OVERVIEW

This report was prepared by The Colorado Department of Higher Education (DHE) pursuant to 23-1-113.3 C.R.S.

The information in this report is presented to inform the ongoing dialogue regarding preparation for college and the effects of remedial education or developmental education* in Colorado. This report documents data gathered by the Colorado Department of Higher Education (DHE) for academic year 2013 (Summer 2012 – Spring 2013) as required by statute. The report concerns students taking basic skills courses at Colorado’s public higher education institutions. The report is submitted to the Education Committees of the Senate and House of Representatives, the Joint Budget Committee (JBC), the Colorado Department of Education (CDE), and each Colorado public school district superintendent.

C.R.S. 23-1-113.3 defines areas of responsibility for the Commission with regard to remedial education:

- adopt and implement a remedial policy; develop funding policies for remediation appropriate to institutional roles and missions;
- design a reporting system that provides the General Assembly with information on the number, type, and costs of remediation;
- establish comparability of placement or assessment tests; and
- ensure each student identified as needing remediation is provided with written notification regarding cost and availability of remedial courses.

For more information please contact:

Beth Bean, Chief Research Officer at the Colorado Department of Higher Education, at 303-866-2661 or by email at beth.bean@dhe.state.co.us

*Remedial education, remediation, and developmental education are used interchangeably throughout this report.

HIGHLIGHTS

Highlights from Academic Year 2012-13

- Overall, the percentage of the 2012 high school graduates placed into remediation in at least one subject was 37.0%, an improvement from the previous year of 40.0%.
- Of the 22,413 high school graduates who matriculated to college in Colorado, 8,299 students were not college ready and required at least one remedial course.
- About 40 percent of college female students were not college ready compared to 35 percent of college matriculated males.
- Eighty seven percent of Black, non-Hispanic students at two-year colleges and 49 percent of such students at four-year institutions were not ready for college level courses.
- Almost 78 percent of Hispanic students enrolled at a two-year college required developmental education compared to 38 percent at four-year institutions.
- Fifty-nine percent of Free and Reduced Lunch participants were not college ready compared to 31% of non-FRL students who were not college ready.
- When examining remediation by subject, most students required remediation in mathematics, followed by writing and then reading.
- The majority of students needing English and reading remediation only needed one course before being ready for a credit bearing college level course.
- For the first time, remedial students had higher first year retention rates than non-remedial students at community colleges.
- At the four-year level, the retention rate for students not assigned to remediation was 75 percent, compared to 61 percent for those needing remediation.
- Approximately 62 percent of all remedial courses were completed successfully, an increase over last year's 59 percent.
- Combined, the estimated cost to the state and estimated tuition cost to the student for remedial courses amount to approximately \$56.1 million in FY2012-13. This is a two million dollar savings from last year with fewer students needing remediation.

REPORT SUMMARY

The Colorado Commission on Higher Education has set a primary performance goal of increasing the number of residents aged 25-34 who hold a high-quality, postsecondary credential to 66 percent.¹ In order to reach this goal, and for Colorado to have an educated workforce to fill the 74% of jobs that will require a college degree by 2020², it is no longer enough to get students to college. Nearly all college students must be successful and earn a certificate or degree. Remedial education can no longer be a barrier to success. To that end, a number of initiatives across the state are targeted at reducing students' need for, and lessening their time spent in, remedial classes. These initiatives appear to be working as the overall number of high school students needing remediation decreased this year in Colorado.

For decades, policymakers and educators have been lamenting, and rightfully so, about the high number of high school graduates who are not ready for college and require developmental education courses. However, prior to the last few years, progress was stunted due to a lack of alignment between K12 and higher education. Secondary and postsecondary education had different standards, expectations, and a lack of ownership regarding remedial education. Since 2009, the developmental education landscape has drastically changed and Colorado, along with the nation, is making major

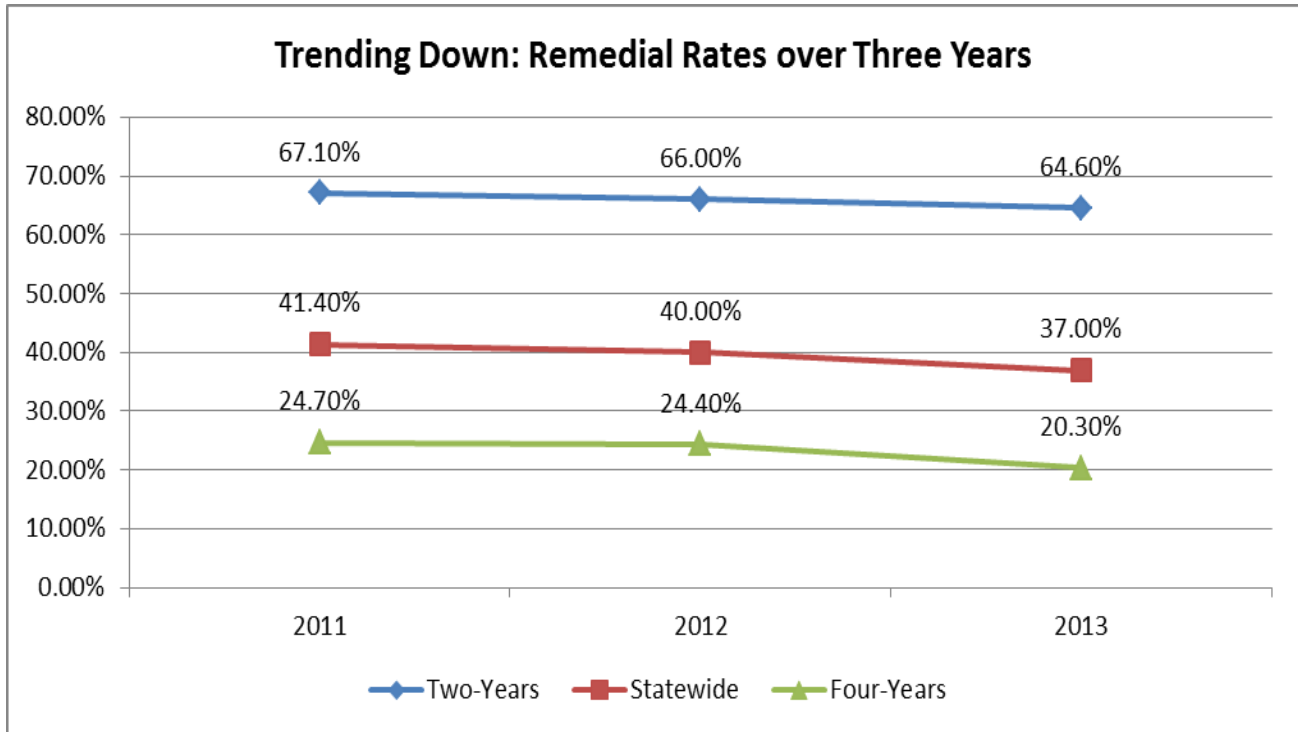

The 2012-2013
remedial rate
decreased to 37
percent of students
needing remedial
education from last
year's 40

advancements in increasing college readiness. Fundamental changes have occurred in two main areas. First, the implementation of the Common Core State Standards Initiative will align K12 and higher education standards in Mathematics and English and secondly, major developmental education reform efforts are underway.

Prior national research estimated half of all community college students and 20% of students entering a four-year institution required remediation³. Other national studies cite upwards of 60 percent of students attending two-year institutions need basic skill courses⁴ and it is estimated that less than 25% with remedial needs graduate. Colorado's rates are comparable with the nation and have historically shown statewide

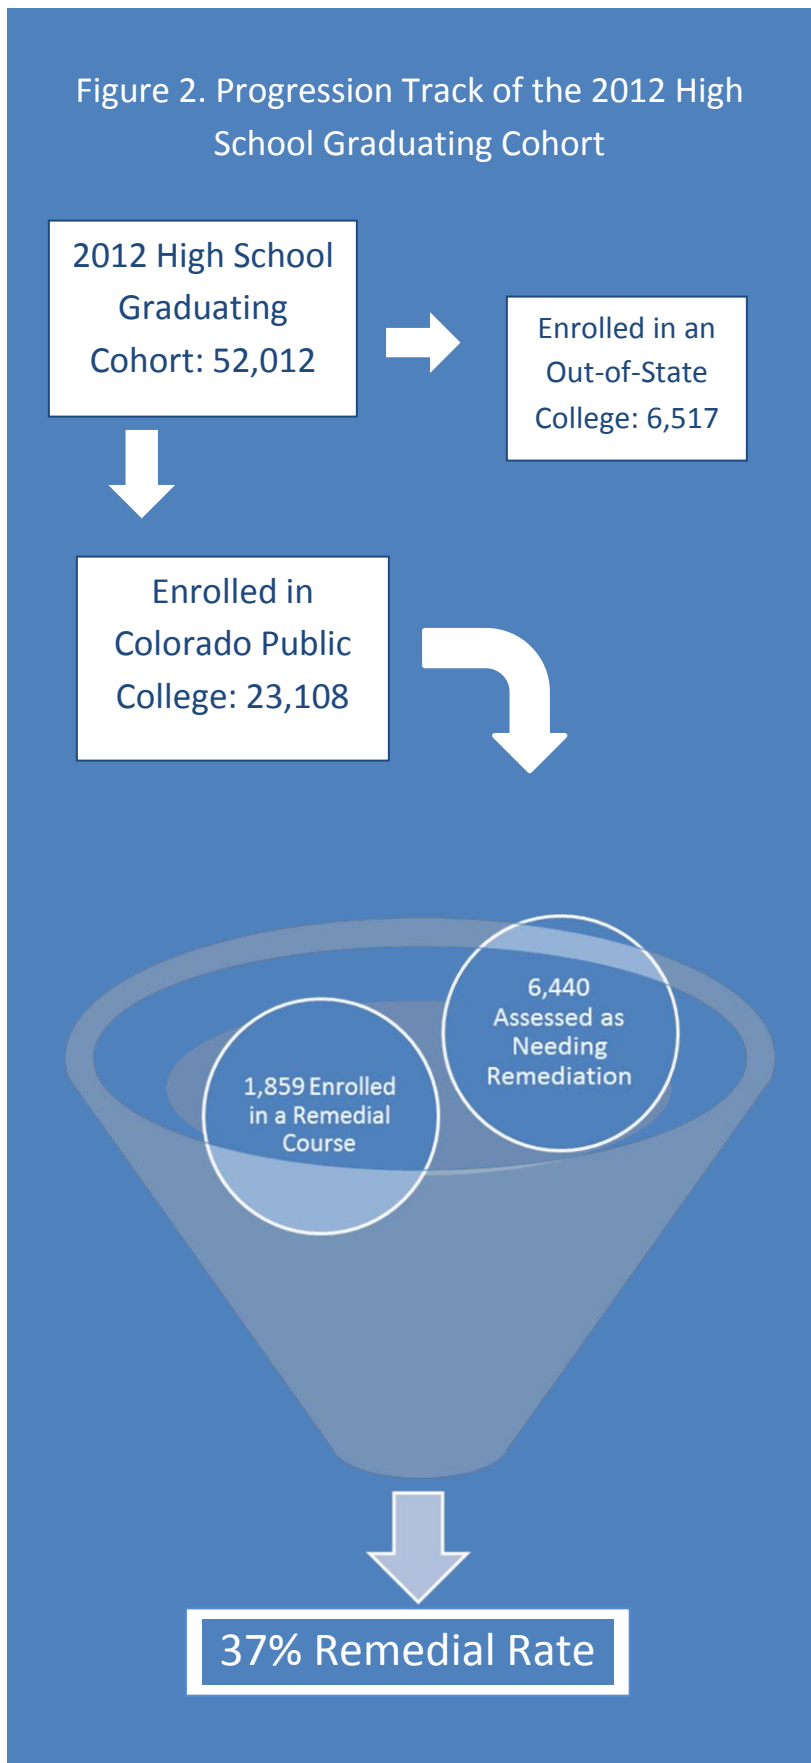

remediation to hover around 40 percent. In 2012-2013, the number of students requiring remediation decreased by three percentage points. The 2012-2013 remedial rate is 37 percent compared to last year's remediation rate of 40 percent. The decrease in the number of students needing remediation demonstrates Colorado is moving in the right direction and points to the success of recently implemented remedial initiatives.

Figure 1. Longitudinal Remedial Rates by Sector

Specifically, of the 2012 public high school completers who enrolled in a state college or university 37% were assessed as needing remediation or were enrolled in a basic skills course. The percentage of 2012 high school graduates who enrolled in a two-year college and needed remediation was 64.6 percent, an improvement from the previous year of 66 percent of students. The comparable rate for students who enrolled in a four-year institution was 20 percent, also an improvement compared to the previous year of 24 percent of students. Figure 1 displays remedial rates from the past three academic years statewide and by educational sector. As the graphic displays, there has been a downward trend in the number of students needing remediation across each sector within the state.

Figure 2. Progression Track of the 2012 High School Graduating Cohort

Assessment and Enrollment of Remedial Students

In 2012, slightly over 52,000 high school students graduated. Of those high school graduates, 57% enrolled into a postsecondary institution. The majority or about 78% of the college enrollees remained in state, while about 22% of Colorado high school graduates enrolled into an out-of-state college. Of those high school graduates who matriculated to a Colorado public college, 6,440 were assessed as needing remediation. An additional 1,859 students enrolled in a remedial course. Not all students who were assessed as needing a basic skill course enrolled immediately into a class. Various efforts are underway to enroll students into a needed remedial class early in their college career as this has been linked to future success.

Remedial Rates by Public Institution of Higher Education in Colorado

In 2012-13, the majority of community colleges experienced a slight decrease in the number of students needing remediation compared to the prior academic year. The combined remedial rate for Colorado community colleges was 63.8%. The range of remedial rates included a low of 48.1% at Red Rocks Community College to a high of 86.9% at the Community College of Denver. The high rate at the Community College of Denver could be a reflection of the unique role the college plays as the only two-year member of the Auraria Campus.

Table 1: Remedial Rates by Public Institution

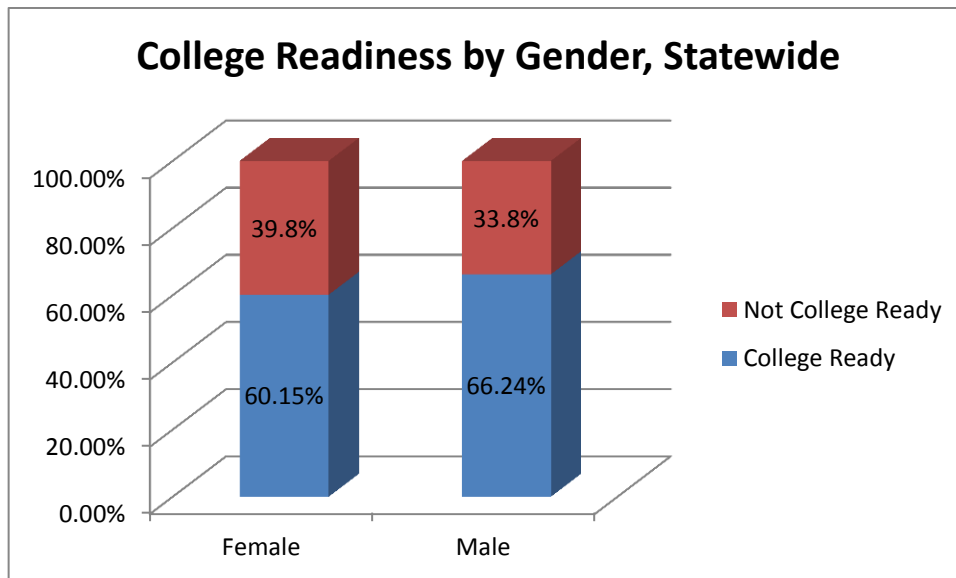

INSTITUTION NAME	COHORT	REMEDIAL	PERCENT REMEDIAL
Arapahoe Community College	778	436	56.0%
Colorado Northwestern Community College	77	47	61.0%

University of Colorado Boulder	2743	11	0.4%
University of Colorado Colorado Springs	1162	295	25.4%
University of Colorado Denver	824	147	17.8%
University of Northern Colorado	1843	636	34.5%
Western State Colorado University	293	108	36.9%
Grand Total for Four-Year Institutions	13945	2832	20.3%
COMBINATION 2 AND 4 YEAR UNIVERSITIES			
Total - Adams State University	376	214	56.9%
Total - Colorado Mesa University	1526	773	50.7%
Grand Total	22413	8299	37.0%

The local district colleges had a combined remedial rate of 60.6%, while the two year students enrolled at our dual mission colleges, showed a combined remedial rate of 80.6%. Among four-year institutions, Adams State College, an institution with both a two-year and four-year role and mission, had the highest percent of four-year students needing remediation at 58.1%, a decrease from last year. The University of Colorado Boulder and the Colorado School of Mines had 1 percent or less of the 2012 enrolled high school graduates needing developmental education. Please see Table 1. Please note college cohort size may vary year to year depending on the accuracy of matching the K12 State Assigned Student ID (SASID) to college records.

PROFILE OF A REMEDIAL STUDENT: Demographics of the 2012 High School Graduates Assigned to Developmental Education

Consistent with recent trends, a slightly higher proportion of females were assigned to remediation. When examining the students who were assessed as needing developmental education, 57% were females compared to 43% of males. These remedial rates are consistent with enrollment rates that have steadily shown a slight majority of female students matriculating compared to males. Within the buckets of gender, 40% of females were not college ready upon entrance to college and 34% of males were not college ready. At two-year institutions in the fall of 2012, 67 percent of females and 60 percent of males was assigned to a remedial course, compared to approximately 25 percent of females and 20 percent of males who were enrolled at a four-year institution. (Please see Figure 3 and Table 4 [appendix]).

Figure 3. Remediation in at Least One Subject by Gender (Statewide)

When examining developmental needs by race/ethnicity, minority students are more likely to not be college ready compared to White, non-Hispanic students. Among students from minority populations, Black, non-Hispanic high school graduates had the highest remedial placement rate. *Eighty seven percent of Black, non-Hispanic students at two-year colleges and 49 percent of such students at four-year institutions were not ready for college level courses. Almost 78 percent of Hispanic students enrolled at two-year colleges required developmental education compared to 38 percent at four-year institutions.* As our diverse populations experience dramatic growth in Colorado, our schools must be prepared to help students pass the necessary remedial courses and succeed through to a postsecondary credential (See Figures 4a and 4b and Table 3 [appendix]).

Figure 4a. College Readiness by Race/Ethnicity (Two-Year Institutions)

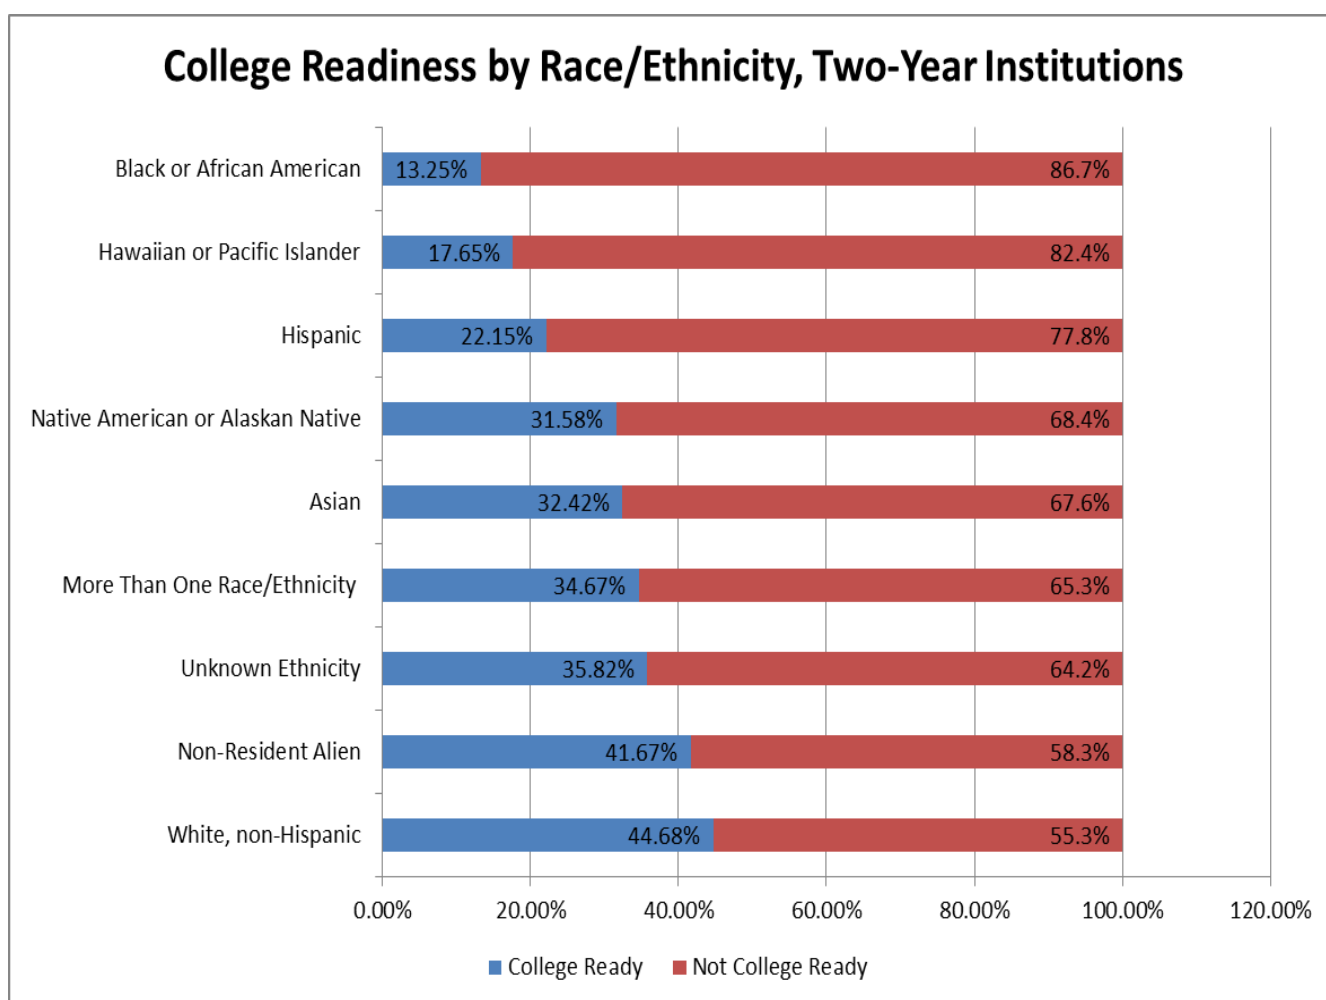

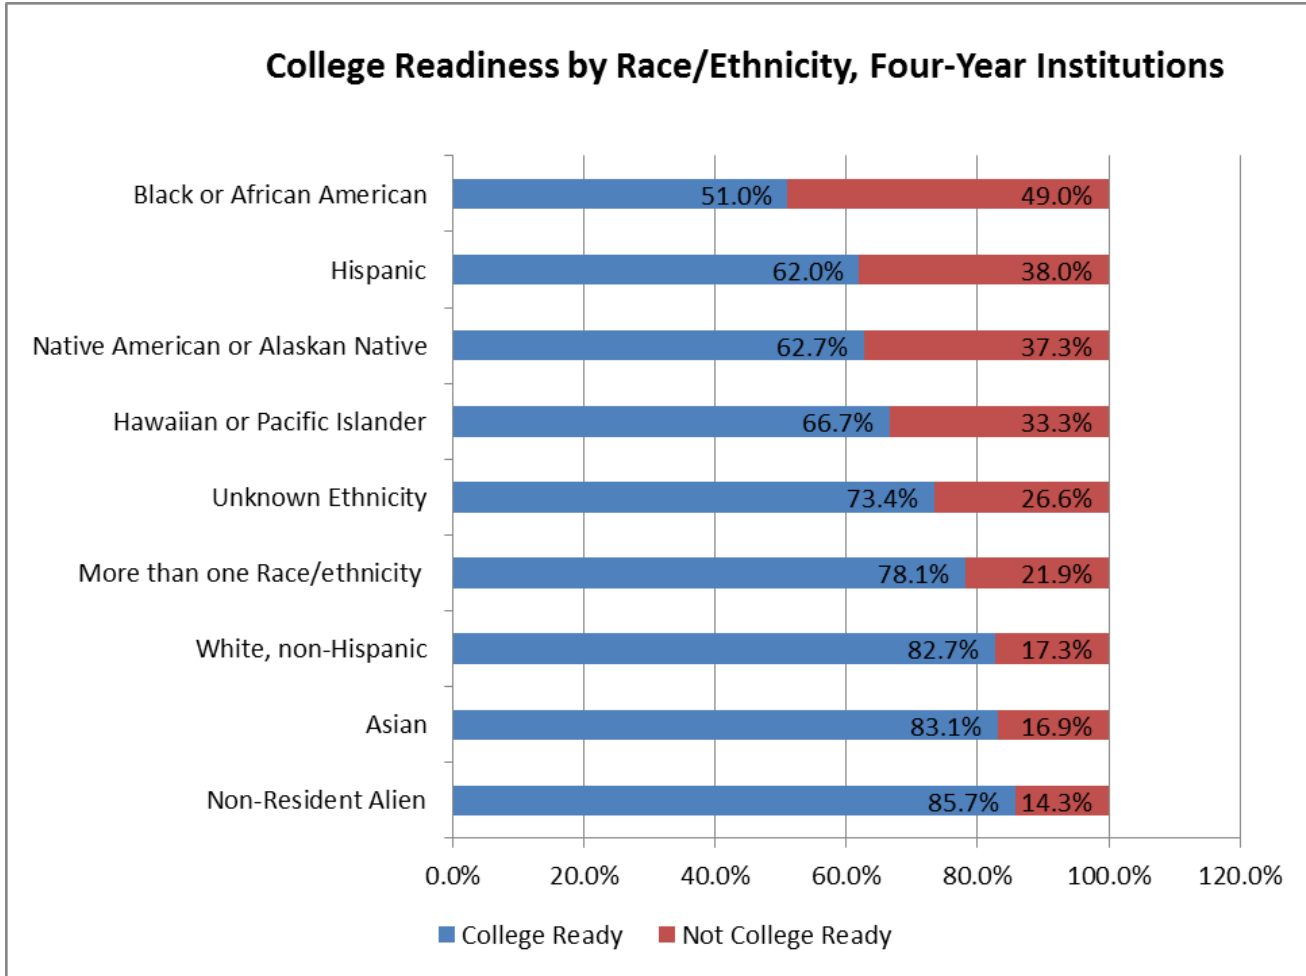

Figure 4b. College Readiness by Race/Ethnicity (Four-Year Institutions)

When examining developmental needs by free and reduced lunch (FRL) participation, students who had greater financial needs and participated in FRL were less likely to be college ready than their peers who were not participants in the FRL program. Specifically, 59% of FRL students were not college ready compared to 31% of non-FRL students who needed remediation. Please see Figure 5.

English Language Learner (ELL) participants were also more likely to need remediation than non-ELL high school graduates. Approximately, 80% of ELL students need remediation compared 35% of non-ELL students. Please see Figure 6.

Special Education participation in high school is also associated with a greater need for remediation. For those students who participated in special education in high school, 77% needed remediation compared to 36% of traditional education students. Please see Figure 7.

Figure 5. College Readiness by Free and Reduced Lunch Participation in High School

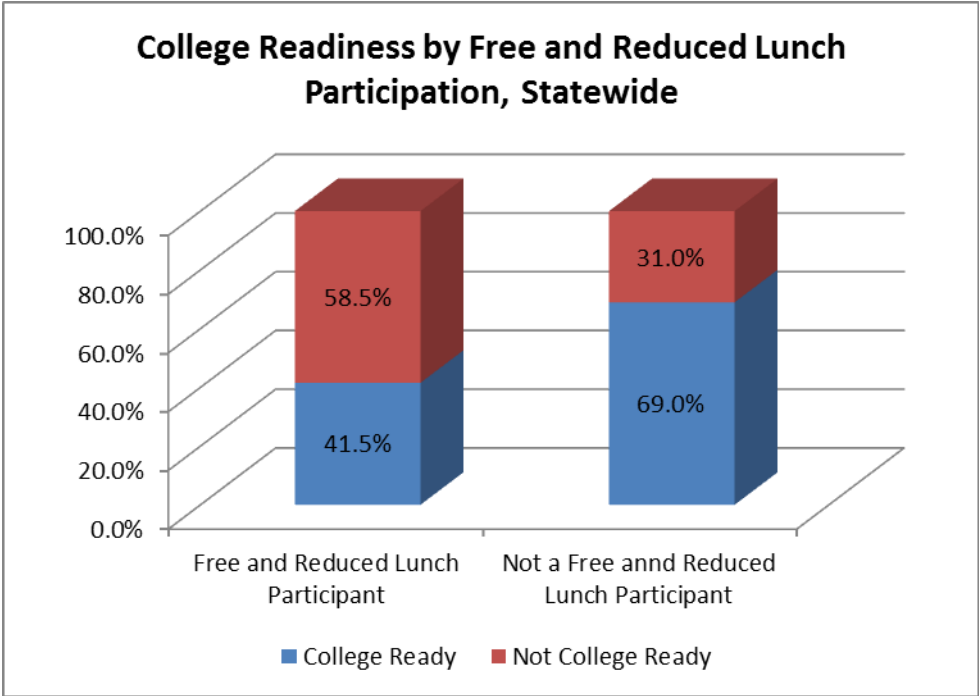

Figure 6. College Readiness by English Language Learner Status in High School

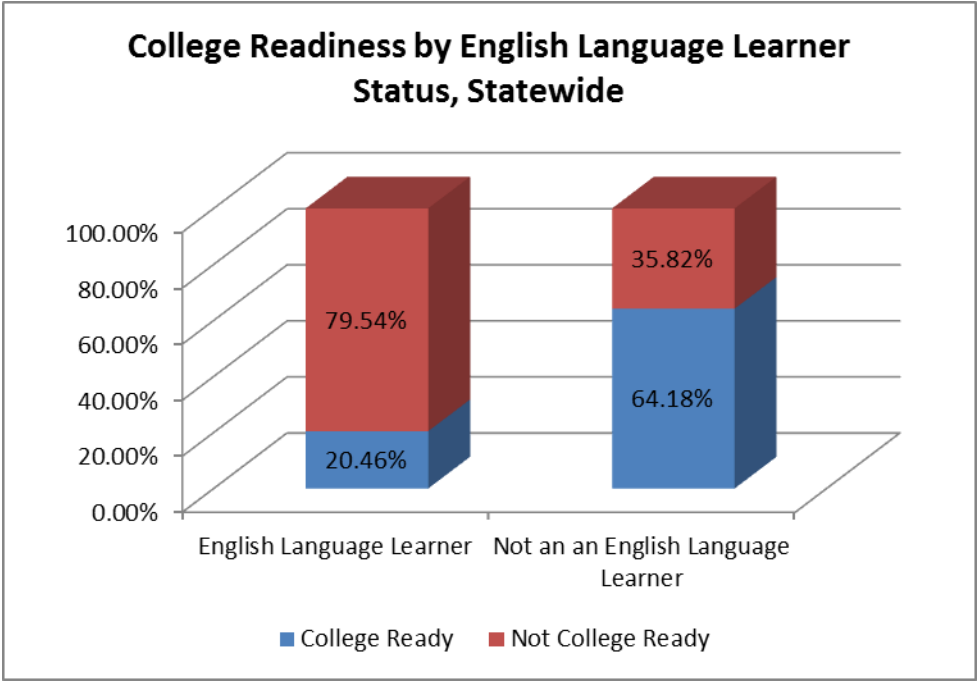

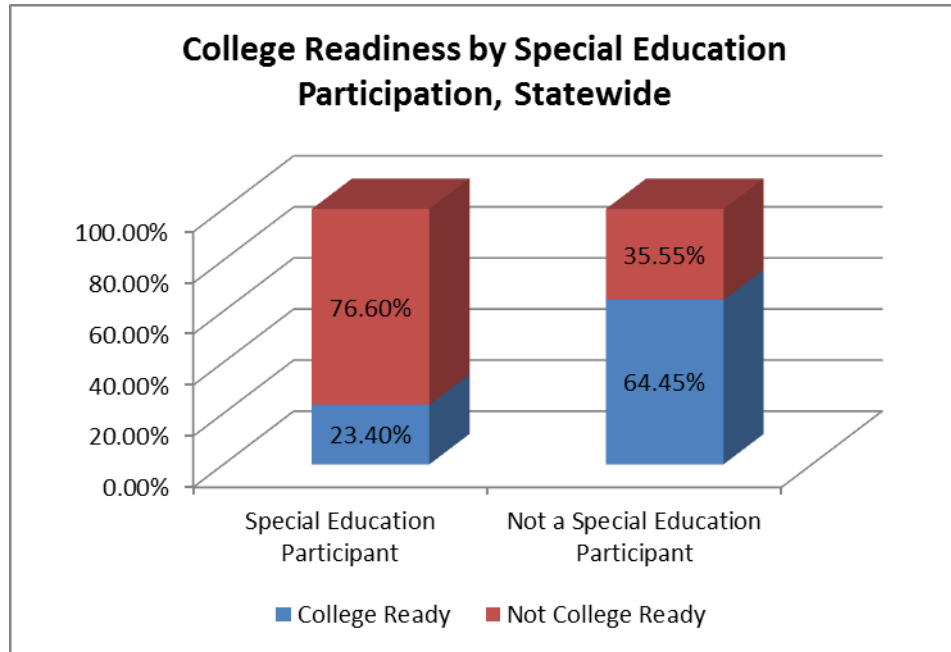

Figure 7. College Readiness by Special Education Participation in High School

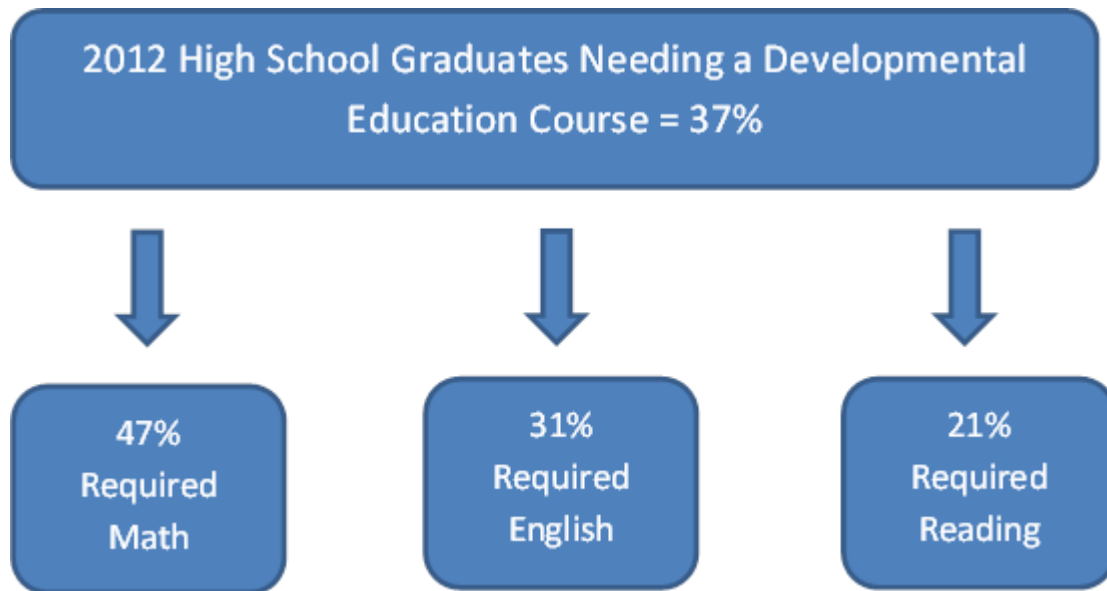

Remedial Rates by Subject

The largest number of students in need of remediation required additional help in math (47%), a finding consistent with previous state reports and national trends. This rate is followed in magnitude by writing (31%) and reading (21%). Figure 8 below illustrates the percentage of 2012 high school graduates assigned to remediation by subject.

As Figure 8 shows, the greatest remedial intensity is in math. Research has shown there is a negative relationship between the number of remedial classes needed and a student’s chance of academic success⁵. The Colorado Community College System has estimated that less than five percent of students assigned to a remedial course will eventually go on to earn a degree⁶.

Importantly, the Colorado Community College System has successfully been offering tutor support to students who would have tested into the lowest level remedial courses and has implemented a system that reduces the amount of time required to complete remedial sequences, as well as, the adoption of varied math requirements based upon a student’s major of choice.

Figure 8. Developmental Education by Subject

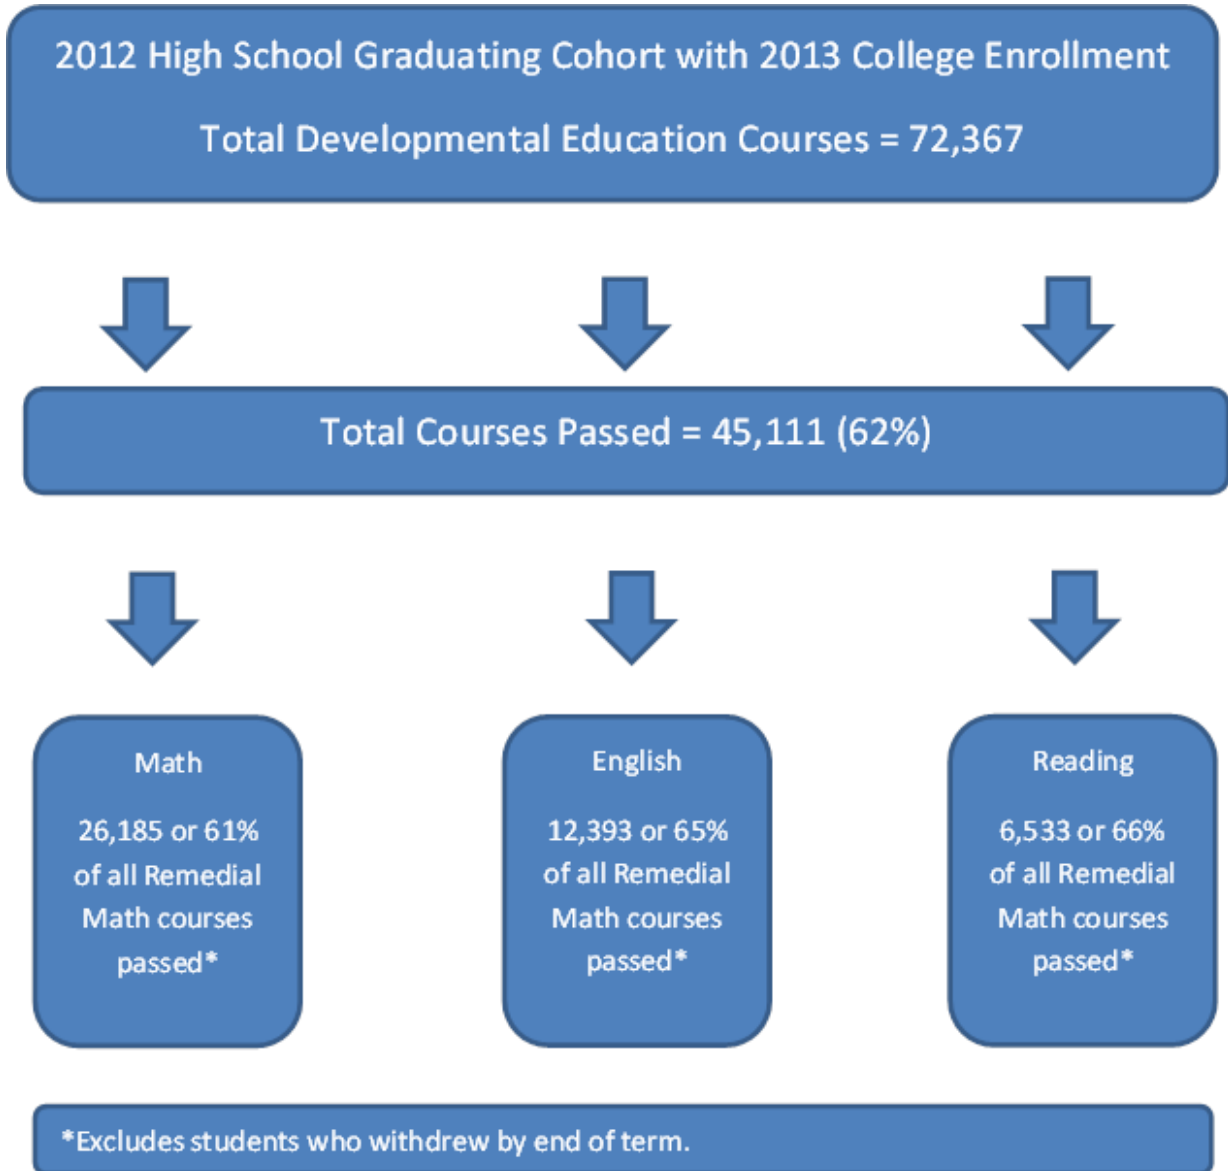

REMEDIAL COURSE COMPLETION AND COSTS

Remedial Summary by End of Term Completion

Figure 9 and Tables 6 and 7 in the appendix show developmental courses attempted and total credit hours passed, failed, withdrew or incomplete. At all institutions, students enrolled in 72,367 remedial courses. Of those, students passed 45,111 (62 percent), and failed, withdrew, took as incomplete or audited 27,104 (37 percent). This is a three percentage point improvement over the number of successfully completed remedial courses last year. Figure 9 displays remedial pass rates by subject. Please note these percentages are only based upon passed and failed and therefore don't include withdrawn courses. The pass rates for Math, English, and Reading are comparable with 66 percent of remedial students passing Reading, 65 percent passing English, and 61% passing Math. The figure also shows that the overwhelming majority of remedial courses are in Math, almost twice as many as English and four times as many as Reading.

Figure 9.

2012 College Going Cohort Pass Rate for Developmental Education Courses

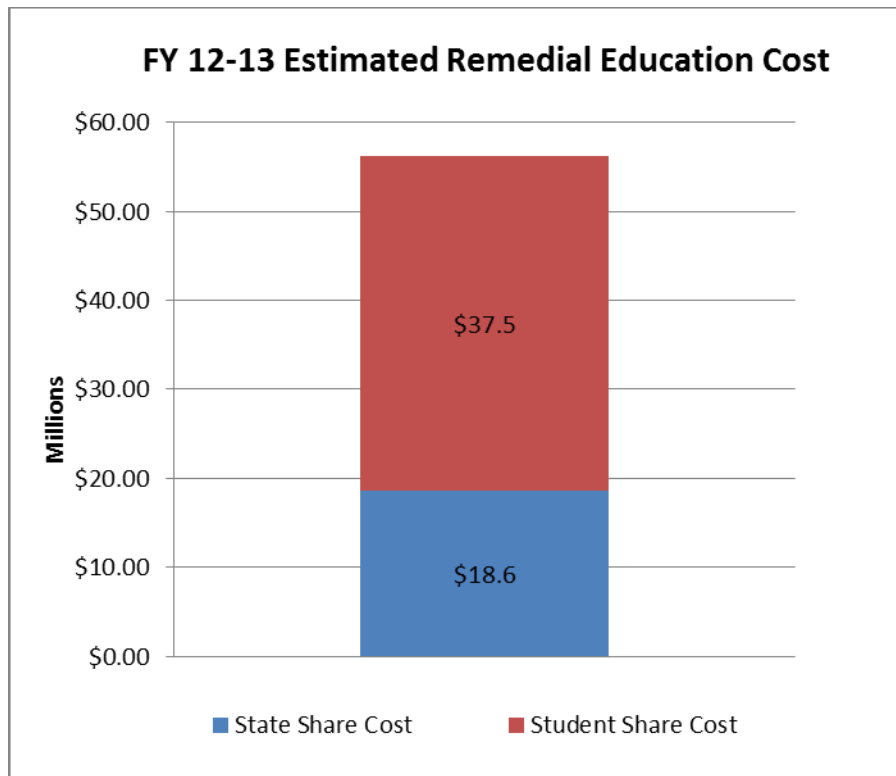

Remedial Credit Hour Costs

The estimated cost for remediation is calculated by utilizing actual year data provided on total educational and general expenditures and revenue at the public institutions of higher education. Total revenues for educational and general expenditures are comprised of a combination of sources but are primarily comprised of tuition and state funding (General Fund or College Opportunity Fund dollars). This amount is divided by the total number of credit hours provided by the colleges to

students over the same fiscal year to general an average cost per credit hour. This average cost per credit hour is then applied to the number of remedial credit hours which generates an estimated average cost for total remedial education, which is further divided into student share and state share.

Table 8 and Figure 10 show the estimated state cost for Fall 2012 and Spring 2013. Two-year and four-year institutions that are authorized to offer remedial instruction reported that 70,541 remedial courses were taken in Fall 2012 and Spring 2013. The estimated *total* cost for remedial instruction associated with these enrollments is \$56.1 million. This total is comprised of an estimated state cost of \$18.6 million and an estimated student cost of \$37.5 million. These cost tables do not include cash funded courses or remedial coursework taken during the summer. The FY 2012-2013 remedial education cost is a decrease over last year's estimated cost of \$58.4 million dollars and shows a savings of over two million dollars due to fewer students taking remedial courses. Consistent with last year's estimated figures is the high portion of responsibility on the student to cover the cost.

Figure 10. FY 2012-13 Estimated Remedial Education Cost

FIRST YEAR RETENTION: Retention Rates of Remedial and Non-Remedial Students

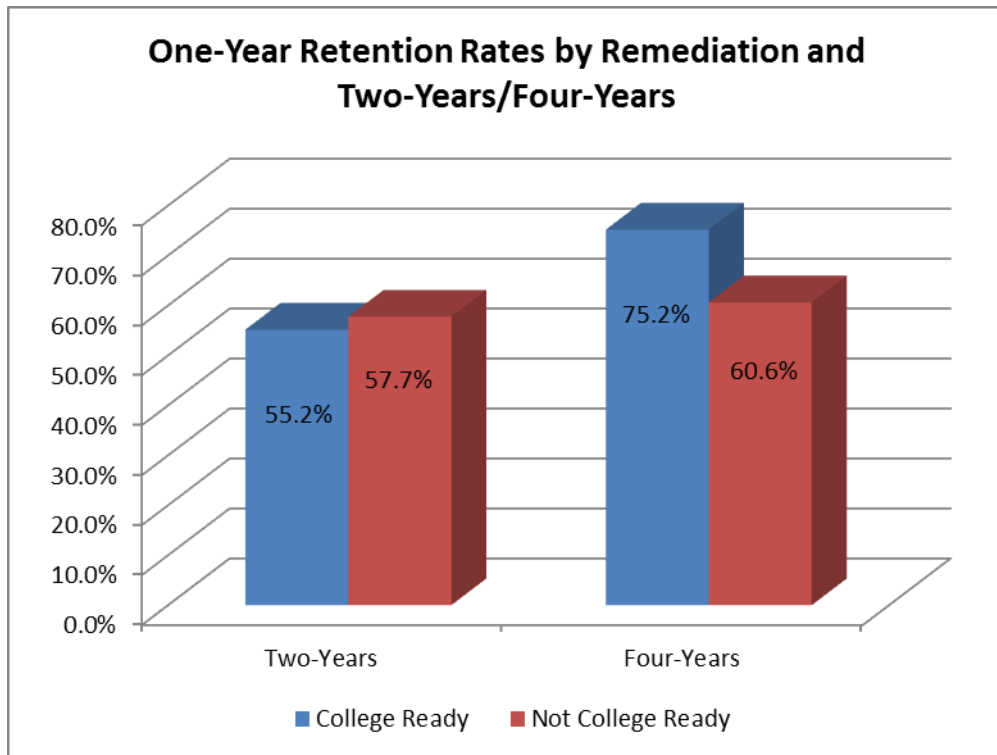

This section examines the retention rates of remedial and non-remedial students by institution. In recent years, the measure of higher education success has shifted from a focus on college access (inputs) to postsecondary success (outcomes).

Consequently, measuring success is not based upon the percent of students needing developmental education (or not), but rather the number of such students who move through the remedial sequence into credit-bearing courses and on to graduation.

Table 5 (in appendix) and Figure 11 compare overall retention rates of students assigned to remediation and those not assigned to remediation by type of institution. Historically, Colorado students who required developmental education were less likely to persist into their second year. *However, for the first time since annual reporting began in 2001, the first-year retention rates of remedial students were higher than for non-remedial students at community colleges.* At these two-year institutions, 58% of students who needed remediation enrolled in their second year of college compared to 55% of two-year students who didn't arrive on campus with developmental education needs. At four-year institutions, the difference between one-year retention rates and remediation was more pronounced and had the more common reverse effect. The retention rate for four-year students not assigned to remedial coursework was 75% compared to 61% for those assigned to remediation, nearly a 15 percentage point difference in retention. More research is needed to fully understand this new occurrence and the success of the two-year remedial students.

For the first time, students with remedial needs had higher one-year retention rates than non-remedial students at community colleges.

Figure11. Remediation and One-Year Retention (Two-Year and Four-Year Institutions)

REMEDICATION BY SCHOOL DISTRICT AND HIGH SCHOOL

Table 9 shows data on the number of students assigned to remediation by school district and high school. For confidentiality purposes, data from high schools with less than 16 graduates enrolled are not displayed, though these students are included in the overall remedial rate. Table 10 disaggregates the most current year of data by developmental education subject and high school.

Remedial rates by high school range from a low of 0.0 percent at The Classical Academy – College Pathways in Colorado Springs to a high of 100 percent or at Jefferson High School in Greeley. James Irwin Charter High School in the Harrison District had tremendous improvement this year and lowered its remedial rate to 4% from 23% last year. A number of high schools have consistently had low remedial rates for their high school graduates. These schools include D’Evelyn High School, Colorado Springs Early College, the Denver School of Science and Technology in Denver County, and Fairview High School in Boulder. Approximately 23 percent of high schools have a 2012 remedial rate of 25% or lower, while 48% of secondary schools have a remedial rate between 26 and 50 percent. Only two percent of high schools have a remedial rate greater than 75 percent of their graduates not being college ready.

Expanding upon last year's report, which applied a new remedial report methodology beginning with the complete high school graduation cohort and looked at whether the student was assessed for remediation and/or enrolled in a basic skills course, this report adds one additional function upon the recommendation of the local K-12 districts and with the support of the Colorado Department of Education. In this report, remedial rates for high schools have been calculated based upon two high school cohorts. The first cohort is the completer cohort, which matches last year's report, and is based upon the academic year. In this cohort, early and late graduates are folded into the same class based upon the year. The second cohort presented in Table X is the on-time graduation cohort in which a student is assigned a graduating class that does not change over time. This change in reporting aligns with the on-time graduation rate currently reported by our local districts and complies with the No Child Left Behind Act.

REFORMING THE SYSTEM OF REMEDIATION

The Colorado P20 educational system is fully invested in graduating high school students who are college ready and do not require remediation. This shared goal is necessary for Colorado to meet our credential completion goal and prepare our future workforce. This following section highlights the current remediation reform work occurring across the state and discusses future alignment.

- The Colorado Commission on Higher Education as part of the 2012 Statewide Master Plan includes “improving student success through better outcomes in basic skills education” as one of its top four goals. This vital goal will be measured at the institutional level by “eliminating the disparities in the completion rates of college-level English and mathematics courses between students originally assigned to remediation and those not assigned to remediation”.¹ This is a major shift in accountability as institutions are committing to being responsible for not only successfully getting students through the remedial sequence but also completing their first college credit bearing courses. The first round of reporting related to this goal will occur in December of this year as part of the performance funding initiative of Senate Bill 52 and will further be expanded with the recent passing of House Bill 1319.
- The Colorado Department of Education and the Colorado Department of Higher Education are working closely together to align Colorado Academic standards with college readiness and college admission and placement policies by way of the CAP4K legislation (SB 08-212). Under the CAP4K legislation Colorado's admission and remediation policies were revised to permit students to qualify for college by demonstrated proficiency versus seat time. These two revised policies are currently in the implementation phase. This will change the way students are assessed and placed into a remedial course and should decrease the number of students needing developmental education.
- In March 2013, the Colorado Commission on Higher Education approved a Supplemental Academic Instruction (SAI) policy. By way of this policy, institutions can enjoy discretion to assign students with limited academic deficiencies to standard credit-bearing courses with corequisite academic support. This will affect those students who have been admitted to an institution, but have failed to meet the minimum threshold placement scores for college-level

coursework as determined by the CCHE's Remedial Education Policy. This modification to policy permits these students to accelerate into college-level courses at their institution of choice, reducing the incidence in remediation and is expected to improve college completion. None of the institutions were authorized to offer SAI during the 2012-13 academic year and no data was reported. Aims Community College, Colorado Community College System, Metropolitan State College of Denver and Western State Colorado University were authorized to offer SAI during the 2013-14 academic year and this SAI data may be reported in the 2015 Remedial Education report.

- Utilizing best practices and funding from Complete College America, the Colorado Community College System convened a developmental education taskforce in the fall of 2011 to review developmental education practices throughout the CCCS and make recommendations on what steps the system would take to become the premier purveyor of developmental education in more streamlined and efficient ways, resulting in greater student success. That taskforce worked for 18 months to develop a redesigned remedial policy that included a number of dramatic changes for the state. Colorado's community colleges implemented developmental education innovations statewide including accelerated course sequencing, modularizing and contextualized curriculum, learning communities, test preparation strategies, combined courses, mainstreaming and others. Those changes included integrating reading and English courses for developmental students, creating pathways in math rather than have all students take coursework to prepare for algebra instruction, and creating a number of corequisite course opportunities for students so they could complete college courses concurrently with their developmental work. These strategies appear to be working as the remedial rates for community colleges decreased and retention rates increased.
- Lastly, the Colorado Department of Higher Education along with other states has been working closely with the Education Commission of the States, which is exploring a consistent means for measuring and reporting remedial rates within and across states. Colorado will be an early adopter of the consistent remedial calculations once they are finalized and available. These standardized calculations may be included in next year's report and will include advanced measures such as success in gateway courses for remedial students.

The major P20 alignment and revision work occurring in Colorado holds promising outcomes for students, our education and workforce systems, and our state. Colorado public secondary and postsecondary institutions are dedicated to improving and eventually eliminating remedial education. Within one year's time Colorado has seen positive and incremental movement in the right direction towards all college students being ready and successful.

Appendix B: Technical Information

REMEDIAL METHODOLOGY AND DATA LIMITATIONS

Methodology

The high school graduating cohorts for this remedial report were provided by the Colorado Department of Education. Utilizing the State Assigned Student ID (SASID), DHE is able to link postsecondary enrollment and remedial records to the K12 records. High school graduates were linked to enrollment records from Fall 2012 and Spring 2013. Once a college enrollment record was found for a high school graduate their applicant file was reviewed for a remedial assessment record no older than 6 months from their high school graduation. Additionally, the enrollment file was reviewed for enrollment in a remedial course in the Fall 2012 or Spring 2013 term. College remedial students can be duplicated in the college remedial rates as students can enroll at multiple institutions. Remedial students are not duplicated in the high school remedial rate calculations.

Data Limitations

In reviewing the tables in this report, one must be mindful that the data do not include recent graduates who enrolled in Colorado institutions for which we do not collect data, an out-of-state college, and or students who are missing a SASID. Additionally, numerous variables exist that DHE is unable to collect that may account for some of the variance surrounding those students who need remediation and those adequately prepared for postsecondary education. Despite these limitations, DHE believes that this summary is a *reasonable representation* of the current remedial landscape of Colorado.
