

# 2019 MOFFAT COUNTY PROPERTY ASSESSMENT STUDY

September 15, 2019

Ms. Natalie Mullis Director of Research Colorado Legislative Council Room 029, State Capitol Building Denver, Colorado 80203

#### RE: Final Report for the 2019 Colorado Property Assessment Study

Dear Ms. Mullis:

Wildrose Appraisal Inc.-Audit Division is pleased to submit the Final Reports for the 2019 Colorado Property Assessment Study.

These reports are the result of two analyses: A procedural audit and a statistical audit.

The procedural audit examines all classes of property. It specifically looks at how the assessor develops economic areas, confirms and qualifies sales, develops time adjustments and performs periodic physical property inspections. The audit reviews the procedures for determining subdivision absorption and subdivision discounting. Valuation methodology is examined for residential properties and commercial properties. Procedures are reviewed for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests, and non-producing patented mining claims.

Statistical audits are performed on vacant land, residential properties, commercial/industrial properties and agricultural land. A statistical analysis is performed for personal property compliance on the eleven largest counties: Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo and Weld. The remaining counties receive a personal property procedural study.

Wildrose Appraisal Inc. – Audit Division appreciates the opportunity to be of service to the State of Colorado. Please contact us with any questions or concerns.

Harry J. Hullon

Harry J. Fuller Project Manager Wildrose Appraisal Inc. – Audit Division

STATISTICAL APPENDIX	24

The State Board of Equalization (SBOE) reviews assessments for conformance to the Constitution. The SBOE will order revaluations for counties whose valuations do not reflect the proper valuation period level of value.

The statutory basis for the audit is found in C.R.S. 39-1-104(16)(a)(b) and (c).

The legislative council sets forth two criteria that are the focus of the audit group:

To determine whether each county assessor is applying correctly the constitutional and statutory provisions, compliance requirements of the State Board of Equalization, and the manuals published by the State Property Tax Administrator to arrive at the actual value of each class of property.

To determine if each assessor is applying correctly the provisions of law to the actual values when arriving at valuations for assessment of all locally valued properties subject to the property tax.

The property assessment audit conducts a twopart analysis: A procedural analysis and a statistical analysis. The procedural analysis includes all classes of property and specifically looks at how the assessor develops economic areas, confirms and qualifies sales, and develops time adjustments. The audit also examines the procedures for adequately discovering, classifying and valuing agricultural outbuildings, discovering subdivision build-out subdivision and discounting procedures. Valuation methodology for vacant land, improved properties commercial residential and properties is examined. Procedures for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests and non-producing patented mining claims are also reviewed.

Statistical analysis is performed on vacant land, residential properties, commercial industrial properties, agricultural land, and personal property. The statistical study results are compared with State Board of Equalization compliance requirements and the manuals published by the State Property Tax Administrator.

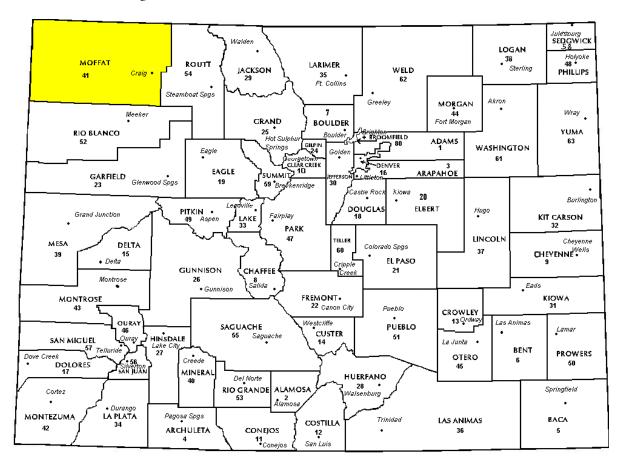

Wildrose Audit has completed the Property Assessment Study for 2019 and is pleased to report its findings for Moffat County in the following report.

# REGIONAL/HISTORICAL SKETCH OF MOFFAT COUNTY

### **Regional Information**

Moffat County is located in the Western Slope region of Colorado. The Western Slope of Colorado refers to the region west of the Rocky Mountains. It includes Archuleta, Delta, Dolores, Eagle, Garfield, Grand, Gunnison, Hinsdale, Jackson, La Plata, Mesa, Moffat, Montezuma, Montrose, Ouray, Pitkin, Rio Blanco, Routt, San Juan, San Miguel, and Summit counties.

#### **Historical Information**

Moffat County had an estimated population of approximately 13,109 people with 2.8 people per square mile, according to the U.S. Census Bureau's 2016 estimated census data. This represents a -5.0 percent change from April 1, 2010 to July 1, 2016.

Moffat County lies at the most Northwestern point of Colorado. The scenery is vast and remote and makes an ideal "get away from it all" vacation. Moffat County was created out of the western portion of Routt County on February 27, 1911. The county was named for David H. Moffat, a Colorado tycoon who died in 1911. His railroad, the Denver, Northwestern & Pacific, attempted to build a route from Denver to Salt Lake City. In 1913, a reorganized railroad, the Denver & Salt Lake, reached as far as Craig, the county seat, but no further.

Moffat County's high-desert landscape provides world-class hunting and an abundance of winter and summer recreational opportunities. The county has the only wave pool complex on the Western Slope and a beautiful and challenging 18-hole public golf course with scenic views of the Yampa River. Visitors can also enjoy sport fishing, abundant wildlife and petroglyphs. The gateway to Dinosaur National Monument and one of the last free-roaming herds of wild mustangs are also found in Moffat County. Resident elk, deer, antelope, mountain lions, sandhill cranes, eagles, wild horses and other species of wildlife may be spotted from state and county roads that wander through scenic back country. Northwest Colorado is nationally renowned for big game hunting. Summer recreation opportunities include hiking, biking, horseback riding, rafting, kayaking, tubing, motocross and more. In the winter, residents and visitors enjoy a variety of snow sports such cross-country and downhill skiing, as snowmobiling, snowshowing, playing hockey and icefishing.

Craig, the Moffat County seat, was founded in 1889 by William H. Tucker and named for one of the town's financial backers, Rev. William Bayard Craig, was incorporated as a city on April 24, 1908 and became the county seat in 1911. In the same area as Craig, at the confluence of the Yampa River (then known as the Bear River) and Fortificaton Creek, were previous towns known as Yampa (as early as 1885) and Windsor (as early as 1878). In 1878 the area consisted of a number of ranches and at least two businesses: Himley's Ford (which allowed crossing of the Yampa River) and Peck's Store (a one room trading post). Today, Craig is the mid-point for Denver and Salt Lake City travelers and is the economic center of Northwest Colorado.

## **RATIO ANALYSIS**

#### Methodology

All significant classes of property were analyzed. Sales were collected for each property class over the eighteen month period from January 1, 2017 through June 30, 2018. Property classes with less than thirty sales had the sales period extended in six month increments up to an additional forty-two months. If this extended sales period did not produce the minimum thirty qualified sales, the Audit performed supplemental appraisals to reach the minimum.

Although it was required that we examine the median and coefficient of dispersion for all counties, we also calculated the weighted mean and price-related differential for each class of property. Counties were not passed or failed by these latter measures, but were counseled if there were anomalies noted during our analysis. Qualified sales were based on the qualification code used by each county, which were typically coded as either "Q" or "C." The ratio analysis included all sales. The data was trimmed for counties with obvious outliers using IAAO standards for data analysis. In

every case, we examined the loss in data from trimming to ensure that only true outliers were excluded. Any county with a significant portion of sales excluded by this trimming method was examined further. No county was allowed to pass the audit if more than 5% of the sales were "lost" because of trimming.

All sixty-four counties were examined for compliance on the economic area level. Where were sufficient sales there data, the neighborhood and subdivision levels were tested for compliance. Although counties are determined to be in or out of compliance at the class level, non-compliant economic areas, neighborhoods and subdivisions (where applicable) were discussed with the Assessor.

#### Data on the individual economic areas, neighborhoods and subdivisions are found in the STATISTICAL APPENDIX.

#### Conclusions

For this final analysis report, the minimum acceptable statistical standards allowed by the State Board of Equalization are:

ALLOWABLE STANDARDS RATIO GRID				
Property Class	Unweighted Median Ratio	Coefficient of Dispersion		
Commercial/Industrial	Between .95-1.05	Less than 20.99		
Condominium	Between .95-1.05	Less than 15.99		
Single Family	Between .95-1.05	Less than 15.99		
Vacant Land	Between .95-1.05	Less than 20.99		

The results for Moffat County are:

Moffat County Ratio Grid					
Number of QualifiedUnweightedPrice PriceCoefficient CoefficientProperty ClassSalesRatioDifferentialDispersion					
Commercial/Industrial	46	0.988	1.060	17.8	Compliant
Condominium	N/A	N/A	N/A	N/A	N/A
Single Family	303	1.009	1.007	8.9	Compliant
Vacant Land	48	1.003	1.038	20.5	Compliant

After applying the above described methodologies, it is concluded from the sales ratios that Moffat County is in compliance with SBOE, DPT, and Colorado State Statute valuation guidelines.

Recommendations

## TIME TRENDING VERIFICATION

#### Methodology

While we recommend that counties use the inverted ratio regression analysis method to account for market (time) trending, some counties have used other IAAO-approved methods, such as the weighted monthly median approach. We are not auditing the methods used, but rather the results of the methods used. Given this range of methodologies used to account for market trending, we concluded that the best validation method was to examine the sale ratios for each class across the appropriate sale period. To be specific, if a county has considered and adjusted correctly for market trending, then the sale ratios should remain stable (i.e. flat) across the sale period. If a residual market trend is detected, then the county may or may not have addressed market

trending adequately, and a further examination is warranted. This validation method also considers the number of sales and the length of the sale period. Counties with few sales across the sale period were carefully examined to determine if the statistical results were valid.

#### Conclusions

After verification and analysis, it has been determined that Moffat County has complied with the statutory requirements to analyze the effects of time on value in their county. Moffat County has also satisfactorily applied the results of their time trending analysis to arrive at the time adjusted sales price (TASP).

Recommendations

## SOLD/UNSOLD ANALYSIS

### Methodology

Moffat County was tested for the equal treatment of sold and unsold properties to ensure that "sales chasing" has not occurred. The auditors employed a multi-step process to determine if sold and unsold properties were valued in a consistent manner.

We test the hypothesis that the assessor has valued unsold properties consistent with what is observed with the sold properties based on several units of comparison and tests. The units of comparison include the actual value per square foot and the change in value from the previous base year period to the current base year. The first test compares the actual value per square foot between sold and unsold properties by class. The median and mean value per square foot is compared and tested for any significant difference. This is tested using non-parametric methods, such as the Mann-Whitney test for differences in the distributions or medians between sold and unsold groups. It is also examined graphically and from an appraisal perspective. Data can be stratified based on location and subclass. The second test compares the difference in the median change in value from the previous base year to the current base year between sold and unsold properties by class. The same combination of non-parametric and appraisal testing is used as with the first test. A third test employing a valuation model testing a sold/unsold binary variable while controlling for property attributes such as location, size, age and other attributes. The model determines if the sold/unsold variable is statistically and empirically significant. If all three tests indicate a significant difference between sold and unsold properties for a given class, the Auditor may meet with the county to determine if sale chasing is actually occurring,

or if there are other explanations for the observed difference.

If the unsold properties have a higher median value per square foot than the sold properties, or if the median change in value is greater for the unsold properties than the sold properties, the analysis is stopped and the county is concluded to be in compliance with sold and unsold guidelines. All sold and unsold properties in a given class are first tested, although properties with extreme unit values or percent changes can be trimmed to stabilize the analysis. The median is the primary comparison metric, although the mean can also be used as a comparison metric if the distribution supports that type of measure of central tendency.

The first test (unit value method) is applied to both residential and commercial/industrial sold and unsold properties. The second test is applied to sold and unsold vacant land properties. The second test (change in value method) is also applied to residential or commercial sold and unsold properties if the first test results in a significant difference observed and/or tested between sold and unsold properties. The third test (valuation modeling) is used in instances where the results from the first two tests indicate a significant difference between sold and unsold properties. It can also be used when the number of sold and unsold properties is so large that the nonparametric testing is indicating a false rejection of the hypothesis that there is no difference between the sold and unsold property values.

These tests were supported by both tabular and graphics presentations, along with written documentation explaining the methodology used.

Sold/Unsold R	esults
Property Class	Results
Commercial/Industrial	Compliant
Condominium	N/A
Single Family	Compliant
Vacant Land	Compliant

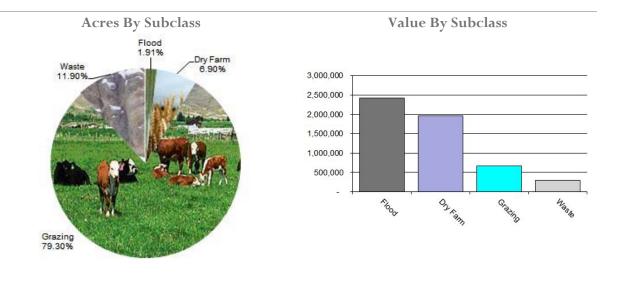

## Conclusions

### Recommendations

After applying the above described methodologies, it is concluded that Moffat County is reasonably treating its sold and unsold properties in the same manner.

## AGRICULTURAL LAND STUDY

## Agricultural Land

County records were reviewed to determine major land categories such as irrigated farm, dry farm, meadow hay, grazing and other lands. In addition, county records were reviewed in order to determine if: Aerial photographs are available and are being used; soil conservation guidelines have been used to classify lands based on productivity; crop rotations have been documented; typical commodities and yields have been determined; orchard lands have been properly classified and valued; expenses reflect a ten year average and are typical landlord expenses; grazing lands have been properly classified and valued; the number of acres in each class and subclass have been determined; the capitalization rate was properly applied. Also, documentation was required for the valuation methods used and any locally developed yields, carrying capacities, and expenses. Records were also checked to ensure that the commodity prices and expenses, furnished by the Property Tax Administrator (PTA), were applied properly.

(See Assessor Reference Library Volume 3 Chapter 5.)

### Conclusions

An analysis of the agricultural land data indicates an acceptable appraisal of this property type. Directives, commodity prices and expenses provided by the PTA were properly applied. County yields compared favorably to those published by Colorado Agricultural Statistics. Expenses used by the county were allowable expenses and were in an acceptable range. Grazing lands carrying capacities were in an acceptable range. The data analyzed resulted in the following ratios:

	Moffat County Agricultural Land Ratio Grid						
Abstract Code	Land Class	Number Of Acres	County Value Per Acre	County Assessed Total Value	WRA Total Value	Ratio	
4117	Flood	20,559	117.69	2,419,607	2,436,122	0.99	
4127	Dry Farm	74,422	26.35	1,961,082	1,987,433	0.99	
4147	Grazing	855,383	5.18	666,350	666,350	1.00	
4167	Waste	128,344	2.39	306,204	306,204	1.00	
Total/Avg		1,078,708	4.96	5,353,242	5,396,109	0.99	

#### Recommendations

None

## Agricultural Outbuildings

### Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.74 through 5.77 were being followed. Property Taxation for the valuation of agricultural outbuildings. **Recommendations** None

#### Conclusions

Moffat County has substantially complied with the procedures provided by the Division of

## **Agricultural Land Under Improvements**

## Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.19 and 5.20 were being followed.

### Conclusions

Moffat County has used the following methods to discover land under a residential improvement on a farm or ranch that is determined to be not integral under 39-1-102, C.R.S.:

- Questionnaires
- Field Inspections
- In-Person Interviews with Owners/Tenants
- Written Correspondence other than Questionnaire
- Personal Knowledge of Occupants at Assessment Date
- Aerial Photography/Pictometry

Moffat County has used the following methods to discover the land area under a residential improvement that is determined to be not integral under 39-1-102, C.R.S.:

- Property Record Card Analysis
- Field Inspections
- In-Person Interviews with Owners/Tenants
- Aerial Photography/Pictometry

Moffat County has substantially complied with the procedures provided by the Division of Property Taxation for the valuation of land under residential improvements that may or may not be integral to an agricultural operation.

Recommendations

## SALES VERIFICATION

According to Colorado Revised Statutes:

A representative body of sales is required when considering the market approach to appraisal.

(8) In any case in which sales prices of comparable properties within any class or subclass are utilized when considering the market approach to appraisal in the determination of actual value of any taxable property, the following limitations and conditions shall apply:

(a)(1) Use of the market approach shall require a representative body of sales, including sales by a lender or government, sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties that are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample that reasonably reflect a true or typical sales price during the period specified in section 39-1-104 (10.2). Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

(b) Each such sale included in the sample shall be coded to indicate a typical, negotiated sale, as screened and verified by the assessor. (39-1-103, C.R.S.)

The assessor is required to use sales of real property only in the valuation process.

(8)(f) Such true and typical sales shall include only those sales which have been determined on an individual basis to reflect the selling price of the real property only or which have been adjusted on an individual basis to reflect the selling price of the real property only. (39-1-103, C.R.S.) Part of the Property Assessment Study is the sales verification analysis. WRA has used the above-cited statutes as a guide in our study of the county's procedures and practices for verifying sales.

WRA reviewed the sales verification procedures in 2019 for Moffat County. This study was conducted by checking selected sales from the master sales list for the current valuation period. Specifically WRA selected 39 sales listed as unqualified.

All of the sales in the unqualified sales sample had reasons that were clear and supportable.

For residential, commercial, and vacant land sales with considerations over \$100,000, the contractor has examined and reported the ratio of qualified sales to total sales by class and performed the following analyses of unqualified sales:

> The contractor has examined the manner in which sales have been classified as qualified or unqualified, including a listing of each step in the sales verification process, any adjustment procedures, and the county official responsible for making the final decision on qualification.

> When less than 50 percent of sales are qualified in any of the three property classes (residential, commercial, and vacant land), the contractor analyzed the reasons for disqualifying sales in any subclass that constitutes at least 20 percent of the class, either by number of properties or by value, from the prior year. The contractor has

reviewed with the assessor any analysis indicating that sales data are inadequate, fail to reflect typical properties, or have been disqualified for insufficient cause. In addition, the contractor has reviewed the disqualified sales by assigned code. If there appears to be any inconsistency in the coding, the contractor has conducted further analysis to determine if the sales included in that code have been assigned appropriately.

If 50 percent or more of the sales are qualified, the contractor has reviewed a statistically significant sample of unqualified sales, excluding sales that were disqualified for obvious reasons. The following subclasses were analyzed for Moffat County:

0100 Residential Lots 0200 Commercial Lots 0530 5.0 to 9.99

### Conclusions

Moffat County appears to be doing a good job of verifying their sales. WRA agreed with the county's reason for disqualifying each of the sales selected in the sample. There are no recommendations or suggestions.

**Recommendations** 

# ECONOMIC AREA REVIEW AND EVALUATION

### Methodology

Moffat County has submitted a written narrative describing the economic areas that make up the county's market areas. Moffat County has also submitted a map illustrating these areas. Each of these narratives have been read and analyzed for logic and appraisal sensibility. The maps were also compared to the narrative for consistency between the written description and the map.

#### Conclusions

After review and analysis, it has been determined that Moffat County has adequately

identified homogeneous economic areas comprised of smaller neighborhoods. Each economic area defined is equally subject to a set of economic forces that impact the value of the properties within that geographic area and this has been adequately addressed. Each economic area defined adequately delineates an area that will give "similar values for similar properties in similar areas."

Recommendations

## NATURAL RESOURCES

## **Earth and Stone Products**

#### Methodology

Under the guidelines of the Assessor's Reference Library (ARL), Volume 3, Natural Resource Valuation Procedures, the income approach was applied to determine value for production of earth and stone products. The number of tons was multiplied by an economic royalty rate determined by the Division of Property Taxation to determine income. The income was multiplied by a recommended Hoskold factor to determine the actual value. The Hoskold factor is determined by the life of the reserves or the lease. Value is based on two variables: life and tonnage. The operator determines these since there is no other means to obtain production data through any state or private agency.

#### Conclusions

The County has applied the correct formulas and state guidelines to earth and stone production.

Recommendations

None

**Producing Oil and Gas** 

#### Methodology

Assessors Reference Library (ARL) Volume 3, Chapter 6: Valuation of Natural Resources

#### STATUTORY REFERENCES

Section § 39-1-103, C.R.S., specifies that producing oil or gas leaseholds and lands are valued according to article 7 of title 39, C.R.S.

#### Actual value determined - when.

(2) The valuation for assessment of leaseholds and lands producing oil or gas shall be determined as provided in article 7 of this title. § 39-1-103, C.R.S.

Article 7 covers the listing, valuation, and assessment of producing oil and gas leaseholds and lands.

#### Valuation:

#### Valuation for assessment.

(1) Except as provided in subsection (2) of this section, on the basis of the information contained in such statement, the assessor shall value such oil and gas leaseholds and lands for assessment, as real property, at an amount equal to eighty-seven and one-half percent of:

(a) The selling price of the oil or gas sold there from during the preceding calendar year, after excluding the selling price of all oil or gas delivered to the United States government or any agency thereof, the state of Colorado or any agency thereof, or any political subdivision of the state as royalty during the preceding calendar year;

(b) The selling price of oil or gas sold in the same field area for oil or gas transported from the premises which is not sold during the preceding calendar year, after excluding the selling price of all oil or gas delivered to the United States government or any agency thereof, the state of Colorado or any agency thereof, or any political subdivision of the state as royalty during the preceding calendar year.

#### § 39-7-102, C.R.S.

#### Conclusions

The county applied approved appraisal procedures in the valuation of oil and gas.

#### Recommendations

## **Producing Coal Mines**

#### Methodology

Under the guidelines of the Assessor's Reference Library (ARL), Volume 3, Section 6, Valuation of Producing Coal Leaseholds and Lands, the income approach is the primary method applied to find value for the valuation of coalmines. This methodology estimates annual economic royalty income based on previous year's production, then capitalizes that income to value using a Hoskold factor to estimate the present worth of the permitted acres. The operator provides production data and the life of the leases.

#### Conclusions

County has applied the correct formulas and state guidelines to coal mine valuation.

**Recommendations** 

## VACANT LAND

#### **Subdivision Discounting**

Subdivisions were reviewed in 2019 in Moffat County. The review showed that subdivisions were discounted pursuant to the Colorado Revised Statutes in Article 39-1-103 (14) and by applying the recommended methodology in ARL Vol 3, Chap 4. Subdivision Discounting in the intervening year can be accomplished by reducing the absorption period by one year.

#### Conclusions

Moffat County has implemented proper procedures to adequately estimate absorption periods, discount rates, and lot values for qualifying subdivisions.

Recommendations

## **POSSESSORY INTEREST PROPERTIES**

#### **Possessory Interest**

Possessory interest property discovery and valuation is described in the Assessor's Reference Library (ARL) Volume 3 section 7 in accordance with the requirements of C.R.S. Chapter 39-1-103 (17)(a)(II) Possessory Interest is defined by the Property Tax Administrator's Publication ARL Volume 3, Chapter 7: A private property interest in government-owned property or the right to the occupancy and use of any benefit in government-owned property that has been under granted lease, permit, license, concession, contract, or other agreement.

Moffat County has been reviewed for their procedures and adherence to guidelines when assessing and valuing agricultural and commercial possessory interest properties. The county has also been queried as to their confidence that the possessory interest properties have been discovered and placed on the tax rolls.

#### Conclusions

Moffat County has implemented a discovery process to place possessory interest properties on the roll. They have also correctly and consistently applied the correct procedures and valuation methods in the valuation of possessory interest properties.

**Recommendations** 

## PERSONAL PROPERTY AUDIT

Moffat County was studied for its procedural compliance with the personal property assessment outlined in the Assessor's Reference Library (ARL) Volume 5, and in the State Board of Equalization (SBOE) requirements for the assessment of personal property. The SBOE requires that counties use ARL Volume 5, including current discovery, classification, documentation procedures, current economic lives table, cost factor tables, depreciation table, and level of value adjustment factor table.

The personal property audit standards narrative must be in place and current. A listing of businesses that have been audited by the assessor within the twelve-month period reflected in the plan is given to the auditor. The audited businesses must be in conformity with those described in the plan.

Aggregate ratio will be determined solely from the personal property accounts that have been physically inspected. The minimum assessment sample is one percent or ten schedules, whichever is greater, and the maximum assessment audit sample is 100 schedules.

For the counties having over 100,000 population, WRA selected a sample of all personal property schedules to determine whether the assessor is correctly applying the provisions of law and manuals of the Property Tax Administrator in arriving at the assessment This sample was levels of such property. selected from the personal property schedules audited by the assessor. In no event was the sample selected by the contractor less than 30 schedules. The counties to be included in this study are Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo, and Weld. All other counties received a procedural study.

Moffat County is compliant with the guidelines set forth in ARL Volume 5 regarding discovery procedures, using the following methods to discover personal property accounts in the county:

- Public Record Documents
- MLS Listing and/or Sold Books
- Chamber of Commerce/Economic Development Contacts
- Local Telephone Directories, Newspapers or Other Local Publications
- Personal Observation, Physical Canvassing or Word of Mouth

The county uses the Division of Property Taxation (DPT) recommended classification and documentation procedures. The DPT's recommended cost factor tables, depreciation tables and level of value adjustment factor tables are also used.

Moffat County submitted their personal property written audit plan and was current for the 2019 valuation period. The number and listing of businesses audited was also submitted and was in conformance with the written audit plan. The following audit triggers were used by the county to select accounts to be audited:

- Accounts with obvious discrepancies
- New businesses filing for the first time
- Incomplete or inconsistent declarations
- Businesses with no deletions or additions for 2 or more years
- Non-filing Accounts Best Information Available
- Accounts protested with substantial disagreement

#### Conclusions

Moffat County has employed adequate discovery, classification, documentation, valuation, and auditing procedures for their personal property assessment and is in statistical compliance with SBOE requirements.

# STATISTICAL APPENDIX

#### STATISTICAL COMPLIANCE REPORT FOR MOFFAT COUNTY 2019

### I. OVERVIEW

Moffat County is located in northwestern Colorado. The county has a total of 10,516 real property parcels, according to data submitted by the county assessor's office in 2019. The following provides a breakdown of property classes for this county:

The vacant land class of properties was dominated by residential land. Residential lots (coded 100 and 1112) accounted for 33.9% of all vacant land parcels, followed by large lots (coded 530) at 20.31%.

For residential improved properties, single family properties accounted for 94.9% of all residential properties.

Commercial and industrial properties represented a much smaller proportion of property classes in comparison. Commercial/industrial properties accounted for 3.35% of all such properties in this county.

Based on the Audit questionnaire filled out by the assessor (see below), the following geographic levels were used by the assessor to value residential, commercial and vacant land properties:

Residential	Comm/Ind	Vacant Land
N	N	N
N	N	N
N	N	N
	Residential   N   N   N   N	ResidentialComm/IndNNNNNN

Codes

*V*=*Valid* Geographic Level – used for modeling *N* = Not used as Geographic Level for modeling

### **II. DATA FILES**

The following sales analyses were based on the requirements of the 2019 Colorado Property Assessment Study. Information was provided by the Moffat Assessor's Office in May 2019. The data included all 5 property record files as specified by the Auditor.

### **III. RESIDENTIAL SALES RESULTS**

There were 303 qualified residential sales for the 18 month period ending June 30, 2018. The sales ratio analysis results were as follows:

Median	1.009
Price Related Differential	1.007
Coefficient of Dispersion	8.9

We next stratified the sale ratio analysis by economic area, as follows:

		8	
		Count	Percent
ECONAREA	1.00	32	10.7%
	2.00	177	59.0%
	3.00	33	11.0%
	4.00	42	14.0%
	5.00	11	3.7%
	6.00	5	1.7%
Overall		300	100.0%
Excluded		3	
Total		303	

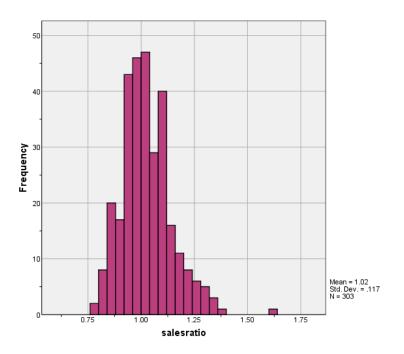

#### **Case Processing Summary**

		Price Related	Coefficient of
Group	Median	Differential	Dispersion
1.00	.979	1.020	.109
2.00	1.017	1.003	.081
3.00	1.030	1.007	.082
4.00	.990	.998	.094
5.00	1.000	1.050	.125
6.00	1.036	1.025	.097
Overall	1.009	1.007	.089

#### **Ratio Statistics for CURRTOT / TASP**

The above ratio statistics were in compliance with the standards set forth by the Colorado State Board of Equalization (SBOE) for the overall residential sales. The following graphs describe further the sales ratio distribution for these properties:

The above graphs indicate that the distribution of the sale ratios was within state mandated limits. No sales were trimmed.

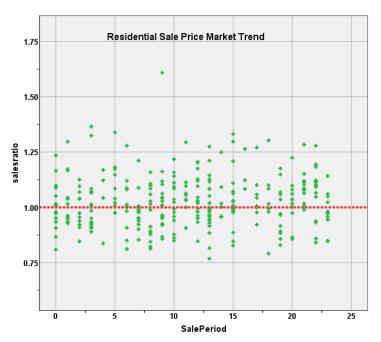

### **Residential Market Trend Analysis**

We next analyzed the residential dataset using the 24-month sale period for any residual market trending, with the following results:

	Coefficients <sup>a</sup>					
				Standardized		
		Unstandardize	d Coefficients	Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.013	.013		77.963	.000
	SalePeriod	.001	.001	.060	1.042	.298

a. Dependent Variable: salesratio

With no significant statistical trend evident in the sales ratio data, the above analysis indicated that the assessor has adequately addressed market trending in the valuation of residential properties.

### Sold/Unsold Analysis

In terms of the valuation consistency between sold and unsold residential properties, we compared the 2019 median actual value per square foot between sold and unsold residential properties, as follows:

Report						
VALSF						
sold	N	Median	Mean			
UNSOLD	3723	\$94	\$96			
SOLD	303	\$103	\$104			

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of VALSF is th same across categories of sold	Independent- e <sup>Samples</sup> Mann- ' Whitney U Test	.000	Reject the null hypothesis.

### Hypothesis Test Summary

Asymptotic significances are displayed. The significance level is .01.

Because of the results from the Mann-Whitney test for similar distributions between sold and unsold residential properties, we also compared the median and mean change in actual value for taxable years 2018 and 2019 between sold and unsold residential properties. The analysis was by class and by economic area as follows:

Report							
DIFF							
sold N Median Mean							
UNSOLD	3772	1.10	1.13				
SOLD	303	1.10	1.12				

## Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of DIFF is the sar across categories of sold.	Independent- Samples Mann- Whitney U Test	.090	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .00.

#### Report

DIFF				
ECONAREA	sold	N	Median	Mean
1.00	UNSOLD	658	1.11	1.16
	SOLD	32	1.15	1.15
2.00	UNSOLD	1728	1.08	1.11
	SOLD	177	1.09	1.12
3.00	UNSOLD	254	1.10	1.10
	SOLD	33	1.10	1.12
4.00	UNSOLD	575	1.09	1.14
	SOLD	42	1.09	1.09
5.00	UNSOLD	258	1.12	1.15
	SOLD	11	1.11	1.13
6.00	UNSOLD	242	1.09	1.17
	SOLD	5	1.08	1.08

The above results indicate that sold and unsold residential properties were valued in a consistent manner.

#### **IV. COMMERCIAL/INDUSTRIAL SALE RESULTS**

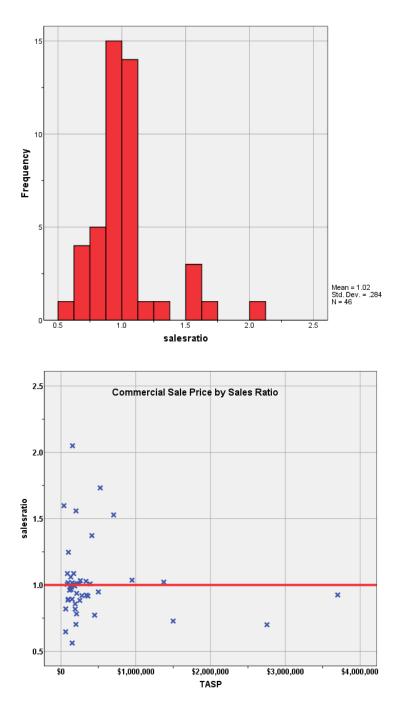

There were 48 qualified sales for the 60 month period ending June 30, 2018. A total of 2 sales were trimmed using IAAO standards, resulting in a final total of 46 commercial sales.

The sales ratio analysis resulted in the following ratio statistics:

Median	0.988
Price Related Differential	1.060
Coefficient of Dispersion	17.8

The above table indicates that the Moffat County commercial/industrial sale ratios were in compliance with the SBOE standards. The following histogram and scatter plot describe the sales ratio distribution further:

### **Commercial Market Trend Analysis**

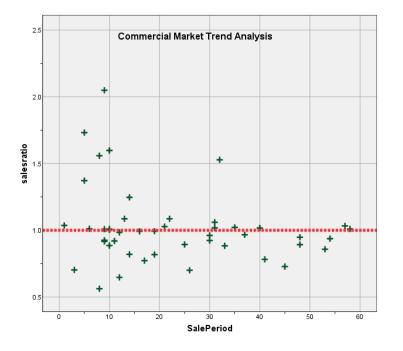

The commercial/industrial sales were next analyzed by subclass for any residual market trending, examining the sale ratios across the 60-month sale period with the following results:

<b>Coefficients</b> <sup>a</sup>	

	Coefficients <sup>a</sup>						
				Standardized			
		Unstandardize	d Coefficients	Coefficients			
Model		В	Std. Error	Beta	t	Sig.	
1	(Constant)	1.110	.072		15.415	.000	
	SalePeriod	004	.003	224	-1.525	.135	

a. Dependent Variable: salesratio

The market trend results indicated no statistically significant trends. We concluded that the assessor adequately considered market trending in their valuation of commercial properties.

#### **Sold/Unsold Analysis**

We compared the 2019 median actual value per square foot between sold and unsold commercial properties to determine if the assessor was valuing each group consistently. This analysis was by class and by sub-class, as follows:

Report						
VALSF						
sold	Ν	Median	Mean			
UNSOLD	309	\$44	\$59			
SOLD	43	\$50	\$76			

## Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of VALSF is the same across categories of sold	Independent- Samples Mann- Whitney U Test	.080	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .01.

VALSF				
ABSTRIMP	sold	N	Median	Mean
2212	UNSOLD	72	\$53	\$70
	SOLD	10	\$56	\$62
2215	UNSOLD	5	\$96	\$91
	SOLD	2	\$158	\$158
2220	UNSOLD	32	\$67	\$77
	SOLD	5	\$72	\$83
2224	UNSOLD	3	\$40	\$33
	SOLD	2	\$62	\$62
2225	UNSOLD	8	\$34	\$45
	SOLD	1	\$35	\$35
2230	UNSOLD	89	\$46	\$61
	SOLD	10	\$62	\$113
2233	UNSOLD	2	\$46	\$46
	SOLD	1	\$36	\$36
2235	UNSOLD	80	\$30	\$41
	SOLD	6	\$26	\$54

### Report

The above results indicate that commercial sold and unsold properties were valued consistently in Moffat County.

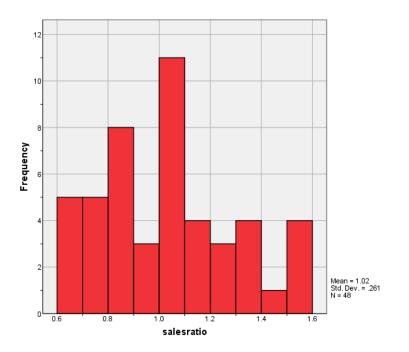

## V. VACANT LAND SALE RESULTS

There were 48 qualified vacant land sales for the 24 month period ending June 30, 2018.

Median	1.003
Price Related Differential	1.038
Coefficient of Dispersion	20.5

The above table indicates that the Moffat County vacant land sale ratios were in compliance with the SBOE standards. The following histogram and scatter plot describe the sales ratio distribution further:

#### Vacant Land Market Trend Analysis

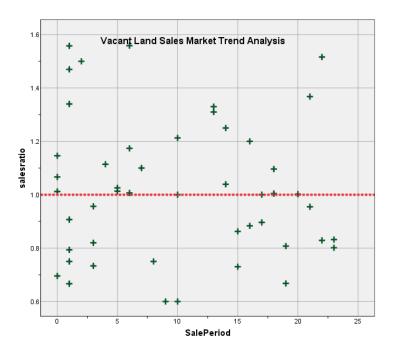

The assessor did not apply any market trend adjustments to the vacant land dataset. The vacant land sales were analyzed, examining the sale ratios across the 24 month sale period with the following results:

Coeffici	ients <sup>a</sup>

				Standardized		
		Unstandardize	d Coefficients	Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.046	.062		16.825	.000
	SalePeriod	003	.005	079	536	.595

a. Dependent Variable: salesratio

The market trend results indicated no statistically significant trend. We concur that no market trend adjustments were warranted for properties in this class for Moffat County.

#### Sold/Unsold Analysis

We compared the median change in actual value for taxable years 2018 and 2019 for vacant land properties to determine if sold and unsold properties were valued consistently, as follows:

Report								
DIFF								
sold	N	Median	Mean					
UNSOLD	1971	1.00	1.00					
SOLD	48	1.00	1.02					

#### Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of DIFF is the san across categories of sold.	Independent- Samples Mann- Whitney U Test	.004	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .00.

We also stratified this analysis by economic area, as follows:

Report								
DIFF								
ECONAREA	sold	N	Median	Mean				
1.00	UNSOLD	368	1.00	1.00				
	SOLD	3	1.00	1.00				
2.00	UNSOLD	230	1.00	1.00				
	SOLD	1	1.00	1.00				
3.00	UNSOLD	52	1.00	1.00				
	SOLD	1	1.00	1.00				
4.00	UNSOLD	237	1.00	1.02				
	SOLD	7	1.00	1.00				
5.00	UNSOLD	429	1.00	1.00				
	SOLD	4	1.00	1.00				
6.00	UNSOLD	462	1.00	1.00				
	SOLD	27	1.00	1.04				
7.00	UNSOLD	166	1.00	1.00				
	SOLD	3	1.00	1.00				

The above results indicated that sold and unsold vacant land properties were valued consistently overall.

#### V. CONCLUSIONS

Based on this statistical analysis, there were no significant compliance issues concluded for Moffat County as of the date of this report.

### STATISTICAL ABSTRACT
