

# PROWERS COUNTY PROPERTY ASSESSMENT STUDY

September 15, 2021

Ms. Natalie Mullis Director of Research Colorado Legislative Council Room 029, State Capitol Building Denver, Colorado 80203

**RE:** Final Report for the 2021 Colorado Property Assessment Study

Dear Ms. Mullis:

Wildrose Appraisal Inc.-Audit Division is pleased to submit the Final Reports for the 2021 Colorado Property Assessment Study.

These reports are the result of two analyses: A procedural audit and a statistical audit.

The procedural audit examines all classes of property. It specifically looks at how the assessor develops economic areas, confirms and qualifies sales, develops time adjustments and performs periodic physical property inspections. The audit reviews the procedures for determining subdivision absorption and subdivision discounting. Valuation methodology is examined for residential properties and commercial properties. Procedures are reviewed for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests, and non-producing patented mining claims.

Statistical audits are performed on vacant land, residential properties, commercial/industrial properties and agricultural land. A statistical analysis is performed for personal property compliance on the eleven largest counties: Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo and Weld. The remaining counties receive a personal property procedural study.

Wildrose Appraisal Inc. – Audit Division appreciates the opportunity to be of service to the State of Colorado. Please contact us with any questions or concerns.

Harry J. Fuller Project Manager

STATISTICAL APPENDIX	29

# INTRODUCTION

The State Board of Equalization (SBOE) reviews assessments for conformance to the Constitution. The SBOE will order revaluations for counties whose valuations do not reflect the proper valuation period level of value.

The statutory basis for the audit is found in C.R.S. 39-1-104 (16)(a)(b) and (c).

The legislative council sets forth two criteria that are the focus of the audit group:

To determine whether each county assessor is applying correctly the constitutional and statutory provisions, compliance requirements of the State Board of Equalization, and the manuals published by the State Property Tax Administrator to arrive at the actual value of each class of property.

To determine if each assessor is applying correctly the provisions of law to the actual values when arriving at valuations for assessment of all locally valued properties subject to the property tax.

The property assessment audit conducts a twopart analysis: A procedural analysis and a statistical analysis. The procedural analysis includes all classes of property and specifically looks at how the assessor develops economic areas, confirms and qualifies sales, and develops time adjustments. The audit also examines the procedures for adequately discovering, classifying and valuing agricultural outbuildings, discovering subdivision build-out subdivision discounting procedures. Valuation methodology for vacant land, improved residential properties commercial and properties is examined. Procedures for producing mines, oil and gas leaseholds and lands producing, producing coal mines, producing earth and stone products, severed mineral interests and non-producing patented mining claims are also reviewed.

Statistical analysis is performed on vacant land, residential properties, commercial industrial properties, agricultural land, and personal property. The statistical study results are compared with State Board of Equalization compliance requirements and the manuals published by the State Property Tax Administrator.

Wildrose Audit has completed the Property Assessment Study for 2021 and is pleased to report its findings for Prowers County in the following report.

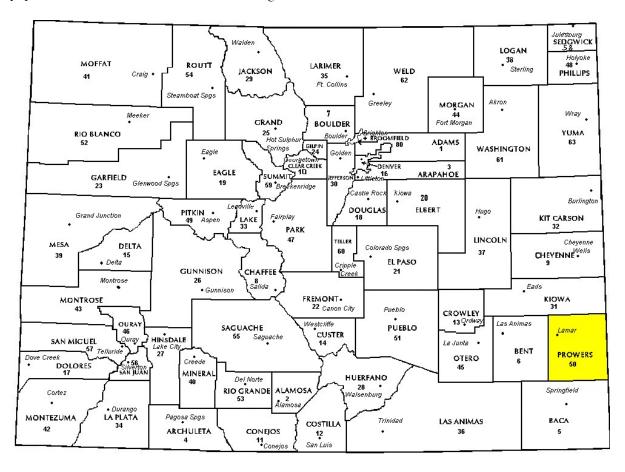

# REGIONAL/HISTORICAL SKETCH OF PROWERS COUNTY

### **Regional Information**

Prowers County is located in the Eastern Plains region of Colorado. The Eastern Plains of Colorado refer to the region on the east side of the Rocky Mountain. It is east of the population centers of the Front Range,

including Baca, Bent, Cheyenne, Crowley, Elbert, Kiowa, Kit Carson, Lincoln, Logan, Morgan, Otero, Phillips, Prowers, Sedgwick, Washington, and Yuma counties.

### **Historical Information**

Prowers County has approximately 1,638.4 square miles and an estimated population of approximately 12,172 people with 7.7 people per square mile, according to the U.S. Census Bureau's 2020 estimated census data. This represents a -3.0 percent change from April 1, 2010 to July 1, 2019.

Prowers County, once part of Bent County, was established in 1889 with an area of 1,621 square miles. The county was named for John W. Prowers, the pioneer who drove the first herd of Hereford cattle to the Arkansas Valley from Missouri.

The county seat is Lamar, named for Lucius Q. C. Lamar, the Secretary of the Interior at the time.

The City of Lamar serves as the industrial and retail center for southeast Colorado. Located in the fertile Arkansas River Valley, the surrounding agricultural landscape features wide-open spaces with panoramic views of irrigated corn and alfalfa fields, as well as dry land wheat fields. This semi-arid climate is favorable to livestock production and offers an average of 340 days of sunshine annually.

Visitors and guests can find a variety of recreational activities, historically significant sites and western traditions to visit or attend year round in Prowers County. Attractions in the County include the Santa Fe Trail, Camp Amache, camping, fishing, hunting, birding trails, WPA structures, petroglyphs, and Big Timbers Museum.

Colorado Green (Shell Wind Energy and PPM Energy) has located the world's fifth largest wind farm in the world south of Prowers County. Xcel Energy purchases the energy created from Colorado Green and Prairie Wind Energy and converts it at the AC/DC Electricity Converter Station in northern Prowers County. This is one of seven such transfer stations located along the nation's heartland.

The Pierre Auger Observatory has selected southeast Colorado as the site in the northern hemisphere to build a world-class observatory to study the highest energy cosmic rays. A visitor's center and scientific conference center will be built on Lamar Community College grounds.

(www.prowerscounty.net, www.procolorado.org., William Bright, Colorado Place Names, 3rd Edition, Johnson Books, 2004, p. 143 and 101)

# RATIO ANALYSIS

### Methodology

All significant classes of property were analyzed. Sales were collected for each property class over the eighteen month period from January 1, 2019 through June 30th, 2020. Property classes with less than thirty sales had the sales period extended in six month increments up to an additional forty-two months. If this extended sales period did not produce the minimum thirty qualified sales, the Audit performed supplemental appraisals to reach the minimum.

Although it was required that we examine the median and coefficient of dispersion for all counties, we also calculated the weighted mean and price-related differential for each class of property. Counties were not passed or failed by these latter measures, but were counseled if there were anomalies noted during our analysis. Qualified sales were based on the qualification code used by each county, which were typically coded as either "Q" or "C." The ratio analysis included all sales. The data was trimmed for counties with obvious outliers using IAAO standards for data analysis. In

every case, we examined the loss in data from trimming to ensure that only true outliers were excluded. Any county with a significant portion of sales excluded by this trimming method was examined further. No county was allowed to pass the audit if more than 5% of the sales were "lost" because of trimming.

All sixty-four counties were examined for compliance on the economic area level. Where there were sufficient sales data, the neighborhood and subdivision levels were tested for compliance. Although counties are determined to be in or out of compliance at the class level, non-compliant economic areas, neighborhoods and subdivisions (where applicable) were discussed with the Assessor.

Data on the individual economic areas, neighborhoods and subdivisions are found in the STATISTICAL APPENDIX.

### **Conclusions**

For this final analysis report, the minimum acceptable statistical standards allowed by the State Board of Equalization are:

ALLOWABLE STANDARDS RATIO GRID						
Property Class	Unweighted Median Ratio	Coefficient of Dispersion				
Commercial/Industrial	Between .95-1.05	Less than 20.99				
Residential Condominium	Between .95-1.05	Less than 15.99				
Residential	Between .95-1.05	Less than 15.99				
Vacant Land	Between .95-1.05	Less than 20.99				

The results for Prowers County are:

Prowers County Ratio Grid							
Number of Unweighted Price Coefficient Qualified Median Related of Time Tre Property Class Sales Ratio Differential Dispersion Analy							
Commercial/Industrial	42	0.998	1.009	2.7	Compliant		
Residential	220	0.998	1.005	4.5	Compliant		
Vacant Land	N/A	N/A	N/A	N/A	N/A		

After applying the above described methodologies, it is concluded from the sales ratios that Prowers County is in compliance

with SBOE, DPT, and Colorado State Statute valuation guidelines.

Recommendations

# TIME TRENDING VERIFICATION

### Methodology

While we recommend that counties use the inverted ratio regression analysis method to account for market (time) trending, some counties have used other IAAO-approved methods, such as the weighted monthly median approach. We are not auditing the methods used, but rather the results of the methods used. Given this range of methodologies used to account for market trending, we concluded that the best validation method was to examine the sale ratios for each class across the appropriate sale period. To be specific, if a county has considered and adjusted correctly for market trending, then the sale ratios should remain stable (i.e. flat) across the sale period. If a residual market trend is detected, then the county may or may not have addressed market trending adequately, and a further examination is warranted. This validation method also considers the number of sales and the length of the sale period. Counties with few sales across the sale period were carefully examined to determine if the statistical results were valid.

### **Conclusions**

After verification and analysis, it has been determined that Prowers County has complied with the statutory requirements to analyze the effects of time on value in their county. Prowers County has also satisfactorily applied the results of their time trending analysis to arrive at the time adjusted sales price (TASP).

### Recommendations

# SOLD/UNSOLD ANALYSIS

### Methodology

Prowers County was tested for the equal treatment of sold and unsold properties to ensure that "sales chasing" has not occurred. The auditors employed a multi-step process to determine if sold and unsold properties were valued in a consistent manner.

We test the hypothesis that the assessor has valued unsold properties consistent with what is observed with the sold properties based on several units of comparison and tests. units of comparison include the actual value per square foot and the change in value from the previous base year period to the current base year. The first test compares the actual value per square foot between sold and unsold properties by class. The median and mean value per square foot is compared and tested for any significant difference. This is tested using non-parametric methods, such as the Mann-Whitney test for differences in the distributions or medians between sold and unsold groups. It is also examined graphically and from an appraisal perspective. Data can be stratified based on location and subclass. The second test compares the difference in the median change in value from the previous base year to the current base year between sold and unsold properties by class. The same combination of non-parametric and appraisal testing is used as with the first test. A third test employing a valuation model testing a sold/unsold binary variable while controlling for property attributes such as location, size, age and other attributes. The model determines if the sold/unsold variable is statistically and empirically significant. three tests indicate a significant difference between sold and unsold properties for a given class, the Auditor may meet with the county to determine if sale chasing is actually occurring,

or if there are other explanations for the observed difference.

If the unsold properties have a higher median value per square foot than the sold properties, or if the median change in value is greater for the unsold properties than the sold properties, the analysis is stopped and the county is concluded to be in compliance with sold and unsold guidelines. All sold and unsold properties in a given class are first tested, although properties with extreme unit values or percent changes can be trimmed to stabilize The median is the primary the analysis. comparison metric, although the mean can also be used as a comparison metric if the distribution supports that type of measure of central tendency.

The first test (unit value method) is applied to both residential and commercial/industrial sold and unsold properties. The second test is applied to sold and unsold vacant land properties. The second test (change in value method) is also applied to residential or commercial sold and unsold properties if the first test results in a significant difference observed and/or tested between sold and unsold properties. The third test (valuation modeling) is used in instances where the results from the first two tests indicate a significant difference between sold and unsold properties. It can also be used when the number of sold and unsold properties is so large that the nonparametric testing is indicating a false rejection of the hypothesis that there is no difference between the sold and unsold property values.

These tests were supported by both tabular and graphics presentations, along with written documentation explaining the methodology used.

Sold/Unsold F	Results
Property Class	Results
Commercial/Industrial	Compliant
Residential	Compliant
Vacant Land	N/A

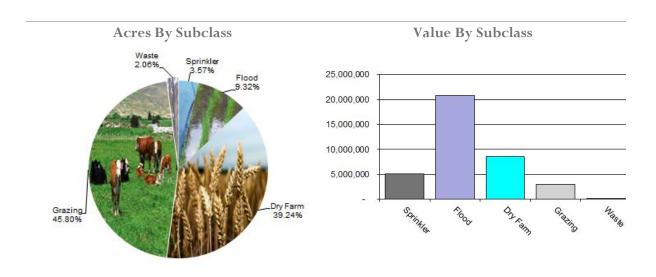

### **Conclusions**

After applying the above described methodologies, it is concluded that Prowers County is reasonably treating its sold and unsold properties in the same manner.

# Recommendations

# AGRICULTURAL LAND STUDY

# **Agricultural Land**

County records were reviewed to determine major land categories such as irrigated farm, dry farm, meadow hay, grazing and other In addition, county records were reviewed in order to determine if: photographs are available and are being used; soil conservation guidelines have been used to classify lands based on productivity; crop rotations have been documented; typical commodities and yields have been determined; orchard lands have been properly classified and valued; expenses reflect a ten year average and are typical landlord expenses; grazing lands have been properly classified and valued; the number of acres in each class and subclass have been determined; the capitalization rate was properly applied. Also, documentation was required for the valuation methods used and locally developed yields, capacities, and expenses. Records were also checked to ensure that the commodity prices and expenses, furnished by the Property Tax Administrator (PTA), were applied properly.

(See Assessor Reference Library Volume 3 Chapter 5.)

### Conclusions

An analysis of the agricultural land data indicates an acceptable appraisal of this property type. Directives, commodity prices and expenses provided by the PTA were properly applied. County yields compared favorably to those published by Colorado Agricultural Statistics. Expenses used by the county were allowable expenses and were in an acceptable range. Grazing lands carrying capacities were in an acceptable range. The data analyzed resulted in the following ratios:

	Prowers County Agricultural Land Ratio Grid								
Abstract	Number County County WRA								
Code	<b>Land Class</b>	Acres	Per Acre	Total Value	Value	Ratio			
4107	Sprinkler	35,272	143.12	5,048,136	5,088,822	0.99			
4117	Flood	92,187	226.18	20,850,977	21,371,223	0.98			
4127	Dry Farm	388,123	21.91	8,502,336	8,850,923	0.96			
4147	Grazing	452,998	6.73	3,049,865	3,049,865	1.00			
4167	Waste	20,416	2.42	49,369	49,369	1.00			
Total/Avg		988,996	37.92	37,500,684	38,410,203	0.98			

### Recommendations

None

# **Agricultural Outbuildings**

# Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.74 through 5.77 were being followed.

### Conclusions

Prowers County has substantially complied with the procedures provided by the Division

of Property Taxation for the valuation of agricultural outbuildings.

### Recommendations

# **Agricultural Land Under Improvements**

# Methodology

Data was collected and reviewed to determine if the guidelines found in the Assessor's Reference Library (ARL) Volume 3, pages 5.19 and 5.20 were being followed.

### Conclusions

Prowers County has used the following methods to discover land under a residential improvement on a farm or ranch that is determined to be not integral under 39-1-102, C.R.S.:

 Personal Knowledge of Occupants at Assessment Date Prowers County has used the following methods to discover the land area under a residential improvement that is determined to be not integral under 39-1-102, C.R.S.:

 Personal Knowledge of Occupants at Assessment Date

Prowers County has substantially complied with the procedures provided by the Division of Property Taxation for the valuation of land under residential improvements that may or may not be integral to an agricultural operation.

### Recommendations

# SALES VERIFICATION

### According to Colorado Revised Statutes:

A representative body of sales is required when considering the market approach to appraisal.

(8) In any case in which sales prices of comparable properties within any class or subclass are utilized when considering the market approach to appraisal in the determination of actual value of any taxable property, the following limitations and conditions shall apply:

(a)(I) Use of the market approach shall require a representative body of sales, including sales by a lender or government, sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties that are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample that reasonably reflect a true or typical sales price during the period specified in section 39-1-104 (10.2). Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

(b) Each such sale included in the sample shall be coded to indicate a typical, negotiated sale, as screened and verified by the assessor. (39-1-103, C.R.S.)

The assessor is required to use sales of real property only in the valuation process.

(8)(f) Such true and typical sales shall include only those sales which have been determined on an individual basis to reflect the selling price of the real property only or which have been adjusted on an individual basis to reflect the selling price of the real property only. (39-1-103, C.R.S.)

Part of the Property Assessment Study is the sales verification analysis. WRA has used the above-cited statutes as a guide in our study of the county's procedures and practices for verifying sales.

WRA reviewed the sales verification procedures in 2021 for Prowers County. This study was conducted by checking selected sales from the master sales list for the current valuation period. Specifically WRA selected 52 sales listed as unqualified.

All but one of the sales selected in the sample gave reasons that were clear and supportable. One sale had insufficient reason for disqualification.

For residential, commercial, and vacant land sales with considerations over \$100,000, the contractor has examined and reported the ratio of qualified sales to total sales by class and performed the following analyses of unqualified sales:

The contractor has examined the manner in which sales have been classified as qualified or unqualified, including a listing of each step in the sales verification process, any adjustment procedures, and the county official responsible for making the final decision on qualification.

When less than 50 percent of sales are qualified in any of the three property classes (residential, commercial, and vacant land), the contractor analyzed the reasons for disqualifying sales in any subclass that constitutes at least 20 percent of the class, either by number

of properties or by value, from the prior year. The contractor has reviewed with the assessor any analysis that sales indicating data inadequate, fail to reflect typical properties, or have been disqualified for insufficient cause. In addition, the has contractor reviewed disqualified sales by assigned code. If there appears to be any inconsistency in the coding, the contractor has conducted further analysis determine if the sales included in that code have been assigned appropriately.

If 50 percent or more of the sales are qualified, the contractor has reviewed a

statistically significant sample of unqualified sales, excluding sales that were disqualified for obvious reasons.

The following subclasses were analyzed for Prowers County:

2212 Merchandising2230 Special Purpose

### Conclusions

Prowers County appears to be doing an adequate job of verifying their sales.

### Recommendations

# ECONOMIC AREA REVIEW AND EVALUATION

### Methodology

Prowers County has submitted a written narrative describing the economic areas that make up the county's market areas. Prowers County has also submitted a map illustrating these areas. Each of these narratives have been read and analyzed for logic and appraisal sensibility. The maps were also compared to the narrative for consistency between the written description and the map.

### Conclusions

After review and analysis, it has been determined that Prowers County has

adequately identified homogeneous economic areas comprised of smaller neighborhoods. Each economic area defined is equally subject to a set of economic forces that impact the value of the properties within that geographic area and this has been adequately addressed. Each economic area defined adequately delineates an area that will give "similar values for similar properties in similar areas."

### Recommendations

# NATURAL RESOURCES

### **Earth and Stone Products**

### Methodology

Under the guidelines of the Assessor's Reference Library (ARL), Volume 3, Natural Resource Valuation Procedures, the income approach was applied to determine value for production of earth and stone products. The number of tons was multiplied by an economic royalty rate determined by the Division of Property Taxation to determine income. The income was multiplied by a recommended Hoskold factor to determine the actual value. The Hoskold factor is determined by the life of the reserves or the lease. Value is based on two variables: life and tonnage. The operator determines these since there is no other means to obtain production data through any state or private agency.

### **Conclusions**

The County has applied the correct formulas and state guidelines to earth and stone production.

### Recommendations

None

# **Producing Oil and Gas**

# Methodology

Assessors Reference Library (ARL) Volume 3, Chapter 6: Valuation of Natural Resources

### STATUTORY REFERENCES

Section § 39-1-103, C.R.S., specifies that producing oil or gas leaseholds and lands are valued according to article 7 of title 39, C.R.S. Actual value determined - when.

(2) The valuation for assessment of leaseholds and lands producing oil or gas shall be determined as provided in article 7 of this title. § 39-1-103, C.R.S.

Article 7 covers the listing, valuation, and assessment of producing oil and gas leaseholds and lands.

### Valuation:

### Valuation for assessment.

- (1) Except as provided in subsection (2) of this section, on the basis of the information contained in such statement, the assessor shall value such oil and gas leaseholds and lands for assessment, as real property, at an amount equal to eighty-seven and one-half percent of:
- (a) The selling price of the oil or gas sold there from during the preceding calendar year, after excluding the selling price of all oil or gas delivered to the United States government or any agency thereof, the state of Colorado or any agency thereof, or any political subdivision of the state as royalty during the preceding calendar year;
- (b) The selling price of oil or gas sold in the same field area for oil or gas transported from the premises which is not sold during the preceding calendar year, after excluding the selling price of all oil or gas delivered to the United States government or any agency thereof, the state of Colorado or any agency thereof, or any political subdivision of the state as royalty during the preceding calendar year. § 39-7-102, C.R.S.

### Conclusions

The county applied approved appraisal procedures in the valuation of oil and gas.

### Recommendations

# VACANT LAND

### **Subdivision Discounting**

Subdivisions were reviewed in 2021 in Prowers County. The review showed that subdivisions were discounted pursuant to the Colorado Revised Statutes in Article 39-1-103 (14). Discounting procedures were applied to all subdivisions where less than 80 percent of all sites were sold using the present worth method. The market approach was applied where 80 percent or more of the subdivision sites were sold. An absorption period was estimated for each subdivision that was discounted. An appropriate discount rate was

developed using the summation method. Subdivision land with structures was appraised at full market value.

### Conclusions

Prowers County has implemented proper procedures to adequately estimate absorption periods, discount rates, and lot values for qualifying subdivisions.

### Recommendations

# POSSESSORY INTEREST PROPERTIES

### **Possessory Interest**

Possessory interest property discovery and valuation is described in the Assessor's Reference Library (ARL) Volume 3 section 7 in accordance with the requirements of C.R.S. Chapter 39-1-103 (17)(a)(II)Possessory Interest is defined by the Property Tax Administrator's Publication ARL Volume 3, Chapter 7: A private property interest in government-owned property or the right to the occupancy and use of any benefit in government-owned property that has been under lease, permit, concession, contract, or other agreement.

Prowers County has been reviewed for their procedures and adherence to guidelines when

assessing and valuing agricultural possessory interest properties. The county has also been queried as to their confidence that the possessory interest properties have been discovered and placed on the tax rolls.

### **Conclusions**

Prowers County has implemented a discovery process to place possessory interest properties on the roll. They have also correctly and consistently applied the correct procedures and valuation methods in the valuation of possessory interest properties.

### Recommendations

# PERSONAL PROPERTY AUDIT

Prowers County was studied for its procedural compliance with the personal property assessment outlined in the Assessor's Reference Library (ARL) Volume 5, and in the State Board of Equalization (SBOE) requirements for the assessment of personal property. The SBOE requires that counties use ARL Volume 5, including current discovery, classification, documentation procedures, current economic lives table, cost factor tables, depreciation table, and level of value adjustment factor table.

The personal property audit standards narrative must be in place and current. A listing of businesses that have been audited by the assessor within the twelve-month period reflected in the plan is given to the auditor. The audited businesses must be in conformity with those described in the plan.

Aggregate ratio will be determined solely from the personal property accounts that have been physically inspected. The minimum assessment sample is one percent or ten schedules, whichever is greater, and the maximum assessment audit sample is 100 schedules.

For the counties having over 100,000 population, WRA selected a sample of all personal property schedules to determine whether the assessor is correctly applying the provisions of law and manuals of the Property Tax Administrator in arriving at the assessment levels of such property. This sample was selected from the personal property schedules audited by the assessor. In no event was the sample selected by the contractor less than 30 schedules. The counties to be included in this study are Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Mesa, Pueblo, and Weld. All other counties received a procedural study.

Prowers County is compliant with the guidelines set forth in ARL Volume 5 regarding discovery procedures, using the following methods to discover personal property accounts in the county:

- Public Record Documents
- MLS Listing and/or Sold Books
- Chamber of Commerce/Economic Development Contacts
- Local Telephone Directories, Newspapers or Other Local Publications
- Personal Observation, Physical Canvassing or Word of Mouth
- Questionnaires, Letters and/or Phone Calls to Buyer, Seller and/or Realtor

The county uses the Division of Property Taxation (DPT) recommended classification and documentation procedures. The DPT's recommended cost factor tables, depreciation tables and level of value adjustment factor tables are also used.

Prowers County submitted their personal property written audit plan and was current for the 2021 valuation period. The number and listing of businesses audited was also submitted and was in conformance with the written audit plan. The following audit triggers were used by the county to select accounts to be audited:

- Businesses in a selected area
- Accounts with obvious discrepancies
- New businesses filing for the first time
- Accounts with greater than 10% change
- Incomplete or inconsistent declarations
- Accounts with omitted property
- Same business type or use

- Businesses with no deletions or additions for 2 or more years
- Non-filing Accounts Best Information Available
- Accounts close to the \$7,900 actual value exemption status
- Lowest or highest quartile of value per square foot
- Accounts protested with substantial disagreement

### **Conclusions**

Prowers County has employed adequate discovery, classification, documentation, valuation, and auditing procedures for their personal property assessment and is in statistical compliance with SBOE requirements.

# STATISTICAL APPENDIX

### STATISTICAL COMPLIANCE REPORT FOR PROWERS COUNTY 2021

### I. OVERVIEW

Prowers County is an agricultural county located in southeastern Colorado. The county has a total 9,968 real property parcels, according to data submitted by the county assessor's office in 2021. The following provides a breakdown of property classes for this county:

Based on the number of vacant land parcels in Prowers County, we were not required to analyze this class of property for audit compliance.

For residential improved properties, single family properties accounted for 79.8% of all residential properties.

Commercial and industrial properties represented a much smaller proportion of property classes in comparison.

### II. DATA FILES

The following sales analyses were based on the requirements of the 2021 Colorado Property Assessment Study. Information was provided by the Prowers Assessor's Office in April 2021. The data included all 5 property record files as specified by the Auditor.

### III. RESIDENTIAL SALES RESULTS

We analyzed 220 qualified residential sales for this analysis. The sale spanned the 24-month period up to June 30, 2020. The following are the results from the sales ratio analysis:

Median	0.998
Price Related Differential	1.005
Coefficient of Dispersion	4.5

The above ratio statistics were in compliance with the standards set forth by the Colorado State Board of Equalization (SBOE) for the overall residential sales.

Based on the information provided by the assessor from the Audit questionnaire, we stratified the residential sale ratio analysis by neighborhoods with at least 10 sales, as follows:

### **Case Processing Summary**

		Count	Percent
NBHD	1.00	10	8.8%
	2.03	11	9.6%
	3.03	21	18.4%
	3.04	10	8.8%
	4.00	14	12.3%
	5.00	15	13.2%
	7.04	20	17.5%
	10.00	13	11.4%
Overall		114	100.0%
Excluded		0	
Total		114	

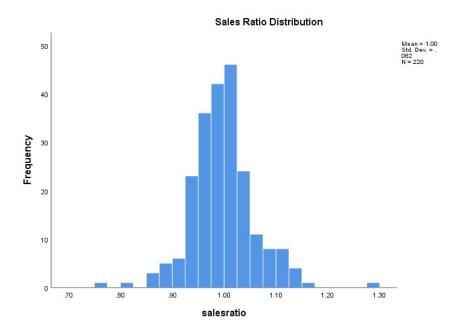

### Ratio Statistics for CURRTOT / TASP

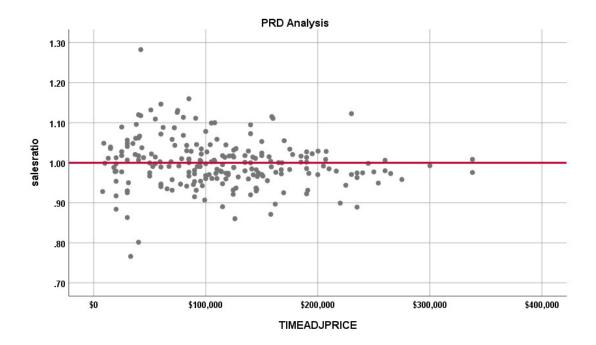

Group	Median	Price Related Differential	Coefficient of Dispersion
1.00	1.007	.999	.065
2.03	1.014	1.000	.063
3.03	.981	1.005	.060
3.04	1.002	1.023	.054
4.00	.986	1.010	.050
5.00	.992	1.001	.022
7.04	.974	1.009	.052
10.00	1.027	1.027	.059
Overall	.999	1.007	.054

The above analysis indicates that the sales ratios were in compliance for residential neighborhoods with at least 10 sales.

The following graphs describe further the sales ratio distribution for all of these properties:

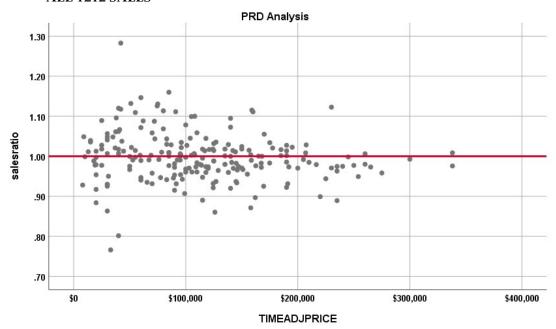

The above graphs indicate that the distribution of the sale ratios was within state mandated limits, and that there were no significant price-related differential issues. No sales were trimmed.

### **Subclass 1212 PRD Analysis**

We next analyzed residential properties identified as 1212 using the state abstract code system. These include single family residences, town homes and purged manufactured homes. The following indicates the distribution of sales ratios across the sale price spectrum:

### **ALL 1212 SALES**

The Price-Related Differential (PRD) for all 1212 sales is 1.005, which is within IAAO standards for the PRD. We also performed a regression analysis between the sales ratio and the assessor's current value to further test for regressivity or progressivity in the residential sales valuation, as follows:

### **Coefficients**<sup>a</sup>

		Unstandardized Coeffi	cients	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	1.005	.008		121.309	.000
	CURRTOT	000000058	.000	062	905	.367

a. Dependent Variable: salesratio

Although the statistical relationship was significant, the magnitude of the slope at 0.000000058 reflects that there is virtually no slope in the regression line. This indicates that sales ratios are similar across the entire sale price array.

We also stratified the sales ratio analysis by the sale price range, as follows:

		Count	Percent
SPRec	LT \$50K	45	20.9%
	\$50K to \$100K	58	27.0%
	\$100K to \$200K	89	41.4%
	\$200K to \$300K	21	9.8%
	\$300K to \$400K	2	0.9%
Overall		215	100.0%
Excluded		0	
Total		215	

C	Madian	Price Related	Coefficient of	Variation
Group	Median	Differential	Dispersion	Median Centered
LT \$50K	1.011	.994	.058	8.4%
\$50K to \$100K	1.001	1.003	.048	6.4%
\$100K to \$200K	.988	1.000	.037	4.9%
\$200K to \$300K	.977	1.000	.029	4.7%
\$300K to \$400K	.992	1.000	.017	2.3%
Overall	.998	1.005	.045	6.2%

Based on the above analysis, we concluded that there was no consistent pattern of regressivity or progressivity in the residential sale data for Prowers County.

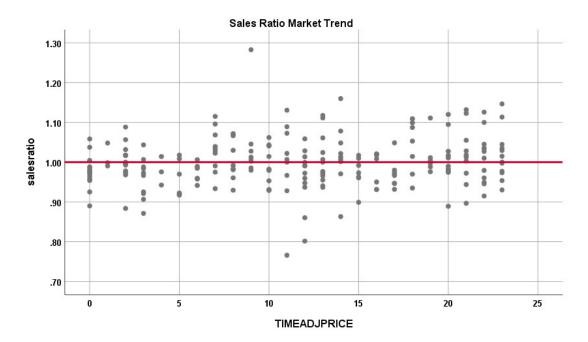

### **Residential Market Trend Analysis**

We next analyzed the residential dataset using the 24-month sale period, with the following results:

### Coefficients<sup>a</sup>

		Unstandardized	Coefficients	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.983	.008		123.827	.000
	SalePeriod	.001	.001	.147	2.188	.030

a. Dependent Variable: salesratio

The above analysis indicated that there was no significant residual marginal trend present in the sale ratios.

### Sold/Unsold Analysis

In terms of the valuation consistency between sold and unsold residential properties, we compared the median actual value per square foot for 2021 between each group, as follows:

# Report

VALSF			
sold	N	Median	Mean
UNSOLD	3812	\$44	\$47
SOLD	220	\$66	\$63

### Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of VALSF is th same across categories of sold	Independent- Samples eMann- Whitney U Test	.000	Reject the null hypothesis.

Asymptotic significances are displayed. The significance level is .01.

Given the gap between the sold and unsold residential properties using the value per square foot, we next examined the average change in value between taxable years 2018 and 2020 to verify that sold properties and unsold properties were valued in a similar manner:

### Report

DIFF			
sold	N	Median	Mean
UNSOLD	3808	1.1633	1.2517
SOLD	219	1.2936	1.3960

Although the non-parametric test for the value per square foot indicated a significant difference between sold and unsold properties, the sold properties tended to be newer and of higher quality than the unsold properties.

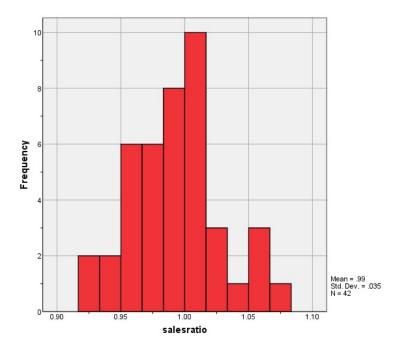

### IV. COMMERCIAL/INDUSTRIAL SALE RESULTS

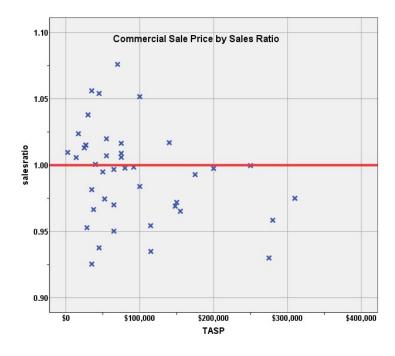

We analyzed 42 qualified commercial/industrial sales between July 1, 2015 and June 30, 2020 for this analysis. The following sales ratio analysis was then undertaken:

Median	0.998
Price Related Differential	1.009
Coefficient of Dispersion	2.7

The above table indicates that the Prowers County commercial/industrial sale ratios were in compliance with the SBOE standards, both overall and by relevant subclass (none in this case due to the small number of sales). The following histogram and scatter plot describe the sales ratio distribution further:

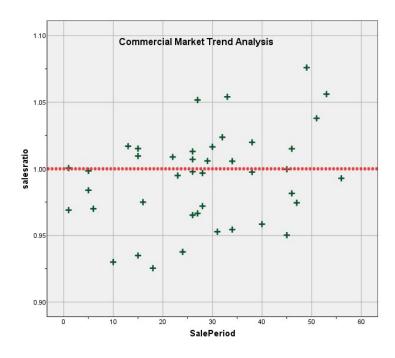

### **Commercial Market Trend Analysis**

The assessor did not apply any market trend adjustment to the commercial dataset. The commercial sales did not indicate a significant trend, based on our analysis.

### Coefficients<sup>a</sup>

		Unstandardized	Coefficients	Standardized Coefficients		
Model		В	Std. Error	Beta	t	Sig.
1	(Constant)	.972	.011		85.760	.000
	SalePeriod	.001	.000	.317	2.115	.041

a. Dependent Variable: salesratio

### **Sold/Unsold Analysis**

We compared the median actual value per square foot between sold and unsold commercial properties to determine if the assessor was valuing each group consistently. While this is a challenge to prove in this county, given the small number of sales and the overall small number and diversity of commercial/industrial properties in general, the following results indicate that based on the median actual value, both groups were valued in a consistent manner:

Report VALSF			
sold	N	Median	Mean
UNSOLD	460	\$17	\$31
SOLD	42	\$15	\$32

# Hypothesis Test Summary

	Null Hypothesis	Test	Sig.	Decision
1	The distribution of VALSF is the same across categories of sold.	Independent- Samples Mann- Whitney U Test	.753	Retain the null hypothesis.

Asymptotic significances are displayed. The significance level is .01.

VALSF				
ABSTRIMP	sold	N	Median	Mean
2212.00	UNSOLD	57	\$12	\$17
	SOLD	8	\$14	\$28
2220.00	UNSOLD	43	\$35	\$40
	SOLD	9	\$46	\$70
2230.00	UNSOLD	106	\$16	\$33
	SOLD	7	\$8	\$13
2234.00	UNSOLD	14	\$14	\$15
	SOLD	4	\$19	\$21
2235.00	UNSOLD	51	\$11	\$18
	SOLD	5	\$5	\$7

### **V. CONCLUSIONS**

Based on this statistical analysis, there were no significant compliance issues concluded for Prowers County as of the date of this report.

### **STATISTICAL ABSTRACT**

### **Residential**

	Ratio Statistics for CURRTOT / TASP											
	95% Confiden Me			95% Con	ifidence Interval fo	or Median		95% Confiden Weighte				Coefficient of Variation
Mean	Lower Bound	Upper Bound	Median	Lower Bound	Upper Bound	Actual Coverage	Weighted Mean	Lower Bound	Upper Bound	Price Related Differential	Coefficient of Dispersion	Mean Centered
