

## 2022

# LAKE COUNTY PROPERTY ASSESSMENT STUDY

September 15, 2022

Ms. Natalie Mullis Director of Research Colorado Legislative Council Room 029, State Capitol Building Denver, Colorado 80203

RE: Final Report for the 2022 Colorado Property Assessment Study

Dear Ms. Mullis:

Wildrose Appraisal Inc.-Audit Division is pleased to submit the Final Reports for the 2022 Colorado Property Assessment Study.

These reports are the result of two analyses: A procedural audit and a statistical audit.

The procedural audit examines all classes of property. It specifically looks at how the assessor develops economic areas, confirms and qualifies sales, develops time adjustments and performs periodic physical property inspections. The audit reviews the procedures for determining subdivision absorption and subdivision discounting. Valuation methodology is examined for residential properties and commercial properties. Procedures are reviewed for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests, and non-producing patented mining claims.

Statistical audits are performed on vacant land, residential properties, commercial/industrial properties and agricultural land. A statistical analysis is performed for personal property compliance on the eleven largest counties: Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo and Weld. The remaining counties receive a personal property procedural study.

Wildrose Appraisal Inc. – Audit Division appreciates the opportunity to be of service to the State of Colorado. Please contact us with any questions or concerns.

Harry J. Fuller Project Manager

Harry J. Dulla

## INTRODUCTION

The State Board of Equalization (SBOE) reviews assessments for conformance to the Constitution. The SBOE will order revaluations for counties whose valuations do not reflect the proper valuation period level of value.

The statutory basis for the audit is found in C.R.S. 39-1-104 (16)(a)(b) and (c).

The legislative council sets forth two criteria that are the focus of the audit group:

To determine whether each county assessor is applying correctly the constitutional and statutory provisions, compliance requirements of the State Board of Equalization, and the manuals published by the State Property Tax Administrator to arrive at the actual value of each class of property.

To determine if each assessor is applying correctly the provisions of law to the actual values when arriving at valuations for assessment of all locally valued properties subject to the property tax.

The property assessment audit conducts a twopart analysis: A procedural analysis and a statistical analysis. The procedural analysis includes all classes of property and specifically looks at how the assessor develops economic areas, confirms and qualifies sales, and develops time adjustments. The audit also examines the procedures for adequately discovering, classifying and valuing agricultural outbuildings, discovering subdivision build-out subdivision discounting procedures. Valuation methodology for vacant land, improved residential properties commercial and properties is examined. Procedures for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests and non-producing patented mining claims are also reviewed.

Statistical analysis is performed on vacant land, residential properties, commercial/industrial properties, agricultural land, and personal property. The statistical study results are compared with State Board of Equalization compliance requirements and the manuals published by the State Property Tax Administrator.

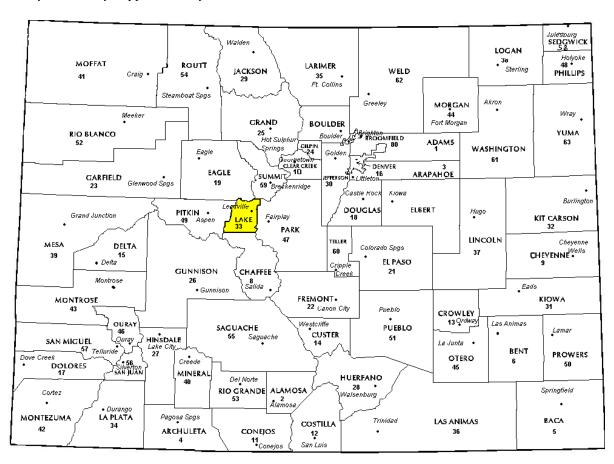

Wildrose Audit has completed the Property Assessment Study for 2022 and is pleased to report its findings for Lake County in the following report.

## REGIONAL/HISTORICAL SKETCH OF LAKE COUNTY

#### **Regional Information**

Lake County is located in the Central Mountains region of Colorado. The Central Mountains Region is in the central portion of Colorado. It extends from the northern Gilpin county boundary approximately 210 miles southeasterly to the southern boundary of Colorado, including Chaffee, Clear Creek, Custer, Fremont, Gilpin, Huerfano, Lake, Las Animas, Park, and Teller counties.

#### **Historical Information**

Lake County has approximately 376.9 square miles and an estimated population of approximately 8,127 people, according to the U.S. Census Bureau's 2020 estimated census data. This represents a 11.2 percent change from April 1, 2010 to July 1, 2019.

Lake County was one of the original 17 counties created by the Colorado legislature on November 1, 1861. As originally defined, Lake County included a large portion of western Colorado to the south and west of its present boundaries. It was named for the Twin Lakes in the area.

Lake County slowly lost territory over the succeeding decades, losing to Saguache County in 1866, Hinsdale County in 1874, La Plata County in 1874, San Juan County in 1876 and to Ouray and Gunnison counties in 1877.

With its many reductions in size, Lake County's designated county seat also changed multiple times within just a few years, residing successively in Oro City (from 1861), Lourette (from 1863), Dayton (from 1866), and Granite (from 1868).

By 1878, Lake County had been reduced to an area including only present-day Lake and Chaffee counties. On February 8, 1879, the Colorado legislature renamed Lake County as Carbonate County, although this designation name only lasted for two days, until Chaffee County was split off from Carbonate's southern section on February 10 and the remaining northern portion was redesignated Lake County with its current county seat of Leadville.

Leadville sits in a high mountain valley surrounded by snow-capped peaks. It is North America's highest incorporated city at a lofty perch of 10,430 feet. With 310 days of sunshine each year and summer temperatures seldom over 80 degrees, Leadville, Twin Lakes, and Lake County have been a mountain retreat for over 100 years. The local ski area, Ski Cooper, is the place where the men of the 10th Mountain Division trained. Also located in Leadville is the National Mining Hall of Fame & Museum which is the only federallychartered non-profit national mining museum. (Wikipedia.org, mininghalloffame.org, Lakecountyco.com & leadville.com)

## RATIO ANALYSIS

#### Methodology

All significant classes of property were analyzed. Sales were collected for each property class over the eighteen month period from January 1, 2019 through June 30th, 2020. Property classes with less than thirty sales had the sales period extended in six month increments up to an additional forty-two months. If this extended sales period did not produce the minimum thirty qualified sales, the Audit performed supplemental appraisals to reach the minimum.

Although it was required that we examine the median and coefficient of dispersion for all counties, we also calculated the weighted mean and price-related differential for each class of property. Counties were not passed or failed by these latter measures, but were counseled if there were anomalies noted during our analysis. Qualified sales were based on the qualification code used by each county, which were typically coded as either "Q" or "C." The ratio analysis included all sales. The data was trimmed for counties with obvious outliers using IAAO standards for data analysis. In every case, we examined the loss in data from

trimming to ensure that only true outliers were excluded. Any county with a significant portion of sales excluded by this trimming method was examined further. No county was allowed to pass the audit if more than 5% of the sales were "lost" because of trimming.

All sixty-four counties were examined for compliance on the economic area level. Where there were sufficient sales data, the neighborhood and subdivision levels were tested for compliance. Although counties are determined to be in or out of compliance at the class level, non-compliant economic areas, neighborhoods and subdivisions (where applicable) were discussed with the Assessor.

Data on the individual economic areas, neighborhoods and subdivisions are found in the STATISTICAL APPENDIX.

#### **Conclusions**

For this final analysis report, the minimum acceptable statistical standards allowed by the State Board of Equalization are:

ALLOWABLE STANDARDS RATIO GRID				
Property Class	Unweighted Median Ratio	Coefficient of Dispersion		
Commercial/Industrial	Between .95-1.05	Less than 20.99		
Condominium	Between .95-1.05	Less than 15.99		
Single Family	Between .95-1.05	Less than 15.99		
Vacant Land	Between .95-1.05	Less than 20.99		

#### The results for Lake County are:

Lake County Ratio Grid						
Property Class	Number of Qualified Sales	Unweighted Median Ratio	Price Related Differential	Coefficient of Dispersion	Time Trend Analysis	
*Commercial/Industrial	27	0.978	0.973	13	Compliant	
Single Family	225	0.956	1.012	14.4	Compliant	
Vacant Land	154	0.995	1.058	12.2	Compliant	

<sup>\*</sup>County Sales File augmented by 3 supplemental appraisals

After applying the above described methodologies, it is concluded from the sales ratios that Lake County is in compliance with SBOE, DPT, and Colorado State Statute valuation guidelines.

Recommendations

## TIME TRENDING VERIFICATION

#### Methodology

While we recommend that counties use the inverted ratio regression analysis method to account for market (time) trending, some counties have used other IAAO-approved methods, such as the weighted monthly median approach. We are not auditing the methods used, but rather the results of the methods used. Given this range of methodologies used to account for market trending, we concluded that the best validation method was to examine the sale ratios for each class across the appropriate sale period. To be specific, if a county has considered and adjusted correctly for market trending, then the sale ratios should remain stable (i.e. flat) across the sale period. If a residual market trend is detected, then the county may or may not have addressed market

trending adequately, and a further examination is warranted. This validation method also considers the number of sales and the length of the sale period. Counties with few sales across the sale period were carefully examined to determine if the statistical results were valid.

#### **Conclusions**

After verification and analysis, it has been determined that Lake County has complied with the statutory requirements to analyze the effects of time on value in their county. Lake County has also satisfactorily applied the results of their time trending analysis to arrive at the time adjusted sales price (TASP).

#### Recommendations

## SOLD/UNSOLD ANALYSIS

#### Methodology

Lake County was tested for the equal treatment of sold and unsold properties to ensure that "sales chasing" has not occurred. The auditors employed a multi-step process to determine if sold and unsold properties were valued in a consistent manner.

We test the hypothesis that the assessor has valued unsold properties consistent with what is observed with the sold properties based on several units of comparison and tests. units of comparison include the actual value per square foot and the change in value from the previous base year period to the current base year. The first test compares the actual value per square foot between sold and unsold properties by class. The median and mean value per square foot is compared and tested for any significant difference. This is tested using non-parametric methods, such as the Mann-Whitney test for differences in the distributions or medians between sold and unsold groups. It is also examined graphically and from an appraisal perspective. Data can be stratified based on location and subclass. The second test compares the difference in the median change in value from the previous base year to the current base year between sold and unsold properties by class. The same combination of non-parametric and appraisal testing is used as with the first test. A third test employing a valuation model testing a sold/unsold binary variable while controlling for property attributes such as location, size, age and other attributes. The model determines if the sold/unsold variable is statistically and empirically significant. three tests indicate a significant difference between sold and unsold properties for a given class, the Auditor may meet with the county to determine if sale chasing is actually occurring,

or if there are other explanations for the observed difference.

If the unsold properties have a higher median value per square foot than the sold properties, or if the median change in value is greater for the unsold properties than the sold properties, the analysis is stopped and the county is concluded to be in compliance with sold and unsold guidelines. All sold and unsold properties in a given class are first tested, although properties with extreme unit values or percent changes can be trimmed to stabilize the analysis. The median is the primary comparison metric, although the mean can also be used as a comparison metric if the distribution supports that type of measure of central tendency.

The first test (unit value method) is applied to both residential and commercial/industrial sold and unsold properties. The second test is applied to sold and unsold vacant land properties. The second test (change in value method) is also applied to residential or commercial sold and unsold properties if the first test results in a significant difference observed and/or tested between sold and unsold properties. The third test (valuation modeling) is used in instances where the results from the first two tests indicate a significant difference between sold and unsold properties. It can also be used when the number of sold and unsold properties is so large that the nonparametric testing is indicating a false rejection of the hypothesis that there is no difference between the sold and unsold property values.

These tests were supported by both tabular and graphics presentations, along with written documentation explaining the methodology used.

Sold/Unsold Results				
Property Class	Results			
Commercial/Industrial	Compliant			
Single Family	Compliant			
Vacant Land	Compliant			

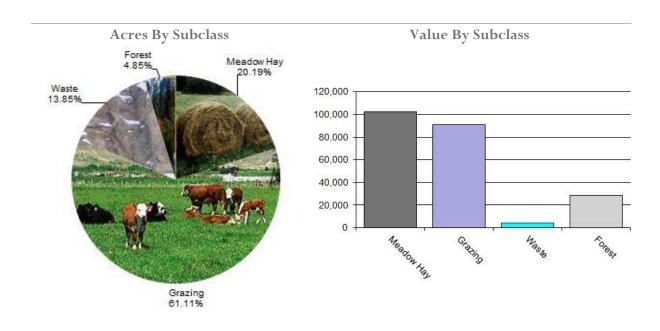

#### **Conclusions**

After applying the above described methodologies, it is concluded that Lake County is reasonably treating its sold and unsold properties in the same manner.

#### Recommendations

## AGRICULTURAL LAND STUDY

#### **Agricultural Land**

County records were reviewed to determine major land categories such as irrigated farm, dry farm, meadow hay, grazing and other In addition, county records were lands. reviewed in order to determine if: photographs are available and are being used; soil conservation guidelines have been used to classify lands based on productivity; crop rotations have been documented; typical commodities and yields have been determined; orchard lands have been properly classified and valued; expenses reflect a ten year average and are typical landlord expenses; grazing lands have been properly classified and valued; the number of acres in each class and subclass have been determined; the capitalization rate was properly applied. Also, documentation was required for the valuation methods used and locally developed yields, capacities, and expenses. Records were also

checked to ensure that the commodity prices and expenses, furnished by the Property Tax Administrator (PTA), were applied properly. (See Assessor Reference Library Volume 3 Chapter 5.)

#### **Conclusions**

An analysis of the agricultural land data indicates an acceptable appraisal of this property type. Directives, commodity prices and expenses provided by the PTA were properly applied. County yields compared favorably to those published by Colorado Agricultural Statistics. Expenses used by the county were allowable expenses and were in an acceptable range. Grazing lands carrying capacities were in an acceptable range. The data analyzed resulted in the following ratios:

	Lake County Agricultural Land Ratio Grid					
Number County County WRA Abstract Of Value Assessed Total Code Land Class Acres Per Acre Total Value Value Ratio						
4137	Meadow Hay	2,336	37.74	88,167	88,167	1.00
4147	Grazing	6,407	11.15	71,446	71,446	1.00
4177	Forest	1,364	43.17	58,879	58,879	1.00
4167	Waste	1,585	2.20	3,489	3,489	1.00
Total/Avg		11,692	18.99	221,981	221,981	1.00

#### Recommendations

None

## **Agricultural Outbuildings**

#### Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.74 through 5.77 were being followed.

#### **Conclusions**

Lake County has complied with the procedures provided by the Division of Property Taxation for the valuation of agricultural outbuildings.

#### Recommendations

## **Agricultural Land Under Improvements**

#### Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.19 and 5.20 were being followed.

#### Conclusions

Lake County has used the following methods to discover land under a residential improvement on a farm or ranch that is determined to be not integral under 39-1-102, C.R.S.:

- Questionnaires
- Field Inspections
- Phone Interviews
- In-Person Interviews with Owners/Tenants
- Personal Knowledge of Occupants at Assessment Date

Lake County has used the following methods to discover the land area under a residential improvement that is determined to be not integral under 39-1-102, C.R.S.:

- Property Record Card Analysis
- Questionnaires
- Aerial Photography/Pictometry

Lake County has complied with the procedures provided by the Division of Property Taxation for the valuation of land under residential improvements that may or may not be integral to an agricultural operation.

#### Recommendations

## SALES VERIFICATION

#### According to Colorado Revised Statutes:

A representative body of sales is required when considering the market approach to appraisal.

(8) In any case in which sales prices of comparable properties within any class or subclass are utilized when considering the market approach to appraisal in the determination of actual value of any taxable property, the following limitations and conditions shall apply:

(a)(I) Use of the market approach shall require a representative body of sales, including sales by a lender or government, sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties that are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample that reasonably reflect a true or typical sales price during the period specified in section 39-1-104 (10.2). Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

(b) Each such sale included in the sample shall be coded to indicate a typical, negotiated sale, as screened and verified by the assessor. (39-1-103, C.R.S.)

The assessor is required to use sales of real property only in the valuation process.

(8)(f) Such true and typical sales shall include only those sales which have been determined on an individual basis to reflect the selling price of the real property only or which have been adjusted on an individual basis to reflect the selling price of the real property only. (39-1-103, C.R.S.)

Part of the Property Assessment Study is the sales verification analysis. WRA has used the above-cited statutes as a guide in our study of the county's procedures and practices for verifying sales.

WRA reviewed the sales verification procedures in 2022 for Lake County. This study was conducted by checking selected sales from the master sales list for the current valuation period. Specifically WRA selected 37 sales listed as unqualified.

All of the sales in the unqualified sales sample had reasons that were clear and supportable.

For residential, commercial, and vacant land sales with considerations over \$100,000, the contractor has examined and reported the ratio of qualified sales to total sales by class and performed the following analyses of unqualified sales:

The contractor has examined the manner in which sales have been classified as qualified or unqualified, including a listing of each step in the sales verification process, any adjustment procedures, and the county official responsible for making the final decision on qualification.

The contractor has reviewed with the assessor any analysis indicating that sales data are inadequate, fail to reflect typical properties, or have been disqualified for insufficient cause. In addition, the contractor has reviewed the disqualified sales by assigned code. If there appears to be any inconsistency in the coding, the contractor has

conducted further analysis to determine if the sales included in that code have been assigned appropriately.

**Conclusions** 

Lake County appears to be doing an adequate job of verifying their sales. WRA agreed with

the county's reason for disqualifying each of the sales selected in the sample. There are no recommendations or suggestions.

Recommendations

## ECONOMIC AREA REVIEW AND EVALUATION

#### Methodology

Lake County has submitted a written narrative describing the economic areas that make up the county's market areas. Lake County has also submitted a map illustrating these areas. Each of these narratives have been read and analyzed for logic and appraisal sensibility. The maps were also compared to the narrative for consistency between the written description and the map.

#### Conclusions

After review and analysis, it has been determined that Lake County has adequately

identified homogeneous economic areas comprised of smaller neighborhoods. Each economic area defined is equally subject to a set of economic forces that impact the value of the properties within that geographic area and this has been adequately addressed. Each economic area defined adequately delineates an area that will give "similar values for similar properties in similar areas."

#### Recommendations

## NATURAL RESOURCES

#### **Earth and Stone Products**

#### Methodology

Under the guidelines of the Assessor's Reference Library (ARL), Volume 3, Natural Resource Valuation Procedures, the income approach was applied to determine value for production of earth and stone products. The number of tons was multiplied by an economic royalty rate determined by the Division of Property Taxation to determine income. The income was multiplied by a recommended Hoskold factor to determine the actual value. The Hoskold factor is determined by the life of the reserves or the lease. Value is based on two variables: life and tonnage. The operator determines these since there is no other means to obtain production data through any state or private agency.

#### **Conclusions**

The County has applied the correct formulas and state guidelines to earth and stone production.

#### Recommendations

None

## **Producing Mines**

#### Methodology

Colorado Revised Statutes (CRS) Article 39, Section 6, and the Assessor's Reference Library (ARL), Volume 3 are the basis for valuing producing mine property. The gross value of the ore extracted during the preceding year is determined. All costs of treatment, reduction, transportation and sale are deducted to estimate gross proceeds. The costs of extraction are deducted from the gross proceeds to estimate net proceeds.

The current value for assessment is determined by determining if 25% of the gross proceeds or 100% of the net proceeds is greater, then applying that number as the valuation for assessment.

#### Conclusions

The County valued the producing mine production using acceptable appraisal procedures.

#### Recommendations

## VACANT LAND

#### **Subdivision Discounting**

Subdivisions were reviewed in 2022 in Lake County. The review showed that subdivisions were discounted pursuant to the Colorado Revised Statutes in Article 39-1-103 (14) and by applying the recommended methodology in ARL Vol 3, Chap 4. Subdivision Discounting in the intervening year can be accomplished by reducing the absorption period by one year.

In instances where the number of sales within an approved plat was less than the absorption

rate per year calculated for the plat, the absorption period was left unchanged.

#### Conclusions

Lake County has implemented proper procedures to adequately estimate absorption periods, discount rates, and lot values for qualifying subdivisions.

#### Recommendations

## POSSESSORY INTEREST PROPERTIES

#### **Possessory Interest**

Possessory interest property discovery and valuation is described in the Assessor's Reference Library (ARL) Volume 3 section 7 in accordance with the requirements of C.R.S. Chapter 39-1-103 (17)(a)(II)Possessory Interest is defined by the Property Tax Administrator's Publication ARL Volume 3, Chapter 7: A private property interest in government-owned property or the right to the occupancy and use of any benefit in government-owned property that has been under lease, permit, concession, contract, or other agreement.

Lake County has been reviewed for their procedures and adherence to guidelines when assessing and valuing agricultural and

commercial possessory interest properties. The county has also been queried as to their confidence that the possessory interest properties have been discovered and placed on the tax rolls.

#### **Conclusions**

Lake County has implemented a discovery process to place possessory interest properties on the roll. They have also correctly and consistently applied the correct procedures and valuation methods in the valuation of possessory interest properties.

#### Recommendations

## PERSONAL PROPERTY AUDIT

Lake County was studied for its procedural compliance with the personal property assessment outlined in the Assessor's Reference Library (ARL) Volume 5, and in the State Board of Equalization (SBOE) requirements for the assessment of personal property. The SBOE requires that counties use ARL Volume 5, including current discovery, classification, documentation procedures, current economic lives table, cost factor tables, depreciation table, and level of value adjustment factor table.

The personal property audit standards narrative must be in place and current. A listing of businesses that have been audited by the assessor within the twelve-month period reflected in the plan is given to the auditor. The audited businesses must be in conformity with those described in the plan.

Aggregate ratio will be determined solely from the personal property accounts that have been physically inspected. The minimum assessment sample is one percent or ten schedules, whichever is greater, and the maximum assessment audit sample is 100 schedules.

For the counties having over 100,000 population, WRA selected a sample of all personal property schedules to determine whether the assessor is correctly applying the provisions of law and manuals of the Property Tax Administrator in arriving at the assessment levels of such property. This sample was selected from the personal property schedules audited by the assessor. In no event was the sample selected by the contractor less than 30 schedules. The counties to be included in this study are Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo, and Weld. All other counties received a procedural study.

Lake County is compliant with the guidelines set forth in ARL Volume 5 regarding discovery procedures, using the following methods to discover personal property accounts in the county:

- Public Record Documents
- MLS Listing and/or Sold Books
- Local Telephone Directories, Newspapers or Other Local Publications
- Personal Observation, Physical Canvassing or Word of Mouth
- Questionnaires, Letters and/or Phone Calls to Buyer, Seller and/or Realtor
- Social Media

The county uses the Division of Property Taxation (DPT) recommended classification and documentation procedures. The DPT's recommended cost factor tables, depreciation tables and level of value adjustment factor tables are also used.

Lake County submitted their personal property written audit plan and was current for the 2022 valuation period. The number and listing of businesses audited was also submitted and was in conformance with the written audit plan. The following audit triggers were used by the county to select accounts to be audited:

- Accounts with obvious discrepancies
- New businesses filing for the first time
- Accounts with omitted property
- Businesses with no deletions or additions for 2 or more years
- Non-filing Accounts Best Information Available
- Accounts close to the \$50,000 actual value exemption status

Accounts protested with substantial disagreement

#### **Conclusions**

Lake County has employed adequate discovery, classification, documentation, valuation, and

auditing procedures for their personal property assessment and is in statistical compliance with SBOE requirements.

## APPENDICES

#### STATISTICAL COMPLIANCE REPORT FOR LAKE COUNTY 2022

#### I. OVERVIEW

Lake County is located in the central mountain region of Colorado. The county has a total of 7,746 real property parcels, according to data submitted by the county assessor's office in 2022. The following provides a breakdown of property classes for this county:

The vacant land class of properties was dominated by residential land. Residential lots (coded 100 and 1112) accounted for 64.3% of all vacant land parcels.

For residential improved properties, single family properties accounted for 93.2% of all residential properties.

Commercial and industrial properties represented a much smaller proportion of property classes in comparison. Commercial/industrial properties accounted for 1.9% of all such properties in this county.

#### II. DATA FILES

The following sales analyses were based on the requirements of the 2022 Colorado Property Assessment Study. Information was provided by the Lake Assessor's Office in May 2022. The data included all 5 property record files as specified by the Auditor.

Please note that we only included qualified and confirmed sales in this analysis, coded as a "C." Qualified sales not confirmed (coded as a "Q") were not included in this analysis.

#### III. RESIDENTIAL SALES RESULTS

A total of 227 qualified residential were initially analyzed; we trimmed 2 sales using IAAO standards. This resulted in 225 sales used in this analysis. They occurred between July 1, 2018 and June 30, 2020. The sales ratio analysis was analyzed as follows:

Median	0.956
Price Related Differential	1.012
Coefficient of Dispersion	14.4

We next stratified the sale ratio analysis by economic area and neighborhood. The minimum sales for neighborhoods was 10 sales. The following are the results of this stratification analysis:

## Economic Area Case Processing Summary

		Count	Percent
ECONAREA	1.00	136	61.0%
	2.00	10	4.5%
	3.00	10	4.5%
	5.00	67	30.0%
Overall		223	100.0%
Excluded		4	
Total		227	
		227	

#### **Ratio Statistics for CURRTOT / TASP**

			Price
Group	N	Median	Differe
1.00	136	.937	1.010
2.00	10	1.043	1.044
3.00	10	1.012	1.087
5.00	67	.962	.996
Overall	223	.956	1.011

## Neighborhoods with 10 or more sales Case Processing Summary

		Count	Percent
NBHD	1400	92	67.2%
	1440	31	22.6%
	1640	14	10.2%
Overall		137	100.0%
Exclude	d	0	
Total		137	

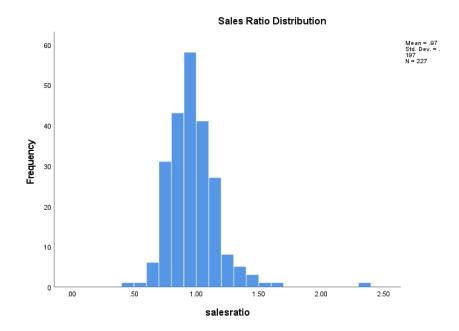

#### **Ratio Statistics for CURRTOT / TASP**

			Price Related	Coefficient of
Group	N	Median	Differential	Dispersion
1400	92	.925	1.015	.158
1440	31	.926	1.002	.137
1640	14	1.007	.998	.071
Overall	137	.935	1.009	.146

Although the overall sales ratio median was within SBOE standards, there were several economic areas and neighborhoods that were below the minimum limit. We contacted the assessor's office to advise them of these results.

The following graphs describe further the sales ratio distribution for these properties:

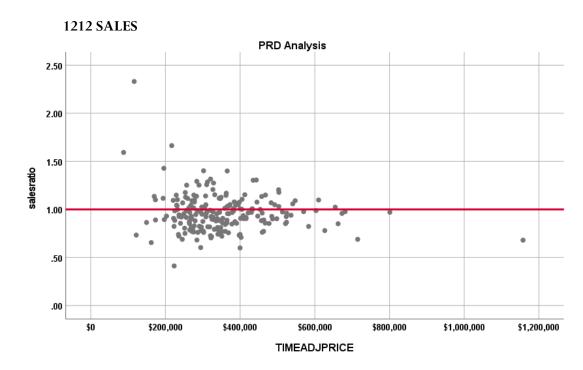

The above graphs indicate that the distribution of the sale ratios was within state mandated limits.

#### **Subclass 1212 PRD Analysis**

We next analyzed residential properties identified as 1212 using the state abstract code system. These include single family residences, town homes and purged manufactured homes. The following indicates the distribution of sales ratios across the sale price spectrum:

The Price-Related Differential (PRD) for all sales is 1.010, which is within IAAO standards for the PRD. We also performed a regression analysis between the sales ratio and the assessor's current value to further test for regressivity or progressivity in the residential sales valuation, as follows:

#### Coefficients<sup>a</sup>

		Unstandardized Coefficie	ents	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.805	.037		21.629	<.001
	CURRTOT	.000000467	.000	.295	4.501	<.001

a. Dependent Variable: salesratio

The slope of the line at 0.000000467 indicates that there is virtually no slope in the regression line, which indicates that sales ratios are similar across the entire sale price array.

We also stratified the sales ratio analysis by the sale price range, as follows:

#### **Case Processing Summary**

		Count	Percent
SPRec	LT \$200K	11	5.1%
	\$200K to \$300K	68	31.6%
	\$300K to \$400K	79	36.7%
	\$400K to \$500K	34	15.8%
	Over \$500K	23	10.7%
Overall		215	100.0%
Excluded	k	0	
Total		215	

#### **Ratio Statistics for CURRTOT / TASP**

		Price Related	Coefficient of
Group	Median	Differential	Dispersion
LT \$200K	1.101	1.036	.295
\$200K to \$300K	.945	1.002	.142
\$300K to \$400K	.923	1.001	.143
\$400K to \$500K	.949	1.000	.110
Over \$500K	.970	1.018	.102
Overall	.951	1.010	.143

The above indicates that there was no consistent pattern indicating regressivity or progressivity in the sale data for Lake County.

#### **Residential Market Trend Analysis**

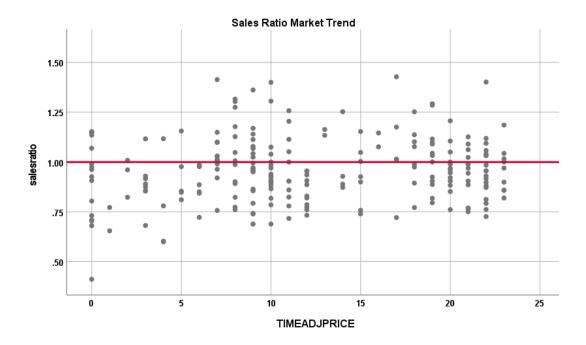

We next analyzed the residential dataset using the 24-month sale period for any residual market trending, as follows:

#### Coefficients

		Unstandardized	I Coefficients	Standardized Coefficients			
Model		В	Std. Error	Beta	t	Sig.	
1	(Constant)	.922	.022		41.878	<.001	
	SalePeriod	.003	.002	.127	1.902	.058	

a. Dependent Variable: salesratio

There was no residual market trending present in the sale ratio data. We therefore concluded that the assessor has adequately addressed market trending in the valuation of residential properties.

#### **Sold/Unsold Analysis**

In terms of the valuation consistency between sold and unsold residential properties, we compared sold and unsold residential properties using the median percent change in value between valuation year 2018 and valuation year 2020, as follows:

Report							
DIFF							
sold	N	Median	Mean				
UNSOL	3297	1.21	1.36				
D							
SOLD	227	1.20	1.20				

#### Hypothesis Test Summary

	Null Hypothesis	Test	Sig. <sup>a,b</sup>	Decision
1	The distribution of DIFF is the same across categories of sold.	Independent-Samples Mann- Whitney U Test	.871	Retain the null hypothesis.

a. The significance level is .001.

We next stratified the sold/unsold analysis by economic area, as follows:

b. Asymptotic significance is displayed.

Report
DIEE

ECONAREA	sold	N	Median	Mean
1.00	UNSOLD	1748	1.21	1.25
	SOLD	136	1.22	1.22
2.00	UNSOLD	364	1.17	1.94
	SOLD	10	1.18	1.28
3.00	UNSOLD	205	1.22	1.39
	SOLD	10	1.22	1.19
5.00	UNSOLD	649	1.20	1.40
	SOLD	67	1.18	1.17

We also stratified the sold/unsold analysis by neighborhoods with at least 10 sales, as follows:

Report DIFF				
NBHD	sold	N	Median	Mean
1400	UNSOLD	1273	1.20	1.21
	SOLD	92	1.21	1.21
1440	UNSOLD	310	1.22	1.21
	SOLD	31	1.22	1.23
1610	UNSOLD	57	1.16	1.47
	SOLD	10	1.16	1.16
1640	UNSOLD	94	1.19	1.41
	SOLD	14	1.20	1.17

The above results indicate that sold and unsold residential properties were valued in a consistent manner.

#### IV. COMMERCIAL/INDUSTRIAL SALE RESULTS

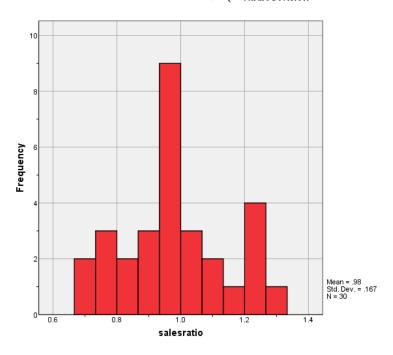

There were 27 qualified commercial sales qualified for analysis in the 60 month period ending June 30, 2020. Based on the guidelines of the 2022 Audit, we augmented the 27 commercial sales with 3 supplemental appraisals. Please note that the 27 sales will be used to analyze the commercial market trend and for the sold and unsold comparison analysis.

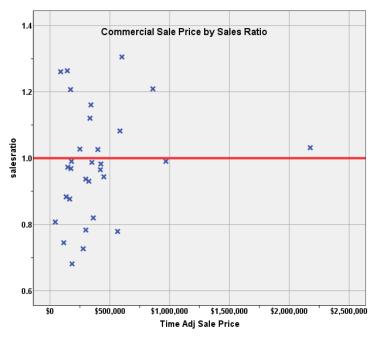

The sales ratio analysis was analyzed with the following results:

Median	0.978
Price Related Differential	0.973
Coefficient of Dispersion	13.0

The above table indicates that the Lake County commercial sale ratios were in compliance with the SBOE standards. The following histogram and scatter plot describe the sales ratio distribution further:

The above graphs indicate that the distribution of the sale ratios was within state mandated limits.

#### **Commercial Market Trend Analysis**

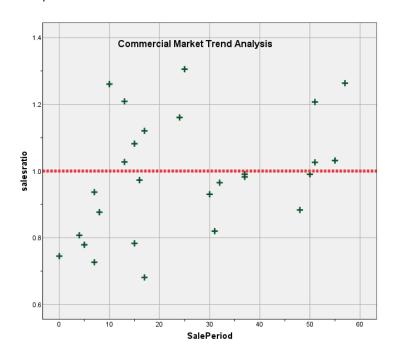

We next analyzed the commercial dataset using the 60-month sale period for any residual market trending, as follows:

#### Coefficients<sup>a</sup>

		Unstandardized	Coefficients	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.893	.056		15.847	.000
	SalePeriod	.004	.002	.367	1.974	.059

a. Dependent Variable: salesratio

There was no significant residual market trending present in the sale ratio data. We therefore concluded that the assessor has adequately addressed market trending in the valuation of residential properties.

#### **Sold/Unsold Analysis**

In terms of the valuation consistency between sold and unsold residential properties, we compared commercial sold and unsold properties using the median 2022 actual value per square foot, as follows:

Report VALSF			
sold	N	Median	Mean
UNSOLD	121	\$59	\$68
SOLD	23	\$73	\$102

#### Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of VALSF is the same across categories of sold.	Independent- Samples Mann- Whitney U Test	.018	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .01.

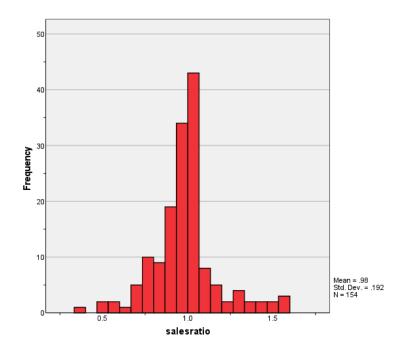

The above results indicate that sold and unsold commercial properties were valued in a consistent manner.

#### V. VACANT LAND SALE RESULTS

A total of 154 qualified vacant land sales were analyzed for the period between July 1, 2018 and June 30, 2020.

Median	0.995
Price Related Differential	1.058
Coefficient of Dispersion	12.2

The above table indicates that the Lake County vacant land sale ratios were in compliance with the SBOE standards. The following histogram and scatter plot describe the sales ratio distribution further:

#### **Vacant Land Market Trend Analysis**

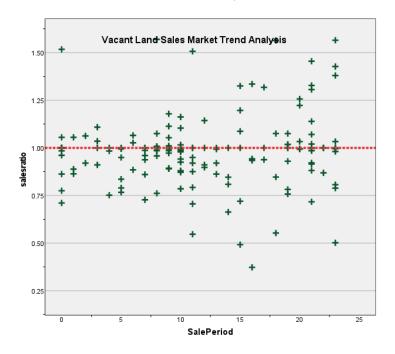

The vacant land sales were analyzed, examining the sale ratios across the 24 month sale period with the following results:

#### Coefficients<sup>a</sup>

		Unstandardized	Coefficients	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.948	.031		30.658	<.001
	SalePeriod	.003	.002	.108	1.342	.181

a. Dependent Variable: salesratio

There was no residual market trending present in the vacant land sale ratios.

#### **Sold/Unsold Analysis**

We compared the median change in actual value between valuation year 2018 and valuation year 2020 for vacant land properties to determine if sold and unsold properties were valued consistently, as follows:

Report								
DIFF								
sold	N	Median	Mean					
UNSOL	1858	1.35	1.28					
SOLD	129	1.29	1.25					

We also stratified this analysis by subdivision with at least 10 sales, as follows:

Report DIFF				
SUBDIVNO	sold	N	Median	Mean
38	UNSOLD	135	1.38	1.36
	SOLD	23	1.38	1.30
39	UNSOLD	75	1.07	1.06
	SOLD	14	1.07	1.14
40	UNSOLD	296	1.61	1.58
	SOLD	17	1.61	1.43

The above results indicated that sold and unsold vacant land properties were valued consistently overall by Lake County.

#### V. CONCLUSION

Based on this 2022 audit statistical analysis, residential, commercial and vacant land properties were found to be in compliance with state guidelines. We have contacted the assessor concerning the low median sales ratios in certain residential economic areas and neighborhoods.

#### **STATISTICAL ABSTRACT**
