COLORADO CHILDREN'S CAMPAIGN

KIDS! COUNT! in Colorado 2020

is made possible through the support of:

THE ANNIE E. CASEY FOUNDATION

THE ANSCHUTZ FOUNDATION

This research was funded in part by the Annie E. Casey Foundation. We thank them for their support but acknowledge that the findings and conclusions presented in the report are those of the authors alone, and do not necessarily reflect the opinions of the Foundation.

We also acknowledge the generous support of the countless contributors whose investments make possible the work of the Colorado Children's Campaign, including sharing these critical data throughout the year.

KIDS COUNT in Colorado! is an annual publication of the Colorado Children's Campaign that provides the best available state- and county-level data to measure and track the education, health and general well-being of our state's children. The report informs policy debates and community discussions, serving as a valuable resource for policymakers, community leaders, advocates and citizens.

The *KIDS COUNT in Colorado!* project is written by Sarah Hughes, Vice President, Research Initiatives, and Erica Manoatl, Research Analyst.

Design is by Erin Autrey, 3 Story Design, and Rob Sherow, Design Manager, Colorado Children's Campaign.

Permission to copy is granted so long as *KIDS COUNT in Colorado!* and the Colorado Children's Campaign are cited as the source.

LETTER FROM THE GOVERNOR

Jared Polis
Governor

COLORADO
Governor Jared Polis

March 19, 2020

Greetings:

I'm honored to kick off the release of the 27th edition of *KIDS COUNT in Colorado!* The data and research provided by the Colorado Children's Campaign have been central to big policy changes for kids for many years. This edition is also close to my heart—and my policy priorities—because it explores the state of access to quality preschool in Colorado.

Less than a year ago, Colorado expanded access to the Colorado Preschool Program so that more eligible kids can access quality early childhood education. It was a significant investment in preschool access in our state and reflects our commitment to our collective future.

In my State of the State address in January, I said we should celebrate this milestone—and recognize that we are not yet halfway to ensuring all young children in Colorado can have this important foundational school experience. We can and we must do better.

Early childhood education isn't just about giving our kids a great start in life. Every dollar invested in high-quality preschool brings significant returns on that investment due to higher earnings, lower special education needs, greater tax revenues, less need for public assistance, and lower crime rates.

As you explore this edition of the indispensable *KIDS COUNT in Colorado!* report, I invite you to consider how you can support this movement and help Colorado take advantage of this momentum toward universal access to quality preschool. This isn't just the right thing to do, it's the smart thing to do.

And it's time to get it done.

Sincerely,

Jared Polis
Governor

March 19, 2020

I love the cover of this year's edition of *KIDS COUNT in Colorado!* not just for the cute hands doing important work, but for the vision it portrays. Children will create their path forward, and they need our help in clearing the way.

This is the second year that we've opened our data book with a focus on a hot issue facing kids. Last year we explored the significant undercount of young children in the U.S. Census, and what lawmakers and advocates could do to prevent it from happening in the 2020 count. Thanks to the hard work of so many Coloradans, we are hopeful that the 2020 Census currently underway will be successful in counting every baby and child across the state.

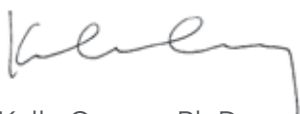

This year we are also looking into the future and the potential for Colorado to significantly expand access to preschool. The essay in the following pages offers several important perspectives and tools as we kick off this work. First and foremost, it is always important to know where we are—and base that assessment on the best available data. Our research team analyzed every data point we could get our hands on related to preschool need, quality and access. Those findings are laid out expertly and can serve as a foundation for the work of early childhood advocates in the next few years as we move Colorado closer to universal access.

Second, the essay sets an important baseline for all as we explore how we expand access to preschool without causing unintended consequences, such as creating new barriers to enrollment or shifting resources in a way that hurts other services and programs. We have learned important policy lessons from other states that have expanded access to every family that wants preschool. A statewide program can, and should, be most accessible to children facing the most barriers to success in school.

The Children's Campaign is committed to using every asset, experience and idea we have to achieve a universal preschool program in Colorado. We ground this work in our values of diversity, equity and inclusion and will do everything we can to ensure any new system first opens paths for children and families facing the most obstacles to quality early childhood experiences.

As always, *KIDS COUNT in Colorado!* is a wealth of data and information, no matter your field of study or work. As you dig in, let us know what trends you see reflected in your own experiences and communities. We'd love to hear it!

Sincerely,

Kelly Causey, Ph.D.
President and CEO
Colorado Children's Campaign

Kelly Causey, Ph.D.

High-Quality Preschool: Creating a Path Forward for Colorado's Kids

Colorado recently made landmark progress in early education by providing tuition-free full-day kindergarten for all children whose parents choose it. This bold decision resulted in nearly 12,000 more children having access to a full day of learning in kindergarten classrooms in the first year of implementation. Yet access to preschool in the all-important years that precede kindergarten remains limited, inequitable and inconsistent across Colorado communities. We have an opportunity to set Colorado's youngest kids on the strongest path to success by ensuring that every young Colorado child has access to high-quality early learning experiences, including the opportunity to attend preschool.

Colorado's historic expansion of full-day kindergarten was a huge step forward for young children in our state. Studies have consistently found benefits associated with attending full-day kindergarten programs, including lower chances of being held back in later grades and larger gains in reading and math compared to children in half-day programs.^{1,2} The research is also clear, however, that we can't wait until a child walks into their first day of kindergarten to begin investing in their learning. Developmental gaps along the lines of income, race and ethnicity emerge long before children walk through the kindergarten classroom door, underscoring the importance of investing in high-quality learning opportunities like preschool during the earliest years of life.^{3,4}

In recent years, Colorado policymakers have taken important strides toward improving access to preschool among our state's youngest learners, including passing the largest expansion of the Colorado Preschool Program in the program's more than 30-year history as part of the 2019 full-day kindergarten legislation. Despite these important steps, however, data on preschool enrollment show that Colorado has a long way to go before every young child has the opportunity to reap the benefits of a high-quality preschool experience.

Decades of research are clear: high-quality preschool programs yield lifelong benefits for the children who participate and for society as a whole. Imagine the progress Colorado could make if **every** child had the opportunity to attend a high-quality preschool program that equipped them with the foundational skills and knowledge they will need in kindergarten and beyond.

THE EARLIEST YEARS: BUILDING A FOUNDATION FOR SUCCESS WITH HIGH-QUALITY PRE-K

By the time children turn 5, they have already experienced the greatest developmental period in their lives. The early childhood years from birth to age 5 are a time of rapid brain development, with one million new connections forming in the brain **every second**.⁵ Early experiences play a vital role in determining how brain connections are formed and in the “wiring” that becomes the foundation upon which all later learning is built.

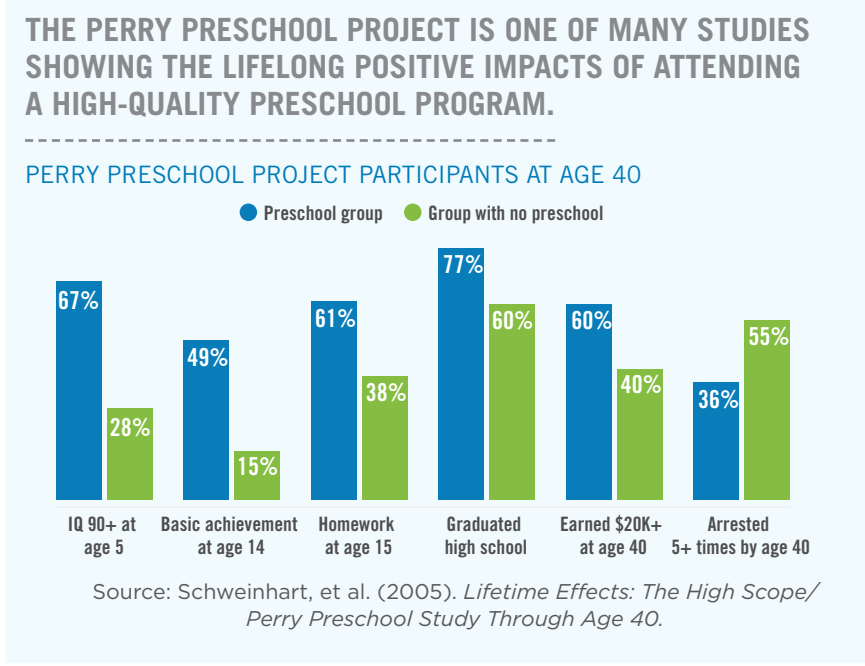

Some children in Colorado are fortunate to have access to a variety of high-quality learning experiences during these all-important early years: trips to the zoo or the children's museum, music classes, homes filled with books and toys, and access to quality preschool programs. But far too many Colorado kids lack access to these and other valuable experiences, putting them at a disadvantage before they ever enter the K-12 education system. Data from Colorado's school readiness assessment, along with national research, show that the opportunity gap is already present from the moment kids start kindergarten, and studies suggest that children who enter kindergarten behind tend to stay behind.^{6,7}

Although the primary goal of preschool is to equip children with important foundational knowledge and skills, research has found other benefits associated with expanding access to pre-k programs—including making it easier for parents to work and earn an income. A recent analysis found that since Washington, D.C. began offering two years of free and universal high-quality preschool, the labor force participation rate among mothers in the city increased by **12 percentage points**, with 10 of those percentage points attributable to the preschool expansion. Labor force participation increased among mothers in both low- and high-income families, benefitting families across the economic spectrum.

Source: Maleek, R. (2018). The effects of universal preschool in Washington, D.C.: Children's learning and mothers' earnings.

Attending a high-quality preschool program in the years before kindergarten can help equip every child with the skills they need to start school ready to learn. Decades of research show that participation in high-quality preschool can alter the trajectory of a child's life, yielding benefits that persist long past kindergarten. The positive impacts of preschool are particularly strong for children living in families with low incomes and children of color, who disproportionately face barriers to educational opportunity in comparison to their peers.⁸ Research has identified benefits ranging from substantial improvements on test scores early in life to increased likelihood of high school graduation and even improved health outcomes.^{9,10} Preschool is also a smart economic investment: the Perry Preschool Project, one of the most well-known, long-term studies of the effects of preschool, found that society saw a nearly \$13 return on investment for every dollar invested into the program. A comprehensive analysis of 22 high-quality studies between 1960 and 2016 also found that early childhood education programs reduce special education placement and grade retention and increase high school graduation rates among those who participate.¹¹ These outcomes benefit the children themselves as well as society more broadly in the form of reduced costs as children get older. An investment in preschool is an investment in the long-term success of our children, our workforce and our state.

THE CURRENT PRESCHOOL LANDSCAPE IN COLORADO

Despite the robust research base on the positive impacts of preschool participation, access to preschool remains limited across the state. According to U.S. Census Bureau data, just **half** of all 3- and 4-year-olds in Colorado were enrolled in any type of preschool between 2016 and 2018—only a slight improvement from 47 percent nearly a decade earlier.¹²

Comprehensive data on preschool enrollment are scarce. While data from the U.S. Census Bureau’s American Community Survey can provide some idea of how many young children across the state are enrolled in preschool, these data have important limitations: preschool enrollment is reported by parents, and there is little information available about the type of preschool experience the child is receiving. For example, the survey does not ask parents about the number of days the child attends preschool, the length of the preschool day, or the quality of the program. Among the children who are enrolled in preschool according to the survey data, there is no way to assess how many are attending a full-day program, a part-day program or only attending for a couple of hours one day a week, for instance. Even considering these limitations, however, the available data show that Colorado has more work to do to ensure every young child has the option to attend high-quality preschool in his or her community.

Preschool Enrollment by County

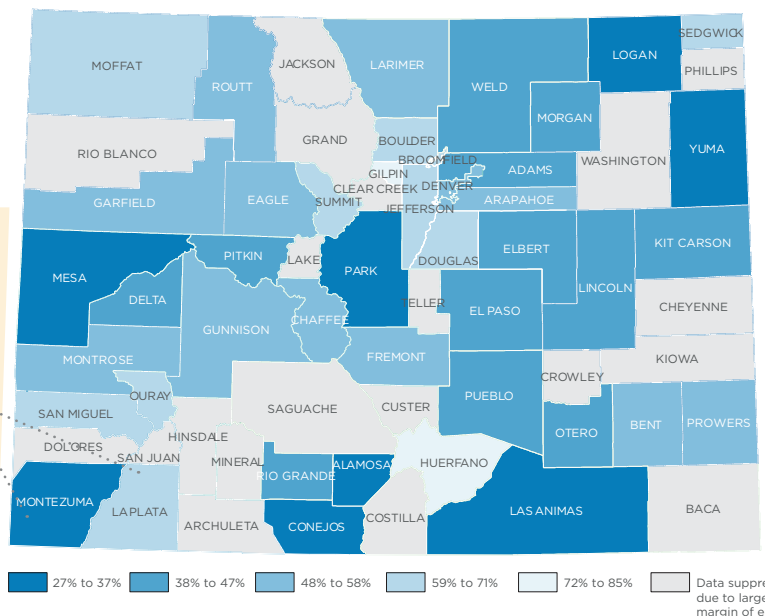

A child’s ZIP code should never determine the early learning opportunities available to them. Yet preschool enrollment in Colorado varies widely from county to county, with some communities still lagging far behind the statewide average.

The percentage of 3- and 4-year-olds attending any type of preschool between 2014 and 2018 ranged from 27 percent in Yuma and Logan counties to 85 percent in Gilpin County.¹³

PERCENT OF 3- AND 4-YEAR-OLDS ENROLLED IN ANY TYPE OF PRESCHOOL PROGRAM BY COUNTY, 2014-2018

Montezuma and La Plata counties provide one example of how uneven preschool access can be, even between neighboring counties. Between 2014 and 2018, **62 percent** of La Plata County 3- and 4-year-olds were enrolled in some type of preschool, compared to only 31 percent of Montezuma County children in this age group.

Source: Colorado Children’s Campaign analysis of data from the U.S. Census Bureau, 2014-2018 American Community Survey 5-Year Estimates.

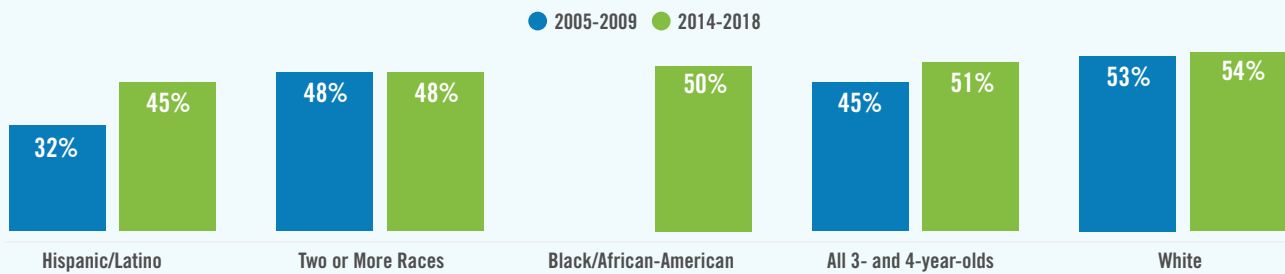

Preschool Enrollment by Race, Ethnicity and Income

Children of color and children in low-income families—two groups that disproportionately face barriers to educational opportunity—are less likely to be enrolled in preschool than their more affluent or white peers.

Enrollment in any type of preschool has increased the fastest among Hispanic/Latino children and children in low-income families during the past several years, yet disparities in enrollment persist.

HISPANIC/LATINO CHILDREN IN COLORADO HAVE SEEN THE LARGEST GAINS IN PRESCHOOL ENROLLMENT IN RECENT YEARS, BUT CHILDREN OF COLOR STILL FACE MORE BARRIERS TO PRESCHOOL ENROLLMENT THAN THEIR WHITE PEERS.

PERCENT OF COLORADO 3- AND 4-YEAR-OLDS ENROLLED IN PRESCHOOL BY RACE/ETHNICITY*

STATE-FUNDED PRESCHOOL IN COLORADO: IMPRESSIVE RESULTS, LIMITED ACCESS

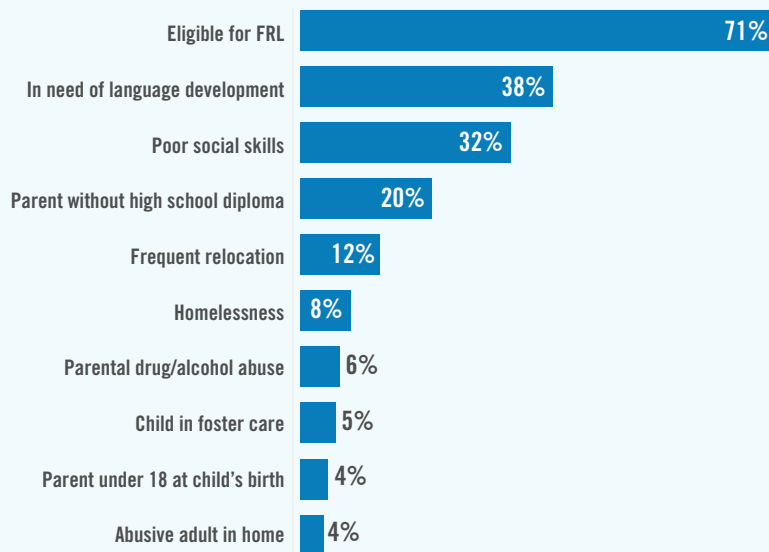

Since 1988, the Colorado Preschool Program—Colorado’s state-funded, voluntary preschool program—has been providing high-quality, half-day preschool to some of Colorado’s youngest learners, and research shows that kids who participate see benefits that persist through at least high school graduation. Yet at current funding levels, CPP is only able to serve a fraction of eligible children and an even smaller proportion of all preschool-aged kids in Colorado.

What is CPP?

Alongside other early learning programs like Head Start, the Colorado Preschool Program is a critical piece of the preschool puzzle across the state and provides a high-quality early learning experience to tens of thousands of young Colorado kids each year. The program serves 3- and 4-year-old children, as well as 5-year-olds not yet in kindergarten, who face risk factors that threaten academic success. Each CPP slot includes a 2.5-hour day of preschool, four days per week, with the fifth day typically set aside for teacher professional development. Preschool providers can combine slots to serve some children for a full day, but the majority of children in CPP are enrolled in half-day programs. Most children funded through CPP attend a school district-operated preschool, but the program also serves children in Head Start programs or at other community preschool providers.¹⁴

MOST CHILDREN ENROLLED IN CPP LIVE IN LOW-INCOME FAMILIES, BUT INCOME IS NOT THE ONLY MEANS BY WHICH A CHILD CAN QUALIFY. THE PROGRAM’S ELIGIBILITY GUIDELINES ALSO CONSIDER OTHER RISK FACTORS THAT JEOPARDIZE SCHOOL SUCCESS.

PERCENT OF CHILDREN IN CPP WITH EACH RISK FACTOR, 2018-2019

Source: Colorado Department of Education. *Colorado Preschool Program: Legislative Report 2020*.

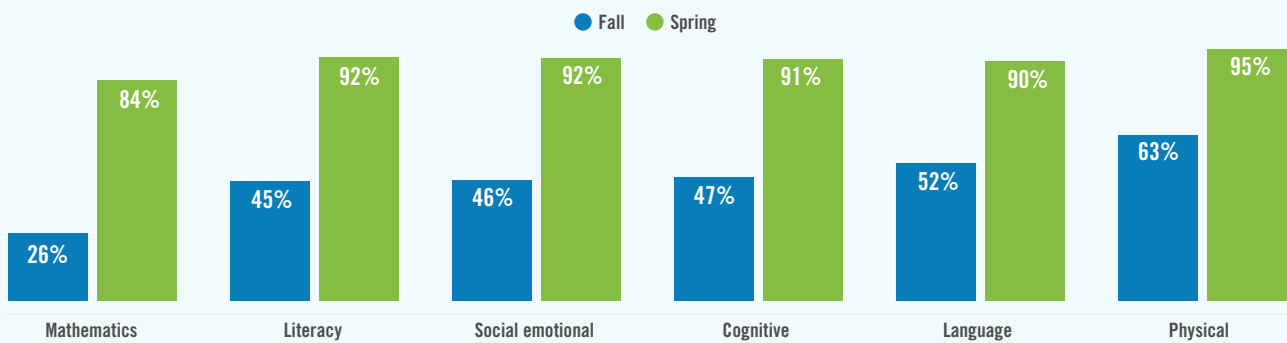

CREATING A PATH FORWARD FOR COLORADO'S KIDS

Short- and Long-Term Benefits of CPP Participation

Data show that children who participate in CPP see remarkable results, both during the preschool year and long after preschool graduation. Between fall 2018 and spring 2019, the percent of 4-year-olds in CPP who meet widely held expectations improved by at least 30 percentage points across all domains of school readiness, according to the most recent data available.¹⁵

CHILDREN ENROLLED IN CPP MAKE SIGNIFICANT GAINS IN IMPORTANT DOMAINS OF SCHOOL READINESS DURING THE COURSE OF THE PRESCHOOL YEAR.

PERCENT OF 4-YEAR-OLDS IN CPP MEETING WIDELY HELD EXPECTATIONS IN SCHOOL READINESS DOMAINS, 2018-2019

Source: Colorado Department of Education. *Colorado Preschool Program: Legislative Report 2020.*

The academic gains from participating in CPP persist long beyond preschool or kindergarten.

Longitudinal data show that when compared to their peers who did **NOT** participate in CPP and faced similar risk factors, children who participate are:

50%

as likely to be held back a grade during the K-3 years

12%

more likely to graduate from high school within four years

26%

less likely to be identified as having a significant reading deficiency

And more likely to meet or exceed expectations on the CMAS in nearly every subject area.¹⁶

Despite these measurable positive outcomes, CPP's reach is limited due to its current funding levels.

Although the number of children served through CPP has grown from 1,933 kids in 1988 to more than 27,000 kids 30 years later, the program's capacity remains insufficient to serve every child who qualifies under existing eligibility criteria—much less every 3- and 4-year-old across the state. The Colorado Department of Education estimates that CPP is only able to serve **40 percent** of eligible 3- and 4-year-olds in Colorado at its current funding levels.¹⁷ When considering all 3- and 4-year-olds in Colorado and not just those who meet current eligibility requirements, CPP is only able to enroll 23 percent of all 4-year-olds and 8 percent of all 3-year-olds.¹⁸

FUNDING LIMITS THE NUMBER OF COLORADO KIDS WHO CAN PARTICIPATE IN CPP. THE COLORADO DEPARTMENT OF EDUCATION ESTIMATES THAT CPP WAS ONLY ABLE TO SERVE **40 PERCENT** OF ELIGIBLE COLORADO CHILDREN IN 2018-2019.

What if every young child in Colorado could experience the benefits of a high-quality preschool program?

Colorado has proven it can provide a high-quality preschool experience for the fraction of young children who are able to get a coveted slot. Imagine if high-quality preschool were universally available to every young child across the state.

Programs such as the Colorado Preschool Program and Head Start are targeted toward specific groups of children who face risk factors that jeopardize school readiness. Although targeted programs such as these can help ensure that limited resources are reaching the kids who need them the most, rigid eligibility requirements mean that some children who could benefit from preschool will inevitably be left behind. Research suggests that high-quality universal preschool programs—those available to all children, regardless of family income or the presence of other risk factors—still benefit young children facing the most barriers to academic success, and in fact may yield stronger results for these groups of children than targeted programs.

A recent study comparing results from states with universal preschool programs to those in states with targeted programs found that children in families with low incomes saw greater benefits from the programs that were universal rather than targeted.¹⁹ Meanwhile, universal programs also help boost school readiness among children in middle-income families, many of whom are still unable to afford a high-quality preschool experience.²⁰ And research suggests that all children benefit from learning in classrooms alongside peers from different backgrounds.²¹ As Colorado leaders

CREATING A PATH FORWARD FOR COLORADO'S KIDS

pursue strategies to serve more children in preschool, it is important to consider the benefits of making a high-quality preschool program universally available.

BUILDING ON RECENT PROGRESS

Colorado is committed to our state's youngest children, as we've seen with recent investments in early learning opportunities, including historic expansions of full-day kindergarten and the Colorado Preschool Program. Still, only half of all young kids across the state are enrolled in any type of preschool program, and too many Colorado kids are starting kindergarten without the skills and knowledge they need to be successful throughout their educational experiences. In the years ahead, Colorado has the chance to build on its recent commitments to expand and improve early learning opportunities by investing in high-quality preschool that is available to every young child whose parents want that option.

Although high-quality preschool is powerful, it is also important to note that preschool alone is not sufficient to ensure Colorado kids are prepared for school and for life. Children begin learning from the moment they are born, and efforts to expand access to preschool must be bolstered by investments in programs and strategies that support pregnant people, infants and toddlers. Voluntary home visitation programs, accessible and affordable child care, and high-quality health care services beginning during pregnancy are vital to a healthy early childhood experience. By making meaningful investments in the programs that support families in the earliest years of their child's life, Colorado can help ensure that every child in our state gets off to a strong start.

CHANGING POPULATION TRENDS

Colorado's child population declined in 2018 for the first time in decades, falling slightly by an estimated 325 children.²⁷ Despite this recent decrease, the number of kids living in Colorado still grew faster than in most other states during the past 10 years.²⁸

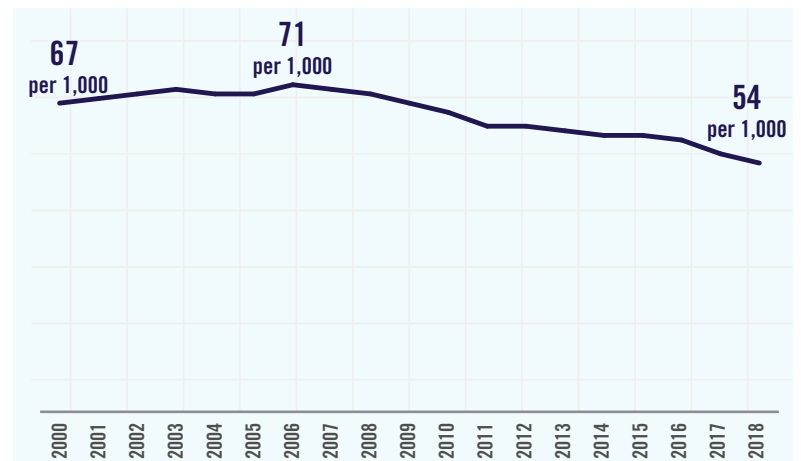

A declining fertility rate is contributing to the slowing of Colorado’s child population growth.

Colorado’s birth rate to women of childbearing age—often referred to as the fertility rate—began falling during the Great Recession. While it is not uncommon for births to decline during times of economic hardship, the state’s fertility rate did not bounce back as the economy began to recover. Other factors, including a steep decline in Colorado’s teen birth rate since 2009 and the increased availability of long-acting reversible contraceptives (LARCs) have also contributed to the steady drop in the birth rate to women ages 15 to 44.³²

THE BIRTH RATE TO COLORADO WOMEN OF CHILDBEARING AGE HAS FALLEN EVERY YEAR SINCE 2006.

LIVE BIRTHS PER 1,000 FEMALES AGES 15 TO 44 IN COLORADO

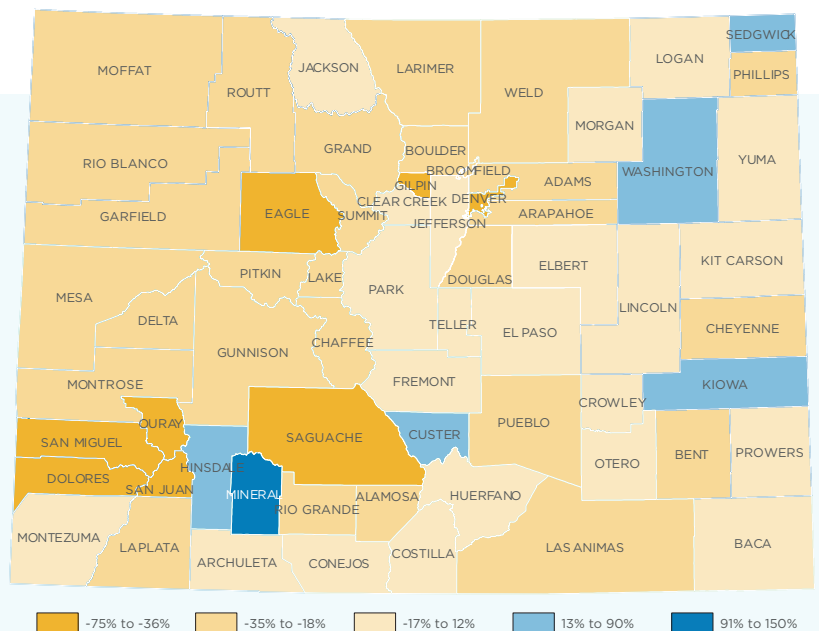

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

Between 2006 and 2018, the fertility rate fell in all but 10 of Colorado’s counties. San Juan, Gilpin, Eagle, San Miguel and Saguache counties experienced the steepest declines in the fertility rate, while Mineral, Kiowa, Hinsdale, Sedgwick and Washington counties saw the largest increases.³³

THE FERTILITY RATE HAS FALLEN IN THE VAST MAJORITY OF COLORADO COUNTIES SINCE 2006.

CHANGE IN THE BIRTH RATE TO FEMALES AGES 15 TO 44, 2006 TO 2018

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

CHANGING POPULATION TRENDS

If Colorado's birth rate has been falling for more than a decade, how has our child population increased during the same time period?

Birth rates are only one contributor to changes in our state's child population. Migration into or out of Colorado also contributes to population growth or decline. Colorado tends to have positive net migration, meaning that in most years, the people moving into Colorado outnumber the people who leave the state—a fact that is particularly true among people of childbearing age.

Source: Colorado State Demography Office. *Looking back to see ahead: Population trends in Colorado.*

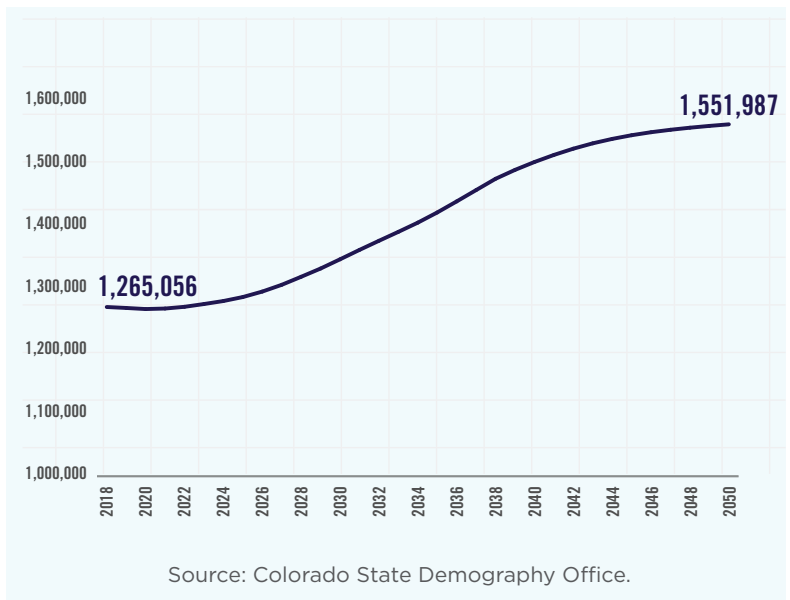

Looking ahead

Despite the recent decline in the fertility rate and a dip in the number of children under 18, Colorado's child population is forecast to remain steady in the short term and will continue to grow in the long run. By 2050, it is projected that Colorado will be home to more than **1.5 million kids** under 18, a 22 percent increase from 2018. The young child population (children under 5) is projected to grow even faster, reaching more than 418,050 kids in 2050.³⁴ What can we do today to ensure a bright future for all of these children?

BY 2050, COLORADO'S CHILD POPULATION IS PROJECTED TO REACH MORE THAN 1.5 MILLION KIDS UNDER 18.

POPULATION ESTIMATES AND FORECASTS FOR CHILDREN UNDER 18

FAMILY ECONOMIC SECURITY

Our vision:
All Colorado children are economically secure.

Although Colorado has seen improvement in some economic indicators in recent years, our state's economy is still leaving too many kids and families behind.

FAMILY ECONOMIC SECURITY

CHILD POVERTY

Colorado has made little progress in reducing child poverty in nearly 20 years. Although the child poverty rate has returned to levels seen before the Great Recession, in the long run the percent of Colorado kids living in poverty hasn't improved from almost two decades ago.

COLORADO'S CHILD POVERTY RATE HELD STEADY AT 12 PERCENT IN 2018, WITH NEARLY 150,000 KIDS ACROSS THE STATE EXPERIENCING POVERTY.

PERCENT OF CHILDREN LIVING IN POVERTY, 2000 TO 2018

Source: Population Reference Bureau, analysis of data from the U.S. Census Bureau, Census 2000 Supplemental Survey, 2001 Supplemental Survey, 2002-2018 American Community Surveys.

How is poverty still affecting so many Colorado kids when unemployment hovers near 2 percent in many communities?

The child poverty rate is closely linked to the unemployment rate, yet the availability of employment opportunities is only one element necessary for economic security. Even if jobs are plentiful, do parents have access to safe, high-quality child care for their children? If child care capacity is sufficient, do the job opportunities pay enough to cover the costs of child care and other basic necessities? Do parents have reliable transportation and the health care they need to make sure they are healthy enough to work? Ensuring that every Colorado family is economically secure requires more than a low unemployment rate. Colorado must also invest in the services that make working possible, such as transportation, child care and health care, to promote true financial security.

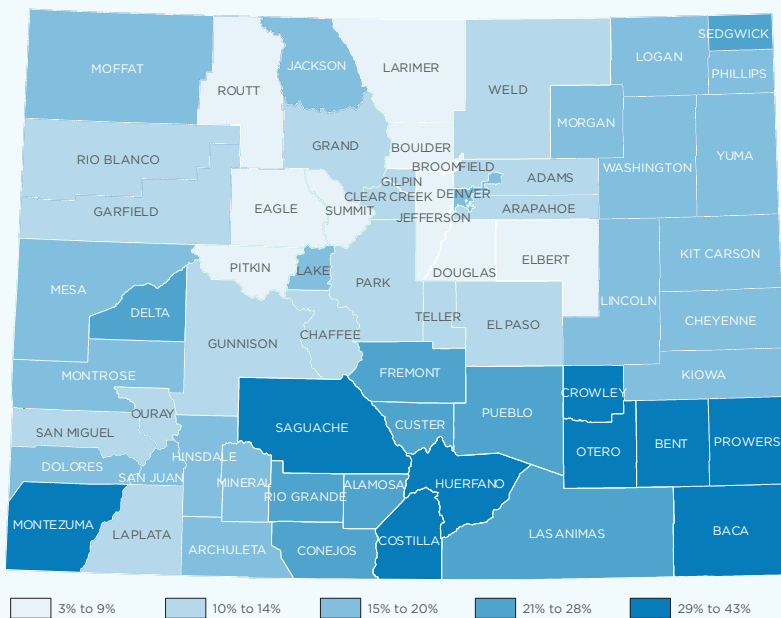

THE CHILD POVERTY LANDSCAPE IN COLORADO

Who is affected by child poverty in Colorado? The answer to that question is arguably “everyone,” since our whole state pays the price when we fail to ensure all Colorado families can meet their kids’ basic needs. However, data show that some communities and groups of children are more likely to be directly affected by poverty than others.

Job opportunities, wages and access to the things people need to get to work—such as child care and transportation—vary significantly across Colorado communities. These differences lead to large geographic disparities in child poverty rates from county to county. In 2018, all five of the counties with the highest child poverty rates were rural counties located in the southern or southeastern regions of the state.

CHILD POVERTY RATES BY COUNTY, 2018

HIGHEST % OF KIDS IN POVERTY:

- Huerfano County: 37%
- Saguache County: 37%
- Costilla County: 37%
- Bent County: 30%
- Otero County: 30%

LOWEST % OF KIDS IN POVERTY:

- Douglas County: 3%
- Broomfield County: 5%
- Pitkin County: 6%
- Boulder County: 7%
- Summit County: 7%

Source: U.S. Census Bureau, 2018 Small Area Income and Poverty Estimates (SAIPE).

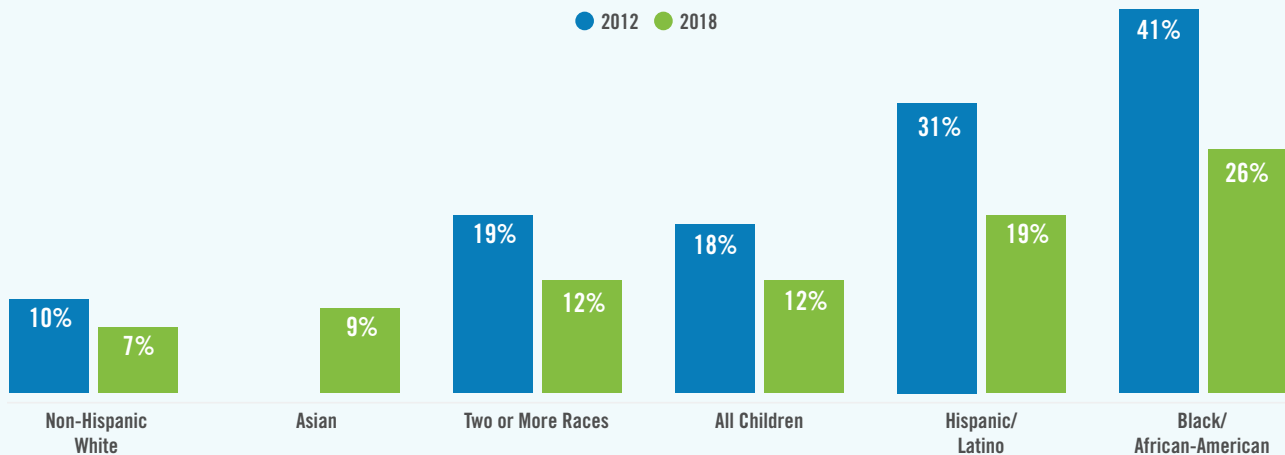

FAMILY ECONOMIC SECURITY

Child poverty rates also vary along racial and ethnic lines, as a result of policies and practices that have too often limited resources and opportunities for families of color. Although poverty rates have fallen for Colorado children of all races and ethnicities since their peak in 2012, stubborn racial and ethnic disparities persist.

POVERTY AFFECTS COLORADO CHILDREN OF ALL RACES AND ETHNICITIES, BUT IT AFFECTS CHILDREN OF COLOR AT HIGHER RATES DUE TO POLICIES AND PRACTICES THAT HAVE CREATED BARRIERS TO ECONOMIC OPPORTUNITY.

PERCENT OF COLORADO CHILDREN LIVING IN POVERTY BY RACE/ETHNICITY*

Source: Population Reference Bureau, analysis of data from the U.S. Census Bureau, 2012 and 2018 American Community Surveys.

*Due to large margins of error, poverty rates for American Indian/Alaska Native and Native Hawaiian/Pacific Islander children, as well as the 2012 poverty rate for Asian children, are not published here.

EXTREME POVERTY AND TEMPORARY ASSISTANCE FOR NEEDY FAMILIES (TANF)

In 2018, 5 percent of Colorado kids experienced extreme poverty.³⁵ Children living in families earning less than 50 percent of the federal poverty level (below \$12,550 in annual income for a family of four) are considered to be experiencing extreme poverty, sometimes referred to as deep poverty. Families at this income level often must live without even the most basic necessities.

For families experiencing extreme poverty, Temporary Assistance for Needy Families (TANF) is a lifeline.

TANF provides basic cash assistance (BCA) to families who qualify for the program, as well as some other supportive services such as education and job training. Basic cash assistance helps decrease the stress of meeting basic needs for families experiencing extreme poverty and is particularly important to families because of its flexibility. While many other anti-poverty programs are dedicated to assisting with specific needs (e.g., child care, health care, housing or food), BCA is one of the few resources that can be used flexibly to meet pressing needs like diapers, car repairs or school supplies.

While the cost of these and other necessities increases every year, BCA payments in Colorado do not. Since TANF was created in 1996, the value of the payment has eroded and has not kept pace with the dramatic increase in the cost of living in Colorado.³⁶ At their current levels, BCA payments still leave families living well below the federal poverty line.³⁷

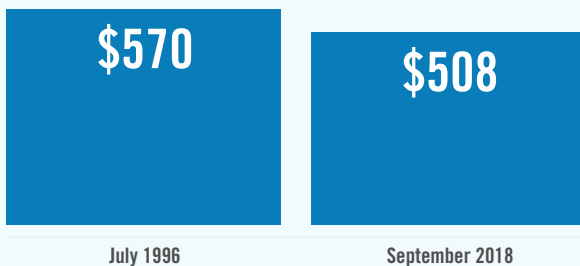

For a family of four, living in extreme poverty means getting by on only

\$8
per person per day

BECAUSE THE TANF BASIC CASH ASSISTANCE PAYMENT IS NOT TIED TO INFLATION, IT IS WORTH LESS TODAY THAN IN 1996.

MONTHLY TANF BCA BENEFIT LEVELS FOR A SINGLE-PARENT FAMILY OF 3 IN 2018 DOLLARS

FAMILY ECONOMIC SECURITY

THE FEDERAL POVERTY LEVEL: OUTDATED AND INADEQUATE

Poverty is defined by the federal poverty level (FPL), a measure developed in the early 1960s. Although the federal government has updated it for inflation annually, it has otherwise seen no major revisions in the past 50 years. In addition to being outdated, the federal poverty level does not account for geographic differences in the cost of living; nor does it consider how expenses like child care, health care or transportation affect the family budget. Despite these flaws, many public programs such as Medicaid, Head Start and the National School Lunch Program use percentages of the FPL to determine eligibility.

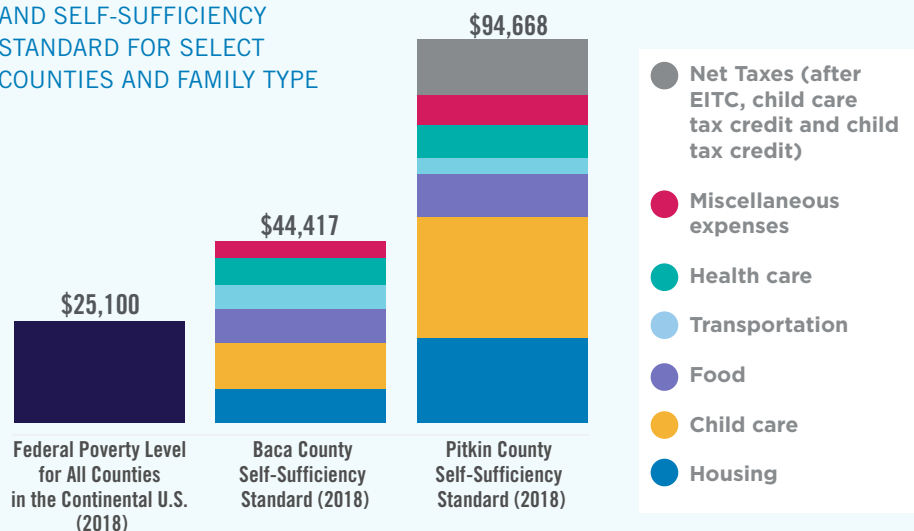

2018 Federal Poverty Guidelines							
People in Household	100% FPL	130% FPL	150% FPL	185% FPL	200% FPL	250% FPL	300% FPL
1	\$12,140	\$15,782	\$18,210	\$22,459	\$24,280	\$30,350	\$36,420
2	\$16,460	\$21,398	\$24,690	\$30,451	\$32,920	\$41,150	\$49,380
3	\$20,780	\$27,014	\$31,170	\$38,443	\$41,560	\$51,950	\$62,340

Source: U.S. Department of Health and Human Services. 2018 poverty guidelines for the 48 contiguous states and the District of Columbia.

Other measures, such as the Colorado Self-Sufficiency Standard, aim to compensate for the federal poverty level's shortcomings and more realistically estimate the amount of income a family requires to meet their basic needs. The Self-Sufficiency Standard considers common household expenses such as housing, child care, health care and taxes, and it also accounts for differences in the cost of living from community to community.³⁸

THE COST OF LIVING VARIES DRAMATICALLY ACROSS COLORADO COUNTIES, BUT THE FEDERAL POVERTY LEVEL DOES NOT ACCOUNT FOR THESE DIFFERENCES. IN NO COLORADO COUNTY IS THE FEDERAL POVERTY LEVEL SUFFICIENT TO MEET THE NEEDS OF A FAMILY OF TWO ADULTS, A PRESCHOOLER AND A SCHOOL-AGED CHILD

2018 FEDERAL POVERTY LEVEL AND SELF-SUFFICIENCY STANDARD FOR SELECT COUNTIES AND FAMILY TYPE

Source: Pearce, D.M. (2018). The Self-Sufficiency Standard for Colorado 2018. Prepared for the Colorado Center on Law and Policy.

HOUSING

Safe and stable housing is essential to child well-being. No child should go through the day wondering where he or she is going to sleep that night, and yet housing instability is the reality for too many Colorado kids.

Many Colorado families are struggling to find an affordable place to call home, as housing costs have skyrocketed in many parts of the state and incomes have not kept pace. Access to safe, stable housing can be particularly challenging for families with children, and families with kids are more likely to face eviction than households without children.³⁹

IN 2018:

3 in 10 Colorado kids lived in a household with a high housing cost burden, defined as spending more than 30 percent of income on housing expenses.

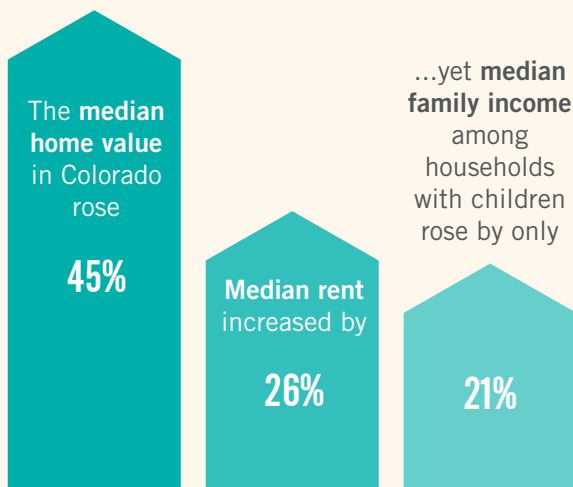

Among low-income kids in Colorado, the share of kids living in housing cost-burdened families is nearly **7 in 10**.

1 in 10 Colorado kids lived in crowded housing, where there is often no quiet place to read, color or do homework.

BETWEEN 2012 AND 2018...

Source: Colorado Children's Campaign analysis of data from the U.S. Census Bureau 2012 and 2018 American Community Surveys.

Note: Median home value, rent and income have been adjusted for inflation.

The U.S. Department of Education recently announced that more than 1.5 million American public school students experienced homelessness in the 2017-2018 school year—the highest number ever recorded.

In the same school year, Colorado school districts identified **22,369 students** experiencing homelessness—up 42 percent from 2008-2009. The federal definition of homelessness includes unsheltered living (e.g., living in cars or abandoned buildings), living in hotels or motels, staying in shelters or transitional housing, and doubling or tripling up with other families due to economic hardship or loss of their own housing.

Source: National Center for Homeless Education. (2020). Federal data summary, school years 2015-16 through 2017-18: Education for Homeless Children and Youth.

CHILD HEALTH

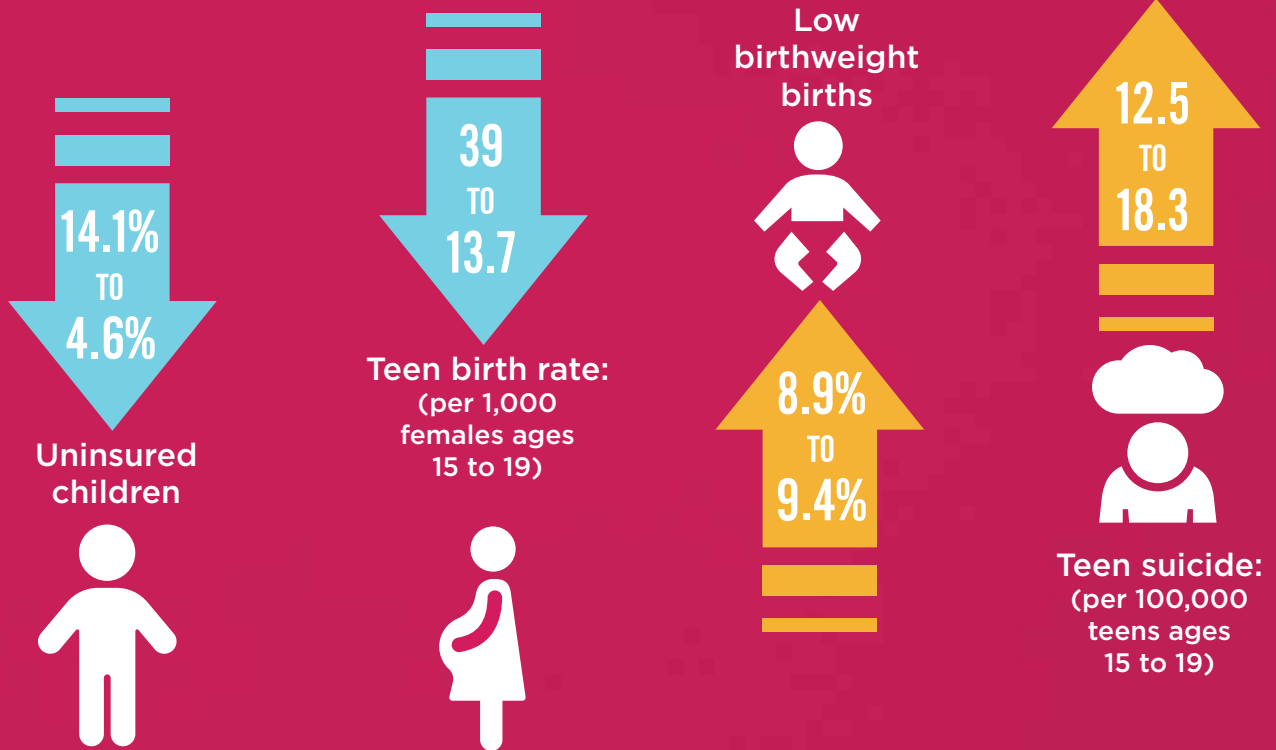

Our vision:

All Colorado children have access to quality, affordable health care, including physical, mental and oral health services, as well as the community environments and supports needed to be healthy.

QUICK FACTS

Data Comparison from 2008 to 2018

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

HEALTHY STARTS: MATERNAL AND INFANT HEALTH

Every year, more than 60,000 babies are born in Colorado. How can we ensure a healthy start for each of them?

A healthy start for baby begins with high-quality health care for mom. Regular prenatal care has been shown to reduce the risk of pregnancy complications for mom and baby.⁴⁰ The percent of babies born to people who received early prenatal care has inched up in the past decade, but Colorado has a long way to go to ensure every pregnant person gets the early care they need.

IN 2018, NEARLY **1 IN 5** COLORADO BABIES WERE BORN TO A MOM WHO DID NOT HAVE EARLY PRENATAL CARE— ONLY A SLIGHT IMPROVEMENT FROM A DECADE EARLIER.

PERCENT OF COLORADO BABIES BORN TO MOTHERS WHOSE PRENATAL CARE BEGAN IN THE FIRST TRIMESTER

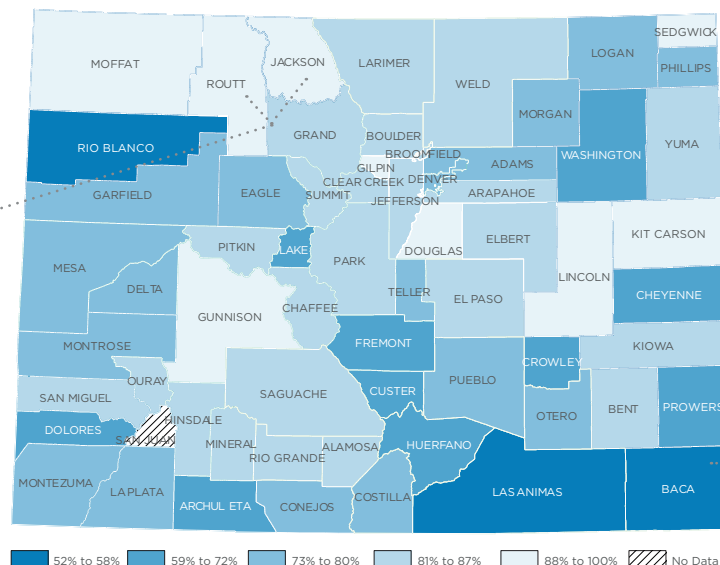

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

Pregnant people in some Colorado communities face more barriers to accessing early prenatal care than others.

BABIES BORN TO MOMS WHO HAD EARLY PRENATAL CARE BY COUNTY, 2018

In Jackson and Routt counties, **more than 90 percent** of babies born in 2018 were born to women who had early prenatal care.

In Baca County, only **52 percent** of live births occurred to women who had early prenatal care, the lowest rate in the state. Baca County has not seen an early prenatal care rate higher than 70 percent since 2015.

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

CHILD HEALTH

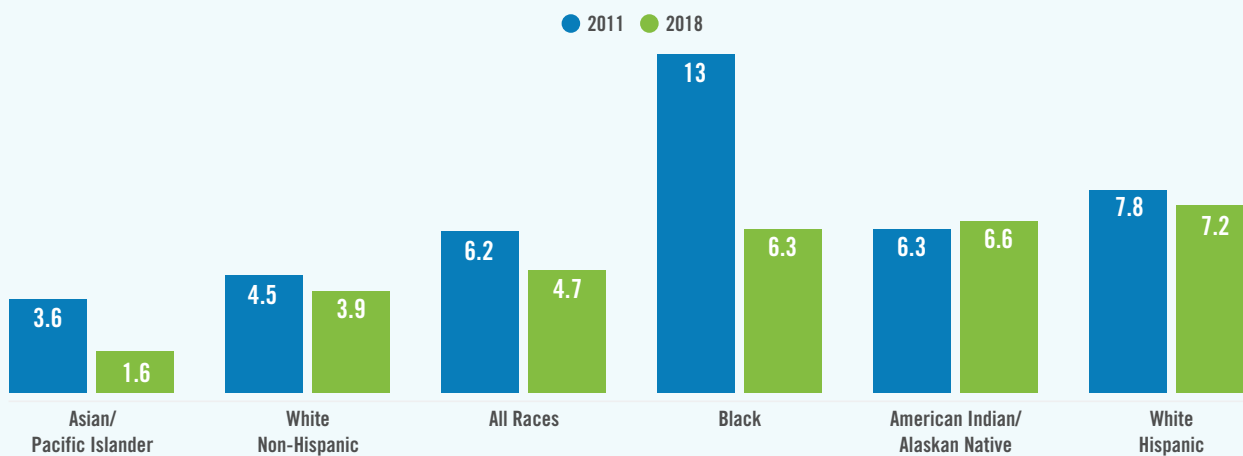

HEALTHY STARTS: MATERNAL AND INFANT HEALTH

In 2018, 296 Colorado infants died before their first birthday.⁴¹ Although Colorado’s infant mortality rate has fallen steeply since 1990, every infant death is a tragedy and our state must do more to promote strong, healthy starts for our youngest children.

Racial and ethnic health disparities driven by inequitable policies and practices are well-documented, and infant mortality rates show that these inequities are already causing irreparable harm to children in the earliest days of life. In Colorado and across the nation, infants of color—in particular, black, American Indian and Hispanic infants—face higher-than-average mortality rates. Among black infants, studies have shown that these disparities persist even after controlling for education and income, pointing instead to the stress that black women experience as a result of discrimination and structural racism.⁴²

INFANT MORTALITY RATES HAVE FALLEN FOR NEARLY ALL RACIAL AND ETHNIC GROUPS IN COLORADO, YET CLEAR DISPARITIES STILL EXIST.

INFANT DEATHS PER 1,000 LIVE BIRTHS BY RACE/ETHNICITY

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

Perinatal mood and anxiety disorders, including depression, are the most common complication associated with pregnancy, yet many new moms are not getting the treatment they need.⁴³

Among Colorado women who gave birth in the previous year, **1 in 9** reported experiencing postpartum depressive symptoms.

Source: Colorado Department of Public Health and Environment, 2018 PRAMS.

A separate survey found that nearly **1 in 3** new moms in Colorado had elevated anxiety scores on a commonly used screening tool.

Source: Colorado Department of Public Health and Environment, 2018 Health eMoms Survey.

Nationally, **half** of women who had recently given birth and were diagnosed with depression did not get the treatment they needed.

COVERING ALL KIDS

Health insurance is critical to the well-being of Colorado children and the economic security of their families. In the last decade, Colorado has made tremendous gains overall in getting more children covered. Between 2008 and 2015, the rate of uninsured children fell dramatically by two thirds; yet progress has stalled and the rate has hovered around 4.4 percent since 2015.⁴⁴

In 2018, 4.6 percent of Colorado children went without health insurance.⁴⁵

THE UNINSURED RATE FOR COLORADO CHILDREN HAS FALLEN SIGNIFICANTLY SINCE 2008, BUT PROGRESS HAS STALLED IN THE PAST THREE YEARS.

CHILDREN UNDER 19 WITHOUT HEALTH INSURANCE, U.S. AND COLORADO

Source: U.S. Census Bureau, Health Insurance Historical Tables, 2008 to 2018.

CHILD HEALTH

COVERING ALL KIDS

Much of the success Colorado has seen in **the plummeting uninsured rate among children has been due to increased access to public health insurance programs like Medicaid and the Child Health Plan Plus (CHP+)**. From 2008 to 2017, the percent of Colorado kids covered by Medicaid at some point in the year increased from 26 percent to 44 percent. At its peak, CHP+ covered 11 percent of kids at some point during the year.⁴⁶ Together, the programs insured a significant portion of Colorado children who might not have access to health insurance otherwise.

MEDICAID AND CHP+ COVER A SUBSTANTIAL PORTION OF COLORADO CHILDREN EACH YEAR

COLORADO CHILDREN ENROLLED IN MEDICAID OR CHP+ AT ANY POINT IN THE FISCAL YEAR, 2008 TO 2018

Source: Colorado Department of Health Care Policy and Financing.

Yet the latest estimates indicate that **child enrollment in Medicaid and CHP+ appears to be declining**. State data show that between fiscal years 2017-18 and 2018-19, enrollment in Medicaid and CHP+ fell by more than 21,000 children or 1.7 percent overall.^{47, 48} Fifty-one out of 64 counties in Colorado saw the share of kids covered by Medicaid fall during this period, while 31 counties saw decreases in the percentage of children enrolled in CHP+.

THE PERCENT OF CHILDREN ELIGIBLE FOR MEDICAID OR CHP+ BUT NOT ENROLLED GREW SLIGHTLY BETWEEN 2017 AND 2018.

PERCENT OF COLORADO CHILDREN ELIGIBLE FOR MEDICAID OR CHP+ BUT NOT ENROLLED, 2015-2018

Source: Colorado Health Institute.

The latest national estimates looking at enrollment between March 2017 and 2019 suggest an even larger decline for Colorado: a fall in enrollment by nearly 43,000 children or 6.8 percent, which cannot be explained by any change to the unemployment rate.^{49, 50} The population of Colorado children who were eligible for Medicaid or CHP+ but not enrolled also increased slightly between 2017 and 2018.⁵¹

What is behind the fall in enrollment and threatening our state’s progress toward getting kids covered? Further investigation is needed, yet **state system changes requiring further income and residence verification** as well as **federal policies targeting immigrant families are likely to be major drivers**; these shifts may be disenrolling eligible Coloradans and discouraging participation in public insurance programs among the state’s immigrant communities.⁵² At one point in time, Colorado was seeing some of the largest declines in the nation in the rate of uninsured children, but recent estimates reveal that our progress may be backsliding.

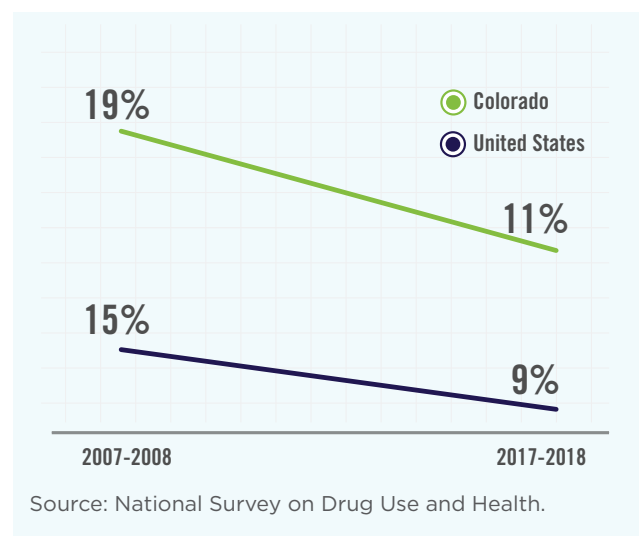

SUBSTANCE USE AMONG TEENS

Alcohol and cigarette use has been declining among Colorado adolescents for the past decade, but Colorado’s highest-in-the-nation teen vaping rates are cause for concern.

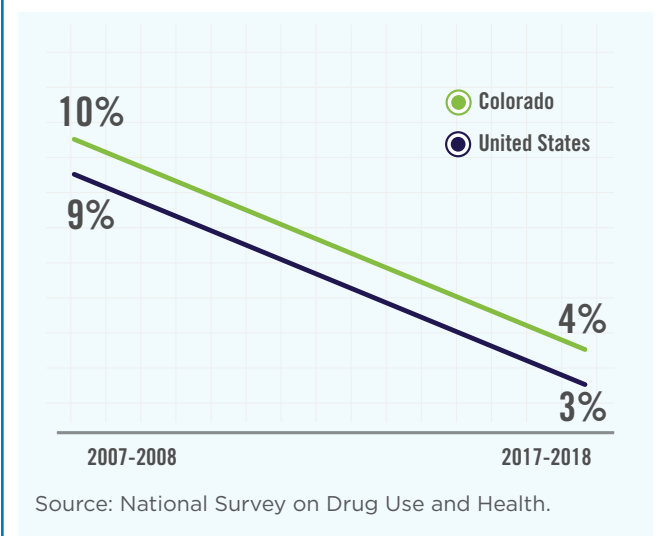

BETWEEN 2007-2008 AND 2017-2018, THE PERCENT OF COLORADO YOUTH AGES 12 TO 17 WHO REPORTED DRINKING ALCOHOL IN THE PAST MONTH FELL BY NEARLY HALF.

PERCENT OF YOUTH AGES 12 TO 17 WHO REPORT USING ALCOHOL IN THE PAST 30 DAYS

CIGARETTE USE AMONG YOUTH HAS DECLINED EVEN MORE STEEPLY.

PERCENT OF COLORADO YOUTH AGES 12 TO 17 WHO REPORT SMOKING A CIGARETTE IN THE PAST 30 DAYS

E-CIGARETTE USE AMONG YOUTH

Vaping—or the use of e-cigarettes—is a relatively new phenomenon. But by 2014, U.S. youth were using e-cigarettes more than any other tobacco product, and 2017 Colorado data show that vaping was four times more common among high school students than smoking cigarettes.^{53, 54}

Although often marketed as a safer alternative to traditional cigarettes, e-cigarettes contain large amounts of nicotine, a highly addictive chemical that harms developing brains.⁵⁵ Youth who use e-cigarettes are at higher risk of using other tobacco products in the future. A recent study found that **youth who used e-cigarettes as their first tobacco product were three times more likely to be using cigarettes two years later than youth who had never used tobacco products.**⁵⁶

COLORADO YOUTH WHO IDENTIFY AS PACIFIC ISLANDER, AMERICAN INDIAN, MULTIRACIAL OR WHITE USE E-CIGARETTES AT HIGHER RATES THAN THEIR HISPANIC, BLACK OR ASIAN PEERS.

Source: Colorado Department of Public Health and Environment, 2017 Healthy Kids Colorado Survey.

IN SOME REGIONS OF THE STATE, NEARLY TWO IN FIVE HIGH SCHOOL STUDENTS REPORT VAPING IN THE PAST MONTH.

PERCENT OF HIGH SCHOOL STUDENTS WHO REPORT USING E-CIGARETTES IN THE PAST 30 DAYS BY HEALTH STATISTICS REGION, 2017

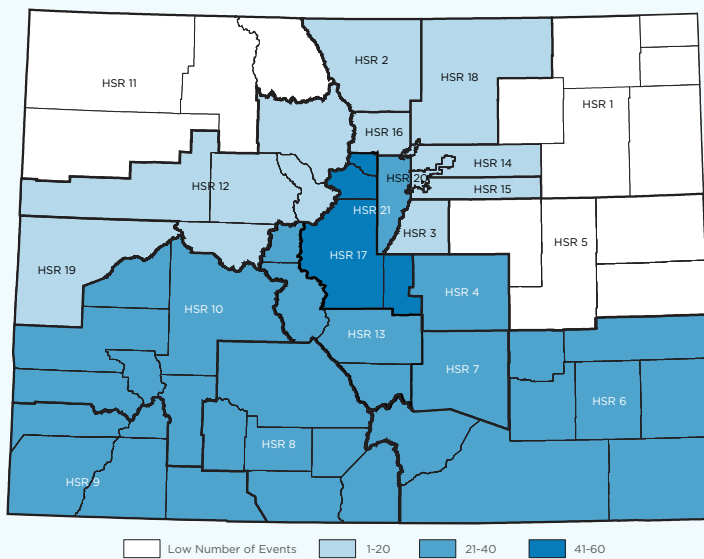

Source: Colorado Department of Public Health and Environment, 2017 Healthy Kids Colorado Survey.

TEEN SUICIDE

The rate of teen suicide in Colorado remained historically high in 2018 with **18.3 suicides per 100,000 teens ages 15 to 19**. This rate represents 69 young Coloradans who tragically lost their lives.⁵⁸ The highest teen suicide rates in recent years occurred in Health Statistics Region 17 (Clear Creek, Gilpin, Park and Teller counties) and Region 6 (Baca, Bent, Crowley, Huerfano, Kiowa, Las Animas, Otero and Prowers counties).⁵⁹

THE HIGHEST TEEN SUICIDE RATES IN RECENT YEARS HAVE BEEN DOCUMENTED IN HEALTH STATISTICS REGIONS 17 AND 6.

TEEN SUICIDE DEATHS (RATE PER 100,000 TEENS AGES 15-19) IN COLORADO BY HEALTH STATISTICS REGION, 2014-2018

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

For all youth between the ages of 10 and 18, suicide has been identified as the leading cause of death in recent years.⁶⁰ For Colorado’s older teens, the suicide rate has reached some of its highest levels on record since 2015. While death by suicide tends to be less common among younger teens, the suicide rate for 10 to 14-year-olds in our state has also risen significantly in the last decade.⁶¹

WHILE LESS COMMON, THE SUICIDE RATE AMONG 10- TO 14-YEAR-OLDS HAS MORE THAN DOUBLED SINCE 2010.

TEEN SUICIDE DEATHS (RATE PER 100,000 TEENS) IN COLORADO BY AGE GROUP, 2010-2018

Source: Colorado Department of Public Health and Environment, Vital Statistics Program.

CHILD HEALTH

TEEN SUICIDE

Among which groups of young people are suicide rates highest? A report conducted by the Colorado Department of Public Health and Environment took a deep dive into suicide deaths among 10 to 18-year-olds between 2013 and 2017. Results from those years indicate that **boys, Non-Hispanic white teens and black teens saw the highest suicide rates.**⁶² Of the suicide deaths where there were known contributing factors, mental health concerns and a current depressed mood were most common. National research also suggests that suicide may be more common among youth in higher-poverty areas.⁶³

Recent local research in Colorado communities identified the following risk factors for teen suicide:

- social media use
- cyberbullying
- a lack of a sense of resiliency to deal with challenges
- exposure to instances of adult suicide⁶⁴

In 2017, Colorado high school students were able to directly report their mental health struggles on the Healthy Kids Colorado Survey. Results from that year indicated that **nearly 1 in 3 high school students had experienced symptoms of clinical depression.**⁶⁵

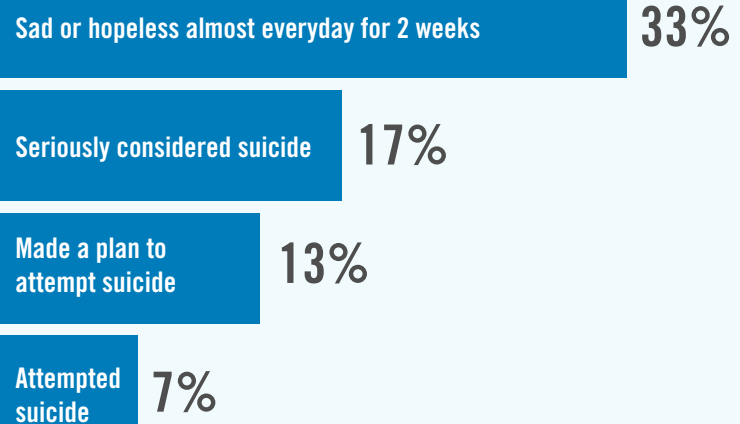

Comprehensive suicide prevention efforts are needed to keep Colorado teens safe and healthy.

Promising research finds that school-based interventions, as well as those delivered in other community settings, can have significant positive impacts.⁶⁶

MANY COLORADO TEENS REPORT STRUGGLING WITH THEIR MENTAL HEALTH.

PERCENTAGE OF COLORADO HIGH SCHOOL STUDENTS REPORTING SPECIFIC MENTAL HEALTH STRUGGLES, 2017

Source: Colorado Department of Public Health and Environment.

GUN VIOLENCE

Between 2013 and 2017, 254 Colorado kids and teens died due to firearm injuries.⁶⁷

Nationally, firearm-related deaths are the third leading cause of death among children ages 1 to 17 and the second leading cause of injury-related death, following deaths from motor vehicle injuries.⁶⁸ Firearm deaths are also much more common in the U.S. than in other developed nations. U.S. children between the ages of 5 and 14 are **21 times more likely** to be killed with a gun than children in other high-income countries.⁶⁹

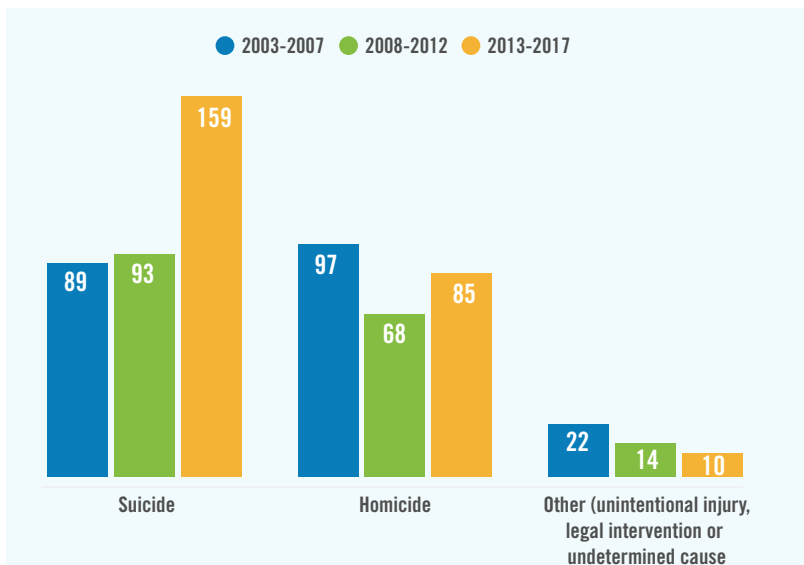

Which groups of children are most at risk of dying by firearm?

The vast majority of children and teens who die by firearm in Colorado are boys. Between 2013 and 2017, **boys made up 82 percent of all Colorado firearm deaths among youth ages 19 and under.** Disparities in firearm deaths also fall along racial and ethnic lines due to intentional and systemic disinvestment in communities of color. Although non-Hispanic white youth made up the majority of firearm deaths in Colorado between 2013 and 2017 (58 percent), black youth are overrepresented among firearm deaths compared to their population size. Black youth made up about 7 percent of Colorado youth ages 19 and under between 2013 and 2017, but accounted for 11 percent of all firearm deaths among this age group during the same timeframe.^{70,71}

Firearm deaths include deaths due to suicide, homicide, unintentional injury or other undetermined causes.

IN RECENT YEARS, SUICIDES HAVE ACCOUNTED FOR MOST FIREARM DEATHS AMONG COLORADO CHILDREN AND TEENS.

FIREARM DEATHS IN COLORADO BY INJURY INTENT, AGES 19 AND UNDER

CHILD HEALTH

GUN VIOLENCE

Some parts of Colorado experience significantly more firearm suicides than others.

BETWEEN 2013 AND 2017, EL PASO COUNTY EXPERIENCED THE HIGHEST NUMBER OF YOUTH FIREARM SUICIDES IN THE STATE—MORE THAN TWICE AS MANY AS ANY OTHER COLORADO COUNTY.

NUMBER OF DEATHS BY FIREARM SUICIDE AMONG LARGE COLORADO COUNTIES, AGES 10 TO 19, 2013 TO 2017

Source: Colorado Department of Public Health and Environment.

A 2010 study found that most adolescents who died by firearm suicide used guns obtained from a parent or other family member. Several studies suggest that child access prevention (CAP) laws can reduce firearm self-injuries, including suicide as well as accidental discharges and injuries among children and youth. CAP laws vary significantly by state, but in general, they encourage safe storage of firearms to prevent children and teens from having unsupervised access to guns.

Sources: Johnson, et al. (2010). Who are the owners of firearms used in adolescent suicides?; RAND Corporation. (2018). Effects of child-access prevention laws on suicide.; Giffords Law Center to Prevent Gun Violence. (n.d.). Child access prevention.

Even children who are not directly injured by firearms are affected by gun violence. Too many kids witness gun violence against others in their families or communities, and a majority worry about experiencing a shooting themselves.

8%

of U.S. kids—

EARLY CHILDHOOD

ADVERSE CHILDHOOD EXPERIENCES (ACEs)

A child's early years are critical to long-term well-being. Adverse Childhood Experiences (ACEs) have been shown to have lifetime impacts on a kid's health and behavior. Specific categories of ACEs were first identified in the landmark 1998 study conducted by the Centers for Disease Control. They include:

Adults in the study who experienced four or more of these harmful experiences in childhood were four to 12 times more likely to face drug use, alcoholism, depression and suicide attempts. They were also at increased risk for smoking, sexually transmitted diseases, and obesity.⁷⁵ Research since then has found the experiences of **poverty, discrimination, bullying, and neighborhood violence are likely additional ACEs** and can have powerful impacts on children.⁷⁶

In Colorado, an estimated 5 percent of all children under 6 have been exposed to two or more ACEs, a figure that is half the national average; 18 percent of 6 to 11-year-olds and 28 percent of 12 to 17-year-olds have also encountered multiple ACEs.⁷⁷ These figures represent an important population of Colorado children who have dealt with significant adversity in their most formative years.

COMPARED TO THE U.S., COLORADO SEES A SLIGHTLY BETTER RATE OF MULTIPLE ACEs AMONG YOUNG CHILDREN, BUT SIMILAR RATES FOR OLDER CHILDREN.

PERCENTAGE OF CHILDREN EXPOSED TO TWO OR MORE ACEs BY AGE GROUP, U.S. AND COLORADO 2017-2018

Source: The Child and Adolescent Health Measurement Initiative (CAHMI).

The same children who have historically faced the most barriers to optimal health also face a significantly higher risk of encountering ACEs. In the largest ACEs study thus far, adults who identified as black, Hispanic or multiracial; gay, lesbian or bisexual; those without a high school diploma; and those with very low annual incomes were much more likely to report ACEs in their childhood years.⁷⁸ Available data for Colorado suggest that our state’s Hispanic children see higher rates of exposure to multiple ACEs than the national average, as well as our children living below the federal poverty level.⁷⁹

Policies designed to meet the basic needs of all Colorado families, as well as interventions to promote resilience, are considered the major pathways to protect children from ACEs and help mitigate their negative impacts when they occur.⁸⁰

A LARGER SHARE OF HISPANIC CHILDREN IN COLORADO EXPERIENCE MULTIPLE ACEs COMPARED TO THE NATIONAL AVERAGE.

PERCENTAGE OF CHILDREN WHO HAVE EXPERIENCED TWO OR MORE ACEs BY RACE/ETHNICITY, U.S. AND COLORADO 2017-2018*

 *Due to the small sample size, estimates for black children, American Indian or Alaska Native, and Pacific Islander children in Colorado were not available.

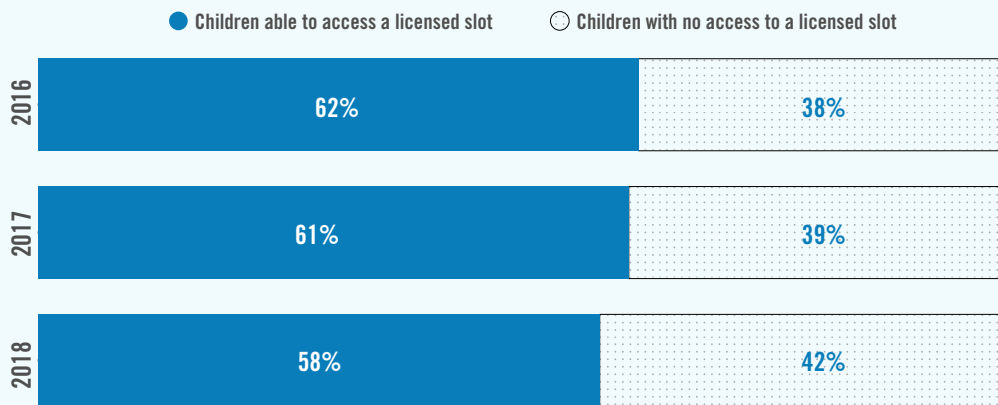

EARLY CHILDHOOD

AVAILABILITY OF CHILD CARE

High-quality child care is a necessity for Colorado’s working families. Access to licensed care can help ensure a strong start for children and allow parents to participate in the workforce, strengthening the financial security of their families. **In 2018, Colorado’s licensed child care centers, family child care homes and preschools only had capacity to serve 58 percent of the young children who were likely in need of care.** More than 255,000 children under 6 in Colorado had all available parents in the workforce that year. Yet provider data indicate there were fewer than 148,000 licensed slots available across the state as of June 2018.^{81, 82} **Between June 2017 and June 2018, the state lost more than 4,000 licensed slots,** despite an increase in the estimated number of young children in need of care.^{83, 84, 85}

LICENSED CHILD CARE CAPACITY HAS FALLEN IN COLORADO IN RECENT YEARS, MAKING IT HARDER FOR FAMILIES TO FIND CARE.

PERCENT OF COLORADO CHILDREN UNDER 6 LIKELY IN NEED OF CHILD CARE SERVED BY LICENSED CAPACITY

Sources: Colorado Children’s Campaign’s analysis of ACS 1-Year Estimates 2016-2018 and data from the Colorado Office of Early Childhood.

National survey data indicate that some of this loss might be explained by a significant decrease in licensed small family child care (FCC) homes; between 2011 and 2017, the number of these homes across the country fell by 35 percent.⁸⁶ The number of licensed large FCC homes and licensed child care centers also fell during this time, by 8 percent and 2 percent respectively.⁸⁷

In the past decade, Colorado has seen important shifts in the care and education of the state’s 5-year-olds, prompting changes for how we might measure and understand child care availability in the years ahead. Full-day kindergarten programs, mainly serving 5-year-olds, have enrolled more children each year since 2009, and in 2019 the passage of state-funded full-day kindergarten ensured access to full-day programs for all who choose this option.⁸⁸

When examining care availability for a narrower age range (children under 5), a recent report found that Colorado’s licensed capacity was still insufficient, especially in rural counties.

In 2018, 51 percent of Coloradans lived in child care deserts. These communities have at least three times more children under 5 than licensed child care slots.⁸⁹ **Black and Hispanic/Latino Coloradans were more likely to live in these child care deserts,** as well as residents in urban and rural communities and those in low-income neighborhoods.⁹⁰

Increasing child care capacity to better respond to the needs of working families is essential to child and community well-being. Investments in the availability of child care, affordability for families, and support for the early childhood workforce are needed to address pressing family needs.

HALF OF COLORADANS LIVE IN CHILD CARE DESERTS, AND BLACK AND HISPANIC/LATINO COLORADANS ARE MORE IMPACTED THAN OTHERS.

PERCENT OF COLORADANS LIVING IN CHILD CARE DESERTS BY RACE/ETHNICITY, 2018

Source: Center for American Progress.

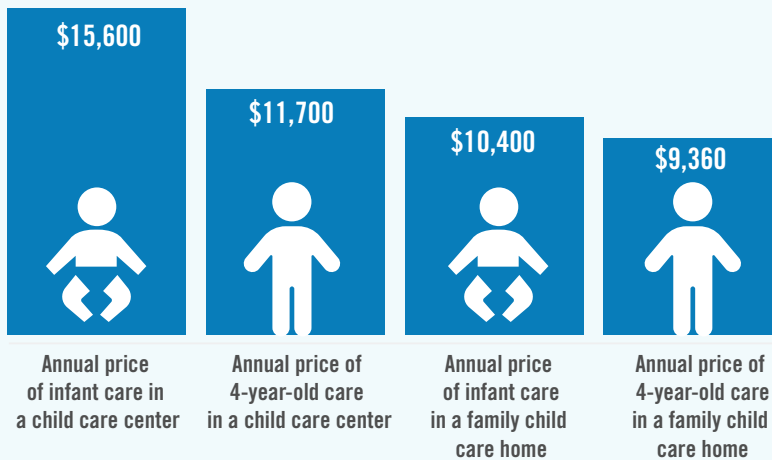

EARLY CHILDHOOD

AFFORDABILITY OF CHILD CARE

The majority of Colorado’s youngest children live in households where all parents work, making child care a necessity for most families. Child care is also often the largest piece of the household budget, putting a strain on families’ wallets during an already expensive phase of life.

DUE TO INSUFFICIENT PUBLIC INVESTMENT IN CHILD CARE, MANY COLORADO PARENTS STRUGGLE TO AFFORD CONSISTENT CARE WHILE PROVIDERS STILL OPERATE ON VERY THIN MARGINS.

AVERAGE ANNUAL PRICE OF CHILD CARE IN COLORADO, BY CHILD’S AGE AND CARE SETTING

Source: Child Care Aware.

Welcoming a new child into the family is a joyous occasion. It can also be a costly one as families face the cost of diapers, equipment, medical bills, and the expense of taking family leave that is often unpaid. On top of these expenses, most families must grapple with the high cost of child care—often a necessity in order for them to work and earn an income that can support their family. On average, one year of child care for an infant in Colorado costs \$15,600 in a child care center and \$10,400 in a family child care home.⁹¹

Child care costs are a significant burden for parents, but cutting the cost of providing care is not the answer to these affordability challenges. Colorado needs additional public investment in child care so that parents don’t have to shoulder the cost alone—and so providers can continue to offer high-quality care to children during a sensitive time of brain development.

Despite the high price families pay for care, many providers are still operating on paper-thin margins. For some age groups, current child care tuition rates already may not cover the total cost of providing care.⁹² Staff salaries and benefits are the largest expense for most providers, making up an estimated 56 to 68 percent of program expenses, according to one recent cost model.⁹³ And child care teachers are already underpaid, contributing to Colorado’s significant child care workforce shortage. Forcing providers to bear the burden of cutting costs would hurt child care educators and ultimately reduce the quality of care Colorado’s youngest kids are receiving.

CHILD CARE TEACHERS IN COLORADO EARN SIGNIFICANTLY LESS THAN EDUCATORS IN OTHER SETTINGS. NATIONALLY, INFANT AND TODDLER TEACHERS TYPICALLY EARN EVEN LESS THAN THE AVERAGE WAGE FOR ALL CHILD CARE TEACHERS.

MEDIAN WAGES IN COLORADO FOR SELECT EDUCATION OCCUPATIONS, 2018

Source: Colorado Department of Labor and Employment.

Kids, parents and employers across the state count on Colorado’s child care educators every day. Low wages are harming the valuable educators who dedicate themselves to nurturing our state’s youngest children and causing a serious child care workforce shortage.

Approximately **70%** of Colorado child care directors report having difficulty finding teachers to fill open positions.

Vacancies take an average of **2.5 months** to fill.

Source: Schaack, D.M., & Le, V. (2017). Colorado Early Childhood Workforce Survey 2017: Key Findings.

Our vision:
All students in Colorado graduate from high school prepared for college, careers and life.

QUICK FACTS

In 2019-2020:

913,223 students attended Colorado public schools, up 10 percent since 2009-2010. Colorado has not seen a decrease in student enrollment since **1988**.⁹⁴

41% of Colorado students qualified for free or reduced-price lunch because their family's income was at or below 185 percent of the federal poverty level

14% were identified as English Language Learners

12% received special education services

7% were identified as gifted and talented

1% were immigrants⁹⁵

COLORADO'S STUDENT POPULATION IS DIVERSE, YET OUR PUBLIC SCHOOL TEACHER WORKFORCE IS PREDOMINANTLY WHITE.

STUDENTS AND TEACHERS IN COLORADO PUBLIC SCHOOLS BY RACE/ETHNICITY, 2018-2019

FULL-DAY KINDERGARTEN

Research has long demonstrated the benefits of full-day kindergarten for our youngest learners. Colorado’s recent decision to fully fund full-day kindergarten means that thousands more kids are able to reap those benefits.

Full-day kindergarten is linked to:

Improved student attendance during kindergarten⁹⁶

Lower rates of grade retention later in a child’s schooling⁹⁷

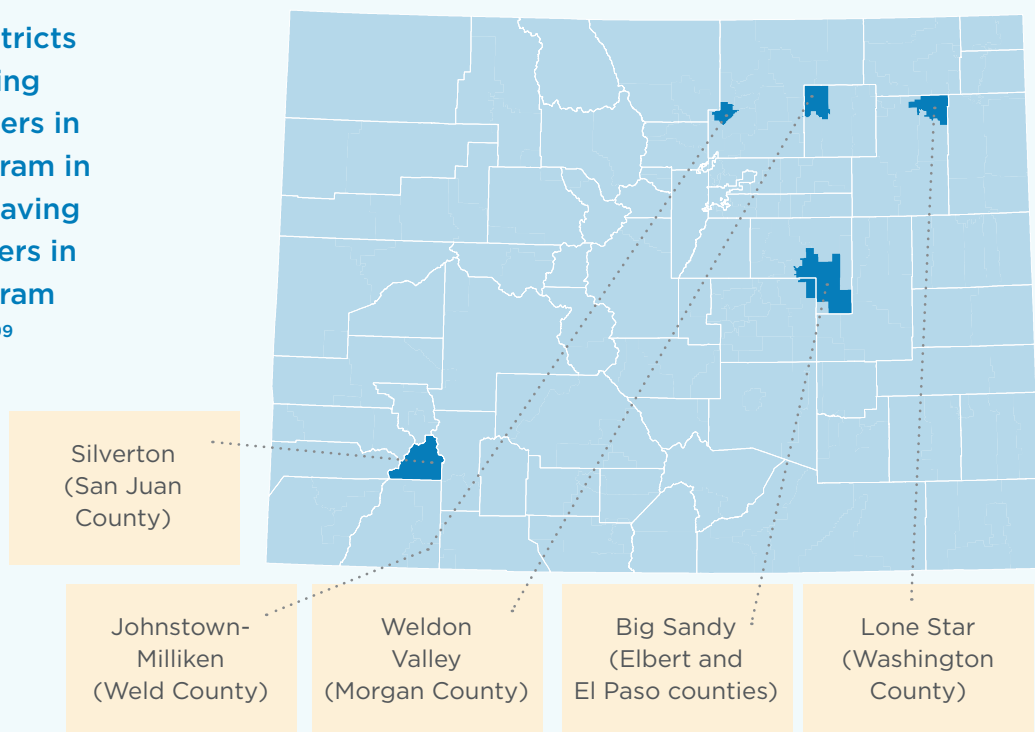

Larger gains in reading and math relative to children in half-day programs⁹⁸

NEARLY 12,000 MORE YOUNG COLORADO STUDENTS WERE ABLE TO ENROLL IN FULL-DAY KINDERGARTEN IN 2019-2020 AFTER THE STATE EXPANDED FREE FULL-DAY KINDERGARTEN TO ALL WHO CHOOSE IT.

PERCENT OF COLORADO KINDERGARTNERS IN A FULL-DAY PROGRAM

Five school districts went from having **no** kindergartners in a full-day program in 2018-2019 to having **all** kindergartners in a full-day program one year later.⁹⁹

SCHOOL FUNDING

The level at which we fund our state’s public schools not only demonstrates our commitment to Colorado’s kids—it can also determine their academic futures. A large body of research finds that school funding is strongly linked to student performance and academic outcomes.¹⁰⁰ Yet during the past several decades, **Colorado has continued to lag behind most states, as well as the nation, in the dollars we spend on each student per year.**¹⁰¹

COLORADO HAS TRAILED THE NATION IN PER-PUPIL SPENDING FOR MUCH OF THE PAST FIVE DECADES.

PER-PUPIL SPENDING IN CONSTANT 2017-2018 DOLLARS, U.S. AND COLORADO

Source: National Center for Education Statistics.

Beyond state averages, the amount of dollars invested in Colorado’s students varies significantly between districts due to the state’s school funding formula, and the role played by local property wealth and voters’ ability to invest more in education. Coloradans in property-poor districts pay some of the highest base property tax rates and often vote to tax themselves further, but still struggle to generate funding for local schools; in fiscal year 2019-2020, the state’s **35 school districts with the lowest assessed property value per student were only able to raise an additional \$1,049 per student with an average of 16.51 override mills.**¹⁰² In comparison, residents in property-wealthy areas pay lower base tax rates and are still able to collect significant amounts of additional, voter-approved funding; that same year, the **35 school districts with the highest assessed value per student were able to raise an average of \$2,109 per student on just 2.83 voter-approved override mills.**¹⁰³

These data indicate that our state’s low property wealth districts taxed themselves at 5.8 times the rate of high property wealth districts in FY 19-20, but only generated half of the additional dollars for their students. Mill levy override funding is layered on top of funding that is received through the state’s funding formula, exacerbating inequities in the level of resources available to educate students across districts.

For low-income students especially, adequate school funding is a game changer. Poverty has extensive and damaging impacts on a student’s ability to learn—but adequate investments can help mitigate these effects. States and districts that invest more in schools tend to see stronger academic performance among students in poverty.^{104, 105} School funding is associated with children’s access to important learning resources, such as improved class sizes, student-to-teacher ratios and teacher pay.¹⁰⁶

The achievement gap in Colorado between low-income students and their higher income peers is significant across subject areas, and low-income students make up a large portion (41 percent) of the student population.¹⁰⁷ Some research finds that **students facing poverty likely require 2.5 times the school funding as their higher income peers.**¹⁰⁸ Yet due to the lower local revenues in high-poverty school districts, Colorado students in the highest poverty districts in 2015 only saw 7 percent more in total revenue per student than those in the lowest poverty districts.¹⁰⁹

Colorado’s students of color, who have historically faced the most barriers to educational opportunity, are attending schools receiving less revenue per student as well. In 2015, **the state’s districts serving the most students of color received 5 percent less in state and local revenue per student in than those serving the fewest.**¹¹⁰

SOME RESEARCH FINDS THAT STUDENTS FACING POVERTY REQUIRE 2.5 TIMES THE FUNDING THEIR HIGHER-INCOME PEERS RECEIVE—YET IN COLORADO, THE REVENUES PER STUDENT DIFFER ONLY SLIGHTLY BETWEEN THE HIGHEST AND LOWEST POVERTY DISTRICTS.

STATE AND LOCAL REVENUES PER COLORADO STUDENT, HIGHEST AND LOWEST POVERTY QUARTILES

EDUCATOR SALARIES

Teachers play pivotal roles in our children’s lives and are the single most important school-related factor for student achievement.¹¹¹ Unfortunately, Colorado continues to face an educator shortage, and local and national research indicate that low teacher pay is likely a key contributor.¹¹² In the 2018-2019 school year, **Colorado’s public school teachers were paid an average annual salary of \$54,950**, with significant pay disparities between teachers in different districts.¹¹³

National data indicate that Colorado’s average teacher pay has trailed the U.S. average for the last two decades. After adjusting for inflation, **Colorado’s teacher salaries have actually fallen overall by 6.3 percent since 1999.**¹¹⁴

Teacher salaries in Colorado’s rural communities are especially low. The most recent cost-of-living data available for school districts show that **in most small rural communities, teacher salaries fall well below the local cost of living.**^{115, 116}

BETWEEN 1999 AND 2018, THE AVERAGE TEACHER SALARY IN COLORADO FELL BY MORE THAN 6 PERCENT.

AVERAGE ANNUAL SALARY OF PUBLIC SCHOOL TEACHERS IN CONSTANT 2017-18 DOLLARS, U.S. AND COLORADO, SELECTED YEARS

TEACHERS IN SMALL RURAL DISTRICTS MAKE SIGNIFICANTLY LESS THAN THEIR PEERS IN LARGER DISTRICTS ON THE FRONT RANGE.

AVERAGE ANNUAL SALARIES OF COLORADO TEACHERS AND COST-OF-LIVING ESTIMATES IN SELECTED DISTRICTS, 2017

Sources: Colorado Department of Education and Colorado Legislative Council.

At the beginning of the 2018-2019 school year, there were nearly **7,800 teaching vacancies across the state**, representing a shortage of 13.8 percent.¹¹⁷ Compounding this issue, in recent years Colorado's educator preparation programs have seen declines in enrollment and completion as well. **Between 2011 and 2018, enrollment in educator preparation programs in Colorado fell by more than 13 percent, while completion fell by 17 percent.**¹¹⁸

Low teacher pay may also be connected to another significant issue Colorado faces—a lack of racial and ethnic diversity in the educator workforce. Higher student debt burdens experienced by teachers of color create another barrier to entering the classroom.^{119, 120} While nearly half of Colorado students are children of color, teachers of color make up less than 15 percent of our state's teacher workforce. See page 44 for a more detailed breakdown of the demographics of Colorado teachers and students.

Adequate teacher pay is essential for recruiting and retaining great educators.¹²¹ Compensating educators appropriately for their significant contributions to Colorado's children can ensure a strong teacher workforce for years to come.

ONLINE EDUCATION PROGRAMS

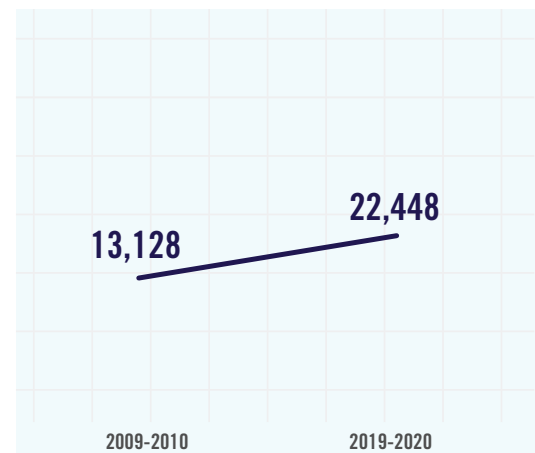

Enrollment in Colorado's online schools has grown from 166 students in the 2000-2001 school year to more than 22,000 students nearly 20 years later.^{122, 123} Despite this rapid growth, the quality of education some online schools provide is in question.

Online schools and programs in Colorado are full-time academic programs. In the 2019-2020 school year, Colorado had 28 multi-district online schools (schools authorized by a single district but serving students from across the state), 11 single-district online schools (schools that only serve students from their authorizing district), and 26 single-district online programs (a program tied to a single school that does not enroll more than 100 students).¹²⁴ Although the schools and programs themselves are not-for-profit, many contract with for-profit education service providers that design and implement education programs, provide online class management and coordinate employment of teachers, among other instructional and operational services.¹²⁵

A 2006 report by the state auditor highlighted several concerns with the quality and accountability of Colorado's online schools and programs, including poor student performance on standardized assessments, graduation rates significantly below the state average, and a lack of licensed and highly qualified teachers.¹²⁶ Nearly 15 years later, most of these concerns have not been addressed. The state's 2019 *Online Summary Report* notes that students in online schools score lower than those in non-online schools across all subjects and on all assessments, despite the fact that the overall demographics of online schools are very similar to the demographics of Colorado's student population as a whole.¹²⁷ And among the 39 online schools and programs for which high school graduation rates were available in 2019, all but seven had graduation rates below the state average.¹²⁸

IN THE PAST DECADE, ENROLLMENT IN COLORADO'S ONLINE SCHOOLS AND PROGRAMS HAS GROWN BY 71 PERCENT—NEARLY NINE TIMES FASTER THAN PK-12 ENROLLMENT AS A WHOLE.

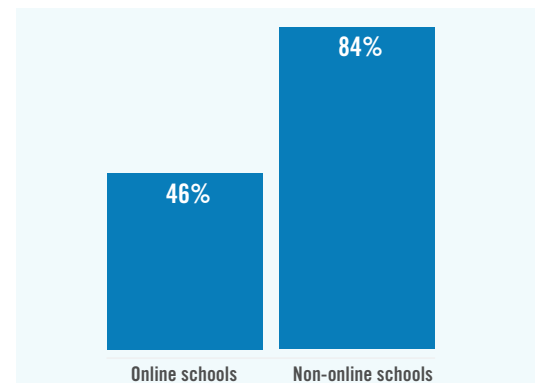

NUMBER OF PRE-K THROUGH 12TH GRADE STUDENTS ENROLLED IN A COLORADO ONLINE SCHOOL OR PROGRAM

Source: Colorado Department of Education.

FEWER THAN HALF OF ALL HIGH SCHOOL STUDENTS AT ONLINE SCHOOLS GRADUATED ON TIME IN 2019, COMPARED TO 84 PERCENT OF STUDENTS IN NON-ONLINE SCHOOLS.

PERCENT OF PUBLIC HIGH SCHOOL STUDENTS GRADUATING WITHIN FOUR YEARS BY SCHOOL TYPE, 2019

Source: Colorado Children's Campaign analysis of data from the Colorado Department of Education.

STUDENT ACHIEVEMENT

Standardized assessments are not the only way to measure students' knowledge and abilities, but they do offer one method to track progress in the core skills kids will need later in life.

Colorado's Statewide Standardized Assessment Schedule

CMAS English Language Arts and Mathematics: Grades 3 through 8

CMAS Science: Grades 5, 8 and 11

CMAS Social Studies: Grades 4 and 7 (sampled)

PSAT: Grades 9 and 10

SAT: Grade 11

Source: Colorado Department of Education.

STUDENT ACHIEVEMENT HAS INCHED UP IN RECENT YEARS, BUT STILL FEWER THAN HALF OF COLORADO STUDENTS MEET EXPECTATIONS IN CRITICAL SUBJECTS.

PERCENT OF STUDENTS MEETING OR EXCEEDING EXPECTATIONS ON THE CMAS

Statewide averages can mask significant differences in student proficiency across the state. This map shows the percent of students meeting or exceeding expectations in English Language Arts on the 2019 CMAS by school district. Proficiency levels range from 7 percent in Saguache County's Mountain Valley School District to 75 percent in Yuma County's Liberty School District.¹²⁹ ELA proficiency levels are strongly correlated with the percent of students who qualify for free or reduced-price lunch, illustrating the impact poverty can have on educational outcomes.

STUDENTS MEETING OR EXCEEDING EXPECTATIONS IN ENGLISH LANGUAGE ARTS ON THE 2019 CMAS BY SCHOOL DISTRICT

Source: Colorado Department of Education.

STUDENT ACHIEVEMENT

COLORADO MUST DO MORE TO REMOVE BARRIERS TO EDUCATIONAL OPPORTUNITY AMONG CHILDREN IN LOW-INCOME FAMILIES. STUDENTS WHO QUALIFY FOR FREE OR REDUCED-PRICE LUNCH ARE 30 PERCENTAGE POINTS LESS LIKELY TO MEET EXPECTATIONS ACROSS ALL SUBJECTS DUE TO THE HARMFUL EFFECTS OF POVERTY.

PERCENT OF STUDENTS IN GRADES 3 THROUGH 8 MEETING OR EXCEEDING EXPECTATIONS ON THE 2019 CMAS, BY FAMILY INCOME

COLORADO'S STUDENTS OF COLOR ALSO EXPERIENCE LIMITED ACADEMIC RESOURCES AS A RESULT OF POLICIES AND PRACTICES THAT LIMIT OPPORTUNITY, DRIVING PERSISTENT GAPS IN STUDENT PROFICIENCY BETWEEN MANY STUDENTS OF COLOR AND THEIR WHITE PEERS.

PERCENT OF STUDENTS IN GRADES 3-8 MEETING OR EXCEEDING EXPECTATIONS ON THE 2019 CMAS, BY RACE/ETHNICITY

HIGH SCHOOL GRADUATION RATES

A high school diploma opens the door to college, employment opportunities and greater lifetime earning potential. Supporting all young people in graduating high school will help ensure a brighter future for our state's children.

COLORADO'S ON-TIME HIGH SCHOOL GRADUATION RATE CONTINUED ITS STEADY CLIMB IN 2019, REACHING ITS HIGHEST LEVEL SINCE THE GRADUATION RATE FORMULA WAS CHANGED IN 2010.

PERCENT OF COLORADO PUBLIC HIGH SCHOOL STUDENTS GRADUATING WITHIN FOUR YEARS

In 2018, Coloradans with a high school diploma earned nearly

20% more

than those who did not finish high school.

Source:
U.S. Census Bureau,
2018 American
Community Survey.

AMERICAN INDIAN, HISPANIC, AND BLACK STUDENTS HAVE SEEN THE GREATEST GAINS IN GRADUATION RATES SINCE 2011, BUT COLORADO HAS MORE WORK TO DO TO REMOVE BARRIERS TO GRADUATION FOR OUR STUDENTS OF COLOR.

PERCENT OF COLORADO PUBLIC HIGH SCHOOL STUDENTS GRADUATING WITHIN FOUR YEARS, BY RACE/ETHNICITY

Source: Colorado Department of Education.

What about students who take longer than four years to graduate high school? Colorado also publishes five-, six- and seven-year graduation rates, recognizing that some students need more time to finish school. Although some students do graduate in more than four years, the majority of those who do not finish within four years do not go on to graduate. For example, the on-time, four-year graduation rate among the class of 2017 was 79 percent. Including students who took six years to graduate boosts it slightly to 85.7 percent.¹³⁰

COUNTY DATA DEFINITIONS

The Colorado Children’s Campaign relies on data from federal, state and local agencies; these sources are the final authority relating to the quality of any data presented in this report. Please note that all vital statistics data are reported by place of residence, and not place of birth or death.

POPULATION

Total Population (number)

Number of individuals. Estimates provided by the Colorado State Demography Office, Colorado Department of Local Affairs. Estimates retrieved on November 20, 2019.

Child Population (Under 18) (number)

Number of children under the age of 18. Estimates provided by the Colorado State Demography Office, Colorado Department of Local Affairs. Estimates retrieved on November 20, 2019.

Children as a Percentage of Total Population (percent)

Percent of the population under the age of 18. Number of children under the age of 18 provided by the Colorado State Demography Office, Colorado Department of Local Affairs; percent calculations performed by the Colorado Children’s Campaign.

Young Child Population (Under 5) (number)

Number of children under the age of 5. Estimates provided by the Colorado State Demography Office, Colorado Department of Local Affairs. Estimates retrieved on November 20, 2019.

School-Aged Population (Ages 5-17) (number)

Number of children ages 5 through 17. Estimates provided by the Colorado State Demography Office, Colorado Department of Local Affairs. Estimates retrieved on November 20, 2019.

VULNERABLE FAMILIES

Births to Single Women (percent)

Percent of live births occurring to unmarried women. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births to single women.

Births to Women without a High School Diploma or GED (percent)

Percent of live births occurring to women without a high school diploma or GED . Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births to women with less than 12 years of education.

Teen Births (rate per 1,000 females ages 15-19)

Number of live births to women ages 15 through 19 per 1,000 women of that age group (age-specific fertility rate). Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births to teens.

Three Risk-Factor Births (percent)

Percent of live births occurring to unmarried women under the age of 25 years with less than 12 years of education. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births in this category.

Out-of-Home Placements (rate per 1,000 children under 18)

Number of children removed from their homes by the Department of Human Services per 1,000 children under the age of 18. Data provided by the Colorado Department of Human Services Division of Child Welfare; rate calculations performed by the Colorado Children’s Campaign. Out-of-home placements include family foster care, specialized group homes, residential child care facilities, independent living situations, foster care with relatives, residential treatment centers, and both emergency and non-emergency placements or shelters.

FAMILY ECONOMICS AND SUPPORTS

Children Qualifying for Free or Reduced-Price Lunch (percent)

Percent of children in public school grades PK-12 who qualified for free or reduced-price school lunches. Data provided by the Colorado Department of Education. Public school children qualify for free lunches if their family's income falls below 130 percent of the federal poverty level (FPL). Public school children qualify for reduced-price lunches if their family's income falls between 130 percent and 185 percent of the FPL.

Median Household Income (dollars)

Median income of households. Data provided by the U.S. Census Bureau Small Area Income and Poverty Estimates (SAIPE).

Children (Under 18) in Poverty (percent)

Percent of children under the age of 18 living in families with incomes at or below the federal poverty level. Data provided by the U.S. Census Bureau Small Area Income and Poverty Estimates (SAIPE).

School-Aged Children (Ages 5-17) in Poverty (percent)

Percent of children ages 5 through 17 living in families with incomes at or below the federal poverty level. Data provided by the U.S. Census Bureau Small Area Income and Poverty Estimates (SAIPE).

Children Receiving TANF Basic Cash Assistance Payments (percent)

Percent of children receiving Basic Cash Assistance payments as part of the Temporary Assistance for Needy Families (TANF) program during the calendar year. Caseload data provided by the Colorado Department of Human Services; percent calculations performed by the Colorado Children's Campaign.

Children Under 5 Receiving WIC Program Vouchers (percent)

Percent of children under age 5 (until their fifth birthday) served by the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) during the calendar year. Unduplicated count of WIC child participants provided by the Governor's Office of Information Technology; percent calculations performed by the Colorado Children's Campaign.

Note: Some local WIC programs provide services to children from other counties. Hinsdale, Mineral, San Juan and Gilpin Counties did not have a WIC program in 2019, and children in these counties were served by neighboring counties.

COUNTY DATA DEFINITIONS

CHILD AND MATERNAL HEALTH

Live Births (number)

Total number of live births. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births.

Low Weight Births (percent)

Percent of babies born weighing 5.5 pounds (2500 grams) or less. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three babies born at low weights.

Early Prenatal Care (percent)

Percent of live births in which prenatal care was initiated in the first trimester of pregnancy. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births to mothers receiving early prenatal care.

Births to Women Smoking During Pregnancy (percent)

Percent of live births in which women reported smoking during pregnancy on their infant's birth certificate. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three births to women who smoked during pregnancy.

Note: These data are likely underreported on birth certificates across the state due to mothers' knowledge of the risks of smoking during pregnancy.

Child Abuse and Neglect (rate per 1,000 children under 18)

Number of children under 18 experiencing maltreatment (including physical, sexual or emotional abuse and/or neglect) per 1,000 children. These data represent unique, substantiated cases of maltreatment. Data provided by the Colorado Department of Human Services Division of Child Welfare.

Infant Mortality (rate per 1,000 live births)

Number of infant deaths in the first year of life per 1,000 live births. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three infant deaths.

Child (Ages 1-14) Deaths (rate per 100,000 children ages 1-14)

Number of child deaths per 100,000 children ages 1 through 14. These data include deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides). Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three child deaths.

Teen (Ages 15-19) Deaths (rate per 100,000 teens ages 15-19)

Number of teen deaths per 100,000 teens ages 15 through 19. These data include deaths from natural causes (such as illness or congenital defects) and injury (including motor vehicle deaths, homicides and suicides). Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three teen deaths.

Child (Ages 1-14) Deaths Due to Injury (rate per 100,000 children ages 1-14)

Number of child deaths due to intentional and unintentional injuries per 100,000 children ages 1 through 14. These data include deaths due to homicide, suicide and accidents. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three child deaths due to injury.

Teen (Ages 15-19) Deaths Due to Injury (rate per 100,000 teens ages 15-19)

Number of teen deaths due to intentional and unintentional injuries per 100,000 teens ages 15 through 19. These data include deaths due to homicide, suicide and accidents. Data provided by the Colorado Department of Public Health and Environment Vital Statistics Program. Low number of events (LNE) indicates fewer than three teen deaths due to injury.

Children (Ages 0-18) Enrolled in CHP+ (percent)

Estimated percent of children ages 0 through 18 enrolled in the Child Health Plan *Plus* (CHP+) during the fiscal year. As of 2018, children ages 0 through 18 whose family's modified adjusted gross income (MAGI) is below 260 percent of FPL but above the Medicaid income eligibility cutoff are eligible for CHP+. Caseload data provided by the Colorado Department of Health Care Policy and Financing; percent calculations performed by the Colorado Children's Campaign. Low number of events (LNE) indicates fewer than 30 clients.

Note: The numbers used to calculate this percentage include a unique count of all clients ages 0 through 18 who were served at any point during FY 18-19. The CHP+ numbers reported here do not match official budget numbers; official budget numbers reflect an average monthly caseload over the course of a year and are therefore lower than the numbers reported here.

Children (Ages 0-18) Enrolled in Medicaid (percent)

Estimated percent of children ages 0 through 18 enrolled in Medicaid during the fiscal year. As of 2018, children ages 0 through 18 whose family's modified adjusted gross income (MAGI) is below 142 percent of the federal poverty level are eligible for Medicaid. Caseload data provided by the Colorado Department of Health Care Policy and Financing; percent calculations performed by the Colorado Children's Campaign. Low number of events (LNE) indicates fewer than 30 clients.

Note: The numbers used to calculate this percentage include a unique count of all clients ages 0 through 18 who were served at any point during FY 18-19. The Medicaid numbers reported here do not match official budget numbers; official budget numbers reflect an average monthly caseload over the course of a year and are therefore lower than the numbers reported here.

COUNTY DATA DEFINITIONS

Uninsured Children (Ages 0-18) (percent)

Estimate percent of children ages 0 through 18 who lacked health insurance during the calendar year. Data provided by the U.S. Census Bureau Small Area Health Insurance Estimates (SAHIE) incorporating coverage estimates from the American Community Survey (ACS).

Children Eligible for Medicaid, CHP+ or Subsidies But Not Enrolled (Ages 0-18) (percent)

Estimated percent of children who are eligible for Medicaid, CHP+ or insurance subsidies but are not enrolled to receive them. Data provided by the Colorado Health Institute's (CHI) analysis of data from the U.S. Census Bureau's American Community Survey (ACS).

Note: Analyses are limited to Coloradans for whom ACS income data were collected.

COUNTY DATA DEFINITIONS

EDUCATION

PK-12 Pupil Enrollment (number)

Number of children enrolled in public schools in grades PK-12. Data provided by the Colorado Department of Education.

Kindergartners in a Full-Day Program (percent)

Percent of kindergartners enrolled in a full-day program. Data provided by the Colorado Department of Education; percent calculations performed by the Colorado Children's Campaign.

English Language Learners (percent)

Percent of students identified as English Language Learners. Data from the Colorado Department of Education; percent calculations performed by the Colorado Children's Campaign.

High School Graduation Rate (percent)

Percent of students who graduated from public high schools four years after entering ninth grade. Data provided by the Colorado Department of Education.

4th Grade Students Meeting or Exceeding Expectations in English Language Arts (percent)

Percent of 4th grade students who scored proficient in English Language Arts on the Colorado Measures of Academic Success (CMAS) assessment. Data provided by the Colorado Department of Education (CDE). County data are based on scores from the districts that comprise each county.

Note: CDE does not report CMAS data if the number of students taking the test is fewer than 16, if the cell size for a given proficiency level is below 3, or if the data meet the department's guidelines for complementary suppression; low number of events (LNE) indicates data have been suppressed for one of these reasons.

Students Meeting or Exceeding Expectations on CMAS Math (percent)

Percent of all students in grades 3 through 8 who scored proficient in Math on the Colorado Measures of Academic Success (CMAS) assessments. Data provided by the Colorado Department of Education (CDE). County data are based on data from the districts that comprise each county.

Note: CDE does not report CMAS data if the number of students taking the test is fewer than 16, if the cell size for a given proficiency level is below 3, or if the data meet the department's guidelines for complementary suppression; low number of events (LNE) indicates data have been suppressed for one of these reasons.

Students Meeting or Exceeding Expectations on CMAS English Language Arts (percent)

Percent of all students in grades 3 through 8 who scored proficient in English Language Arts on the Colorado Measures of Academic Success (CMAS) assessments. Data provided by the Colorado Department of Education (CDE). County data are based on data from the districts that comprise each county.

Note: CDE does not report CMAS data if the number of students taking the test is fewer than 16, if the cell size for a given proficiency level is below 3, or if the data meet the department's guidelines for complementary suppression; low number of events (LNE) indicates data have been suppressed for one of these reasons.

Students Meeting or Exceeding Expectations on CMAS Science (percent)

Percent of all students in grades 5, 8 and 11 who scored proficient in Science on the Colorado Measures of Academic Success (CMAS) assessments. Data provided by the Colorado Department of Education (CDE). County data are based on data from the districts that comprise each county.

Note: CDE does not report CMAS data if the number of students taking the test is fewer than 16, if the cell size for a given proficiency level is below 3, or if the data meet the department's guidelines for complementary suppression; low number of events (LNE) indicates data have been suppressed for one of these reasons.

ACKNOWLEDGEMENTS

The Colorado Children’s Campaign would like to thank the following individuals and organizations who helped provide data and expertise for the *2020 KIDS COUNT in Colorado!* report and who dedicate themselves to the well-being of Colorado’s children every day. We sincerely thank you for your generous contributions of time, data and expertise.
