of Public Health
and Environment

Emergency Medical and Trauma Services Section

2012 Annual Legislative Report

July 2011 – June 2012

Submitted to the Colorado Legislature by the
Emergency Medical and Trauma Services Section
Health Facilities and Emergency Medical Services Division
Colorado Department of Public Health and Environment

www.coems.info

Report to the Legislature Concerning the Emergency Medical and Trauma Services System

Report on the expenditure of moneys credited to the Emergency Medical and Trauma Services Account and the quality of the Emergency Medical and Trauma Services System pursuant to Colorado Revised Statutes §§ 25-3.5-606 and 25-3.5-709.

This report identifies many of the specific responsibilities of the department and provides information regarding progress in ensuring that all Coloradans have rapid access to emergency medical care and transportation across the state. Without question, the work done each and every day by the professional EMS and trauma caregivers is the most valuable resource in the emergency medical and trauma services system. This report is dedicated to the on-going support of these professional caregivers.

Executive Summary

Colorado's emergency medical and trauma services system provides transportation and immediate care to the sick and injured 24 hours a day, 365 days a year. Emergency medical and trauma care services are defined as the immediate health care services needed as a result of an injury or sudden illness, particularly when there is a threat to life or long-term functional abilities. Patient survival depends on several factors, including the availability of appropriately trained health care providers and properly equipped and positioned ambulances, rescue units, trauma centers, general hospitals and other specialized health care facilities that are capable of treating time-sensitive, acute conditions such as injuries, strokes and heart attacks. The emergency medical and trauma services system provides care and transportation to patients in non-emergency situations and helps support long-term patient care goals. This system of health care serves as the "safety net" for many Coloradans who might not have immediate access to primary care services. Regardless of where an illness or injury occurs, this statewide system of initial health care must be available and ready to respond at a moment's notice.

Each year, the emergency medical services (EMS) agencies in Colorado transport and provide high quality medical care to approximately 400,000 patients. Of these patients, approximately 26 percent are trauma (injured) patients, and 74 percent are patients with medical or psychiatric conditions. Approximately 200 licensed ambulance services, staffed by more than 16,000 emergency medical services providers, provide out-of-hospital health care services to the ill and injured. Additionally, 72 hospitals and community clinics have been designated as "trauma centers" and meet established criteria and standards for providing services to the acutely injured.

The Emergency Medical and Trauma Services Section at the Colorado Department of Public Health and Environment (department) is responsible for reducing morbidity and mortality resulting from sudden illness and injury by overseeing the delivery of emergency medical and trauma services in Colorado. The regulatory responsibilities of the section include the certification of emergency medical services providers, the recognition of educational institutions that deliver initial EMS provider training and continuing education, the licensure of air ambulance agencies, the administration and management of grants, the designation of hospitals and other health care facilities as trauma centers, the regulation of scopes of practice for EMS providers and the qualifications and responsibilities of EMS medical directors.

One of the most significant strengths of Colorado's emergency medical and trauma services system is the involvement and participation of the community's stakeholders. The State Emergency Medical and Trauma Services Advisory Council is a 32 member "type II" advisory council made up of trauma and EMS system experts representing hospital facilities, public and private EMS agencies, fire service based EMS and rescue agencies, air ambulance providers and local government officials. The council is statutorily required to review and recommend rules for promulgation by the Board of Health, recommend trauma center designation, advise the department on all funding matters related to trauma and EMS and provide system support in terms of resources dedicated to the care and transportation of the ill and injured. The partnership between the department and the council has continually improved and become more productive, and the department enjoys the benefit of this expert advice.

Expert advice related to technical scope of care matters is provided to the department through the Emergency Medical Practice Advisory Council, the statutorily created "type II" advisory council established by House Bill 10-1260, which placed regulatory authority for EMS provider scopes of practice and EMS medical director requirements within the department. The Emergency Medical Practice Advisory Council consists of 11 members, representing urban and rural EMS medical directors and providers, and recommends changes to EMS provider scope of practice rules for promulgation by the

department's executive director as well as recommendations regarding waivers to the scope of practice rules for medical directors. Although in its infancy, the Emergency Medical Practice and Advisory Council has demonstrated its importance in providing crucial technical expertise to the department on EMS practice issues.

Equally important to the state's emergency medical and trauma services system are Colorado's Regional Emergency Medical and Trauma Advisory Councils. These eleven councils are statutorily created to provide the critical link between the state's 64 counties and the clinics, hospitals and EMS provider agencies. This system provides localized support for the education, recruitment and retention of personnel, technical assistance to agencies and vital communications between state agencies and local constituents. During the past year, these regional councils have successfully supported many multi-agency grants, countless educational opportunities for local providers and ensured that the "real world" of patient care is strongly represented in the policy development process. One of the more considerable efforts for most regions has been the creation of a regional medical direction initiative in a manner that fits the needs of the areas. Regions are ensuring a support system for local service medical directors and helping to standardize care throughout Colorado. The Regional Emergency Medical and Trauma Advisory Councils role in maintaining the state's trauma and EMS system is one of the more valuable components of the department's stakeholder community.

In addition to the formal system of stakeholder input, the Emergency Medical and Trauma Services Section staff members strive to maintain open and effective communication with internal and external customers. Staff members recently implemented a weekly email update to stakeholders who sign up that includes hot topics and newly released information as well as upcoming meetings and training events. The section's website, located at www.coems.info, continues to provide useful and timely information, including rules and regulations, applications and forms, and access to the web portal that allows people to check the current certification of Colorado EMS providers, upload transport agency trip reports or submit grant funding applications and quarterly progress reports. Stakeholder and board meetings are regularly attended, and section staff members will present at a variety of conferences throughout the year following invitations to do so. Additionally, quarterly forums and monthly teleconference calls are held with the state's Regional Emergency Medical and Trauma Advisory Councils to help ensure effective communication and information flow between the 11 regions and the state office.

The Emergency Medical and Trauma Services Section is funded primarily from the Emergency Medical Services Account of the Highway Users Tax Fund based on a \$2 fee on each motor vehicle registered in the state. Funding of the section's responsibilities is also supplemented by the collection of trauma center designation fees, air ambulance licensure fees, provisional EMS provider certification fees and a federal grant to support emergency care for children. Additionally, since 2007, the department has received \$100,000 in federal funds each year from the Colorado Department of Transportation to support the integration of EMS and trauma data systems with the state traffic records data systems to improve highway safety.

The passage of Senate Bill 09-002 resulted in enhanced funding to support Colorado's EMS and trauma system. Since that time, much of the Emergency Medical and Trauma Services Section's energy and direction have been devoted to working with the State Emergency Medical and Trauma Services Advisory Council, regions and stakeholders to ensure these new resources are applied in the most effective manner possible. These efforts have resulted in the successful implementation of new funding approaches that more adequately support the needs of Colorado's emergency medical and trauma services system in the 21st century.

Key Accomplishments in Fiscal Year 2012

- The department continues to use the funds collected through the \$2 per motor vehicle registration fee in the EMS Account of the Highway Users Tax Fund to support Colorado's EMS and trauma system, including the development of rural, frontier and underdeveloped emergency medical services and trauma systems across the state. Approximately \$6.7 million was distributed to support EMS and trauma provider initial and continuing education; increase the availability of equipment and ambulances; enhance injury prevention, recruitment/retention and personnel/services projects; and support regional and statewide system improvement projects.
- Since July 2011, staff members in the EMS and trauma data program have been converting the state EMS data collection system from the original state-developed MATRIX system to a commercial vendor product, ImageTrend. State funds were used to purchase the ImageTrend system and space on the ImageTrend servers for data storage. The online MATRIX system was officially converted to the ImageTrend system on April 20, 2012, and the department now has a fully functional EMS services database for the future development of state reports, such as data quality and compliance and agency participation. As of June 2012, the database contained approximately 1.6 million records. In the second quarter of 2012, the department offered several webinars to train Colorado EMS agency staff members on how to use ImageTrend software, including "after-hours" training classes to reach a broader audience. "Report Writer" training is being offered to educate EMS agencies on how to query the database and create standardized reporting and analysis of the data.
- In addition to successfully transferring the legacy EMS data from the state's online MATRIX system to the ImageTrend server, the EMS and trauma data program supported both statewide and regional continuous quality improvement efforts by analyzing data and preparing reports for stakeholders, including assessments of patient outcomes at the Level I, II, and III Colorado trauma facilities, characteristics of pre-hospital providers and patients in southern and southwest Colorado, and Trauma Registry and EMS data quality/validity reports.
- The trauma program has taken the first steps toward continued system improvement through a work group established by the State Emergency Medical and Trauma Services Advisory Council at the request of Executive Director, Dr. Chris Urbina. This group conducted a rapid planning event in the spring, and by June 2012 developed a draft set of recommendations focused on identifying concepts that would lead to enhancements in the quality and availability of trauma care.
- The Colorado Resource for EMS and Trauma Education program continued to demonstrate great success in fiscal year 2012, disbursing a total of \$428,638 in the form of education grants to help offset tuition, book and fee costs, and 1,706 students were trained using support from these grant funds.
- The Emergency Medical Practice Advisory Council developed a resource document to assist new medical directors in creating a medical oversight program. This *Introduction to Continuous Quality Improvement for EMS Systems* assists physicians in collecting and reviewing data to create and modify treatment protocols.
- Emergency medical services system consultations were conducted at the requests of the Fremont and Dolores county governments during the past year. The department assembled a team of practicing EMS professionals from communities across the state to assist these counties in analyzing their current EMS systems and developing strategies for improvement going forward.

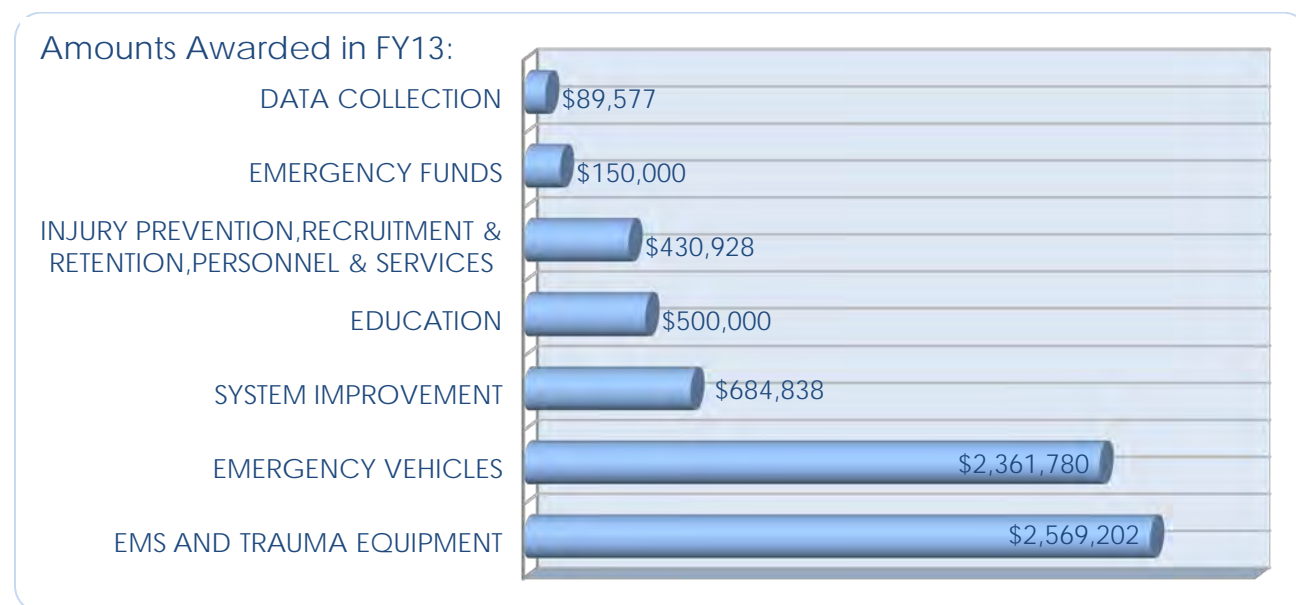

Program Updates

Grants Program

The fiscal year 2013 budget from the EMS Account for the EMS and Trauma funding program is \$6,793,896 and includes the statutory allocations of a minimum of \$150,000 for emergency medical personnel training and at least \$100,000 reserved for emergency grant awards.

Provider grants: the funding program maximizes impact on Colorado's EMS and trauma system by leveraging provider grant state dollars with local matching dollars to ensure buy-in and support at the local level. Provider grant categories include ambulances/vehicles, communications, data collection, equipment, injury prevention, recruitment/retention, personnel/services and other. A total of \$5,451,487 was awarded in provider grants. [See Attachment A](#) for a list of the awards.

System improvement funding: the funding program also provides support for regional and statewide projects. System improvement categories include regional medical direction, technical assistance, system improvement, Regional Emergency Medical and Trauma Advisory Council operations and conference/forum support. A total of \$684,838 was awarded in system improvement funding. [See Attachment A](#) for a list of the awards.

Year-Round Education Opportunities

The Colorado Resource for EMS and Trauma Education program was successfully launched in July 2010 through the Colorado Rural Health Center. This program was developed to improve support for education to EMS and trauma providers on a continuing basis throughout each fiscal year, as opposed to the traditional provider grants program that is only available one time per year. Education grants were funded at a level of \$500,000 for fiscal year 2013 due to the continued need throughout the state, which significantly exceeds the \$150,000 statutory minimum. For fiscal year 2012, a total of \$428,638 was disbursed in the form of education grants to help offset tuition, book and fee costs, and 1,706 students were trained using support from these grant funds.

Trauma Program

The trauma system in Colorado was formally authorized in legislation in 1995. Since that time much effort has gone into three primary and inter-related activities: trauma system rule development, trauma system assessment and trauma designation for acute care facilities.

Trauma center designation has often taken center stage for program development as it is the most visible program activity. In Colorado, health care facilities receiving trauma patients by ambulance or other means must participate in the trauma system by agreeing to follow rules regarding the care of those patients. Facilities may choose to be "non-designated" and thus agree not to keep any trauma patients with complex injuries. Facilities that agree to care for trauma patients receive site reviews and are designated by the state as Level I (highest) through Level V trauma centers.

System

- As of June 30, 2012, there were 72 designated trauma centers in Colorado with the majority of acute care general hospitals and critical access hospitals participating. [See Attachment B](#) for a current list of trauma centers in Colorado.
- Physicians and nurses along with program staff members conducted on-site reviews at 23 of those facilities in the fiscal year.
- Program staff members provided on-site technical assistance on program development issues at an additional nine facilities.

Regulation

Rule development is another primary program function and is necessary to implement the concepts expressed in the emergency medical and trauma system legislation. Rules are under constant scrutiny to determine whether they reflect national standards, protect the public's health, are measureable and make sense for both the patient and the regulated community.

Work to develop new rules to replace portions of the interfacility consultation and transfer regulations began in 2011 and is expected to continue, pending the results of the system assessment project described below.

System Assessment

Trauma system assessment is the final piece of program development activity. Program staff members constantly work with other section, department and national resources to assess and improve the program's effectiveness.

In October 2011, the State Emergency Medical and Trauma Services Advisory Council approved the commission of a work group to take a broad look at Colorado's trauma system and provide input regarding options for future development of the trauma program. The charge undertaken by the council was to determine if:

- The current (trauma) system efficiently ensures that an injured patient reaches the facility most prepared to care for him/her.
- The number of high level trauma centers is sufficient to serve the needs of the state in both rural and urban settings.
- The volume criteria for Level I centers is the appropriate number, and determine if there should be volume criteria for other level centers.
- Any regulatory changes are necessary to improve Colorado's trauma system – both the designation process itself and the system overall.

A work group of 10 council members met over six days utilizing a LEAN methodology to guide the analysis. Community stakeholders observed the process and provided input at key points during the discussions.

The workgroup's review and recommendations will be concluded during fiscal year 2013. Over the next year, staff members will seek stakeholder feedback on the draft recommendations. The draft recommendations with stakeholder comments will be presented to the council, which will vet and finalize the recommendations prior to presentation to the department. For each recommendation that is selected for implementation, a process will be developed to allow multiple opportunities to comment on the specifics of implementation.

Colorado participated in another trauma systems project in the past year. Staff members submitted information for a pilot project co-sponsored by the National Association of State Emergency Medical Services Officials and the American College of Surgeons. This project seeks to provide national benchmarking standards for trauma system development by pulling together data from a variety of national and state data sources. Results for this pilot project are also anticipated in fiscal year 2013.

Trauma Registry and EMS Data Collection Program

Comprehensive data systems are essential to effectively plan, implement and evaluate a statewide emergency medical and trauma care system. Critical components include the Colorado Trauma Registry and the Colorado EMS Database, as well as appropriate resources and personnel for efficient data management, analysis and use of the data to evaluate the delivery of patient care.

Evaluation of the Trauma System

The Colorado Trauma Registry is a unique database designed to capture information on the care of trauma patients and on the leading causes of injury hospitalizations and deaths. The data in the Colorado Trauma Registry are used not only to evaluate the effectiveness of the trauma system, but also to identify and monitor the impact of injury prevention strategies. Each licensed hospital facility or clinic that is designated as a trauma center is required to submit a limited set of patient-specific information to the trauma registry database. These data, combined with hospital discharge data from the Colorado Hospital Association and death certificate data from the department's Health Statistics Vital Records Section, are used to evaluate and monitor the emergency medical and trauma care system's response to trauma patients and their needs. The Colorado Trauma Registry currently contains nearly 330,000 records. The data elements required in the Colorado Trauma Registry are compliant with the National Trauma Data Standards (see www.ntdsdictionary.org) developed by the American College of Surgeons.

In fiscal year 2012, Trauma Registry data were used to evaluate several components of the trauma system including:

- The frequency of traumatic injuries in Colorado by geographic location.
- An assessment of the clinical outcomes of elderly adult patients with isolated rib fractures admitted to a Level I, Level II or Level III Colorado trauma facility.
- An assessment of the risk-adjusted adult trauma inpatient mortality at Level I, Level II and Level III Colorado trauma facilities as a function of the facility's patient volume.

Evaluation of the Pre-hospital Care System

Collection and analysis of information from ambulance transport agencies allow evaluation of care provided prior to arrival at the hospital for both medical and trauma patients. Agencies are required to collect the national elements subset of the National Emergency Medical Services Information System dataset (see www.nemsis.org). These national data standards for EMS data collection were developed by the National Highway Traffic Safety Administration. Approximately 80 percent of the licensed ambulance transport agencies in Colorado routinely download data. Since January 2007, ambulance agencies have submitted reports on more than 1.6 million patient encounters.

In fiscal year 2012, EMS data were used to evaluate several components of the pre-hospital care system including:

- An assessment of EMS call statistics for stroke, cardiac arrest, cardiac rhythm disturbance or chest pain, and characteristics associated with those patients in southwest Colorado.
- An assessment of pre-hospital data completeness for heart rate, systolic blood pressure, respiratory rate, pulse oximetry, Glasgow Coma Scale score, capnography monitoring and IV placement as a function of patient age (i.e., data completeness in pediatric vs. adult patient records).
- An assessment of patient and provider characteristics associated with cardiac arrest calls in southern Colorado, including elapsed patient care times.

Operations Program

The department is the state agency responsible for the certification of EMS providers in Colorado and for the oversight of EMS education programs that provide both initial and continuing education courses. As of June 30, 2012, there were 16,911 EMS providers certified in Colorado. Each year the department processes approximately 6,000 applications for certification or certification renewal for EMS providers. EMS provider practice levels include Emergency Medical Technician (EMT), Advanced Emergency Medical Technician (AEMT), Emergency Medical Technician-Intermediate (EMT-I) and Paramedic. The AEMT level is a new level as of this year, added as part of the implementation of new national EMS certification and practice standards.

Number of certified EMS providers as of June 30, 2012:

16,911	12,650	2	649	3,610
Total EMS providers	EMT	Advanced EMT	EMT-Intermediate	Paramedic

New National Standards Implementation

Effective June 30, 2011, department staff members completed an extensive regulatory revision related to the adoption of the National EMS Education Agenda for the Future. This revision involved writing rules to reflect the new national education standards and certification/scope of practice levels so as to align the department's education and provider certification program with the updated national standards. Education programs throughout the state are currently adapting their coursework and materials to incorporate this major national update.

In late 2011, the department purchased a commercial software product, the ImageTrend Licensure Management system, to manage the EMS provider certification functions and associated activities. Implementation and setup activities began in 2012, and it is expected that an online certification application process will be available in 2013.

Investigation and Enforcement

The discipline and enforcement functions of the Emergency Medical and Trauma Services Section continue to be handled effectively. The department instituted 31 disciplinary actions against certified EMS providers, up from 28 last year. Additionally, the department completed 962 background investigations on new and renewal applications, and 17 complaints were investigated and closed.

Medical Direction

The department's medical direction efforts during fiscal year 2012 were primarily focused on improving medical oversight of EMS practice in Colorado through the efforts of the Emergency Medical Practice Advisory Council and the statewide coordinated regional medical direction initiative.

During the past year, significant efforts were directed to implementation of regional medical direction, such that, for fiscal year 2013 the state's Regional Emergency Medical and Trauma Advisory Councils have requested a total of \$320,000 to continue their regional medical direction efforts.

The statewide regional medical direction initiative has:

- Facilitated communication and cooperation among emergency medical services agency medical directors, allowing them to share ideas, discuss problems and communicate within their peer groups.
- Provided resources for agency medical directors to enhance their ability to perform their job functions.

- Facilitated improved efficiency in protocol development and delivery of education. Seven of the eleven Regional Emergency Medical and Trauma Advisory Councils now have regional protocols.
- Provided a forum for the resolution of systems issues at both local and regional levels.
- Created opportunities for continuous quality improvement at the EMS agency level, as well as the regional levels, provided benchmarks and best practices and allowed for the monitoring of outcomes to guide the continued provision of quality care.

Emergency Medical Practice Advisory Council

During fiscal year 2012, the Emergency Medical Practice Advisory Council solicited input from stakeholders on potential changes to the rules pertaining to EMS practice and medical director oversight. Frequent review of the rules allows Colorado's emergency medical services systems to deliver the most current practices in EMS while the department ensures, via the medical oversight process, the safety of Colorado's residents and visitors. The input received will be presented to the council and recommendations for rule changes will be made to the department's executive director for promulgation later this fiscal year. The council continued to effectively meet its obligation to review and make recommendations on requests for waivers to the rules by EMS agency medical directors.

Air Ambulance Licensing

The department licensed 22 fixed and rotor wing air ambulance services that provided transportation to patients in Colorado in 2012. Nine of these services are based in Colorado. Thirteen are based out of state and are mostly situated near the state borders or within an hour of flight distance. A map of licensed air ambulance services can be found at <http://batchgeo.com/map/fd42b8ede34b94c7609c909c964fff53>.

EMS System Consultative Reviews

Emergency medical services system consultations were conducted at the request of the Fremont and Dolores county governments during the past year. The department assembled a team of practicing EMS professionals from communities across the state to assist these counties in analyzing their current EMS systems and developing strategies for improvement going forward. Subsequent to the teams' reviews, department staff members met with local officials and stakeholders and provided formal reports of each county's system assessment and recommendations for enhancing their systems.

Related Activities

Communication Systems

Public access in the emergency medical services setting is defined as the ability of an individual to secure prompt and appropriate emergency medical care. All counties in the state have E911 telephone line services.

The existing Colorado Digital Trunked Radio system provides statewide, two-way communications to state government, local government, tribal and a limited number of federal government agencies over a shared communications platform. The Digital Trunked Radio system in Colorado consists of 212 remote tower sites, more than 1,000 agencies and 64,000 subscriber units (individual radios) spread across four zones. The system carried more than 101 million calls in 2011.

Department of Homeland Security grants provide additional funding to add infrastructure to the overall digital trunked radio system. Seven digital trunked radio tower sites are in the planning stages to be built in the near future. Future plans include adding a fifth zone controller to increase the system's capacity.

The Emergency Medical and Trauma Service Section's grants program has helped to improve and expand communications infrastructure throughout the state. Funding has provided equipment to agencies so they can utilize the Digital Trunked Radio system as well as to keep many existing legacy communication systems operational.

Injury Prevention

Injury prevention efforts at the state level are coordinated through the Injury, Suicide and Violence Prevention Branch in the Prevention Services Division at the department. The branch builds capacity and sustainability at the community, regional and state levels by providing culturally appropriate programming and quality technical assistance and by maintaining diverse community partnerships. The Injury, Suicide and Violence Prevention Branch collaborated with the Emergency Medical and Trauma Services Section through funding and community collaboration efforts described below.

Funding for the department's injury prevention activities comes primarily through grants and cooperative agreements between the department and federal agencies such as the Center for Disease Control and Prevention, Substance Abuse and Mental Health Services Administration and the Health Resources and Services Administration. Limited state general funds are provided to the Office of Suicide Prevention for its activities and to the unit for prevention of child abuse (through the Colorado Children's Trust Fund). State funds have also been distributed through the Emergency Medical and Trauma Services Section's grants program to providers interested in implementing local injury prevention programs.

By providing data, technical assistance and education, staff members in the Injury, Suicide and Violence Prevention Branch and the Emergency Medical and Trauma Services Section support members of the emergency medical and trauma communities in planning community-based injury prevention activities. Many trauma centers are actively involved in current collaborative efforts on senior fall prevention, suicide prevention, booster seat use and safe driving initiatives. The state health department staff members provide coordination for coalitions and technical support in program planning and evaluation for these efforts.

During fiscal year 2012, the department named injury prevention as one of the department's 10 Winnable Battles. The Injury Prevention Winnable Battle initiative aims to decrease teen motor vehicle fatalities, increase adult seatbelt use and decrease hospitalizations related to older adult falls by 2016. The Injury, Suicide and Violence Prevention Branch and the Emergency Medical and Trauma Services Section are working collaboratively with stakeholders across the state to achieve these outcomes.

This year staff members took a leadership role in planning and presenting a one-day injury prevention workshop covering all aspects of developing, implementing and evaluating an injury prevention program. The target audience was trauma nurse coordinators, other trauma staff members and other participants in the trauma and EMS system. More 50 people were in attendance, and the workshop received excellent reviews. Participants came away with the knowledge and resources to identify an injury issue in their community and implement changes to work to address the problem.

Emergency Medical Services for Children

The Emergency Medical and Trauma Services Section continues to be the recipient of a federal EMS for Children State Partnership Grant. This grant is targeted to improve emergency medical care provided to children across the state. In the past year, the program convened stakeholders from across the state to refine the strategic priorities of the program. The main activity of the program continues to be provision of pediatric-focused education programs to EMS providers through collaboration with multiple education and healthcare institutions across the state.

Fiscal Year 2013 EMTS Provider Grant and System Improvement Funding Awards Public Notice						
Applicant Name	Category Name	Score	Total Project Cost	Local Match Amount	Requested State Amount	Funded State Amount
