold properties. The second test is applied to sold and unsold vacant land properties. The second test (change in value method) is also applied to residential or commercial sold and unsold properties if the first test results in a significant difference observed and/or tested between sold and unsold properties. The third test (valuation modeling) is used in instances where the results from the first two tests indicate a significant difference between sold and unsold properties. It can also be used when the number of sold and unsold properties is so large that the nonparametric testing is indicating a false rejection of the hypothesis that there is no difference between the sold and unsold property values.

These tests were supported by both tabular and graphics presentations, along with written documentation explaining the methodology used.

Sold/Unsold F	Results
Property Class	Results
Commercial/Industrial	N/A
Single Family	Compliant
Vacant Land	Compliant

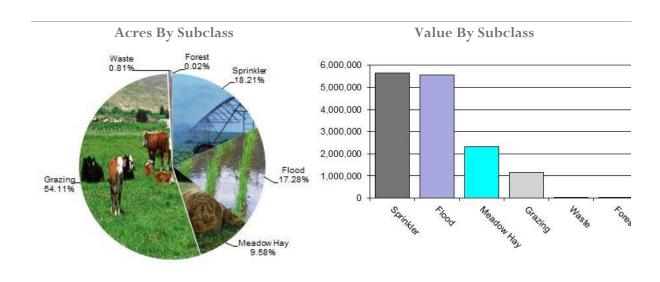

#### Conclusions

After applying the above described methodologies, it is concluded that Conejos County is reasonably treating its sold and unsold properties in the same manner.

#### Recommendations

# AGRICULTURAL LAND STUDY

# **Agricultural Land**

County records were reviewed to determine major land categories such as irrigated farm, dry farm, meadow hay, grazing and other lands. In addition, county records were reviewed in order to determine if: photographs are available and are being used; soil conservation guidelines have been used to classify lands based on productivity; crop rotations have been documented; typical commodities and yields have been determined; orchard lands have been properly classified and valued; expenses reflect a ten year average and are typical landlord expenses; grazing lands have been properly classified and valued; the number of acres in each class and subclass have been determined; the capitalization rate was properly applied. Also, documentation was required for the valuation methods used and locally developed yields, carrying capacities, and expenses. Records were also checked to ensure that the commodity prices and expenses, furnished by the Property Tax Administrator (PTA), were applied properly.

(See Assessor Reference Library Volume 3 Chapter 5.)

#### **Conclusions**

An analysis of the agricultural land data indicates an acceptable appraisal of this property type. Directives, commodity prices and expenses provided by the PTA were properly applied. County yields compared favorably to those published by Colorado Agricultural Statistics. Expenses used by the county were allowable expenses and were in an acceptable range. Grazing lands carrying capacities were in an acceptable range. The data analyzed resulted in the following ratios:

	Conejos County Agricultural Land Ratio Grid									
Abstract	Number County County WRA Abstract Of Value Assessed Total									
Code	Land Class	Acres	Per Acre	Total Value	Value	Ratio				
4107	Sprinkler	40,167	128.13	5,146,769	5,039,145	1.02				
4117	Flood	38,117	132.63	5,055,434	5,059,068	1.00				
4137	Meadow Hay	21,138	99.83	2,110,296	2,110,296	1.00				
4147	Grazing	119,375	8.80	1,050,103	1,050,103	1.00				
4177	Forest	40	6.55	262	262	1.00				
4167	Waste	1,788	2.20	3,936	3,936	1.00				
Total/Avg		220,626	60.59	13,366,800	13,262,811	1.01				

#### Recommendations

None

# **Agricultural Outbuildings**

# Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.74 through 5.77 were being followed.

#### **Conclusions**

Conejos County has complied with the procedures provided by the Division of

Property Taxation for the valuation of agricultural outbuildings.

#### Recommendations

### **Agricultural Land Under Improvements**

#### Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.19 and 5.20 were being followed.

#### Conclusions

Conejos County has used the following methods to discover land under a residential improvement on a farm or ranch that is determined to be not integral under 39-1-102, C.R.S.:

#### Questionnaires

- Field Inspections
- Phone Interviews
- In-Person Interviews with Owners/Tenants
- Written Correspondence other than Questionnaire
- Personal Knowledge of Occupants at Assessment Date
- Aerial Photography/Pictometry

Conejos County has used the following methods to discover the land area under a residential improvement that is determined to be not integral under 39-1-102, C.R.S.:

#### Property Record Card Analysis

- Questionnaires
- Field Inspections
- In-Person Interviews with Owners/Tenants
- Written Correspondence other than Questionnaire
- Personal Knowledge of Occupants at Assessment Date
- Aerial Photography/Pictometry

Conejos County has complied with the procedures provided by the Division of Property Taxation for the valuation of land under residential improvements that may or may not be integral to an agricultural operation.

#### Recommendations

# SALES VERIFICATION

#### According to Colorado Revised Statutes:

A representative body of sales is required when considering the market approach to appraisal.

(8) In any case in which sales prices of comparable properties within any class or subclass are utilized when considering the market approach to appraisal in the determination of actual value of any taxable property, the following limitations and conditions shall apply:

(a)(I) Use of the market approach shall require a representative body of sales, including sales by a lender or government, sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties that are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample that reasonably reflect a true or typical sales price during the period specified in section 39-1-104 (10.2). Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

(b) Each such sale included in the sample shall be coded to indicate a typical, negotiated sale, as screened and verified by the assessor. (39-1-103, C.R.S.)

The assessor is required to use sales of real property only in the valuation process.

(8)(f) Such true and typical sales shall include only those sales which have been determined on an individual basis to reflect the selling price of the real property only or which have been adjusted on an individual basis to reflect the selling price of the real property only. (39-1-103, C.R.S.)

Part of the Property Assessment Study is the sales verification analysis. WRA has used the above-cited statutes as a guide in our study of the county's procedures and practices for verifying sales.

WRA reviewed the sales verification procedures in 2022 for Conejos County. This study was conducted by checking selected sales from the master sales list for the current valuation period. Specifically WRA selected 30 sales listed as unqualified.

All of the sales in the unqualified sales sample had reasons that were clear and supportable.

For residential, commercial, and vacant land sales with considerations over \$100,000, the contractor has examined and reported the ratio of qualified sales to total sales by class and performed the following analyses of unqualified sales:

The contractor has examined the manner in which sales have been classified as qualified or unqualified, including a listing of each step in the sales verification process, any adjustment procedures, and the county official responsible for making the final decision on qualification.

The contractor has reviewed with the assessor any analysis indicating that sales data are inadequate, fail to reflect typical properties, or have been disqualified for insufficient cause. In addition, the contractor has reviewed the disqualified sales by assigned code. If there appears to be any inconsistency in the coding, the contractor has

conducted further analysis to determine if the sales included in that code have been assigned appropriately.

#### **Conclusions**

Conejos County appears to be doing an adequate job of verifying their sales. WRA

agreed with the county's reason for disqualifying each of the sales selected in the sample. There are no recommendations or suggestions.

#### Recommendations

# ECONOMIC AREA REVIEW AND EVALUATION

#### Methodology

Conejos County has submitted a written narrative describing the economic areas that make up the county's market areas. Conejos County has also submitted a map illustrating these areas. Each of these narratives have been read and analyzed for logic and appraisal sensibility. The maps were also compared to the narrative for consistency between the written description and the map.

#### Conclusions

After review and analysis, it has been determined that Conejos County has

adequately identified homogeneous economic areas comprised of smaller neighborhoods. Each economic area defined is equally subject to a set of economic forces that impact the value of the properties within that geographic area and this has been adequately addressed. Each economic area defined adequately delineates an area that will give "similar values for similar properties in similar areas."

#### Recommendations

# NATURAL RESOURCES

#### **Earth and Stone Products**

#### Methodology

Under the guidelines of the Assessor's Reference Library (ARL), Volume 3, Natural Resource Valuation Procedures, the income approach was applied to determine value for production of earth and stone products. The number of tons was multiplied by an economic royalty rate determined by the Division of Property Taxation to determine income. The income was multiplied by a recommended Hoskold factor to determine the actual value. The Hoskold factor is determined by the life of the reserves or the lease. Value is based on two

variables: life and tonnage. The operator determines these since there is no other means to obtain production data through any state or private agency.

#### Conclusions

The County has applied the correct formulas and state guidelines to earth and stone production.

#### Recommendations

# VACANT LAND

#### **Subdivision Discounting**

Subdivisions were reviewed in 2022 in Conejos County. The review showed that subdivisions were discounted pursuant to the Colorado Revised Statutes in Article 39-1-103 (14) and by applying the recommended methodology in ARL Vol 3, Chap 4. Subdivision Discounting in the intervening year can be accomplished by reducing the absorption period by one year.

In instances where the number of sales within an approved plat was less than the absorption

rate per year calculated for the plat, the absorption period was left unchanged.

#### Conclusions

Conejos County has implemented proper procedures to adequately estimate absorption periods, discount rates, and lot values for qualifying subdivisions.

#### Recommendations

# POSSESSORY INTEREST PROPERTIES

#### **Possessory Interest**

Possessory interest property discovery and valuation is described in the Assessor's Reference Library (ARL) Volume 3 section 7 in accordance with the requirements of C.R.S. Chapter 39-1-103 (17)(a)(II)Possessory Interest is defined by the Property Tax Administrator's Publication ARL Volume 3, Chapter 7: A private property interest in government-owned property or the right to the occupancy and use of any benefit in government-owned property that has been under lease, permit, concession, contract, or other agreement.

Conejos County has been reviewed for their procedures and adherence to guidelines when assessing and valuing agricultural and commercial possessory interest properties. The county has also been queried as to their confidence that the possessory interest properties have been discovered and placed on the tax rolls.

#### Conclusions

Conejos County has implemented a discovery process to place possessory interest properties on the roll. They have also correctly and consistently applied the correct procedures and valuation methods in the valuation of possessory interest properties.

#### Recommendations

# PERSONAL PROPERTY AUDIT

Conejos County was studied for its procedural compliance with the personal property assessment outlined in the Assessor's Reference Library (ARL) Volume 5, and in the State Board of Equalization (SBOE) requirements for the assessment of personal property. The SBOE requires that counties use ARL Volume 5, including current discovery, classification, documentation procedures, current economic lives table, cost factor tables, depreciation table, and level of value adjustment factor table.

The personal property audit standards narrative must be in place and current. A listing of businesses that have been audited by the assessor within the twelve-month period reflected in the plan is given to the auditor. The audited businesses must be in conformity with those described in the plan.

Aggregate ratio will be determined solely from the personal property accounts that have been physically inspected. The minimum assessment sample is one percent or ten schedules, whichever is greater, and the maximum assessment audit sample is 100 schedules.

For the counties having over 100,000 population, WRA selected a sample of all personal property schedules to determine whether the assessor is correctly applying the provisions of law and manuals of the Property Tax Administrator in arriving at the assessment levels of such property. This sample was selected from the personal property schedules audited by the assessor. In no event was the sample selected by the contractor less than 30 schedules. The counties to be included in this study are Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo, and Weld. All other counties received a procedural study.

Conejos County is compliant with the guidelines set forth in ARL Volume 5 regarding discovery procedures, using the following methods to discover personal property accounts in the county:

- Public Record Documents
- MLS Listing and/or Sold Books
- Local Telephone Directories, Newspapers or Other Local Publications
- Personal Observation, Physical Canvassing or Word of Mouth
- Questionnaires, Letters and/or Phone Calls to Buyer, Seller and/or Realtor

The county uses the Division of Property Taxation (DPT) recommended classification and documentation procedures. The DPT's recommended cost factor tables, depreciation tables and level of value adjustment factor tables are also used.

Conejos County submitted their personal property written audit plan and was current for the 2022 valuation period. The number and listing of businesses audited was also submitted and was in conformance with the written audit plan. The following audit triggers were used by the county to select accounts to be audited:

- New businesses filing for the first time
- Incomplete or inconsistent declarations
- Same business type or use

#### **Conclusions**

Conejos County has employed adequate discovery, classification, documentation, valuation, and auditing procedures for their personal property assessment and is in statistical compliance with SBOE requirements.

# APPENDICES

#### STATISTICAL COMPLIANCE REPORT FOR CONEJOS COUNTY 2022

#### I. OVERVIEW

Conejos County is located in south central Colorado. The county has a total of 9,078 real property parcels, according to data submitted by the county assessor's office in 2022. The following provides a breakdown of property classes for this county:

The vacant land class of properties was dominated by residential land. Residential lots (coded 100 and 1112) accounted for 49.8 percent of all vacant land parcels.

For residential improved properties, single family properties accounted for 97.3 percent of all residential properties.

Commercial and industrial properties represented a much smaller proportion of property classes in comparison. Commercial/industrial sales accounted for 2.6 percent of all such properties in this county.

#### II. DATA FILES

The following sales analyses were based on the requirements of the 2022 Colorado Property Assessment Study. Information was provided by the Conejos Assessor's Office in May 2022. The data included all 5 property record files as specified by the Auditor.

#### III. RESIDENTIAL SALES RESULTS

There were 125 qualified residential sales in the 24-month sale period ending June 30, 2020. Two sales were trimmed using IAAO standards, resulting in a final total of 123 residential sales. The following sales ratio was performed on the residential sales:

Median	1.013
Price Related Differential	1.015
Coefficient of Dispersion	12.7

We next stratified the sale ratio analysis by neighborhood. The following are the results of this stratification analysis:

#### **Case Processing Summary**

		_	
		Count	Percent
NBHD	1.00	7	5.8%
	2.00	8	6.6%
	3.00	4	3.3%
	4.00	8	6.6%
	5.00	14	11.6%
	6.00	32	26.4%
	7.00	2	1.7%
	8.00	22	18.2%
	9.00	5	4.1%
	10.00	13	10.7%
	11.00	5	4.1%
	13.00	1	0.8%
Overall		121	100.0%
Excluded		2	
Total		123	

#### **Ratio Statistics for CURRTOT / TASP**

Group	Median	Price Related Differential	Coefficient of Dispersion
1.00	.976	1.102	.135
2.00	1.042	1.050	.092
3.00	.988	1.023	.047
4.00	1.013	1.015	.115
5.00	.996	.998	.099
6.00	1.007	1.017	.157
7.00	.957	1.018	.045
8.00	1.050	.989	.156
9.00	.975	1.020	.102
10.00	1.024	1.027	.101
11.00	1.120	.993	.072
13.00	1.194	1.000	.000
Overall	1.013	1.016	.129

For all residential sales and neighborhoods with at least 10 sales, the median ratios and COD's were in compliance with the standards set forth by the Colorado State Board of Equalization (SBOE). The following graphs describe further the sales ratio distribution for these properties:

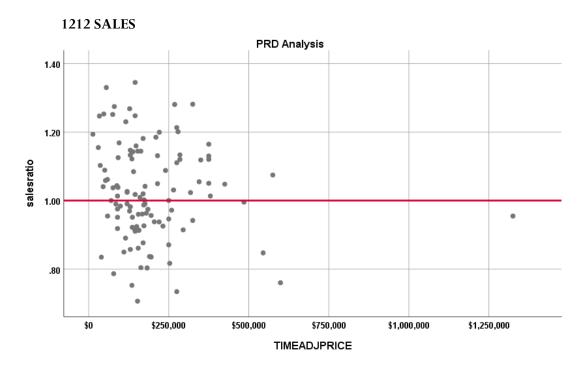

The above graphs indicate that the distribution of the sale ratios was within state mandated limits. No sales were trimmed.

#### **Subclass 1212 PRD Analysis**

We next analyzed residential properties identified as 1212 using the state abstract code system (Conejos County technically uses the land code 11120 and 12120 for 1212 properties in the sale file). These include single family residences, town homes and purged manufactured homes. The following indicates the distribution of sales ratios across the sale price spectrum:

The Price-Related Differential (PRD) for 1212 sales is 1.011, which is within IAAO standards for the PRD. We also performed a regression analysis between the sales ratio and the assessor's current value to further test for regressivity or progressivity in the residential sales valuation, as follows:

#### Coefficients<sup>a</sup>

		Unstandardized (	Coefficients	Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.013	.021		48.304	.000
	CURRTOT	.0000000528	.000	.059	.627	.532

a. Dependent Variable: salesratio

The slope of the line at 0.0000000528 indicates that there is virtually no slope in the regression line, which indicates that sales ratios are similar across the entire sale price array.

This indicates no regressivity or progressivity in the residential values assigned by the assessor.

We also stratified the sales ratio analysis by the sale price range, as follows:

#### **Case Processing Summary**

		Count	Percent
SPRec	LT \$100K	27	23.3%

	\$200K to \$300K	22	19.0%
	\$300K to \$400K	16	13.8%
Overall		116	100.0%
Excluded		0	
Total		116	

#### **Ratio Statistics for CURRTOT / TASP**

Group	Median	Price Related Differential	Coefficient of Dispersion	Coefficient of Variation Median Centered
LT \$100K	1.044	1.014	.099	13.0%
\$100K to \$200K	.970	1.005	.109	14.3%
\$200K to \$300K	1.040	1.000	.115	13.7%
\$300K to \$400K	1.049	1.023	.084	11.9%
Overall	1.013	1.011	.109	13.7%

The above table indicates no regressivity in the sales ratios across sale price categories.

#### **Residential Market Trend Analysis**

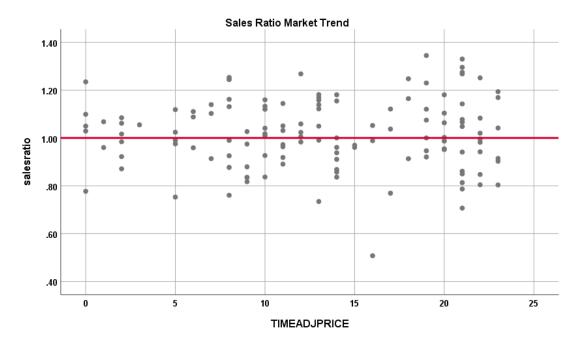

We next analyzed the residential dataset using the 24-month sale period for any residual market trending, with the following results:

#### Coefficients<sup>a</sup>

		Unstandardized		Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.006	.028		35.644	.000
	SalePeriod	.001	.002	.032	.366	.715

a. Dependent Variable: salesratio

With no significant statistical trend evident in the sales ratio data, the above analysis indicated that the assessor has adequately addressed market trending in the valuation of residential properties.

#### **Sold/Unsold Analysis**

In terms of the valuation consistency between sold and unsold residential properties, we compared the median percent change in value for valuation year 2018 and valuation year 2020 to analyze the difference between sold and unsold properties. This test was performed at the class level and for neighborhoods with are least 3 sales:

Report			
DIFF		la a e	ls a
sold	N	Median	Mean
UNSOLD	2684	1.15	1.16
SOLD	120	1.15	1.16

#### Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of DIFF is the same across categories of sold.	Independent- Samples Mann- Whitney U Test	.497	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .00.

#### Report

DIFF

NBHD	sold	N	Median	Mean
1.00	UNSOLD	292	1.08	1.08
	SOLD	7	1.09	1.05
2.00	UNSOLD	322	1.22	1.21
	SOLD	7	1.05	1.06
4.00	UNSOLD	258	1.12	1.12
	SOLD	8	1.14	1.10
5.00	UNSOLD	274	1.21	1.21
	SOLD	14	1.24	1.29
6.00	UNSOLD	757	1.14	1.14
	SOLD	31	1.14	1.12
8.00	UNSOLD	281	1.17	1.16
	SOLD	21	1.16	1.15
9.00	UNSOLD	46	1.10	1.12
	SOLD	5	1.14	1.17
10.00	UNSOLD	102	1.11	1.14
	SOLD	13	1.10	1.13
11.00	UNSOLD	42	1.18	1.19
	SOLD	5	1.25	1.27

The above results indicate that sold and unsold residential properties were valued in a consistent manner.

#### IV. COMMERCIAL/INDUSTRIAL SALE RESULTS

The County had less than ten qualified commercial sales for the June 30, 2020 valuation date. Consequently, a procedural analysis was performed by Wildrose staff for taxable year 2021. That procedural analysis is in effect for taxable year 2022. No other commercial analysis is required.

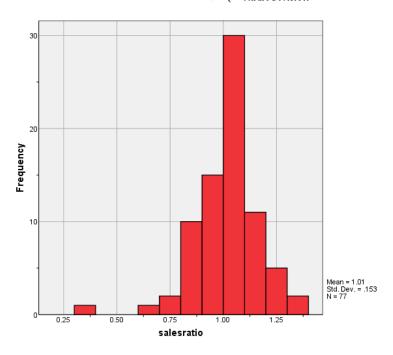

#### V. VACANT LAND SALE RESULTS

There were 78 qualified vacant land sales in the 24-month sale period ending June 30, 2020. One sale was trimmed using IAAO standards, resulting in a final count of 77 qualified vacant land sales. The sales ratio analysis resulted in the following:

Median	1.000
Price Related Differential	1.059
Coefficient of Dispersion	10.7

The above table indicates that the Conejos County vacant land sale ratios were in compliance with the SBOE standards. The following histogram and scatter plot describe the sales ratio distribution further:

#### **Vacant Land Market Trend Analysis**

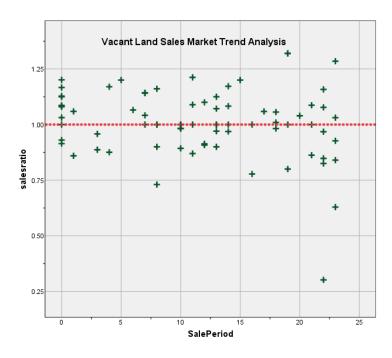

The vacant land sales were analyzed, examining the sale ratios across the 24-month sale period with the following results:

#### Coefficients<sup>a</sup>

		Unstandardized		Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.052	.032		32.964	.000
	SalePeriod	004	.002	193	-1.708	.092

a. Dependent Variable: salesratio

The market trend results indicated no statistically significant trend. We concur that no market trend adjustments were warranted for properties in this class for Conejos County.

#### **Sold/Unsold Analysis**

We compared the median change in actual value between valuation year 2018 and valuation year 2020 for vacant land properties to determine if sold and unsold properties were valued consistently, as follows:

Report			
DIFF			
sold	N	Median	Mean
UNSOLD	7912	1.00	1.02
SOLD	69	.91	.93

We also performed this analysis stratified by neighborhood with at least 4 sales:

# Report DIFF

SUBDIVNO	sold	N	Median	Mean
00070	UNSOLD	436	1.00	1.00
	SOLD	4	.93	.86
01150	UNSOLD	17	1.00	1.00
	SOLD	3	1.00	.87
02222	UNSOLD	200	.90	1.01
	SOLD	11	.90	1.04
06789	UNSOLD	156	1.08	1.07
	SOLD	3	1.08	1.09
07777	UNSOLD	57	.71	.75
	SOLD	4	.71	.71
08181	UNSOLD	78	1.00	.96
	SOLD	7	.70	.72
09876	UNSOLD	129	.54	.57
	SOLD	6	.51	.52

The above results indicated that sold and unsold vacant land properties were valued consistently overall.

#### **V. CONCLUSIONS**

Based on this statistical analysis, there were no compliance issues concluded for Conejos County as of the date of this report.

#### **STATISTICAL ABSTRACT**

#### Residential

Ratio Statistics for CURRTOT / TASP												
	95% Confiden Me			95% Con	ifidence Interval fo	or Median		95% Confiden Weighte				Coefficient of Variation
