

COLORADO

**Department of Health Care
Policy & Financing**

**HEDIS Measurement Year 2020
Aggregate Report
for Health First Colorado
(Colorado's Medicaid Program)**

October 2021

*This report was produced by Health Services Advisory Group, Inc., for the
Colorado Department of Health Care Policy and Financing.*

1. Executive Summary	1-1
Introduction	1-1
Summary of Performance.....	1-2
Detailed Statewide Performance	1-3
Summary of Performance by Domain.....	1-7
Limitations and Considerations.....	1-10
2. Reader’s Guide	2-1
Introduction	2-1
Medicaid Managed Care Organization Names	2-1
Summary of HEDIS MY 2020 Measures.....	2-1
Data Collection Method	2-4
Data Sources and Measure Audit Results	2-4
Calculation of Statewide Averages	2-5
Evaluating Measure Results	2-5
National Benchmark Comparisons.....	2-5
Trend Analysis	2-7
Measure Changes Between HEDIS MY 2019 and HEDIS MY 2020	2-9
Childhood Immunization Status.....	2-9
Well-Child Visits in the First 30 Months of Life	2-9
Child and Adolescent Well-Care Visits	2-9
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents	2-10
Prenatal and Postpartum Care	2-10
Breast Cancer Screening	2-10
Cervical Cancer Screening	2-10
Antidepressant Medication Management.....	2-11
Follow-Up Care for Children Prescribed ADHD Medication.....	2-11
Metabolic Monitoring for Children and Adolescents on Antipsychotics.....	2-11
Persistence of Beta-Blocker Treatment After a Heart Attack	2-11
Comprehensive Diabetes Care	2-11
Statin Therapy for Patients With Diabetes	2-12
Statin Therapy for Patients With Cardiovascular Disease	2-12
Use of Imaging Studies for Low Back Pain	2-13
Pharmacotherapy Management of COPD Exacerbation	2-13
Asthma Medication Ratio.....	2-13
Use of Spirometry Testing in the Assessment and Diagnosis of COPD.....	2-13
Appropriate Testing for Pharyngitis.....	2-13
Appropriate Treatment for Upper Respiratory Infection.....	2-13
Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis.....	2-13
Use of Opioids at High Dosage.....	2-14
Use of Opioids From Multiple Providers	2-14

Risk of Continued Opioid Use	2-14
Pharmacotherapy for Opioid Use Disorder	2-14
Plan All-Cause Readmissions	2-14
Glossary	2-15
3. Pediatric Care	3-1
Pediatric Care	3-1
Childhood Immunization Status	3-2
Immunizations for Adolescents—Combination 1 (Meningococcal, Tdap)	3-12
Immunizations for Adolescents—Combination 2 (Meningococcal, Tdap, HPV)	3-13
Well-Child Visits in the First 30 Months of Life—Well-Child Visits in the First 15 Months —Six or More Well-Child Visits	3-14
Well-Child Visits in the First 30 Months of Life—Well-Child Visits for Age 15 Months– 30 Months—Two or More Well-Child Visits	3-15
Child and Adolescent Well-Child Visits—Total	3-16
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—BMI Percentile Documentation—Total	3-17
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Counseling for Nutrition—Total	3-18
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Counseling for Physical Activity—Total	3-19
Summary of Findings and Recommendations	3-20
4. Access to Care and Preventive Screening	4-1
Access to Care and Preventive Screening	4-1
Access to Care	4-1
Preventive Screening	4-1
Prenatal and Postpartum Care—Timeliness of Prenatal Care	4-2
Prenatal and Postpartum Care—Postpartum Care	4-3
Adults’ Access to Preventive/Ambulatory Health Services—Total	4-4
Chlamydia Screening in Women—Total	4-5
Breast Cancer Screening	4-6
Cervical Cancer Screening	4-7
Non-Recommended Cervical Cancer Screening in Adolescent Females	4-8
Summary of Findings and Recommendations	4-9
5. Mental/Behavioral Health	5-1
Mental/Behavioral Health	5-1
Antidepressant Medication Management—Effective Acute Phase Treatment	5-2
Antidepressant Medication Management—Effective Continuation Phase Treatment	5-3
Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase	5-4
Follow-Up Care for Children Prescribed ADHD Medication—Continuation and Maintenance Phase	5-5
Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total	5-6
Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total	5-7

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose and Cholesterol Testing—Total 5-8

Summary of Findings and Recommendations..... 5-9

6. Living With Illness..... 6-1

Living With Illness 6-1

Persistence of Beta-Blocker Treatment After a Heart Attack 6-2

Comprehensive Diabetes Care—HbA1c Testing..... 6-3

Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%)..... 6-4

Comprehensive Diabetes Care—HbA1c Control (<8.0%) 6-5

Comprehensive Diabetes Care—Eye Exam (Retinal) Performed..... 6-6

Comprehensive Diabetes Care—Blood Pressure Control (<140/90 mm Hg)..... 6-7

Statin Therapy for Patients With Diabetes—Received Statin Therapy 6-8

Statin Therapy for Patients With Diabetes—Statin Adherence 80% 6-9

Statin Therapy for Patients With Cardiovascular Disease—Received Statin Therapy—Total ... 6-10

Statin Therapy for Patients With Cardiovascular Disease—Statin Adherence 80%—Total..... 6-11

Use of Imaging Studies for Low Back Pain 6-12

Pharmacotherapy Management of COPD Exacerbation—Systemic Corticosteroid 6-13

Pharmacotherapy Management of COPD Exacerbation—Bronchodilator 6-14

Asthma Medication Ratio—Total 6-15

Use of Spirometry Testing in the Assessment and Diagnosis of COPD..... 6-16

Summary of Findings and Recommendations..... 6-17

7. Antibiotic Stewardship..... 7-1

Antibiotic Stewardship 7-1

Appropriate Testing for Pharyngitis—Total 7-2

Appropriate Treatment for Upper Respiratory Infection—Total 7-3

Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total 7-4

Antibiotic Utilization—Average Scripts PMPY for Antibiotics—Total 7-5

Antibiotic Utilization—Average Days Supplied per Antibiotic Script—Total 7-6

Antibiotic Utilization—Average Scripts PMPY for Antibiotics of Concern—Total 7-7

Antibiotic Utilization—Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total . 7-8

Summary of Findings and Recommendations..... 7-9

8. Opioids..... 8-1

Opioids 8-1

Use of Opioids at High Dosage..... 8-2

Use of Opioids From Multiple Providers—Multiple Prescribers 8-3

Use of Opioids From Multiple Providers—Multiple Pharmacies 8-4

Use of Opioids From Multiple Providers—Multiple Prescribers and Multiple Pharmacies 8-5

Risk of Continued Opioid Use—At Least 15 Days Covered 8-6

Risk of Continued Opioid Use—At Least 31 Days Covered 8-7

Pharmacotherapy for Opioid Use Disorder—Total..... 8-8

Summary of Findings and Recommendations..... 8-9

9. Use of Services..... 9-1
 Use of Services 9-1
 Ambulatory Care 9-2
 Inpatient Utilization—General Hospital/Acute Care 9-3
 Plan All-Cause Readmissions—Index Total Stays 9-4
 Summary of Findings and Recommendations..... 9-4

 Information System Findings C-1

Appendix D. MCO Capitation Initiative Administrative and Hybrid Rates D-1

Introduction

Health First Colorado (Colorado’s Medicaid program) is administered by the Department of Health Care Policy and Financing (the Department). In fiscal year (FY) 2020–2021, Health First Colorado’s Medicaid member enrollment was approximately 1.3 million. Approximately 1 million members (93 percent) received services via a fee-for-service (FFS) payment model with services coordinated through Health First Colorado’s Accountable Care program. The remaining 7 percent of Medicaid members received services through Colorado’s two managed care organizations (MCOs), Denver Health Medical Plan (DHMP) and Rocky Mountain Health Plans Medicaid Prime (RMHP Prime). In FY 2019–2020, the MCOs were embedded within the organizational structure of two of the seven Regional Accountable Entities (RAEs). Colorado’s Accountable Care Collaborative (ACC) is the primary healthcare delivery model for Health First Colorado members. Beginning in FY 2018–2019, the Department transitioned its ACC program to ACC Phase II. The Department contracted with seven RAEs responsible for providing behavioral health services under a capitated payment model and providing enhanced care coordination of physical and behavioral health services.

Colorado’s Medicaid benefits and services include healthcare primary and specialty care provider visits; dental services; hospitalization, emergency services, and transportation services; maternity and newborn care; mental health/behavioral health services, and substance use disorder services; pharmacy and durable medical equipment benefits; physical, occupational, and speech therapy; laboratory services; preventive health and wellness services; and family planning services.¹⁻¹

To evaluate performance levels and to provide an objective, comparative review of Colorado’s two Medicaid MCOs’ quality-of-care outcomes and performance measure rates, the Department required its MCOs to report results following the National Committee for Quality Assurance’s (NCQA’s) Healthcare Effectiveness Data and Information Set (HEDIS[®]) protocols.¹⁻² The Department selected HEDIS performance measures from the standard Medicaid HEDIS Measurement Year (MY) 2020 reporting set to evaluate the MCOs’ performance and for public reporting. For HEDIS MY 2020, the Department required that the MCOs report all HEDIS measures using the administrative methodology. This report includes rates calculated using only administrative data. Therefore, caution should be exercised when comparing measure results for measures with a hybrid option to national benchmarks, which were established using administrative and/or medical record review data.

In FY 2020–2021, each MCO underwent an NCQA HEDIS Compliance Audit[™] through a licensed organization to verify the processes used to report valid HEDIS rates.¹⁻³ Both MCOs submitted final

¹⁻³ NCQA HEDIS Compliance Audit[™] is a trademark of the NCQA.

measure rates and audit results to Health Services Advisory Group, Inc. (HSAG), the Department’s external quality review organization (EQRO). HSAG examined the measures among the following domains of care: Pediatric Care, Access to Care and Preventive Screening, Mental/Behavioral Health, Living With Illness, Antibiotic Stewardship, Opioids, and Use of Services. Please see Appendix C for additional information on NCQA’s Information Systems (IS) standards and the audit findings for both Medicaid MCOs.¹⁻⁴ This report documents the results of HSAG’s analysis and recommendations for improvement where appropriate.

Summary of Performance

Figure 1-1 shows the Colorado Medicaid program’s performance on HEDIS MY 2020 performance measure indicators that were comparable to NCQA’s Quality Compass® national Medicaid health maintenance organization (HMO) percentiles for HEDIS MY 2019 (referred to throughout this report as percentiles).¹⁻⁵ Of note, rates for the *Risk of Continued Opioid Use* measure indicators were compared to NCQA’s Audit Means and Percentiles national Medicaid percentiles for HEDIS MY 2019 since these indicators are not published in Quality Compass. The bars represent the number of Colorado Medicaid weighted averages that fell into each percentile range. The percentile range shows how the Colorado Medicaid weighted average ranked nationally. Measures under the Use of Services domain and one measure under the Antibiotic Stewardship domain (i.e., *Antibiotic Utilization*) are considered utilization-based measures rather than performance measures; therefore, they are not included in this figure.

Figure 1-1—Colorado Medicaid Weighted Averages

¹⁻⁴ National Committee for Quality Assurance. *HEDIS Compliance Audit Standards, Policies and Procedures, Volume 5*. Washington D.C.

¹⁻⁵ Quality Compass® is a registered trademark of the NCQA.

The Colorado Medicaid weighted averages indicated low performance statewide compared to national standards, as 30 of 51 (58.8 percent) measure rates fell below the 50th percentile.

Detailed Statewide Performance

Table 1-1 shows the Colorado Medicaid weighted averages for HEDIS MY 2018 through HEDIS MY 2020 along with the percentile ranking for each HEDIS MY 2020 rate. Rates for HEDIS MY 2020 shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year. Rates for HEDIS MY 2020 shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.¹⁻⁶ For one measure in the Antibiotic Stewardship domain (i.e., *Antibiotic Utilization*) and some measures in the Use of Services domain (i.e., *Ambulatory Care* and *Inpatient Utilization—General Hospital/Acute Care*), HSAG did not perform significance testing because variances were not provided in the Interactive Data Submission System (IDSS) files; therefore, differences in rates are reported without significance testing. In addition, higher or lower rates do not necessarily indicate better or worse performance for the measures in the Use of Services domain.

Table 1-1—Colorado Medicaid Weighted Averages

Performance Measures	HEDIS MY 2018 Rate	HEDIS MY 2019 Rate	HEDIS MY 2020 Rate	Percentile Ranking
Pediatric Care				
Childhood Immunization Status				
<i>Combination 2</i>	68.01%	69.46%	68.48%	10th–24th
<i>Combination 3</i>	64.77%	66.41%	67.95%	25th–49th
<i>Combination 4</i>	64.65%	66.09%	67.60%	25th–49th
<i>Combination 5</i>	56.78%	57.56%	57.97%	25th–49th
<i>Combination 6</i>	45.20%	47.85%	44.83%	50th–74th
<i>Combination 7</i>	56.66%	57.40%	57.71%	25th–49th
<i>Combination 8</i>	45.14%	47.85%	44.66%	50th–74th
<i>Combination 9</i>	40.76%	42.68%	40.19%	50th–74th
<i>Combination 10</i>	40.70%	42.68%	40.11%	50th–74th
Immunizations for Adolescents				
<i>Combination 1 (Meningococcal; Tetanus, Diphtheria Toxoids and Acellular Pertussis [Tdap])</i>	76.40%	77.63%	75.51%	10th–24th
<i>Combination 2 (Meningococcal, Tdap, Human Papillomavirus [HPV])</i>	48.70%	50.04%	44.87%^^	75th–89th

¹⁻⁶ Performance comparisons are based on the Chi-square test of statistical significance with a *p* value <0.05. A change in performance is considered statistically significant in this report if there was at least a 3-percentage point difference from HEDIS MY 2019 to HEDIS MY 2020.

Performance Measures	HEDIS MY 2018 Rate	HEDIS MY 2019 Rate	HEDIS MY 2020 Rate	Percentile Ranking
Well-Child Visits in the First 30 Months of Life³				
Well-Child Visits in the First 15 Months—Six or More Well-Child Visits	—	—	54.69%	—
Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits	—	—	57.22%	—
Child and Adolescent Well-Care Visits³				
Total	—	—	38.32%	—
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents				
Body Mass Index (BMI) Percentile Documentation—Total ¹	21.62%	24.76%	64.36% [^]	10th–24th
Counseling for Nutrition—Total	7.57%	9.36%	69.02% [^]	25th–49th

* For this indicator, a lower rate indicates better performance.

¹ Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

² Due to changes in the technical specifications for this measure for MY 2019, NCQA recommends trending between MY 2019 and prior years be considered with caution.

³ Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed for this measure.

— Indicates that NCQA recommends a break in trending; therefore, no prior year rates are displayed and comparisons to benchmarks are not performed for this measure. This symbol may also indicate that the MCOs were not required to report this measure for HEDIS MY 2018 or HEDIS MY 2019.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Rates shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year.

Rates shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.

Summary of Performance by Domain

Pediatric Care

Performance for the MCOs in the Pediatric Care domain demonstrated opportunities for improvement, with eight of 14 (57.1 percent) measure indicator rates for DHMP falling below the 50th percentile and all three reportable rates for RMHP Prime falling below the 25th percentile. The MCOs and the Department should identify the factors contributing to the low rates for children receiving vaccinations (e.g., barriers to care, coronavirus disease 2019 public health emergency [COVID-19 PHE], provider billing issues, administrative data source challenges).

Of note, DHMP's rate for the *Immunizations for Adolescents—Combination 2 (Meningococcal, Tdap, HPV)* measure indicator ranked at or above the 75th percentile, showing strength in vaccinations for adolescents.

Access to Care and Preventive Screening

With all reportable performance measure rates within the Access to Care domain falling below the 25th percentile, both DHMP and RMHP Prime have opportunities to improve access to the appropriate providers and services for all members. The MCOs and the Department should conduct root cause analyses for the low access to care rates to determine the nature and scope of the issue (e.g., are the issues related to barriers to accessing care, a lack of family planning service providers, or the need for improved community outreach and education). Additionally, the MCOs and the Department could identify factors related to the COVID-19 PHE and how access to care was impacted. Once the root causes are identified, the MCOs and the Department should work with providers and members to establish potential performance improvement strategies and solutions to increase the access to care rates.

Improvement in the access to care rates may also result in improvement related to the quality of care provided, as evidenced by poor performance in the outpatient setting related to other performance measure domains (e.g., vaccinations, preventive screenings).

Within the Preventive Screening domain, two of four (50.0 percent) of DHMP's rates and all of RMHP Prime's rates fell below the 25th percentile, demonstrating several opportunities to ensure women receive appropriate screenings. Of note, DHMP's rates for *Chlamydia Screening in Women—Total* and *Non-Recommended Cervical Cancer Screening in Adolescent Females* were at or above the 75th percentile, indicating strong performance for DHMP in these two measures. The MCOs and the Department should focus efforts on identifying the factors contributing to the low rates for *Breast Cancer Screening* and *Cervical Cancer Screening* and implement improvement strategies to increase these screening rates. This may include the MCOs following up with providers when members are overdue for a screening or working with providers to send reminders to members about scheduling an appointment.

Mental/Behavioral Health

Within the Mental/Behavioral Health domain, both MCOs demonstrated areas of strength related to managing antidepressant medication. DHMP and RMHP Prime were at or above the 50th percentile for both the *Antidepressant Medication Management—Effective Acute Phase Treatment* and *Effective Continuation Phase Treatment* measure indicators. DHMP fell below the 50th percentile for the *Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase*, and *Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total* and *Blood Glucose Testing—Total* measure indicators; and RMHP Prime fell below the 50th percentile for the *Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total* and *Blood Glucose and Cholesterol Testing—Total* measure indicators. The MCOs and the Department should identify the issues that contribute to low rates of medication monitoring (e.g., the need for improved provider training or community outreach and education) and implement strategies that focus on improving appropriate monitoring of members using medications.

Living With Illness

For the Living With Illness domain, only three of 13 (23.1 percent) of DHMP and RMHP Prime's measure indicator rates were at or above the 50th percentile. Both MCOs demonstrated opportunities to improve the care management of members with diabetes, as evidenced by the low rates of testing for HbA1c levels and retinal disease, along with the low prescribing rates of statin medication. Further, the MCOs indicated improvement is needed related to the medication management for members with other chronic conditions (e.g., cardiovascular disease, asthma, COPD). The MCOs and the Department should focus efforts on identifying the factors contributing to the low rates for these measures (e.g., are the barriers related to accessing outpatient care and pharmacies; or the need for provider training, investigation of prescribing patterns, or improved community outreach and education) and implement strategies to improve the care for members with chronic conditions.

Of note, rates for both MCOs were at or above the 50th percentile for the *Statin Therapy for Patients With Diabetes—Statin Adherence 80%* measure indicator and *Use of Imaging Studies for Low Back Pain* measure.

Antibiotic Stewardship

For the Antibiotic Stewardship domain, six of seven (85.7 percent) of DHMP's measure rates and two of seven (28.6 percent) of RMHP Prime's measure rates were at or above the 50th percentile.

Of note, DHMP met or exceeded the 90th percentile for five of seven (71.4 percent) measure rates in this domain: *Appropriate Treatment for Upper Respiratory Infection—Total*; *Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total*; and *Antibiotic Utilization—All Ages—Average Scripts PMPY for Antibiotics of Concern—Total*, *Average Scripts for PMPY for Antibiotics—Total*, and *Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total*. Performance ratings for *Antibiotic Utilization* are displayed for information only; the rates do not indicate the quality and timeliness of, or access to, care and services.

Opioids

For the Opioids domain, five of seven (71.4 percent) of DHMP's measure indicator rates and four of seven (57.1 percent) of RMHP Prime's measure indicator rates were at or above the 50th percentile. RMHP Prime's rates for *Use of Opioids From Multiple Providers—Multiple Pharmacies* and *Multiple Prescribers and Multiple Pharmacies* were at or above the 90th percentile and *Use of Opioids From Multiple Providers—Multiple Prescribers* was at or above the 75th percentile. The MCOs and the Department should focus efforts on identifying factors contributing to opioid use and implement strategies to improve the care for members receiving opioids for chronic pain.

Use of Services

For the *Plan All-Cause Readmissions* measure, DHMP reported an observed readmissions rate approximately 2 percentage points higher than RMHP Prime's observed readmissions rate. DHMP had greater than expected readmissions, based on its observed-to-expected (O/E) ratio, while RMHP Prime had fewer than expected readmissions, based on its O/E ratio.

For the remaining *Use of Services* reported rates for the MCOs and the Colorado Medicaid weighted average for the Use of Services domain, demographic and clinical characteristics of the population were not considered; therefore, HSAG did not draw conclusions regarding performance based on the reported utilization results for *Ambulatory Care* and *Inpatient Utilization—General Hospital/Acute Care* measures. Nonetheless, combined with other performance metrics, the MCOs' and Colorado Medicaid weighted average utilization results provide additional information that MCOs may use to assess barriers or patterns of utilization when evaluating improvement interventions.

Limitations and Considerations

- RMHP Prime provides services only to adults who reside in select counties (i.e., Garfield, Gunnison, Mesa, Montrose, Pitkin, and Rio Blanco counties) and qualify for Medicaid, and a small number of children who reside in these counties and qualify for Medicaid due to disability. As a result of these changes, HSAG recommends that readers exercise caution when comparing RMHP Prime’s rates in this report to other MCOs’ rates, benchmarks, and historical rates reported for RMHP.
- Since all HEDIS MY 2020 measures were reported using the administrative methodology according to the Department’s direction, MCOs that were able to obtain supplemental data or capture more complete data will generally report higher rates when using the administrative methodology. As a result, the rates presented in this report for measures with a hybrid option may be more representative of data completeness rather than a measure of performance.
- In Colorado, behavioral health services provided in FY 2020–2021 were carved out (i.e., provided by the RAEs, but not the RAEs’ MCO capitation initiatives). Therefore, this carve-out should be considered when reviewing the MCO rates for behavioral health measures.

Introduction

The reader's guide is designed to provide supplemental information to the reader that may aid in the interpretation and use of the results presented in this report.

Medicaid Managed Care Organization Names

Table 2-1 presents the Medicaid MCOs discussed within this report and their corresponding abbreviations.

Table 2-1—2021 Medicaid MCO Names and Abbreviations

Medicaid MCO Name	Abbreviation
Denver Health Medical Plan	DHMP
Rocky Mountain Health Plans Medicaid Prime	RMHP Prime

Summary of HEDIS MY 2020 Measures

Within this report, HSAG presents the MCOs' and statewide performance on HEDIS measures selected by the Department for HEDIS MY 2020. The HEDIS measures selected by the Department were grouped into the following domains of care: Pediatric Care, Access to Care and Preventive Screening, Mental/Behavioral Health, Living With Illness, Antibiotic Stewardship, Opioids, and Use of Services. While performance is reported primarily at the measure indicator level, grouping these measures into domains encourages the MCOs and the Department to consider the measures as a whole rather than in isolation and to develop the strategic changes required to improve overall performance.

Table 2-2 shows the selected HEDIS MY 2020 measures and measure indicators that are presented within this report as well as the corresponding domains of care. Additional measure indicator rates are displayed within the appendices for more granular definitions of MCO performance for select measures. For example, the *Total* rates for *Adults' Access to Preventive/Ambulatory Health Services* are displayed in the Executive Summary and Section 4 of this report to provide an overall understanding of plan and statewide performance associated with access to care for adults ages 20 and older. *Adults' Access to Preventive/Ambulatory Health Services* rates for *Ages 20 to 44*, *Ages 45 to 64*, and *Ages 65 and Older* are presented along with the *Total* in the appendices.

Table 2-2—HEDIS MY 2020 Selected Measures

Performance Measures
Pediatric Care
<i>Childhood Immunization Status—Combinations 2–10</i>
<i>Immunizations for Adolescents—Combination 1 (Meningococcal, Tdap) and Combination 2 (Meningococcal, Tdap, HPV)</i>
<i>Well-Child Visits in the First 30 Months of Life—Well-Child Visits in the First 15 Months—Six or More Well-Child Visits and Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits</i>
<i>Child and Adolescent Well-Care Visits—Total</i>
<i>Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—BMI Percentile Documentation—Total, Counseling for Nutrition—Total, and Counseling for Physical Activity—Total</i>
Access to Care and Preventive Screening
Access to Care
<i>Prenatal and Postpartum Care—Timeliness of Prenatal Care and Postpartum Care</i>
<i>Adults' Access to Preventive/Ambulatory Health Services—Total</i>
Preventive Screening
<i>Chlamydia Screening in Women—Total</i>
<i>Breast Cancer Screening</i>
<i>Cervical Cancer Screening</i>
<i>Non-Recommended Cervical Cancer Screening in Adolescent Females</i>
Mental/Behavioral Health
<i>Antidepressant Medication Management—Effective Acute Phase Treatment and Effective Continuation Phase Treatment</i>
<i>Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase and Continuation and Maintenance Phase</i>
<i>Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total, Cholesterol Testing—Total, and Blood Glucose and Cholesterol Testing—Total</i>
Living With Illness
<i>Persistence of Beta-Blocker Treatment After a Heart Attack</i>
<i>Comprehensive Diabetes Care—HbA1c Testing, HbA1c Poor Control (>9.0%), HbA1c Control (<8.0%), Eye Exam (Retinal) Performed, and Blood Pressure Control (<140/90 mm Hg)</i>
<i>Statin Therapy for Patients With Diabetes—Received Statin Therapy and Statin Adherence 80%</i>
<i>Statin Therapy for Patients With Cardiovascular Disease—Received Statin Therapy—Total and Statin Adherence 80%—Total</i>

Performance Measures
<i>Use of Imaging Studies for Low Back Pain</i>
<i>Pharmacotherapy Management of COPD Exacerbation—Systemic Corticosteroid and Bronchodilator</i>
<i>Asthma Medication Ratio—Total</i>
<i>Use of Spirometry Testing in the Assessment and Diagnosis of COPD</i>
Antibiotic Stewardship
<i>Appropriate Testing for Pharyngitis—Total</i>
<i>Appropriate Treatment for Upper Respiratory Infection—Total</i>
<i>Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total</i>
<i>Antibiotic Utilization—Total—Average Scripts PMPY for Antibiotics, Average Days Supplied per Antibiotic Script, Average Scripts PMPY for Antibiotics of Concern, and Percentage of Antibiotics of Concern of All Antibiotic Scripts</i>
Opioids
<i>Use of Opioids at High Dosage</i>
<i>Use of Opioids From Multiple Providers—Multiple Prescribers, Multiple Pharmacies, and Multiple Prescribers and Multiple Pharmacies</i>
<i>Pharmacotherapy for Opioid Use Disorder—Total</i>
<i>Risk of Continued Opioid Use—At Least 15 Days Covered—Total and At Least 31 Days Covered—Total</i>
Use of Services
<i>Ambulatory Care—Outpatient Visits—Total and ED Visits—Total</i>
<i>Inpatient Utilization—General Hospital/Acute Care—Total Discharges per 1,000 Member Month (Total Inpatient), Total Average Length of Stay (Total Inpatient), Total Discharges per 1,000 Member Months (Medicine), Total Average Length of Stay (Medicine), Total Discharges per 1,000 Member Months (Surgery), Total Average Length of Stay (Surgery), Total Discharges per 1,000 Member Months (Maternity), and Total Average Length of Stay (Maternity)</i>
<i>Plan All-Cause Readmissions—Index Total Stays—Observed Readmissions and O/E Ratio</i>

Data Collection Method

According to the Department's guidance, all measure rates presented in this report for the MCOs are based on administrative data only. The administrative method requires that the MCOs identify the eligible population (i.e., the denominator) using administrative data, derived from claims and encounters. In addition, the numerator(s), or services provided to the members in the eligible population, are derived solely using administrative and supplemental data collected during the reporting year. Supplemental data include immunization registry data, medical record review data from the prior year, etc. Medical records collected during the current year cannot be used to retrieve information. When using the administrative method, the entire eligible population becomes the denominator, and sampling is not allowed. In contrast, the hybrid method extracts a systematic sample of members and utilizes data from the medical record, along with administrative and supplemental data. The hybrid method generally produces higher rates because the completeness of documentation in the medical record exceeds what is typically captured in administrative data; however, the medical record review component of the hybrid method is considered more labor intensive. The data collection or calculation methods (i.e., administrative, hybrid) for each measure are described in detail by NCQA in the *HEDIS MY 2020 Volume 2 Technical Specifications*. Of note, both MCOs reported select measure rates for HEDIS MY 2020 using the administrative and hybrid methods. The hybrid rates are included in Appendix D.

Data Sources and Measure Audit Results

MCO-specific performance displayed in this report was based on data elements obtained from the IDSS files supplied by the MCOs. Prior to HSAG's receipt of the MCOs' IDSS files, all the MCOs were required by the Department to have their HEDIS MY 2020 results examined and verified through an NCQA HEDIS Compliance Audit.

Through the audit process, each measure indicator rate reported by an MCO was assigned an NCQA-defined audit result. HEDIS MY 2020 measure indicator rates received one of seven predefined audit results: *Reportable (R)*, *Small Denominator (NA)*, *Biased Rate (BR)*, *No Benefit (NB)*, *Not Required (NQ)*, *Not Reported (NR)*, and *Unaudited (UN)*. The audit results are defined in the Glossary section.

Rates designated as *NA*, *BR*, *NB*, *NQ*, *NR*, or *UN* are not presented in this report. All measure indicator rates that are presented in this report have been verified as an unbiased estimate of the measure by the respective HEDIS auditor. Please see Appendix C for additional information on NCQA's Information System (IS) standards and the audit findings for the Medicaid MCOs.

Calculation of Statewide Averages

To calculate the statewide weighted averages, HSAG collected the audited results, numerator, denominator, rate, audit designation, and eligible population data elements reported in the files submitted by the MCOs for all measures. Given that the MCOs varied in membership size and demographic configuration, the statewide rate for a measure was the average rate weighted by each MCO's eligible population for the measure. Weighting the rates by the eligible population sizes ensured that the rate for an MCO with 125,000 members, for example, had a greater impact on the overall Colorado Medicaid statewide weighted average rate than the rate for an MCO with only 10,000 members. For the MCO rates reported as *NA* due to small denominators, the numerators, denominators, and eligible populations were still included in the calculations of the statewide weighted average. However, MCO rates reported as *BR*, *NB*, *NQ*, *NR*, or *UN* were excluded from the statewide weighted average calculation.

Evaluating Measure Results

National Benchmark Comparisons

Benchmark Data

HEDIS MY 2020 MCO rates and the statewide weighted average rates were compared to the corresponding national HEDIS benchmarks, which are expressed in percentiles of national performance for each measure. For comparative purposes, HSAG used the most recent data available from NCQA at the time of the production of this report to evaluate the HEDIS MY 2020 rates: NCQA's Quality Compass national Medicaid HMO percentiles for HEDIS MY 2019.

For some measures for which lower rates indicate better performance (e.g., *Ambulatory Care—ED Visits* and *Antibiotic Utilization—Total*), HSAG inverted the percentiles to be consistently applied to these measures as with the other HEDIS measures. For example, the 10th percentile (a lower rate) was inverted to become the 90th percentile, indicating better performance.

Additionally, benchmarking data (i.e., NCQA Quality Compass and NCQA Audit Means and Percentiles) are the proprietary intellectual property of NCQA; therefore, this report does not display any actual percentile values. As a result, rate comparisons to benchmarks are illustrated within this report using proxy displays.

Figure Interpretation

For each performance measure indicator presented in this report, the horizontal bar graph figure positioned on the right side of the page presents each MCO's performance against the HEDIS MY 2020 Colorado Medicaid weighted average (i.e., the bar shaded darker blue) as well as the 50th percentile (i.e., the bar shaded gray), and the high (i.e., the bar shaded green) and low (i.e., the bar shaded red) performance levels.

For most performance measures, the high performance level (HPL) corresponds to the 90th percentile and the low performance level (LPL) corresponds to the 25th percentile. For measures such as *Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%)*, in which lower rates indicate better performance, the 10th percentile (rather than the 90th percentile) and the 75th percentile (rather than the 25th percentile) are considered the HPL and LPL, respectively. An example of the horizontal bar graph figure for one measure is shown in Figure 2-1.

Figure 2-1—Sample Horizontal Bar Graph Figure

Percentile Rankings and Star Ratings

In addition to illustrating MCO-specific and statewide performance via side-by-side comparisons to national percentiles, benchmark comparisons are denoted within this report using the percentile ranking performance levels and star ratings defined below in Table 2-3.

Table 2-3—Percentile Ranking Performance Levels

Star Rating	Percentile Ranking	Performance Level
★★★★★	≥90th	At or above the 90th percentile
★★★★	75th–89th	At or above the 75th percentile but below the 90th percentile
★★★	50th–74th	At or above the 50th percentile but below the 75th percentile
★★	25th–49th	At or above the 25th percentile but below the 50th percentile
★	10th–24th	At or above the 10th percentile but below the 25th percentile
	<10th	Below the 10th percentile

One measure in the Antibiotic Stewardship measure domain and some measures in the Use of Services measure domain are designed to capture the frequency of services provided. Higher or lower rates for these measures do not necessarily indicate better or worse performance. These rates and the associated percentile rankings are provided for informational purposes only.

Of note, MCO-specific and statewide rates were rounded to the second decimal place before performance levels were determined. As HSAG assigned percentile rankings and star ratings, an em dash (—) was presented to indicate when the measure did not have an applicable benchmark; therefore, the performance level for these measures was not presented in this report.

Trend Analysis

In addition to the percentile ranking and star rating results, HSAG also compared HEDIS MY 2020 Colorado Medicaid weighted averages and MCO-specific rates to the corresponding HEDIS MY 2019 rates. HSAG also evaluated the extent of changes observed in the rates between years. Year-over-year performance comparisons are based on the Chi-square test of statistical significance with a *p* value <0.05. However, caution should be exercised when interpreting results of the significance testing, given that statistically significant changes may not necessarily be clinically significant. To limit the impact of this, a change will not be indicated as statistically significant unless the change was at least 3 percentage points. Note that statistical testing could not be performed on the utilization-based measures under the Antibiotic Stewardship and Use of Services domains given that variances were not available in the IDSS for HSAG to use for statistical testing.

In general, results from statistical significance testing provide information on whether a change in the rate may suggest improvement or decline in performance. Throughout the report, references to “significant” changes in performance are noted; these instances refer to statistically significant differences between performance from HEDIS MY 2019 to HEDIS MY 2020. Changes (regardless of whether they are significant) could be related to the following factors independent of any effective interventions designed to improve the quality of care:

- Substantial changes in measure specifications. The “Measure Changes Between HEDIS MY 2019 and HEDIS MY 2020” section lists measures with specification changes made by NCQA.

- Substantial changes in membership composition within the MCO.

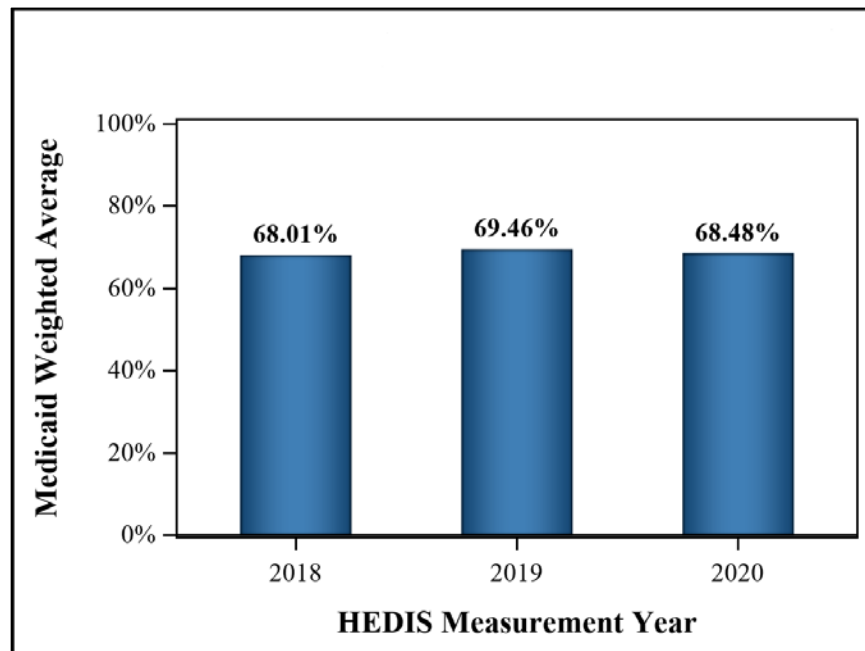

Similarly, caution should be exercised when comparing rates calculated administratively to national benchmarks that were calculated using the hybrid methodology.

Figure Interpretation

Within the Executive Summary and Appendix B of this report, performance measure indicator rates and results of significance testing between HEDIS MY 2019 and HEDIS MY 2020 are presented in tabular format. HEDIS MY 2020 rates shaded green with one caret (^) indicate a significant improvement in performance from the previous year. HEDIS MY 2020 rates shaded red with two carets (^) indicate a significant decline in performance from the previous year.

For each performance measure indicator presented in this report, the vertical bar graph figure positioned on the left side of the page presents the HEDIS MY 2018, HEDIS MY 2019, and HEDIS MY 2020 Colorado Medicaid weighted averages, with significance testing performed between the HEDIS MY 2019 and HEDIS MY 2020 weighted averages. Within these figures, HEDIS MY 2020 rates with one caret (^) indicate a significant improvement in performance from HEDIS MY 2019. HEDIS MY 2020 rates with two carets (^) indicate a significant decline in performance from HEDIS MY 2019. An example of the vertical bar graph figure for measure indicators reported is shown in Figure 2-2.

Figure 2-2—Sample Vertical Bar Graph Figure

Measure Changes Between HEDIS MY 2019 and HEDIS MY 2020

The following is a list of measures with technical specification changes that NCQA announced for HEDIS MY 2020.^{2-1,2-2} These changes may have an effect on the HEDIS MY 2020 rates that are presented in this report.

Childhood Immunization Status

- Added a requirement that live attenuated influenza vaccine (LAIV) (influenza) vaccination must occur on the child's second birthday.

Well-Child Visits in the First 30 Months of Life

- Revised the measure name to *Well-Child Visits in the First 30 Months of Life*.
- Retired the 0, 1, 2, 3, 4 and 5 well-child visit rates.
- Added Rate 2 for children who turned 30 months old during the measurement year and had two or more well-child visits in the last 15 months.
- Removed the Hybrid Data Collection Method.
- Removed the telehealth exclusion.
- Revised the Data Elements for Reporting table.
- Revised the Ages criteria in the *Rules for Allowable Adjustments* section to only allow ranges within the specified age range of the measure.

Child and Adolescent Well-Care Visits

- This measure is a combination measure that replaces the former *Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life* and *Adolescent Well-Care Visits* HEDIS measures.
- Added members age 7 to 11 years.
- Added age stratifications.
- Removed the Hybrid Data Collection Method.
- Removed the telehealth exclusion.
- Revised the Data Elements for Reporting table.
- Revised the Ages criteria in the *Rules for Allowable Adjustments* section to only allow ranges within the specified age range.

²⁻¹ National Committee for Quality Assurance. *HEDIS® Measurement Year 2020 & Measurement Year 2021, Volume 2: Technical Specifications for Health Plans*. Washington, DC: NCQA Publication, 2020.

²⁻² National Committee for Quality Assurance. *HEDIS® Measurement Year (MY) 2020, Volume 2: Technical Update*. Washington, DC: NCQA Publication, 2020.

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents

- Removed the exclusion of member-reported biometric values (body mass index, height, and weight).
- Added a *Note* to clarify that services rendered during a telephone visit, e-visit, or virtual check-in meet criteria for the *Counseling for Nutrition* and *Counseling for Physical Activity* indicators.

Prenatal and Postpartum Care

- Revised the definition of “last enrollment segment.”
- Clarified that visits that occur prior to the enrollment start date (during the pregnancy) meet criteria.
- Added telephone visits (Telephone Visits Value Set), e-visits, and virtual check-ins (Online Assessments Value Set) to the *Timeliness of Prenatal Care* rate (administrative specification) and clarified in the *Notes* that services provided via telephone, e-visit, or virtual check-in are eligible for use in reporting both rates.
- Updated the Hybrid Specification to indicate that sample size reduction is allowed using only the current year’s administrative rate for MY 2020; for MY 2021, organizations may reduce the sample size using the current year’s administrative rate or the prior year’s audited, product line-specific rate.
- Added examples of “pregnancy diagnosis” in the Hybrid Specification of the *Timeliness of Prenatal Care* indicator.

Breast Cancer Screening

- Added palliative care as a required exclusion.
- Added telephone visits, e-visits, and virtual check-ins to the advanced illness exclusion.
- Added Donepezil-memantine to the “Dementia combinations” description in the Dementia Medications List.
- Added the “Number of required exclusions” data element to the Data Elements for Reporting table.
- Added guidance adjusting required exclusions criteria in the *Rules for Allowable Adjustments* section.

Cervical Cancer Screening

- Added palliative care as a required exclusion.
- Updated the Hybrid Specification to indicate that sample size reduction is allowed.
- Clarified that documentation of “vaginal hysterectomy” meets criteria for documentation of hysterectomy with no residual cervix (optional exclusion).
- Added the “Number of required exclusions” data element to the Data Elements for Reporting table.
- Added guidance adjusting required exclusions criteria in the *Rules for Allowable Adjustments* section.

Antidepressant Medication Management

- Added e-visits and virtual check-ins to the event/diagnosis (step 2 required exclusion).

Follow-Up Care for Children Prescribed ADHD Medication

- Clarified in step 4 (of both rates) when the diagnosis must be on the discharge claim.
- Added telehealth and telephone visits to the Rate 1 numerator.
- Added e-visits and virtual check-ins to the Rate 2 numerator and modified the telehealth restrictions.

Metabolic Monitoring for Children and Adolescents on Antipsychotics

- Clarified in the *Rules for Allowable Adjustments of HEDIS* section that when adjusting ages, the upper age range may be expanded or there may be no upper age limit.

Persistence of Beta-Blocker Treatment After a Heart Attack

- Added telephone visits, e-visits, and virtual check-ins to the advanced illness exclusion.
- Added Donepezil-memantine to the “Dementia combinations” description in the Dementia Medications List.

Comprehensive Diabetes Care

- Retired the “HbA1c control (<7.0%) for a selected population” indicator.
- Retired the “Medical Attention for Nephropathy” indicator for the commercial and Medicaid product lines.
- Clarified in the measure description that organizations must use the same data collection method for the HbA1c testing and control indicators (this information was previously included in the General Guidelines).
- Removed the restriction that only one of the two visits with a diabetes diagnosis be an outpatient telehealth, telephone visit, e-visit, or virtual check-in when identifying the event/diagnosis.
- Added telephone visits, e-visits, and virtual check-ins to the advanced illness exclusion.
- Added palliative care as a required exclusion.
- Deleted the HbA1c Level 7.0–9.0 Value Set.
- Updated the Administrative Specification logic and value sets for the Eye Exam indicator.
- Added telephone visits, e-visits, and virtual check-ins to the Administrative Specification as appropriate settings for blood pressure (BP) readings.
- Added Nebivolol-valsartan to the “Antihypertensive combinations” description in the Angiotensin-Converting Enzyme (ACE) Inhibitor and Angiotensin II Receptor Blockers (ARB) Medications List.
- Added Donepezil-memantine to the “Dementia combinations” description in the Dementia Medications List.

- Added polycystic ovarian syndrome to the optional exclusions.
- Added a *Note* to the *Denominator—Sample Size Reduction* section in the Hybrid Specification.
- Clarified that documentation of “HB1c” meets criteria for the Hybrid Specification of the HbA1c testing indicator.
- Clarified that eye exam results read by a system that provides an artificial intelligence (AI) interpretation meet criteria.
- Removed the requirements for remote monitoring devices to allow BPs taken by any digital device.
- Removed the exclusion of BP readings reported or taken by the member.
- Revised the Data Elements for Reporting tables.
- In the *Rules for Allowable Adjustments* section, clarified that the required exclusions criteria may be adjusted with limits.

Statin Therapy for Patients With Diabetes

- Added polycystic ovarian syndrome to the optional exclusions.
- Removed the restriction that only one of the two visits with a diabetes diagnosis be an outpatient telehealth, telephone visit, e-visit, or virtual check-in when identifying the event/diagnosis.
- Removed the restriction that only one of the two visits with an ischemic vascular disease (IVD) diagnosis be an outpatient telehealth, telephone visit, e-visit, or virtual check-in when identifying the event/diagnosis, step 2 required exclusions.
- Added telephone visits, e-visits, and virtual check-ins to the advanced illness exclusion.
- Added palliative care as a required exclusion.
- Added Donepezil-memantine to the “Dementia combinations” description in the Dementia Medications List.
- Added Pitavastatin 1 mg to the Pitavastatin Moderate Intensity Medications List and deleted the Pitavastatin Low Intensity Medications List.
- In the *Rules for Allowable Adjustments* section, clarified that the required exclusions criteria may be adjusted with limits.

Statin Therapy for Patients With Cardiovascular Disease

- Removed the restriction that only one of the two visits with an IVD diagnosis be an outpatient telehealth, telephone visit, e-visit, or virtual check-in when identifying the event/diagnosis.
- Added telephone visits, e-visits, and virtual check-ins to the advanced illness exclusion.
- Added palliative care as a required exclusion.
- Added Donepezil-memantine to the “Dementia combinations” description in the Dementia Medications List.
- In the *Rules for Allowable Adjustments* section, clarified that the required exclusions criteria may be adjusted with limits.

Use of Imaging Studies for Low Back Pain

- In the *Rules for Allowable Adjustments* section, clarified that the numerator criteria may be adjusted with limits.

Pharmacotherapy Management of COPD Exacerbation

- Moved the instructions from step 1 to step 2 to exclude ED visits that result in an inpatient stay.
- Added Fluticasone furoate-umeclidinium-vilanterol to the “Bronchodilator combinations” description in the Bronchodilator Medications List.
- Added Formoterol-acclidinium to the “Bronchodilator combinations” description in the Bronchodilator Medications List.

Asthma Medication Ratio

- Removed the restriction that only three of the four visits with an asthma diagnosis be an outpatient telehealth, telephone visit, e-visit, or virtual check-in when identifying the event/diagnosis.
- Clarified in step 1 when the diagnosis must be on the discharge claim.
- Added Dupilumab to the “Anti-interleukin-4” description in the Dupilumab Medications List.
- Clarified National Drug Code (NDC) code mapping requirements in the *Notes*.

Use of Spirometry Testing in the Assessment and Diagnosis of COPD

- Added telephone visits, e-visits, and virtual check-ins to step 1 of the event/diagnosis and removed the requirement to exclude telehealth.
- Updated the instructions for excluding visits that result in an inpatient stay (step 2).

Appropriate Testing for Pharyngitis

- Updated the instructions for excluding visits that result in an inpatient stay.
- Deleted step 8; this step is unnecessary because these members are removed in step 5.

Appropriate Treatment for Upper Respiratory Infection

- Updated the instructions for excluding visits that result in an inpatient stay.
- In the *Rules for Allowable Adjustments* section, clarified that the numerator criteria may be adjusted with limits.

Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis

- Updated the instructions for excluding visits that result in an inpatient stay.
- In the *Rules for Allowable Adjustments* section, clarified that the numerator criteria may be adjusted with limits.

Use of Opioids at High Dosage

- Clarified the instructions for calculating covered days for the numerator.
- Clarified the instructions for treatment period.
- Added palliative care as a required exclusion.
- Added medication lists for acetaminophen benzhydrocodone, aspirin codeine, and codeine phosphate.
- In the *Rules for Allowable Adjustments* section, clarified that the event/diagnosis, required exclusions and numerator criteria may be adjusted with limits.

Use of Opioids From Multiple Providers

- Added the Aspirin Codeine Medications List, the Codeine Phosphate Medications List, and the Acetaminophen Benzhydrocodone Medications List.
- Clarified the instructions for calculating covered days.
 - In the *Rules for Allowable Adjustments* section, clarified that the event/diagnosis and numerator criteria may be adjusted with limits.

Risk of Continued Opioid Use

- Added the Aspirin Codeine Medications List, the Codeine Phosphate Medications List, and the Acetaminophen Benzhydrocodone Medications List.
- Clarified the instructions for calculating covered days.
- Added palliative care as a required exclusion.
- In the *Rules for Allowable Adjustments* section, clarified that the event/diagnosis, required exclusions, and numerator criteria may be adjusted with limits.

Pharmacotherapy for Opioid Use Disorder

- Added value sets to the Opioid Use Disorder Treatment Medications table.
- Added the *Rules for Allowable Adjustments of HEDIS* section.

Plan All-Cause Readmissions

- Revised the measure description.
- Added a *Note* to the definition of “plan population” to clarify that it should be used as a denominator for the outlier rate.
- Removed “Risk Adjustment Tables” from the Definitions.
- Replaced references to “Table HCC-Surg” with references to the “Surgery Procedure Value Set” in the *Risk Adjustment Determination* section.

- Replaced references to “Table PCR-DischCC” with “Table CC_Mapping” in the *Risk Adjustment Determination* section.
- Updated the *Note* in the *Risk Adjustment Weighting* section for Index Hospital Stay (IHS) that are discharged or transferred to skilled nursing care.
- Removed references to specific risk weight tables in the *Risk Adjustment Weighting* section.
- Clarified rounding rules in step 8 of the *Risk Adjustment Weighting* section.
- Revised the data element tables to separate the Medicaid and commercial product lines from the Medicare product line.

Glossary

Table 2-4 provides definitions of terms and acronyms used through this report.

Table 2-4—Definition of Terms Used in Tables and Graphs

Term	Description
ADHD	Attention-deficit/hyperactivity disorder.
Audit Result	The HEDIS auditor’s final determination, based on audit findings, of the appropriateness of the MCO to publicly report its HEDIS measure rates. Each measure indicator rate included in the HEDIS audit receives an audit result of <i>Reportable (R)</i> , <i>Small Denominator (NA)</i> , <i>Biased Rate (BR)</i> , <i>No Benefit (NB)</i> , <i>Not Required (NQ)</i> , <i>Not Reported (NR)</i> , and <i>Unaudited (UN)</i> .
BMI	Body Mass Index.
BR	Biased Rate: indicates that the MCO’s reported rate was invalid; therefore, the rate was not presented.
Data Completeness	The degree to which occurring services/diagnoses appear in the MCO’s administrative data systems.
COVID-19	Coronavirus disease 2019.
CVX	Vaccine administered codes.
Denominator	The number of members who meet all criteria specified in a measure for inclusion in the eligible population. When using the administrative method, the entire eligible population becomes the denominator. When using the hybrid method, a sample of the eligible population becomes the denominator.
DTaP	Diphtheria, tetanus toxoids, and acellular pertussis.
ED	Emergency department.
EDD	Estimated date of delivery.
EDI	Electronic data interchange, the direct computer-to-computer transfer of data.
Electronic Data	Data that are maintained in a computer environment versus a paper environment.

Term	Description
Encounter Data	Billing data received from a capitated provider. (Although the MCO does not reimburse the provider for each encounter, submission of encounter data allows the MCO to collect the data for future HEDIS reporting.)
EPSDT	Early and Periodic Screening, Diagnostic, and Treatment benefit.
EQR	External quality review.
Exclusions	Conditions outlined in HEDIS measure specifications that describe when a member should not be included in the denominator.
Final Audit Report	Following the MCO's completion of any corrective actions, an auditor completes the final audit report, documenting all final findings and results of the HEDIS audit. The final audit report includes a summary report, IS capabilities assessment, medical record review validation findings, measure results, and auditor's audit opinion (the final audit statement).
Flu	Influenza.
FY	Fiscal year.
HEDIS	The Healthcare Effectiveness Data and Information Set (HEDIS), developed and maintained by NCQA, is a set of performance measures used to assess the quality of care provided by managed health care organizations.
HEDIS Repository	The data warehouse where all data used for HEDIS reporting are stored.
HepA	Hepatitis A.
HepB	Hepatitis B.
HiB	Haemophilus influenzae type B.
HMO	Health maintenance organization.
HPL	High performance level (For most performance measures, the Department defined the HPL as the most recent 90th national Medicaid percentile. For measures such as <i>Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%)</i> , in which lower rates indicate better performance, the 10th percentile [rather than the 90th percentile] is considered the HPL.)
HPV	Human papillomavirus.
hrHPV	High-risk human papillomavirus.
HSAG	Health Services Advisory Group, Inc., the State's external quality review organization.
Hybrid Measures	Measures that can be reported using the hybrid method.
IDSS	The Interactive Data Submission System, a tool used to submit data to NCQA.
IPV	Inactivated polio virus.
IS	Information System; an automated system for collecting, processing, and transmitting data.

Term	Description
IS Standards	Information System (IS) standards, an NCQA-defined set of standards that measure how an organization collects, stores, analyzes, and reports medical, customer service, member, practitioner, and vendor data. ²⁻³
IT	Information technology; the technology used to create, store, exchange, and use information in its various forms.
LPL	Low performance level. (For most performance measures, the Department defined the LPL as the most recent 25th national Medicaid percentile. For measures such as <i>Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%)</i> , in which lower rates indicate better performance, the 75th percentile [rather than the 25th percentile] is considered the LPL).
Medicaid Percentiles	The NCQA national percentiles for each HEDIS measure for the Medicaid product line used to compare the MCO's performance and assess the reliability of the MCO's HEDIS rates.
MME	Morphine milligram equivalent
MMR	Measles, mumps, and rubella.
NA	<p>Small Denominator; indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate, resulting in an NA designation.</p> <ul style="list-style-type: none"> • For effectiveness of care (EOC) and EOC-like measures, when the denominator is fewer than 30. • For utilization measures that count member months, when the denominator is fewer than 360 member months. • For all risk-adjusted utilization measures, when the denominator is fewer than 150.
NB	No Benefit; indicates that the required benefit to calculate the measure was not offered.
NCQA	The National Committee for Quality Assurance (NCQA) is a not-for-profit organization that assesses, through accreditation reviews and standardized measures, the quality of care provided by managed health care delivery systems; reports results of those assessments to employers, consumers, public purchasers, and regulators; and ultimately seeks to improve the health care provided within the managed care industry.
NR	Not Reported; indicates that the MCO chose not to report the required HEDIS measure indicator rate. This designation was assigned to rates during previous reporting years to indicate one of the following designations: The MCO chose not to report the required measure indicator rate, or the MCO's reported rate was invalid, therefore, the rate was not presented.

²⁻³ National Committee for Quality Assurance. HEDIS Compliance Audit Standards, Policies and Procedures, Volume 5. Washington D.C.

Term	Description
Numerator	The number of members in the denominator who received all the services as specified in the measure.
NQ	Not Required; indicates that the MCO was not required to report this measure.
OB/GYN	Obstetrician/Gynecologist.
OUD	Opioid use disorder.
PCP	Primary care practitioner.
PCV	Pneumococcal conjugate.
PHE	Public health emergency.
PMPY	Per member per year.
POP	Eligible population.
PPC	Prenatal and Postpartum Care.
Provider Data	Electronic files containing information about physicians such as type of physician, specialty, reimbursement arrangement, and office location.
RV	Rotavirus.
Software Vendor	A third party, with source code certified by NCQA, that contracts with the MCO to write source code for HEDIS measures. (For the measures to be certified, the vendor must submit programming codes associated with the measure to NCQA for automated testing of program logic, and a minimum percentage of the measures must receive a "Pass" or "Pass With Qualifications" designation.)
The Department	The Colorado Department of Health Care Policy and Financing.
UN	Unaudited; indicates that the organization chose to report a measure that is not required to be audited.
URI	Upper respiratory infection.
Quality Compass	NCQA Quality Compass benchmark.
VZV	Varicella zoster virus (chicken pox).

Pediatric Care

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance within the Pediatric Care domain. The Pediatric Care domain encompasses the following measures/indicators:

- *Childhood Immunization Status—Combination 2—Combination 10*
- *Immunizations for Adolescents—Combination 1 (Meningococcal, Tdap) and Combination 2 (Meningococcal, Tdap, HPV)*
- *Well-Child Visits in the First 30 Months of Life—Well-Child Visits in the First 15 Months—Six or More Well-Child Visits and Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits*
- *Child and Adolescent Well-Care Visits—Total*
- *Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—BMI Percentile Documentation—Total, Counseling for Nutrition—Total, and Counseling for Physical Activity—Total*

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Childhood Immunization Status

Childhood Immunization Status measures the percentage of members 2 years of age who received the following vaccinations on or before their second birthday. Table 3-1 displays the different antigens associated with various combinations. Of note, RMHP Prime did not report a rate for any of the *Childhood Immunization Status* indicators because the denominator was too small (<30) to report a rate.

Table 3-1—Combination Vaccinations for Childhood Immunization Status

Combination	Four DTaP	Three IPV	One MMR	Three HiB	Three HepB	One VZV	Four PCV	One HepA	Two or Three RV	Two Flu
<i>Combination 2</i>	✓	✓	✓	✓	✓	✓				
<i>Combination 3</i>	✓	✓	✓	✓	✓	✓	✓			
<i>Combination 4</i>	✓	✓	✓	✓	✓	✓	✓	✓		
<i>Combination 5</i>	✓	✓	✓	✓	✓	✓	✓		✓	
<i>Combination 6</i>	✓	✓	✓	✓	✓	✓	✓			✓
<i>Combination 7</i>	✓	✓	✓	✓	✓	✓	✓	✓	✓	
<i>Combination 8</i>	✓	✓	✓	✓	✓	✓	✓	✓		✓
<i>Combination 9</i>	✓	✓	✓	✓	✓	✓	✓		✓	✓
<i>Combination 10</i>	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

Childhood Immunization Status—Combination 2

Childhood Immunization Status—Combination 2 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, and one VZV.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were below the LPL.

Childhood Immunization Status—Combination 3

Childhood Immunization Status—Combination 3 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, and four PCV.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile.

Childhood Immunization Status—Combination 4

Childhood Immunization Status—Combination 4 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, and one HepA.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile.

Childhood Immunization Status—Combination 5

Childhood Immunization Status—Combination 5 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, and two or three RV.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile.

Childhood Immunization Status—Combination 6

Childhood Immunization Status—Combination 6 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, and two flu.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Childhood Immunization Status—Combination 7

Childhood Immunization Status—Combination 7 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, one HepA, and two or three RV.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile.

Childhood Immunization Status—Combination 8

Childhood Immunization Status—Combination 8 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, one HepA, and two flu.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Childhood Immunization Status—Combination 9

Childhood Immunization Status—Combination 9 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, two or three RV, and two flu.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Childhood Immunization Status—Combination 10

Childhood Immunization Status—Combination 10 measures the percentage of members 2 years of age who received the following vaccines by their second birthday: four DTaP, three IPV, one MMR, three HiB, three HepB, one VZV, four PCV, one HepA, two or three RV, and two flu.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Immunizations for Adolescents—Combination 1 (Meningococcal, Tdap)

Immunizations for Adolescents—Combination 1 (Meningococcal, Tdap) measures the percentage of members 13 years of age who had the following vaccines by their 13th birthday: one dose of meningococcal vaccine, and one Tdap vaccine.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were below the LPL.

Immunizations for Adolescents—Combination 2 (Meningococcal, Tdap, HPV)

Immunizations for Adolescents—Combination 2 (Meningococcal, Tdap, HPV) measures the percentage of members 13 years of age who had the following vaccines by their 13th birthday: one dose of meningococcal vaccine, one Tdap vaccine, and completed the HPV vaccine series.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

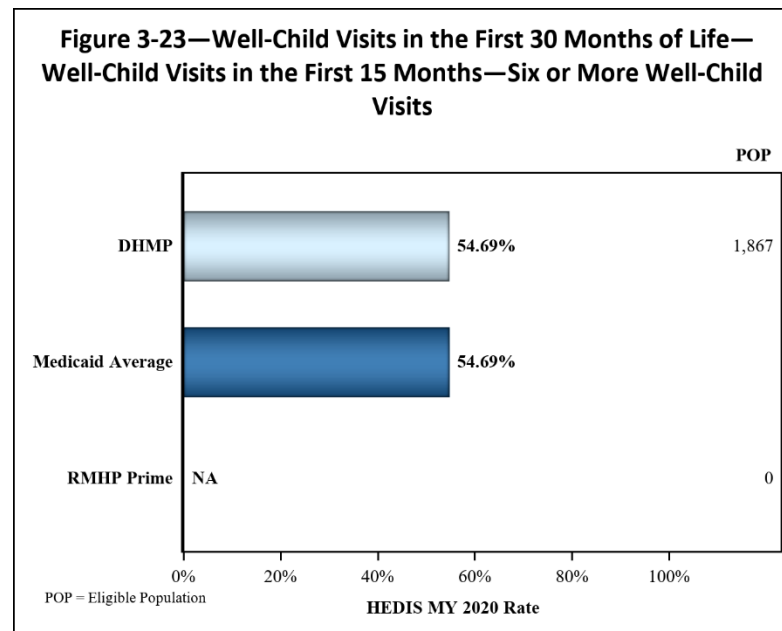

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate. Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Well-Child Visits in the First 30 Months of Life—Well-Child Visits in the First 15 Months—Six or More Well-Child Visits

Well-Child Visits in the First 30 Months of Life—Well-Child Visits in the First 15 Months—Six or More Well-Child Visits measures the percentage of members who turned 15 months of age during the measurement year who received six or more well-child visits on different dates of service with a PCP upon or before turning 15 months of age. Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

DMHP's rate and the Colorado Medicaid weighted average were 54.69 percent in MY 2020.

Well-Child Visits in the First 30 Months of Life—Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits

Well-Child Visits in the First 30 Months of Life—Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits measures the percentage of members who turned 30 months of age during the measurement year who received two or more well-child visits on different dates of service with a PCP between the child turning 15 months of age plus one day and the child turning 30 months of age. This was a new measure rate for MY 2020; therefore, prior years’ rates are not displayed.

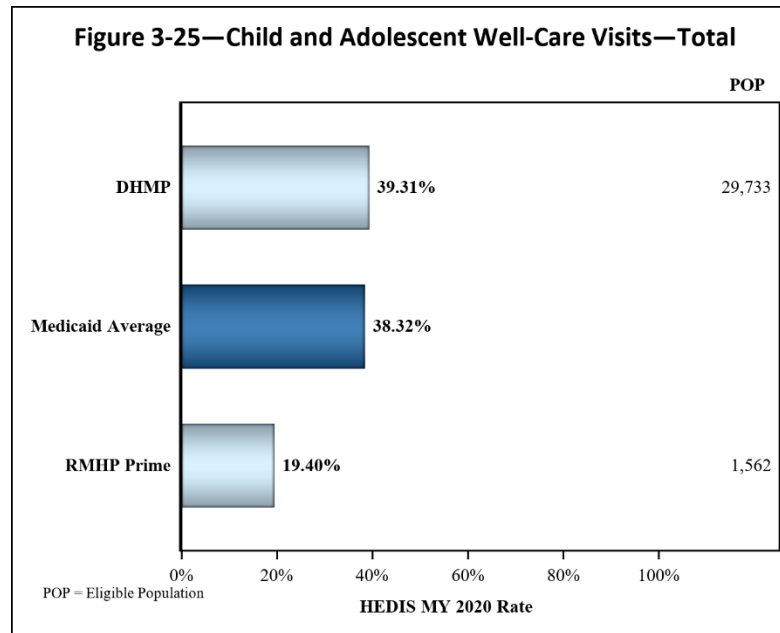

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

The Colorado Medicaid weighted average was 57.22 percent and DHMP’s rate was 57.13 percent in MY 2020.

Child and Adolescent Well-Child Visits—Total

Child and Adolescent Well-Child Visits—Total measures the percentage of members 3 to 21 years of age who had at least one comprehensive well-care visit with a PCP or an OB/GYN practitioner during the measurement year. This measure is a combination measure that replaces the former *Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life* and *Adolescent Well-Care Visits* HEDIS measures. Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed.

MCO performance varied by approximately 20 percentage points.

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—BMI Percentile Documentation—Total

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—BMI Percentile Documentation—Total measures the percentage of members 3 to 17 years of age who had an outpatient visit with a PCP or OB/GYN and had evidence of BMI percentile documentation during the measurement year.

One caret (^) indicates a significant improvement in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly improved from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 60 percentage points.

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents— Counseling for Nutrition—Total

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Counseling for Nutrition—Total measures the percentage of members 3 to 17 years of age who had an outpatient visit with a PCP or OB/GYN and received counseling for nutrition during the measurement year.

One caret (^) indicates a significant improvement in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly improved from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 49 percentage points.

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents— Counseling for Physical Activity—Total

Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents—Counseling for Physical Activity—Total measures the percentage of members 3 to 17 years of age who had an outpatient visit with a PCP or OB/GYN and received counseling for physical activity during the measurement year.

One caret (^) indicates a significant improvement in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly improved from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 69 percentage points.

Summary of Findings and Recommendations

Table 3-2 presents the MCOs’ performance ratings for each measure in the Pediatric Care domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 3-2—Pediatric Care: Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime ¹
Childhood Immunization Status		
Combination 2	★	—
Combination 3	★★	—
Combination 4	★★	—
Combination 5	★★	—
Combination 6	★★★★	—
Combination 7	★★	—
Combination 8	★★★★	—
Combination 9	★★★★	—
Combination 10	★★★★	—
Immunizations for Adolescents		
Combination 1 (Meningococcal, Tdap)	★	—
Combination 2 (Meningococcal, Tdap, HPV)	★★★★	—
Well-Child Visits in the First 30 Months of Life		
Well-Child Visits in the First 15 Months—Six or More Well-Child Visits	—	—
Well-Child Visits for Age 15 Months–30 Months—Two or More Well-Child Visits	—	—
Child and Adolescent Well-Care Visits		
Total	—	—
Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents		
BMI Percentile Documentation—Total	★	★
Counseling for Nutrition—Total	★★	★
Counseling for Physical Activity—Total	★★★★	★

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

— Indicates that a percentile ranking was not determined because the rate was not reportable or there was a break in trending.

Table 3-3 presents a summary of the MCOs’ overall performance for the measures in the Pediatric Care domain. The table shows the number of measures falling into each performance rating.

Table 3-3—Pediatric Care: MCO-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
DHMP	0	1	5	5	3
RMHP Prime	0	0	0	0	3

Performance for the MCOs in the Pediatric Care domain demonstrated opportunities for improvement, with 8 of 14 (57.1 percent) measure indicator rates for DHMP falling below the 50th percentile and all three reportable rates for RMHP Prime falling below the 25th percentile. The MCOs and the Department should identify the factors contributing to the low rates for children receiving vaccinations (e.g., barriers to care, COVID-19 PHE, provider billing issues, administrative data source challenges).

Of note, DHMP’s rate for the *Immunizations for Adolescents—Combination 2 (Meningococcal, Tdap, HPV)* measure indicator ranked at or above the 75th percentile, showing strength in vaccinations for adolescents.

4. Access to Care and Preventive Screening

Access to Care and Preventive Screening

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance for the Access to Care and Preventive Screening domain. The Access to Care and Preventive Screening domain encompasses the following measures:

Access to Care

- *Prenatal and Postpartum Care—Timeliness of Prenatal Care and Postpartum Care*
- *Adults' Access to Preventive/Ambulatory Health Services—Total*

Preventive Screening

- *Chlamydia Screening in Women—Total*
- *Breast Cancer Screening*
- *Cervical Cancer Screening*
- *Non-Recommended Cervical Cancer Screening in Adolescent Females*

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Prenatal and Postpartum Care—Timeliness of Prenatal Care

Prenatal and Postpartum Care—Timeliness of Prenatal Care measures the percentage of deliveries of live births that received a prenatal care visit in the first trimester, on the enrollment start date, or within 42 days of enrollment in the MCO.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 27 percentage points.

Prenatal and Postpartum Care—Postpartum Care

Prenatal and Postpartum Care—Postpartum Care measures the percentage of deliveries of live births that had a postpartum visit on or between seven and 84 days after delivery.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 36 percentage points.

Adults' Access to Preventive/Ambulatory Health Services—Total

Adults' Access to Preventive/Ambulatory Health Services—Total measures the percentage of members 20 years of age and older who had an ambulatory or preventive care visit during the measurement year.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 18 percentage points.

Chlamydia Screening in Women—Total

Chlamydia Screening in Women—Total measures the percentage of female members 16 to 24 years of age who were identified as being sexually active and received at least one test for chlamydia during the measurement year.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 22 percentage points.

Breast Cancer Screening

Breast Cancer Screening measures the percentage of female members 50 to 74 years of age who had a mammogram to screen for breast cancer.

Two carets (^^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 2 percentage points.

Cervical Cancer Screening

Cervical Cancer Screening measures the percentage of female members 21 to 64 years of age who were screened for cervical cancer using either of the following criteria: women 21 to 64 years of age who had cervical cytology performed within the last three years, women 30 to 64 years of age who had cervical hrHPV testing performed within the last five years, or women 30 to 64 years of age who had cervical cytology/hrHPV co-testing within the last five years.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by less than 1 percentage point.

Non-Recommended Cervical Cancer Screening in Adolescent Females

Non-Recommended Cervical Cancer Screening in Adolescent Females measures the percentage of adolescent female members 16 to 20 years of age who were screened unnecessarily for cervical cancer. For this measure, a lower rate indicates better performance.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average exceeded the HPL. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 1 percentage point.

Summary of Findings and Recommendations

Table 4-1 presents the MCOs’ performance ratings for each measure in the Access to Care and Preventive Screening domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 4-1—Access to Care and Preventive Screening: Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime
Access to Care		
Prenatal and Postpartum Care		
Timeliness of Prenatal Care	★	★
Postpartum Care	★	★
Adults’ Access to Preventive/Ambulatory Health Services		
Total	★	★
Preventive Screening		
Chlamydia Screening in Women¹		
Total	★★★★	★
Breast Cancer Screening		
Breast Cancer Screening	★	★
Cervical Cancer Screening		
Cervical Cancer Screening	★	★
Non-Recommended Cervical Cancer Screening in Adolescent Females^{*,1}		
Non-Recommended Cervical Cancer Screening in Adolescent Females	★★★★★	★

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

* For this indicator, a lower rate indicates better performance.

Table 4-2 presents a summary of the MCOs’ overall performance for the measures in the Access to Care and Preventive Screening domain with the number of measures falling into each performance rating.

Table 4-2—Access to Care and Preventive Screening: MCO-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
Access to Care					
DHMP	0	0	0	0	3
RMHP Prime	0	0	0	0	3
Preventive Screening					
DHMP	1	1	0	0	2
RMHP Prime	0	0	0	0	4

With all reportable performance measure rates within the Access to Care domain falling below the 25th percentile, both DHMP and RMHP Prime have opportunities to improve access to the appropriate providers and services for all members. The MCOs and the Department should conduct root cause analyses for the low access to care rates to determine the nature and scope of the issue (e.g., are the issues related to barriers to accessing care, a lack of family planning service providers, or the need for improved community outreach and education). Additionally, the MCOs and the Department could identify factors related to the COVID-19 PHE and how access to care was impacted. Once the root causes are identified, the MCOs and the Department should work with providers and members to establish potential performance improvement strategies and solutions to increase the access to care rates. Improvement in the access to care rates may also result in improvement related to the quality of care provided, as evidenced by poor performance in the outpatient setting related to other performance measure domains (e.g., vaccinations, preventive screenings).

Within the Preventive Screening domain, two of four (50.0 percent) of DHMP’s rates and all of RMHP Prime’s rates fell below the 25th percentile, demonstrating several opportunities to ensure women receive appropriate screenings. Of note, DHMP’s rates for *Chlamydia Screening in Women—Total* and *Non-Recommended Cervical Cancer Screening in Adolescent Females* were at or above the 75th percentile, indicating strong performance for DHMP in these two measures. The MCOs and the Department should focus efforts on identifying the factors contributing to the low rates for *Breast Cancer Screening* and *Cervical Cancer Screening* and implement improvement strategies to increase these screening rates. This may include the MCOs following up with providers when members are overdue for a screening or working with providers to send reminders to members about scheduling an appointment. Best practices include sending reminders in the mail, calling members to schedule screenings, offering flexible or extended office hours, or offering mobile mammogram screenings.⁴⁻¹

⁴⁻¹ The Community Guide. *Cancer Screening: Evidenced-Based Interventions for Your Community*. Available at: <https://www.thecommunityguide.org/sites/default/files/assets/What-Works-Factsheet-CancerScreening.pdf>. Accessed on: August 24, 2021.

Mental/Behavioral Health

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance for the Mental/Behavioral Health domain. In FY 2020–2021, behavioral health services were carved out (i.e., provided by RAEs, but not the RAEs' MCO capitation initiatives) in Colorado. Therefore, this carve out should be considered when reviewing the MCO rates for these behavioral health measures. The Mental/Behavioral Health domain encompasses the following measures/indicators:

- *Antidepressant Medication Management—Effective Acute Phase Treatment and Effective Continuation Phase Treatment*
- *Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase and Continuation and Maintenance Phase*
- *Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total, Cholesterol Testing—Total, and Blood Glucose and Cholesterol Testing—Total*

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Antidepressant Medication Management—Effective Acute Phase Treatment

Antidepressant Medication Management—Effective Acute Phase Treatment measures the percentage of members 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication for at least 84 days (12 weeks).

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 6 percentage points.

Antidepressant Medication Management—Effective Continuation Phase Treatment

Antidepressant Medication Management—Effective Continuation Phase Treatment measures the percentage of members 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication for at least 180 days (6 months).

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 2 percentage points.

Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase

Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase measures the percentage of members 6 to 12 years of age who were newly prescribed ADHD medication and who had a follow-up care visit within 30 days of the first ADHD medication being dispensed.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

DHMP’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile.

Follow-Up Care for Children Prescribed ADHD Medication—Continuation and Maintenance Phase

Follow-Up Care for Children Prescribed ADHD Medication—Continuation and Maintenance Phase measures the percentage of members 6 to 12 years of age who were newly prescribed ADHD medication, remained on the medication for at least 210 days, and had at least three follow-up care visits within a 10-month period, one of which was within 30 days of the first ADHD medication being dispensed.

Both MCOs followed the specifications for this performance measure, but the denominator was too small (<30) to report a valid rate, resulting in a *Small Denominator (NA)* audit designation; therefore, these rates are not presented in this report and the figures for this measure are not displayed.

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total measures the percentage of members 1 to 17 years of age who had two or more antipsychotic medication prescriptions and received blood glucose testing.

NQ (Not Required) indicates the MCOs were not required to report the measure.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

RMHP Prime’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. DHMP’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 13 percentage points.

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total measures the percentage of members 1 to 17 years of age who had two or more antipsychotic medication prescriptions and received cholesterol testing.

NQ (Not Required) indicates the MCOs were not required to report the measure.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. RMHP Prime’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 13 percentage points.

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose and Cholesterol Testing—Total

Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose and Cholesterol Testing—Total measures the percentage of members 1 to 17 years of age who had two or more antipsychotic medication prescriptions and received blood glucose and cholesterol testing.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the 50th percentile but below the HPL. RMHP Prime’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile. MCO performance varied by approximately 2 percentage points.

Summary of Findings and Recommendations

Table 5-1 presents the MCOs’ performance ratings for each measure in the Mental/Behavioral Health domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 5-1—Mental/Behavioral Health Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime
<i>Antidepressant Medication Management</i>		
<i>Effective Acute Phase Treatment</i>	★★★★	★★★★
<i>Effective Continuation Phase Treatment</i>	★★★	★★★
<i>Follow-Up Care for Children Prescribed ADHD Medication¹</i>		
<i>Initiation Phase</i>	★★	—
<i>Continuation and Maintenance Phase</i>	—	—
<i>Metabolic Monitoring for Children and Adolescents on Antipsychotics¹</i>		
<i>Blood Glucose Testing—Total</i>	★★	★★★★
<i>Cholesterol Testing—Total</i>	★★★★	★★
<i>Blood Glucose and Cholesterol Testing—Total</i>	★★★	★★

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.
 — Indicates that a percentile ranking was not determined because the rate was not reportable.

Table 5-2 presents a summary of the MCOs’ overall performance for measures in the Mental/Behavioral Health domain.

Table 5-2—Mental/Behavioral Health: MCO-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
DHMP	0	2	2	2	0
RMHP Prime	0	1	2	2	0

Within the Mental/Behavioral Health domain, both MCOs demonstrated areas of strength related to managing antidepressant medication. DHMP and RMHP Prime were at or above the 50th percentile for both *Antidepressant Medication Management—Effective Acute Phase Treatment* and *Effective Continuation Phase Treatment* measure indicators. DHMP fell below the 50th percentile for the *Follow-Up Care for Children Prescribed ADHD Medication—Initiation Phase* and *Metabolic Monitoring for Children and Adolescents on Antipsychotics—Blood Glucose Testing—Total* measure indicators, and RMHP Prime fell below the 50th percentile for the *Metabolic Monitoring for Children and Adolescents on Antipsychotics—Cholesterol Testing—Total* and *Blood Glucose and Cholesterol Testing—Total* measure indicators. The MCOs and the Department should identify the issues that contribute to low rates of medication monitoring (e.g., the need for improved provider training or community outreach and education) and implement strategies that focus on improving appropriate monitoring of members using medications.

Living With Illness

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance for the Living With Illness domain. The Living With Illness domain encompasses the following measures/indicators:

- *Persistence of Beta-Blocker Treatment After a Heart Attack*
- *Comprehensive Diabetes Care—HbA1c Testing, HbA1c Poor Control (>9.0%), HbA1c Control (<8.0%), Eye Exam (Retinal) Performed, and Blood Pressure Control (<140/90 mm Hg)*
- *Statin Therapy for Patients With Diabetes—Received Statin Therapy and Statin Adherence 80%*
- *Statin Therapy for Patients With Cardiovascular Disease—Received Statin Therapy—Total and Statin Adherence 80%—Total*
- *Use of Imaging Studies for Low Back Pain*
- *Pharmacotherapy Management of COPD Exacerbation—Systemic Corticosteroid and Bronchodilator*
- *Asthma Medication Ratio—Total*
- *Use of Spirometry Testing in the Assessment and Diagnosis of COPD*

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Persistence of Beta-Blocker Treatment After a Heart Attack

Persistence of Beta-Blocker Treatment After a Heart Attack measures the percentage of members 18 years of age and older who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) who received persistent beta-blocker treatment for six months after discharge.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

The Colorado Medicaid weighted average was above the LPL but fell below the 50th percentile.

Comprehensive Diabetes Care—HbA1c Testing

Comprehensive Diabetes Care—HbA1c Testing measures the percentage of diabetic (type 1 and type 2) members 18 to 75 years of age with an HbA1c test performed during the measurement year.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

RMHP Prime’s rate was above the LPL but below the 50th percentile. DHMP’s rate and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 13 percentage points.

Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%)

Comprehensive Diabetes Care—HbA1c Poor Control (>9.0%) measures the percentage of diabetic (type 1 and type 2) members 18 to 75 years of age with the most recent HbA1c test performed during the measurement year where the HbA1c level was greater than 9.0 percent. For this indicator, a lower rate indicates better performance.

Two carets (^^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 19 percentage points.

Comprehensive Diabetes Care—HbA1c Control (<8.0%)

Comprehensive Diabetes Care—HbA1c Control (<8.0%) measures the percentage of diabetic (type 1 and type 2) members 18 to 75 years of age with the most recent HbA1c test performed during the measurement year where the HbA1c level was less than 8.0 percent.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 15 percentage points.

Comprehensive Diabetes Care—Eye Exam (Retinal) Performed

Comprehensive Diabetes Care—Eye Exam (Retinal) Performed measures the percentage of diabetic (type 1 and type 2) members 18 to 75 years of age screened or monitored for diabetic retinal disease.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

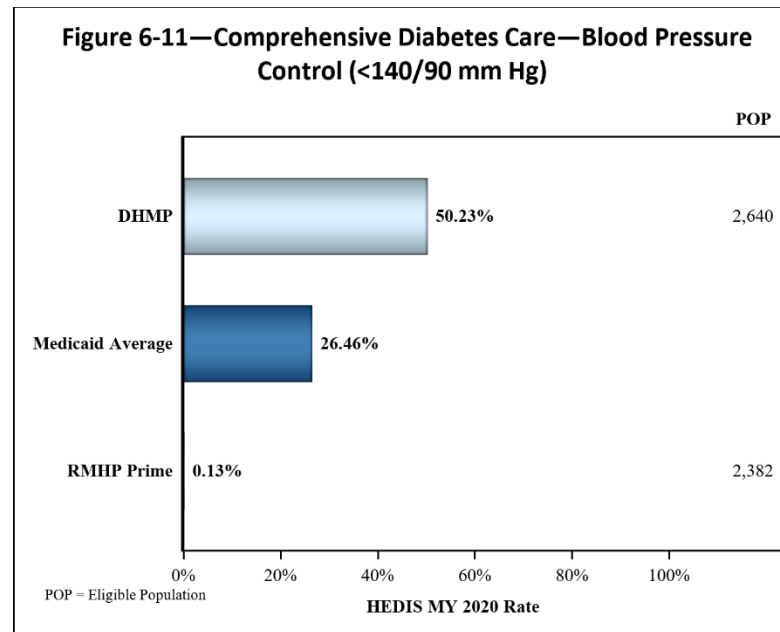

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 12 percentage points.

Comprehensive Diabetes Care—Blood Pressure Control (<140/90 mm Hg)

Comprehensive Diabetes Care—Blood Pressure Control (<140/90 mm Hg) measures the percentage of diabetic (type 1 and type 2) members 18 to 75 years of age whose most recent blood pressure reading taken during the measurement year was less than 140/90 mm Hg. Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed.

Caution should be exercised when comparing administrative-only rates to national benchmarks that were calculated using the administrative and/or hybrid methodology.

MCO performance varied by approximately 50 percentage points.

Statin Therapy for Patients With Diabetes—Received Statin Therapy

Statin Therapy for Patients With Diabetes—Received Statin Therapy measures the percentage of members 40 to 75 years of age with diabetes who did not have clinical atherosclerotic cardiovascular disease (ASCVD) and who were dispensed at least one statin medication of any intensity during the measurement year.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 11 percentage points.

Statin Therapy for Patients With Diabetes—Statin Adherence 80%

Statin Therapy for Patients With Diabetes—Statin Adherence 80% measures the percentage of members 40 to 75 years of age with diabetes who did not have clinical ASCVD and who remained on a statin medication of any intensity for at least 80 percent of the treatment period.

Two carets (^) indicate a statistically significant decline in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 3 percentage points.

Statin Therapy for Patients With Cardiovascular Disease—Received Statin Therapy—Total

Statin Therapy for Patients With Cardiovascular Disease—Received Statin Therapy—Total measures the percentage of male members 21 to 75 years of age and female members 40 to 75 years of age who were identified as having clinical ASCVD and were dispensed at least one high-intensity or moderate-intensity statin medication during the measurement year.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 12 percentage points.

Statin Therapy for Patients With Cardiovascular Disease—Statin Adherence 80%—Total

Statin Therapy for Patients With Cardiovascular Disease—Statin Adherence 80%—Total measures the percentage of male members 21 to 75 years of age and female members 40 to 75 years of age who were identified as having clinical ASCVD and remained on a high-intensity or moderate-intensity statin medication for at least 80 percent of the treatment period.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

RMHP Prime’s rate was above the HPL. The Colorado Medicaid weighted average was above the 50th percentile but below the HPL. DHMP’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 17 percentage points.

Use of Imaging Studies for Low Back Pain

Use of Imaging Studies for Low Back Pain measures the percentage of members 18 to 50 years of age with a primary diagnosis of low back pain who did not have an imaging study performed (plain X-ray, magnetic resonance imaging [MRI], computed tomography [CT] scan) within 28 days of diagnosis.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 4 percentage points.

Pharmacotherapy Management of COPD Exacerbation—Systemic Corticosteroid

Pharmacotherapy Management of COPD Exacerbation—Systemic Corticosteroid measures the percentage of COPD exacerbations for members 40 years of age and older who had an acute inpatient discharge or ED visit on or between January 1 through November 30 of the measurement year and were dispensed a systemic corticosteroid (or there was evidence of an active prescription) within 14 days of the event.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by less than 1 percentage point.

Pharmacotherapy Management of COPD Exacerbation—Bronchodilator

Pharmacotherapy Management of COPD Exacerbation—Bronchodilator measures the percentage of COPD exacerbations for members 40 years of age and older who had an acute inpatient discharge or ED visit on or between January 1 through November 30 of the measurement year and who were dispensed a bronchodilator (or there was evidence of an active prescription) within 30 days of the event.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by approximately 3 percentage points.

Asthma Medication Ratio—Total

Asthma Medication Ratio—Total measures the percentage of members 5 to 64 years of age identified as having persistent asthma who had a ratio of controller medications to total asthma medications of 0.50 or greater during the measurement year.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average fell below the LPL. MCO performance varied by less than 1 percentage point.

Use of Spirometry Testing in the Assessment and Diagnosis of COPD

Use of Spirometry Testing in the Assessment and Diagnosis of COPD measures the percentage of members 40 years of age and older with a new diagnosis of COPD or newly active COPD who received appropriate spirometry testing to confirm the diagnosis.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the 50th percentile but below the HPL. RMHP Prime’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile. MCO performance varied by approximately 4 percentage points.

Summary of Findings and Recommendations

Table 6-1 presents the MCOs’ performance ratings for each measure in the Living With Illness domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 6-1—Living With Illness Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime
Persistence of Beta-Blocker Treatment After a Heart Attack		
<i>Persistence of Beta-Blocker Treatment After a Heart Attack</i>	—	—
Comprehensive Diabetes Care		
<i>Hemoglobin A1c (HbA1c) Testing</i>	★	★★
<i>HbA1c Poor Control (>9.0%)*</i>	★	★
<i>HbA1c Control (<8.0%)</i>	★	★
<i>Eye Exam (Retinal) Performed</i>	★	★
<i>Blood Pressure Control (<140/90 mm Hg)</i>	—	—
Statin Therapy for Patients With Diabetes		
<i>Received Statin Therapy</i>	★	★
<i>Statin Adherence 80%</i>	★★★★	★★★★★
Statin Therapy for Patients With Cardiovascular Disease		
<i>Received Statin Therapy—Total</i>	★	★
<i>Statin Adherence 80%—Total</i>	★★	★★★★★
Use of Imaging Studies for Low Back Pain		
<i>Use of Imaging Studies for Low Back Pain</i>	★★★★★	★★★★
Pharmacotherapy Management of COPD Exacerbation		
<i>Systemic Corticosteroid</i>	★	★
<i>Bronchodilator</i>	★	★
Asthma Medication Ratio¹		
<i>Total</i>	★	★
Use of Spirometry Testing in the Assessment and Diagnosis of COPD		
<i>Use of Spirometry Testing in the Assessment and Diagnosis of COPD</i>	★★★★	★★

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

— Indicates that a percentile ranking was not determined because the rate was not reportable.

* For this indicator, a lower rate indicates better performance.

Table 6-2 presents a summary of the MCOs’ overall performance for measures in the Living With Illness domain, with the number of measures falling into each performance rating.

Table 6-2—Living With Illness: Plan-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
DHMP	0	1	2	1	9
RMHP Prime	1	1	1	2	8

For the Living With Illness domain, only three of 13 (23.1 percent) of DHMP and RMHP Prime’s measure indicator rates were at or above the 50th percentile. Both MCOs demonstrated opportunities to improve the care management of members with diabetes, as evidenced by the low rates of testing for HbA1c levels and retinal disease, along with the low prescribing rates of statin medication. Further, the MCOs indicated improvement is needed related to medication management for members with other chronic conditions (e.g., cardiovascular disease, asthma, COPD). The MCOs and the Department should focus efforts on identifying the factors contributing to the low rates for these measures (e.g., are the barriers related to accessing outpatient care and pharmacies; or the need for provider training, investigation of prescribing patterns, or improved community outreach and education) and implement strategies to improve the care for members with chronic conditions.

Of note, rates for both MCOs were at or above the 50th percentile for the *Statin Therapy for Patients With Diabetes—Statin Adherence 80%* and *Use of Imaging Studies for Low Back Pain* measures.

Antibiotic Stewardship

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance for the Antibiotic Stewardship domain. The Antibiotic Stewardship domain encompasses the following measures/indicators:

- *Appropriate Testing for Pharyngitis—Total*
- *Appropriate Treatment for Upper Respiratory Infection—Total*
- *Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total*
- *Antibiotic Utilization—Average Scripts PMPY for Antibiotics—Total, Average Days Supplied per Antibiotic Script—Total, Average Scripts PMPY for Antibiotics of Concern—Total, and Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total*

The MCOs' member months served as an eligible population proxy and were used when calculating the Colorado Medicaid weighted average for the *Antibiotic Utilization* measure. Additionally, rates displayed for *Antibiotic Utilization* are for information only; the rates do not indicate the quality and timeliness of, or access to, care and services. Therefore, the reader should exercise caution in connecting these data to the efficacy of the program, as many factors influence these data. HSAG recommends that MCOs review the results to identify whether a rate is higher or lower than expected. Additional focused analyses may help to identify key drivers associated with the antibiotic utilization patterns.

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Appropriate Testing for Pharyngitis—Total

Appropriate Testing for Pharyngitis—Total measures the percentage of episodes for members 3 years of age and older where the member was diagnosed with pharyngitis, dispensed an antibiotic, and received a group A streptococcus (strep) test for the episode.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by less than 2 percentage points.

Appropriate Treatment for Upper Respiratory Infection—Total

Appropriate Treatment for Upper Respiratory Infection—Total measures the percentage of episodes for members 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the HPL. RMHP Prime’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 10 percentage points.

Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total

Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis measures the percentage of episodes for members ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the HPL. RMHP Prime’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 34 percentage points.

Antibiotic Utilization—Average Scripts PMPY for Antibiotics—Total

Antibiotic Utilization—Average Scripts PMPY for Antibiotics—Total summarizes the average number of prescriptions PMPY for antibiotics on outpatient utilization of antibiotic prescriptions during the measurement year. For this measure, a lower rate indicates better performance.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the HPL. RMHP Prime’s rate fell below the LPL. MCO performance varied by less than 1 percentage point.

Antibiotic Utilization—Average Days Supplied per Antibiotic Script—Total

Antibiotic Utilization—Average Days Supplied per Antibiotic Script—Total summarizes the average days supplied per antibiotic prescription on outpatient utilization of antibiotic prescriptions during the measurement year. For this measure, a lower rate indicates better performance.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

RMHP Prime’s rate and the Colorado Medicaid weighted average were above the LPL but below the 50th percentile. DHMP’s rate fell below the LPL. MCO performance varied by less than 1 percentage point.

Antibiotic Utilization—Average Scripts PMPY for Antibiotics of Concern—Total

Antibiotic Utilization—Average Scripts PMPY for Antibiotics of Concern—Total summarizes the average number of prescriptions PMPY for antibiotics of concern on outpatient utilization of antibiotic prescriptions during the measurement year. For this measure, a lower rate indicates better performance.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate and the Colorado Medicaid weighted average were above the HPL. RMHP Prime’s rate was above the LPL but below the 50th percentile. MCO performance varied by less than 1 percentage point.

Antibiotic Utilization—Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total

Antibiotic Utilization—Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total summarizes the percentage of antibiotics of concern of all antibiotic prescriptions on outpatient utilization of antibiotic prescriptions during the measurement year. For this measure, a lower rate indicates better performance.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the HPL. RMHP Prime’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 7 percentage points.

Summary of Findings and Recommendations

Table 7-1 presents the MCOs’ performance ratings for each measure in the Antibiotic Stewardship domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 7-1—Antibiotic Stewardship Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime
<i>Appropriate Testing for Pharyngitis</i>		
<i>Total</i>	★★★	★★★★
<i>Appropriate Treatment for Upper Respiratory Infection</i>		
<i>Total</i>	★★★★★	★★
<i>Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis</i>		
<i>Total</i>	★★★★★	★★
<i>Antibiotic Utilization*</i>		
<i>Average Scripts PMPY for Antibiotics of Concern—Total</i>	★★★★★	★★
<i>Average Days Supplied per Antibiotic Script—Total</i>	★	★★
<i>Average Scripts for PMPY for Antibiotics—Total</i>	★★★★★	★
<i>Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total</i>	★★★★★	★★★★

* For this indicator, a lower rate indicates better performance.

Table 7-2 presents a summary of the MCOs’ overall performance for measures in the Antibiotic Stewardship domain, with the number of measures falling into each performance rating.

Table 7-2—Antibiotic Stewardship: Plan-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
DHMP	5	0	1	0	1
RMHP Prime	0	0	2	4	1

For the Antibiotic Stewardship domain, six of seven (85.7 percent) of DHMP’s measure rates and two of seven (28.6 percent) of RMHP Prime’s measure rates were at or above the 50th percentile.

Of note, DHMP met or exceeded the 90th percentile for five of seven (71.4 percent) measure rates in this domain: *Appropriate Treatment for Upper Respiratory Infection—Total*; *Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis—Total*; and *Antibiotic Utilization—Average Scripts PMPY for Antibiotics of Concern—Total*, *Average Scripts for PMPY for Antibiotics—Total*, and *Percentage of Antibiotics of Concern of All Antibiotic Scripts—Total*. As mentioned in the introduction to this domain, rates displayed for *Antibiotic Utilization* are for information only; the rates do not indicate the quality and timeliness of, or access to, care and services.

Opioids

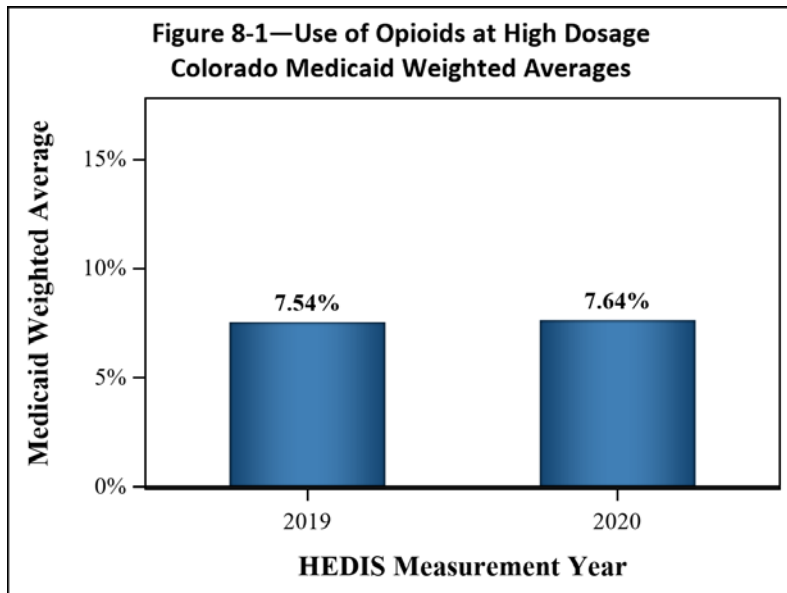

The following section provides a detailed analysis of the Colorado Medicaid MCOs' performance for the Opioids domain. The Opioids domain encompasses the following measures/indicators:

- *Use of Opioids at High Dosage*
- *Use of Opioids From Multiple Providers—Multiple Prescribers, Multiple Pharmacies, and Multiple Prescribers and Multiple Pharmacies*
- *Risk of Continued Opioid Use—At Least 15 Days Covered and At Least 31 Days Covered*
- *Pharmacotherapy for Opioid Use Disorder—Total*

Please see the “Reader’s Guide” section for guidance on interpreting the figures presented within this section. For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Use of Opioids at High Dosage

Use of Opioids at High Dosage measures the percentage of members 18 years of age and older who received prescription opioids at a high dosage (average morphine milligram equivalent dose [MME] ≥ 90) for at least 15 days during the measurement year. For this measure, a lower rate indicates better performance.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the 50th percentile but below the HPL. The Colorado Medicaid weighted average was above the LPL but below the 50th percentile. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 5 percentage points.

Use of Opioids From Multiple Providers—Multiple Prescribers

Use of Opioids From Multiple Providers—Multiple Prescribers measures the percentage of members 18 years and older, receiving prescription opioids for at least 15 days during the measurement year who received opioids from multiple providers and received prescriptions for opioids from four or more different prescribers during the measurement year. For this measure, a lower rate indicates better performance.

One caret (^) indicates a significant improvement in performance from MY 2019 to MY 2020.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly improved from MY 2019 to MY 2020.

Rates for both MCOs and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL.

Use of Opioids From Multiple Providers—Multiple Pharmacies

Use of Opioids From Multiple Providers—Multiple Pharmacies measures the percentage of members 18 years and older, receiving prescription opioids for at least 15 days during the measurement year who received opioids from multiple providers and received prescriptions for opioids from four or more different pharmacies during the measurement year. For this measure, a lower rate indicates better performance.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

RMHP Prime’s rate was above the HPL. DHMP’s rate and the Colorado Medicaid weighted average were above the 50th percentile but below the HPL. MCO performance varied by approximately 3 percentage points.

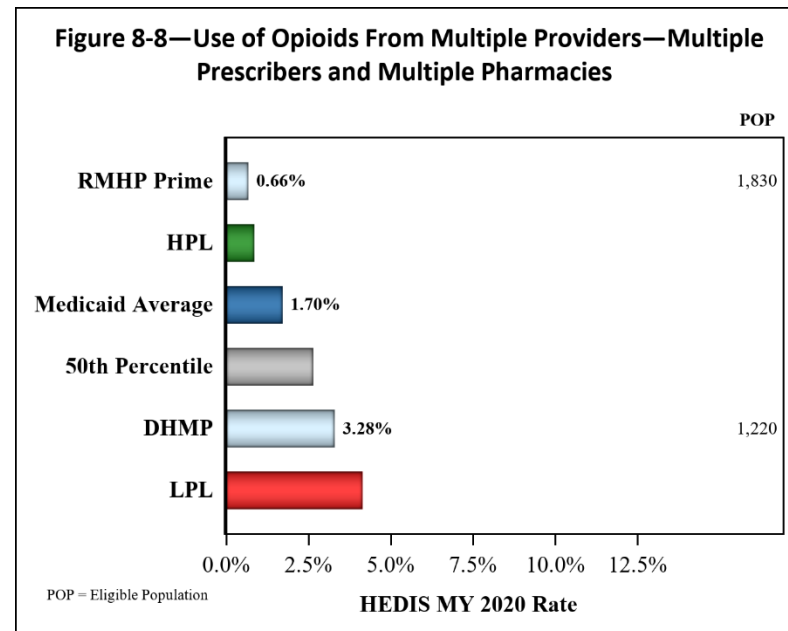

Use of Opioids From Multiple Providers—Multiple Prescribers and Multiple Pharmacies

Use of Opioids From Multiple Providers—Multiple Prescribers and Multiple Pharmacies measures the percentage of members 18 years and older, receiving prescription opioids for at least 15 days during the measurement year who received opioids from multiple providers and received prescriptions for opioids from four or more different prescribers and four or more different pharmacies during the measurement year. For this measure, a lower rate indicates better performance.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

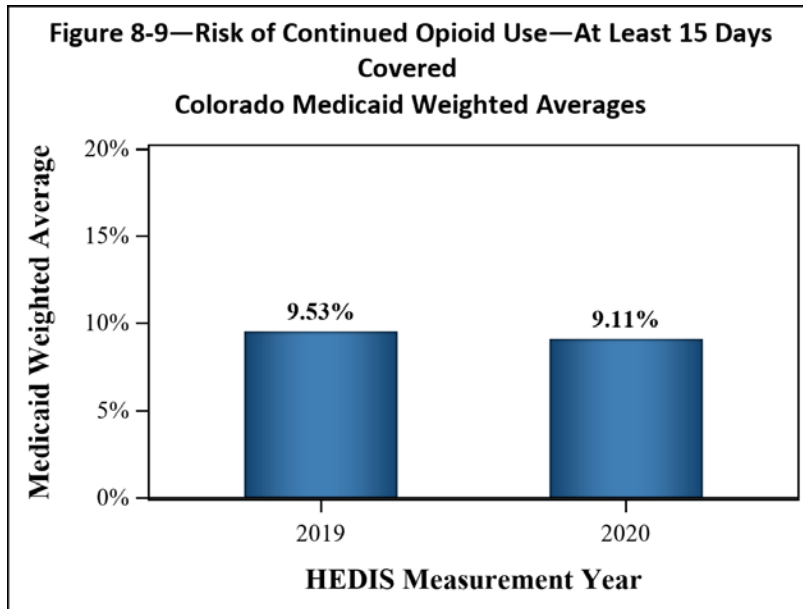

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

RMHP Prime’s rate was above the HPL. The Colorado Medicaid weighted average was above the 50th percentile but below the HPL. DHMP’s rate was above the LPL but below the 50th percentile. MCO performance varied by approximately 3 percentage points.

Risk of Continued Opioid Use—At Least 15 Days Covered

Risk of Continued Opioid Use—At Least 15 Days Covered measures the percentage of members 18 years of age and older who have a new episode of opioid use that puts them at risk for continued opioid use with at least 15 days of prescription opioids in a 30-day period. For this measure, a lower rate indicates better performance.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the 50th percentile but below the HPL. The Colorado Medicaid weighted average was above the LPL but below the 50th percentile. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 9 percentage points.

Risk of Continued Opioid Use—At Least 31 Days Covered

Risk of Continued Opioid Use—At Least 31 Days Covered measures the percentage of members 18 years of age and older who have a new episode of opioid use that puts them at risk for continued opioid use with at least 31 days of prescription opioids in a 62-day period. For this measure, a lower rate indicates better performance.

Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average did not demonstrate a significant change from MY 2019 to MY 2020.

DHMP’s rate was above the 50th percentile but below the HPL. The Colorado Medicaid weighted average was above the LPL but below the 50th percentile. RMHP Prime’s rate fell below the LPL. MCO performance varied by approximately 4 percentage points.

Pharmacotherapy for Opioid Use Disorder—Total

Pharmacotherapy for Opioid Use Disorder—Total measures the percentage of new opioid use disorder (OUD) pharmacotherapy events with OUD pharmacotherapy for 180 or more days among members 16 years of age and older with a diagnosis of OUD.

Two carets (^^) indicate a statistically significant decline in performance from MY 2019 to MY 2020. Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

The Colorado Medicaid weighted average significantly declined from MY 2019 to MY 2020.

RMHP Prime’s rate was above the 50th percentile but below the HPL. The Colorado Medicaid weighted average was above the LPL but below the 50th percentile. DHMP’s rate fell below the LPL. MCO performance varied by approximately 27 percentage points

Summary of Findings and Recommendations

Table 8-1 presents the MCOs’ performance ratings for each measure in the Opioids domain. Performance ratings were assigned across five categories (from ★ representing *Poor Performance* to ★★★★★ representing *Excellent Performance*).

Table 8-1—Opioids Measure-Specific Performance Ratings

Performance Measures	DHMP	RMHP Prime
<i>Use of Opioids at High Dosage*</i>		
<i>Use of Opioids at High Dosage</i>	★★★	★
<i>Use of Opioids From Multiple Providers*</i>		
<i>Multiple Prescribers</i>	★★★★★	★★★★★
<i>Multiple Pharmacies</i>	★★★	★★★★★
<i>Multiple Prescribers and Multiple Pharmacies</i>	★★	★★★★★
<i>Risk of Continued Opioid Use*</i>		
<i>At Least 15 Days Covered—Total</i>	★★★	★
<i>At Least 31 Days Covered—Total</i>	★★★	★
<i>Pharmacotherapy for Opioid Use Disorder</i>		
<i>Total</i>	★	★★★★★

* For this indicator, a lower rate indicates better performance.

Table 8-2 presents a summary of the MCOs’ overall performance for measures in the Opioids domain, with the number of measures falling into each performance rating.

Table 8-2—Opioids: Plan-Specific Count of Measures by Performance Rating

Health Plan Name	★★★★★	★★★★	★★★	★★	★
DHMP	0	1	4	1	1
RMHP Prime	2	2	0	0	3

For the Opioids domain, five of seven (71.4 percent) of DHMP’s measure indicator rates and four of seven (57.1 percent) of RMHP Prime’s measure indicator rates were at or above the 50th percentile. RMHP Prime’s rates for *Use of Opioids From Multiple Providers—Multiple Pharmacies* and *Multiple Prescribers and Multiple Pharmacies* were at or above the 90th percentile and *Use of Opioids From Multiple Providers—Multiple Prescribers* was at or above the 75th percentile. DHMP’s rate for *Use of Opioids From Multiple Providers—Multiple Prescribers* was at or above the 75th percentile. The MCOs and the Department should focus efforts on identifying factors contributing to opioid use and implement strategies to improve the care for members receiving opioids for chronic pain.

Use of Services

Within the Use of Services domain, HEDIS methodology requires that the rate be derived using only the administrative method. The Use of Services domain encompasses the following measures:

- *Ambulatory Care—Outpatient Visits—Total and ED Visits—Total*
- *Inpatient Utilization—General Hospital/Acute Care—Total Inpatient—Total Discharges per 1,000 Member Months and Total Average Length of Stay; Medicine—Total Discharges per 1,000 Member Months and Total Average Length of Stay; Surgery—Total Discharges per 1,000 Member Months and Total Average Length of Stay; and Maternity—Total Discharges per 1,000 Member Months and Total Average Length of Stay*
- *Plan All-Cause Readmissions—Index Total Stays—Observed Readmissions and O/E Ratio*

Both MCOs were required to report these measures in HEDIS MY 2020. The MCOs' member months served as an eligible population proxy and were used when calculating the Colorado Medicaid weighted average for the *Ambulatory Care* and *Inpatient Utilization—General Hospital/Acute Care* measure indicators.

Some rates displayed in the Use of Services domain (i.e., *Ambulatory Care* and *Inpatient Utilization—General Hospital/Acute Care*) are for information only; the rates do not indicate the quality and timeliness of, or access to, care and services. Therefore, the reader should exercise caution in connecting these data to the efficacy of the program, as many factors influence these data. HSAG recommends that MCOs review the Use of Services results to identify whether a rate is higher or lower than expected. Additional focused analyses related to the Use of Services domain may help to identify key drivers associated with the utilization patterns.

For reference, additional analyses for each measure indicator are displayed in Appendix A and Appendix B.

Ambulatory Care

The *Ambulatory Care* measure summarizes use of ambulatory care for *Outpatient Visits—Total* and *ED Visits—Total*. In this section, the results for the total age group are presented.

Results

Table 9-1 shows *Outpatient Visits—Total* and *ED Visits—Total* per 1,000 member months for ambulatory care for all ages.

Table 9-1—Ambulatory Care: Total Visits per 1,000 Member Months for Total Age Group

Health Plan Name	Outpatient Visits	ED Visits*
DHMP	177.62	33.75
RMHP Prime ¹	304.91	49.02
MY 2020 Colorado Medicaid Weighted Average	216.06	38.36
MY 2019 Colorado Medicaid Weighted Average	254.83	49.97
MY 2018 Colorado Medicaid Weighted Average	239.73	49.10

* For this indicator, a lower rate may indicate more favorable performance.

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP's rates.

For the *ED Visits* measure indicator, MCO performance varied, ranging from 49.02 ED visits per 1,000 member months for RMHP Prime to 33.75 ED visits per 1,000 member months for DHMP. Rates displayed for the *Outpatient Visits* measure indicator are for information only.

Inpatient Utilization—General Hospital/Acute Care

The *Inpatient Utilization—General Hospital/Acute Care* measure summarizes use of acute inpatient care and services in four categories: total inpatient, medicine, surgery, and maternity.

Results

Table 9-2 shows the total discharges per 1,000 member months for all ages, which are presented for information only.

Table 9-2—Inpatient Utilization—General Hospital/Acute Care: Total Discharges per 1,000 Member Months for Total Age Group

Health Plan Name	Total Inpatient	Medicine	Surgery	Maternity
DHMP	5.46	3.25	0.99	1.58
RMHP Prime ¹	8.86	4.10	2.29	2.66
MY 2020 Colorado Medicaid Weighted Average	6.48	3.50	1.39	1.95
MY 2019 Colorado Medicaid Weighted Average	7.08	3.78	1.53	2.21
MY 2018 Colorado Medicaid Weighted Average	6.34	3.34	1.29	2.15

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

Table 9-3 displays the total average length of stay for all ages, which are presented for information only.

Table 9-3—Inpatient Utilization—General Hospital/Acute Care: Total Average Length of Stay for Total Age Group

Health Plan Name	Total Inpatient	Medicine	Surgery	Maternity
DHMP	5.08	4.63	9.42	2.71
RMHP Prime ¹	4.23	4.15	6.51	2.22
MY 2020 Colorado Medicaid Weighted Average	4.72	4.46	7.96	2.48
MY 2019 Colorado Medicaid Weighted Average	4.35	3.95	7.49	2.47
MY 2018 Colorado Medicaid Weighted Average	4.19	4.01	6.85	2.56

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

Plan All-Cause Readmissions—Index Total Stays

Plan All-Cause Readmissions—Index Total Stays measures the number of total acute inpatient stays during the measurement year for members 18 years of age and older that were followed by an unplanned acute readmission for any diagnosis within 30 days. This measure is also risk-adjusted to calculate the expected number of readmissions. For each admission, an expected readmission count is calculated based on age, gender, whether the patient had a surgery during the admission, the primary discharge diagnosis for the admission, and comorbid conditions associated with the admission. The O/E ratio is presented to show if the MCO had more, the same as, or fewer readmissions than expected. For this measure, a lower rate indicates better performance.

Results

Table 9-4 shows the total number of observed readmissions and the O/E ratio of an acute readmission for all ages.

Table 9-4—Plan All-Cause Readmissions: Index Total Stays*

Health Plan Name	Observed Readmissions	O/E Ratio
DHMP	11.35%	1.14
RMHP Prime	9.34%	0.93
MY 2020 Colorado Medicaid Weighted Average	10.45%	1.05
MY 2021 Colorado Medicaid Weighted Average	11.54%	1.13

* For this measure, a lower rate may indicate more favorable performance.

DHMP’s observed readmissions rate was approximately 2 percentage points higher than RMHP Prime’s observed readmissions rate, and DHMP had greater than expected readmissions, based on its O/E ratio. RMHP Prime had fewer than expected readmissions, based on its O/E ratio.

Summary of Findings and Recommendations

For the *Plan All-Cause Readmissions* measure, DHMP reported a readmission rate approximately 2 percentage points higher than RMHP Prime’s readmission rate. Additionally, DHMP had greater than expected readmissions, based on its O/E ratio, while RMHP Prime had fewer than expected readmissions, based on its O/E ratio.

For the remaining *Use of Services* reported rates for the MCOs and the Colorado Medicaid weighted average for the Use of Services domain, demographic and clinical characteristics of the population were not considered; therefore, HSAG did not draw conclusions regarding performance based on the reported utilization results for *Ambulatory Care* and *Inpatient Utilization—General Hospital/Acute Care* measures. Nonetheless, combined with other performance metrics, the MCOs’ and Colorado Medicaid weighted average utilization results provide additional information that MCOs may use to assess barriers or patterns of utilization when evaluating improvement interventions.

Appendix A. Tabular Results for Measures by MCO

Appendix A presents tables showing results for the measures by MCO. Where applicable, the results provided for each measure include the eligible population and rate for each MCO as well as the HEDIS MY 2018, MY 2019, and MY 2020 Colorado Medicaid weighted averages. Yellow shading with one caret (^) indicates the HEDIS MY 2020 MCO-specific or Colorado Medicaid weighted average rate was at or above the applicable 50th percentile.

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

² Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

³ Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years’ rates are not displayed.

— Indicates the MCO’s eligible population was too small to report (<30). This symbol may also mean that NCQA recommended a break in trending; therefore, no prior year rates are displayed.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Yellow shading with one caret (^) indicates the rate was at or above the 50th percentile.

Bold font indicates Colorado Medicaid Weighted Average values.

* For this indicator, a lower rate indicates better performance.

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP’s rates.

² Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

— Indicates that NCQA recommended a break in trending; therefore, no prior year rates are displayed. Additionally, this symbol may mean the MCO’s eligible population was too small to report (<30).

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Yellow shading with one caret (^) indicates the rate was at or above the 50th percentile.

Bold font indicates Colorado Medicaid Weighted Average values.

* For this indicator, a lower rate indicates better performance.

¹ Due to differences in member eligibility for children in RMHP Prime, rates may not be comparable to DHMP's rates.

— Indicates the MCO's eligible population was too small to report (<30). This symbol may also mean that NCQA recommended a break in trending; therefore, no prior year rates are displayed.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Yellow shading with one caret (^) indicates the rate was at or above the 50th percentile.

Bold font indicates Colorado Medicaid Weighted Average values.

Appendix B. Trend Tables

Appendix B includes trend tables for each of the MCOs and the Colorado Medicaid weighted averages. Where applicable, measure rates for HEDIS MY 2018, MY 2019, and MY 2020 are presented.

HEDIS MY 2019 to MY 2020 performance comparisons are based on the Chi-square test of statistical significance with a p value <0.05 . Rates shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year. Rates shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.

For measures in the Use of Services domain, statistical tests across years were not performed because variances were not provided in the IDSS files; differences in rates were reported without statistical test results. In addition, higher or lower rates did not necessarily denote better or worse performance. Rates are not risk adjusted; therefore, the percentile ranking should be interpreted with caution and may not accurately reflect better or worse performance.

* For this indicator, a lower rate indicates better performance.

¹ Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

² Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed for this measure.

— Indicates that NCQA recommended a break in trending; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed. This symbol may also indicate that the MCOs were not required to report this measure for HEDIS MY 2018 or HEDIS MY 2019.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Rates shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year.

Rates shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.

* For this indicator, a lower rate indicates better performance.

¹ Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

² Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed for this measure.

— Indicates that NCQA recommended a break in trending; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed. This symbol may also indicate that the MCOs were not required to report this measure for HEDIS MY 2018 or HEDIS MY 2019.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Rates shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year.

Rates shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.

Colorado Medicaid Weighted Average Trend Table

Given that the MCOs varied in membership size, the statewide average rate for each measure was weighted based on the MCOs’ eligible populations. For the MCOs with rates reported as *Small Denominator (NA)*, the numerators, denominators, and eligible populations were included in the calculations of the statewide rate. Non-reportable rates such as *NA* were excluded when calculating plan rate range.

Performance Measures	HEDIS MY 2018 Rate	HEDIS MY 2019 Rate	HEDIS MY 2020 Rate	Plan Rate Range
Plan All-Cause Readmissions*				
<i>Observed Readmissions—Ages 18 to 44 Years</i>	—	10.74%	9.22%	8.62%–9.71%
<i>Observed Readmissions—Ages 45 to 54 Years</i>	—	12.52%	11.96%	10.10%–13.35%
<i>Observed Readmissions—Ages 55 to 64 Years</i>	—	11.94%	11.26%	9.91%–12.44%
<i>Observed Readmissions—Total</i>	—	11.54%	10.45%	9.34%–11.35%
<i>O/E Ratio—Total</i>	—	1.13	1.05	0.93–1.14

* For this indicator, a lower rate indicates better performance.

¹ Due to changes in the technical specifications for this measure, NCQA recommends that trending between MY 2020 and prior years be considered with caution.

² Due to changes in the technical specifications for this measure, NCQA recommends a break in trending between MY 2020 and prior years; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed for this measure.

— Indicates that NCQA recommended a break in trending; therefore, prior years' rates are not displayed and comparisons to benchmarks are not performed. This symbol may also indicate that the MCOs were not required to report this measure for HEDIS MY 2018 or MY 2019.

NA (Small Denominator) indicates that the MCO followed the specifications, but the denominator was too small (<30) to report a valid rate.

Rates shaded green with one caret (^) indicate a statistically significant improvement in performance from the previous year.

Rates shaded red with two carets (^) indicate a statistically significant decline in performance from the previous year.

Appendix C. Information System Findings

Information System Findings

NCQA’s Information System (IS) standards are the guidelines used by NCQA-certified HEDIS compliance auditors to assess the MCOs’ HEDIS reporting capabilities.^{C-1} HSAG evaluated each MCO on six IS standards. To assess the MCOs’ adherence to standards, HSAG reviewed several documents for DHMP and RMHP Prime, which included the Final Audit Reports (FARs) (generated by an NCQA-licensed audit organization [LO]), IDSS files, and audit review tables. The findings indicated that, overall, the MCOs were compliant with all of NCQA’s IS standards. Both MCOs were able to accurately report most Department-required HEDIS performance measures. For a few measures, the MCOs could not report valid rates because too few eligible cases existed (>30) for the measures.

Both MCOs contracted with a software vendor to produce the HEDIS measure rates. The vendors submitted programming code developed for each HEDIS measure to NCQA for the measure certification process. Through certification, NCQA tested that the source code developed for the measures within the software produced valid results and the rate calculations met the technical specifications for the measures. The selected source codes were reviewed and approved for measure reporting.

In FY 2020–2021, each Colorado Medicaid MCO contracted with an LO to perform the NCQA HEDIS Compliance Audit. For the current measurement year, HSAG did not calculate measures or perform an NCQA HEDIS Compliance Audit for the FFS program; therefore, the following table only summarizes the audit findings for the two Colorado Medicaid MCOs.

^{C-1} National Committee for Quality Assurance. *HEDIS Compliance Audit Standards, Policies and Procedures, Volume 5*. Washington D.C.

Table C-1—Summary of Compliance With IS Standards

NCQA’s IS Standards	HSAG’s Findings Based on HEDIS MY 2020 FAR Review
<p>IS 1.0—Medical Service Data—Sound Coding Methods and Data Capture, Transfer, and Entry</p> <ul style="list-style-type: none"> • Industry standard codes are required and captured. • Primary and secondary diagnosis codes are identified. • Nonstandard codes (if used) are mapped to industry standard codes. • Standard submission forms are used. • Timely and accurate data entry processes and sufficient edit checks are used. • Data completeness is continually assessed, and all contracted vendors involved in medical claims processing are monitored. 	<p>Both MCOs were compliant with IS Standard 1.0 for medical services data capture and processing.</p> <p>Both MCOs only accepted industry standard codes on industry standard forms.</p> <p>All data elements required for HEDIS reporting were adequately captured.</p>
<p>IS 2.0—Enrollment Data—Data Capture, Transfer, and Entry</p> <ul style="list-style-type: none"> • All HEDIS-relevant information for data entry or electronic transmissions of enrollment data is accurate and complete. • Manual entry of enrollment data is timely and accurate, and sufficient edit checks are in place. • The MCOs continually assess data completeness and take steps to improve performance. • The MCOs effectively monitor the quality and accuracy of electronic submissions. • The MCOs have effective control processes for the transmission of enrollment data. 	<p>Both MCOs were compliant with IS Standard 2.0 for enrollment data capture and processing.</p> <p>The MCOs had policies and procedures in place for submitted electronic data. Data elements required for reporting were captured. Adequate validation processes were in place, ensuring data accuracy.</p>
<p>IS 3.0—Practitioner Data—Data Capture, Transfer, and Entry</p> <ul style="list-style-type: none"> • Provider specialties are fully documented and mapped to HEDIS provider specialties. • Effective procedures for submitting HEDIS-relevant information are in place. • Electronic transmissions of practitioner data are checked to ensure accuracy. • Processes and edit checks ensure accurate and timely entry of data into the transaction files. • Data completeness is assessed and steps are taken to improve performance. • Vendors are regularly monitored against expected performance standards. 	<p>Both MCOs were compliant with IS Standard 3.0 for practitioner data capture and processing.</p> <p>The MCOs appropriately captured and documented practitioner data. Data validation processes were in place to verify practitioner data.</p> <p>In addition, for accuracy and completeness, the MCOs reviewed all provider data received from delegated entities.</p>

NCQA’s IS Standards	HSAG’s Findings Based on HEDIS MY 2020 FAR Review
<p>IS 4.0—Medical Record Review Processes—Training, Sampling, Abstraction, and Oversight</p> <ul style="list-style-type: none"> • Forms or tools used for medical record review capture all fields relevant to HEDIS reporting. • Checking procedures are in place to ensure data integrity for electronic transmission of information. • Retrieval and abstraction of data from medical records are accurately performed. • Data entry processes, including edit checks, are timely and accurate. • Data completeness is assessed, including steps to improve performance. • Vendor performance is monitored against expected performance standards. 	<p>Both MCOs were compliant with IS Standard 4.0 for medical record review processes.</p> <p>Data collection tools used by the MCOs were able to capture all data fields necessary for HEDIS reporting. Sufficient validation processes were in place to ensure data accuracy. However, HSAG did not review this step since the State requires administrative rates only.</p>
<p>IS 5.0—Supplemental Data—Capture, Transfer, and Entry</p> <ul style="list-style-type: none"> • Nonstandard coding schemes are fully documented and mapped to industry standard codes. • Effective procedures for submitting HEDIS-relevant information are in place. • Electronic transmissions of supplemental data are checked to ensure accuracy. • Data entry processes, including edit checks, are timely and accurate. • Data completeness is assessed, including steps to improve performance. • Vendor performance is monitored against expected performance standards. • Data approved for electronic clinical data system (ECDS) reporting met reporting requirements. • NCQA-certified eCQM (electronic clinical quality measure) data met reporting requirements. 	<p>Both MCOs were compliant with IS Standard 5.0 for supplemental data capture and processing.</p> <p>The HEDIS repository contained all data fields required for HEDIS reporting. In addition, staff members were interviewed to confirm the appropriate quality processes for the data source and to determine if primary source verification (PSV) was needed on all supplemental data that were in nonstandard form.</p>

NCQA’s IS Standards	HSAG’s Findings Based on HEDIS MY 2020 FAR Review
<p>IS 6.0 Data Preproduction Processing—Transfer, Consolidation, Control Procedures That Support Measure Reporting Integrity</p> <ul style="list-style-type: none"> • Nonstandard coding schemes are fully documented and mapped to industry standard codes. Organization-to-vendor mapping is fully documented. • Data transfers to HEDIS repository from transaction files are accurate and file consolidations, extracts, and derivations are accurate. • Repository structure and formatting is suitable for measures and enable required programming efforts. • Report production is managed effectively and operators perform appropriately. • Vendor performance is monitored against expected performance standards. 	<p>Both MCOs were compliant with IS Standard 6.0 for data preproduction processing.</p> <p>File consolidation and data extractions were performed by the MCOs’ staff members. Data were verified for accuracy at each data merge point.</p>
<p>IS 7.0—Data Integration and Reporting—Accurate Reporting, Control Procedures That Support HEDIS Reporting Integrity</p> <ul style="list-style-type: none"> • Data transfers to the HEDIS repository from transaction files are accurate. • Report production is managed effectively and operators perform appropriately. • HEDIS reporting software is managed properly. • The organization regularly monitors vendor performance against expected performance standards. 	<p>Both MCOs were compliant with IS Standard 7.0 for data integration.</p> <p>The MCOs used an NCQA-certified measure vendor for data production and rate calculation.</p>

Appendix D. MCO Capitation Initiative Administrative and Hybrid Rates

Table D-1 shows DHMP’s rates for HEDIS MY 2020 for measures with a hybrid option, along with the percentile ranking for each HEDIS MY 2020 hybrid rate.

Table D-1—HEDIS MY 2020 Administrative and Hybrid Performance Measure Results for DHMP

Performance Measures	Administrative Rate	Hybrid Rate	Percentile Ranking
<i>Access to Care</i>			
<i>Prenatal and Postpartum Care</i>			
<i>Timeliness of Prenatal Care</i>	83.36%	87.10%	25th–49th
<i>Postpartum Care</i>	69.22%	74.21%	25th–49th

Table D-2 shows RMHP Prime’s rates for HEDIS MY 2020 for measures with a hybrid option, along with the percentile ranking for each HEDIS MY 2020 hybrid rate.

Table D-2—HEDIS MY 2020 Administrative and Hybrid Performance Measure Results for RMHP Prime

Performance Measures	Administrative Rate	Hybrid Rate	Percentile Ranking
<i>Pediatric Care</i>			
<i>Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents</i>			
<i>BMI Percentile Documentation—Total</i>	5.83%	75.74%	25th–49th
<i>Counseling for Nutrition—Total</i>	20.42%	77.87%	50th–74th
<i>Counseling for Physical Activity—Total</i>	0.00%	72.34%	50th–74th
<i>Access to Care</i>			
<i>Prenatal and Postpartum Care</i>			
<i>Timeliness of Prenatal Care</i>	56.65%	91.00%	50th–74th
<i>Postpartum Care</i>	32.89%	85.64%	≥90th
<i>Preventive Screening</i>			
<i>Cervical Cancer Screening</i>			
<i>Cervical Cancer Screening</i>	40.27%	52.01%	10th–24th
<i>Living With Illness</i>			
<i>Comprehensive Diabetes Care</i>			
<i>Hemoglobin A1c (HbA1c) Testing</i>	86.61%	92.77%	≥90th
<i>HbA1c Poor Control (>9.0%)*</i>	71.37%	25.94%	≥90th
<i>HbA1c Control (<8.0%)</i>	23.85%	60.10%	75th–89th
<i>Eye Exam (Retinal) Performed</i>	48.57%	59.60%	50th–74th
<i>Blood Pressure Control (<140/90 mm Hg)</i>	0.13%	75.31%	—

*For this measure, a lower rate indicates better performance.

— Indicates that NCQA recommended a break in trending; therefore, comparisons to benchmarks are not performed.
