# Report to the Legislature Concerning the Emergency Medical and Trauma Services System

Report on the expenditure of moneys credited to the Emergency Medical and Trauma Services Account and the quality of the emergency medical and trauma services system pursuant to Colorado Revised Statutes §§ 25-3.5-606 and 25-3.5-709.

This report identifies many of the specific responsibilities of the Colorado Department of Public Health and Environment and provides information regarding progress in ensuring all Coloradans have rapid access to emergency medical care and transportation across the state. Undoubtedly, the work done by the professional EMS and trauma providers is the most valuable resource in the emergency medical and trauma services system. This report is dedicated to the ongoing support of these caregivers.

## Executive Summary

The emergency medical and trauma services system in Colorado provides transportation and immediate care to the ill and injured 24 hours a day, 365 days a year. Emergency medical and trauma care services are defined as the immediate health care services needed as a result of an injury or sudden illness, particularly when there is a threat to life or long-term functional abilities. In addition, today's emergency medical and trauma services systems are full partners in the broader scope of health care across Colorado communities, with involvement in non-traditional issues such as time sensitive medical syndromes and healthy community programs. Patient outcomes depend on factors such as:

- availability of appropriately trained health care providers
- availability of properly equipped and positioned rescue units and ambulances (ground and air)
- location of trauma centers and other specialized health care facilities capable of treating time-sensitive conditions such as strokes and heart attacks
- availability of well-equipped hospitals and clinics with well-trained staff members to stabilize patients who are far from tertiary care

The emergency medical and trauma services system also provides care and transportation to patients in non-emergency situations and serves as the "safety net" for many Coloradans who might not have immediate access to other health care services. Emergency medical services (EMS) agencies and trauma facilities are finding themselves more engaged in activities around community health initiatives, resource coordination and emergency management planning.

The Emergency Medical and Trauma Services Branch at the Colorado Department of Public Health and Environment is responsible for reducing morbidity and mortality resulting from sudden illness and injury by overseeing the delivery of emergency medical and trauma services as described above. The branch's regulatory responsibilities are to:

- certify EMS providers
- register emergency medical responders (EMR)
- recognize educational programs that deliver initial EMS provider training and continuing education
- license air ambulance agencies
- administer and manage grant funding
- designate hospitals and other health care facilities as trauma centers
- regulate scopes of practice for EMS providers
- provide technical assistance

Each year, the emergency medical services agencies in Colorado transport and provide quality medical care to more than 400,000 patients. Of these patients, approximately 25 percent are trauma (injured) patients, and 75 percent are patients with medical, psychiatric or other conditions. Approximately 200 licensed ambulance services, staffed by more than 18,500 EMS providers, provide out-of-hospital health care services to ill and injured patients. Additionally, 84 hospitals and community clinics have been designated as "trauma centers" and meet established criteria and standards for providing services to the acutely injured.

One of the most significant strengths of Colorado's emergency medical and trauma services system is the involvement and participation of the community's stakeholders. The State Emergency Medical and Trauma Services Advisory Council is a 32-member "Type II" advisory board made up of EMS and trauma system experts representing hospitals, public and private EMS agencies, fire service-based EMS and rescue agencies, air ambulance providers and local government officials.

The council is statutorily required to review and recommend rules for promulgation by the Board of Health, recommend trauma center designation, advise the department on all funding matters related to EMS and trauma and provide resources dedicated to the care and transportation of the ill and injured. The partnership between the department, the council and the stakeholder community is very productive, and the department enjoys the benefit of this expert advice. The department also benefits from another "Type II" advisory board established by House Bill 10-1260. The Emergency Medical Practice Advisory Council provides the department expert advice related to technical scope of care for EMS providers and advises on EMS medical director requirements. This is an 11-member council representing urban and rural EMS medical directors and providers. It recommends changes to EMS provider scope of practice rules for promulgation by the department's chief medical officer and makes recommendations regarding waivers to the scope of practice rules for medical directors.

Colorado's Regional Emergency Medical and Trauma Services Advisory Councils are equally important to the state's emergency medical and trauma services system. These councils are created in statute to provide the critical link between the state's 64 counties and the clinics, hospitals and EMS provider agencies within each region. This system provides localized support for the education, recruitment and retention of personnel, technical assistance to agencies and vital communication between state agencies and local constituents. Regional councils complete 2-year biennial plans that outline goals, programs and initiatives. Regions represent the needs and interests of urban, rural and frontier constituents to the department and the state councils. Representatives from each region continue to meet quarterly with state council and department staff members to help ensure coordination and collaboration between state, regional and local partners.

Emergency Medical and Trauma Services Branch staff members maintain open and effective communication with internal and external customers on a daily basis. They present at a variety of conferences and trainings and represent department interests in external stakeholder groups. A weekly email update is sent to stakeholders and includes hot topics and newly released information as well as upcoming meetings and training events. The branch's website, located at [coems.info](http://coems.info), provides useful and timely information including rules and regulations, applications, forms and access to the web portal. Additionally, the website allows people to check the current certification status of Colorado EMS providers, upload transport agency patient care reports and submit grant funding applications and quarterly progress reports.

The Emergency Medical and Trauma Services Branch is funded primarily from the Emergency Medical Services Account of the Highway Users Tax Fund based on a \$2 fee on each motor vehicle registered in the state. Funding is supplemented by the collection of trauma center designation fees, air ambulance licensure fees, provisional EMS provider certification fees and a federal grant to support emergency care for children. Staff members work diligently to ensure these resources are applied in the most effective manner possible. These efforts have resulted in the successful implementation of new funding approaches that more adequately support the needs of Colorado's emergency medical and trauma services system in the 21<sup>st</sup> century.

## Key Accomplishments in Fiscal Year 2019

- The department continues to use the funds collected through the \$2-per-motor vehicle registration fee in the EMS Account of the Highway Users Tax Fund to support Colorado's emergency medical and trauma services system. Approximately \$7.4 million was distributed to support EMS and trauma statewide.
- The 2019 legislative session produced three bills that impact Colorado's EMS and trauma system.
  - Senate Bill 19-052 expands scope of practice for EMS providers in clinical settings. This took effect Aug. 3, 2019.
  - Senate Bill 19-242 allows EMS providers to voluntarily become licensed, rather than certified, with proof of a four-year Bachelor's degree in a field related to the health sciences, or an equivalent field. This requires rule revision in 6 CCR 1015-3 Chapter One, and the state advisory council stood up a task force to address this work with a projected start date of Jan. 1, 2021.
  - Senate Bill 19-065 granted authority for the department to contract with a peer assistance program to provide support services and referrals to EMS providers statewide, and to collect funds to support the program through a \$2.55 certification fee. There is a funding shortfall for this program, and the state advisory committee worked with the department to find a short-term solution using funding from the grants program. The peer assistance program should be operational in early 2020.
- Stakeholders and the department continued to develop a platform to allow expanded scope services within trauma center designation as related to orthopedics, general surgery and neurosurgery. Revised draft rules for 6 CCR 1015-4 Chapter Three were promulgated on June 14, 2019. Additionally, the department convened two task forces to review and revise Chapter Two (State Emergency Medical and Trauma Care System Standards) and Chapter Four (Regional Emergency Medical and Trauma Advisory Councils). Both of these task forces completed their work, and the revisions will be presented to the Board of Health in 2020. An additional task force was convened to continue with draft revisions for Trauma Chapter Three (designation). Significant discussion and work are going into these revisions.
- The Colorado Resource for EMS and Trauma Education (CREATE) program continued its success in fiscal year 2019, disbursing funds in the form of education grants to help offset tuition, book and fee cost. 866 students were trained using support from these grant funds.
- The governor signed into law HB 15-1015 on May 8, 2015, making Colorado one of the first states to adopt the Recognition of EMS Personnel Licensure Interstate Compact (REPLICA). Now 18 states have joined the compact, and the commission is working to get the compact operational. The compact will simplify the complexities of interstate licensing and certification of EMS providers by allowing immediate recognition of certification in authorized circumstances in participating states.
- An emergency medical and trauma services system consultation was conducted at the request of Lake County during the past year. The department worked collaboratively with regional and local stakeholders to assemble a team of practicing EMS and trauma professionals from communities across the state to assist the county in analyzing their current EMTS systems and developing strategies for improvement.

# Section Updates

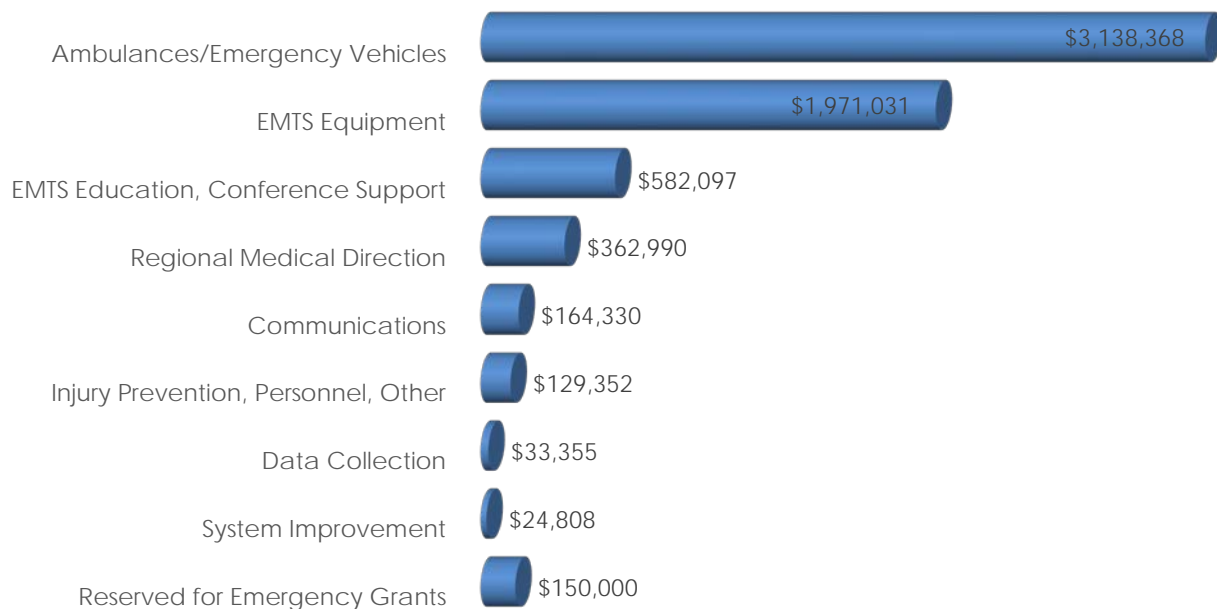

## Funding Section

The fiscal year 2020 budget from the EMS Account for the Emergency Medical and Trauma Services Funding program is \$8,443,896. The budget amount includes the statutory allocations of a minimum of \$150,000 for training emergency medical personnel and \$100,000 for emergency grant awards.

**Provider grants:** The funding program maximizes impact on Colorado’s EMS and trauma system by leveraging provider grant state dollars with local matching funds to ensure buy-in and support at the local level. Provider grant categories include ambulances/EMS vehicles, communications, data collection, EMS and trauma equipment, injury prevention, recruitment/retention, personnel/services and other. A total of \$5,436,436 was awarded in provider grants following a competitive scoring process that used a 50-point scoring tool. A list of the provider grant awards is found in [Attachment A](#).

**System improvement funding:** The funding program also provides support for regional and statewide projects designed to enhance the emergency medical and trauma services system in Colorado. System improvement categories include technical assistance, system improvement and conference/forum support. A total of \$469,895 was awarded in system improvement funding. This total includes \$362,990 distributed to the 11 regions to continue development of medical direction on a regional basis. A list of the awards is found in [Attachment A](#).

Amounts Awarded for FY20

## Year-Round Education Opportunities

The Colorado Resource for EMS and Trauma Education (CREATE) program was successfully launched in July 2010 through the Colorado Rural Health Center. The CREATE program was developed to improve access to funding support for educating EMS and trauma providers on a continuing basis throughout each fiscal year, as opposed to the traditional provider grants program that was only open for applications one time per year. The CREATE program was funded at \$500,000 for fiscal year 2019 due to the continued need throughout the state, which significantly exceeds the \$150,000 statutory minimum. For fiscal year 2019, a total of \$340,293 was disbursed in the form of education grants to help offset the cost of tuition, books and fees, for 866 students who were trained with assistance from these grants.

## Trauma Section

The trauma system in Colorado was formally authorized in legislation in 1995. Since that time, much effort has gone into three primary and inter-related activities: trauma designation for acute care facilities, trauma system rule development and trauma system assessment.

### Trauma Designation

The Trauma Section's most visible activity is the process of trauma center designation. Every licensed health care facility in Colorado which receives trauma patients by ambulance or other means must participate in the trauma system by agreeing to follow rules regarding the care of those patients. Facilities that agree to care for trauma patients receive site reviews and are designated by the state as Level I (highest) through Level V trauma centers. See [Attachment B](#) for a list of trauma centers in Colorado.

In fiscal year 2019 two facilities were newly designated, and one more increased their level of designation. By June 30, 2019, there were 84 designated trauma centers serving the people of Colorado.

- UCHealth Highlands Ranch became a Level III trauma center
- Steamboat Emergency Center became a Level IV trauma center
- UCHealth University of Colorado Hospital (UCH) became a Level I trauma center

Fiscal year 2019 saw continued growth in the number of non-designated facilities. Facilities may choose to be "non-designated" for trauma and thus agree not to keep any trauma patients with complex injuries. As of June 30, 2014, there were 21 facilities non-designated for trauma; a year later there were 32; as of June 30, 2016, there were more than 45; and a year later on June 30, 2017, there were more than 55 non-designated facilities. Currently there are 52 non-designated facilities. Most of these non-designated facilities are known as "free-standing emergency departments" and are conveniently-located facilities offering emergency level care to patients arriving by car or ambulance with the potential for rapid door-to-physician times. However, patients requiring more than emergency department treatment must be transferred to inpatient facilities (hospitals). The Trauma Section continues to search for ways to adequately monitor the flow of trauma patients from free-standing emergency departments to inpatient facilities.

Community engagement and technical assistance are two of the most important aspects of the Trauma Section's work. Fiscal year 2019 offered many opportunities to provide assistance and engage stakeholders across the state:

- There were 47 designation reviews or re-reviews completed by a team of physicians, nurses and Trauma Section staff members.
- Additionally, staff members provided 45 on-site technical assistance visits and/or compliance checks for facilities with plans of correction and four trainings for trauma nurse coordinators and registry staff reaching more than 350 participants.

## Trauma Regulation

Rule development is another primary program function and is necessary to implement the concepts expressed in the emergency medical and trauma system laws. Rules are under constant scrutiny to determine whether they reflect national standards, protect the public's health, are measurable and make sense for both the patient and the regulated community.

Fiscal year 2019 saw the completed revision of new trauma "expanded scope of care" rules and a complete re-write of Chapter Two, State Emergency Medical and Trauma Care System Standards and Chapter Four, Regional Emergency Medical and Trauma Advisory Councils. The concept for these rules has been discussed for a number of years, and the rule changes are in 6 CCR 1015-4. The rules adopted in Chapter Three provide additional guidance in the development of a trauma quality improvement program for all Level III-V facilities. In addition, Level III and IV facilities accepting orthopedic, general surgery and neurosurgery patients beyond the usual scope of care for their designation level must have specific safeguards in place to ensure the optimal care of those patients. Additions to the scope of care rules were promulgated on June 14, 2019.

## STEMI and Stroke Systems of Care

In 2013, Senate Bill 13-225 was passed by the Colorado Legislature and signed into law by Gov. John Hickenlooper. The legislation called for creation of two governor-appointed advisory boards within the Colorado Department of Public Health and Environment: a 15-member ST segment-Elevation Myocardial Infarction (STEMI) Task Force and an 18-member Stroke Advisory Board.

The STEMI Task Force ended and delivered its final report to the legislature in August 2015. The report listed numerous recommendations for the development of a STEMI system of care. In fiscal year 2017, the legislature passed [House Bill 17-1246](#), which directs STEMI receiving centers and encourages STEMI referring centers to report data to a national heart attack database and submit those reports to the department.

In May 2018, Senate Bill 18-1265 was passed by the legislature and signed into law by Gov. John Hickenlooper extending the work of the board for an additional ten years. The Stroke Advisory Board continues its work to make recommendations to improve the system of care for stroke in Colorado in an annual report to the legislature. The last report contained recommendations that address the following key topics: an ongoing board to make recommendations and act as a resource to the stroke system of care, a plan that supports care coordination between rural and urban areas, guidelines for evidence-based practices, initiatives to improve prevention, and the benefit of data reporting for the purpose of quality improvement.

## Trauma Registry and EMS Data Collection Program

Comprehensive data systems are essential to effectively plan, implement and evaluate a statewide emergency medical and trauma care system. Critical components include the Colorado Trauma Registry and the Colorado EMS Database, as well as appropriate resources and personnel for efficient data management, analysis and use of the data to evaluate the delivery of patient care. In fiscal year 2018 the department contracted with ImageTrend to develop a statewide trauma registry to facilitate improved data collection from all facilities. This system was implemented in fiscal year 2019 to begin receiving new trauma records statewide.

### Evaluation of the Trauma System

The Colorado Trauma Registry is a database designed to capture information on the care of trauma patients and on the leading causes of injury hospitalizations and deaths. The data in the Colorado Trauma Registry is used not only to evaluate the effectiveness of the trauma system but also to identify and monitor the impact of injury prevention strategies. Each licensed hospital facility or clinic designated as a trauma center is required to submit a limited set of patient-specific information to the Colorado Trauma Registry. These data, combined with hospital discharge data and emergency department data from the Colorado Hospital Association and death certificate data from the department's Center for Health & Environmental Data, are used to evaluate and monitor the emergency medical and trauma care system's response to trauma patients and their needs. The Colorado Trauma Registry holds hundreds of thousands of records that provide key information on trauma care across the state. In response to requests by trauma stakeholders and in alignment with the National Trauma Data Standards (see [www.ntdsdictionary.org](http://www.ntdsdictionary.org)), developed by the American College of Surgeons, staff members continue to update the Colorado Trauma Registry data elements and response options and provide technical assistance to users to improve the validity of trauma data reporting. In fiscal year 2019, data from the Colorado Trauma Registry were used to evaluate various aspects of the trauma system including:

- Trauma data submission and volume
- Geographic locations of all trauma facilities
- Trauma incidents by age groups, specific geographic area, Injury Severity Score (ISS), mechanism of injuries
- Occupational, firearms, motor vehicle related injuries
- Site level reports for designation reviews
- Causes and procedures
- Inter-facility transfers
- Hospital/ED length of stay
- Patient population statistics

### Evaluation of the Emergency Medical Services System

Since January 2007, ambulance agencies have submitted reports on more than 5 million EMS incidents. For this fiscal year, almost half a million patient care reports were submitted into the Colorado EMS Database. EMS data is collected using the national standard of NEMSIS, the National EMS Information System (see <https://nemsis.org/>). As of Jan. 1, 2018 all licensed ambulance agencies were required to submit patient care data to the department in the newest version of NEMSIS (Version 3). The new software version corrects many of the shortcomings of the previous version, and provides additional capabilities to collect quality data that can be used to improve patient care and support quality improvement projects. As a result, the department began work

on building EMS benchmark reports that examine key aspects of patient care across the state. These reports will allow ambulance agencies to retrieve their own benchmark data as well as compare their numbers to their region and the state overall. EMS data has been presented to several audiences via conferences, meetings, and reports to create a more complete picture of patient care across the state.

In fiscal year 2019, EMS data were used to evaluate various components of the emergency medical services care system, including:

- EMS agency data submission, timeliness, and volume
- Geographic locations of all EMS agencies
- EMS events by age groups, specific geographic area, medications administered
- Emergent responses and transports
- EMS billing rates
- Vital signs, procedures (e.g., blood glucose measure on seizure patients)
- Naloxone use and opioid-associated resuscitative emergencies
- EMS response to behavioral health related emergencies
- Air medical transports
- Cardiac arrest, trauma and stroke events
- Events by destination (e.g., number of events resulting in transport to acute care facilities)
- Primary/secondary impressions
- Common causes of injuries by region

## Operations Section

The department is the state agency responsible for the certification of EMS providers in Colorado and the oversight of EMS education programs that provide both initial and continuing education courses. As of June 2019, there were 18,736 EMS providers certified in Colorado. During the year, the department processed over 6,000 applications for certification or certification renewal for EMS providers and EMR personnel.

EMS provider practice levels include Emergency Medical Technician (EMT), Advanced Emergency Medical Technician (AEMT), Emergency Medical Technician-Intermediate (EMT-I) and Paramedic. The number of paramedics includes 396 who are endorsed to provide critical care acts and medications, in addition to eight endorsed for community paramedicine. The number of endorsed community paramedics continues to rise as programs evolve across the state, helping fill gaps in the healthcare system by utilizing paramedics in the home setting when home health services are either not available or applicable.

Number of certified EMS providers as of June 30, 2019:

Total EMS providers	EMT	Advanced EMT	EMT-Intermediate	Paramedic
18,736	13,253	330	444	4,727

## Emergency Medical Responder Registration

The department transitioned the Emergency Medical Responder (EMR) voluntary registration program from the Department of Public Safety, Division of Fire Prevention and Control (DFPC) effective July 1, 2017. As of June 30, 2019, there were 456 registered EMRs.

## Investigation and Enforcement

The department continues to oversee discipline and enforcement activities for EMS providers, EMRs, licensed air ambulance agencies and EMS education programs. During fiscal year 2019, the department instituted 25 enforcement actions against certified EMS providers. Additionally, the department completed 683 background investigations on new and renewal applications, and investigated and closed 60 complaints.

## Medical Direction

Medical oversight of EMS practice in Colorado occurs at the EMS agency level, as legislative requirements state that all EMS providers have a physician medical director in order to provide any direct patient care. Currently, the Emergency Medical Practice Advisory Council and Colorado regional medical directors continue to focus on system quality improvements and to advance clinical EMS therapies and protocols to ensure the patients in Colorado are receiving the safest and most effective care available.

Regional medical direction involves a coordinated effort among Colorado's 11 Regional Emergency Medical and Trauma Services Advisory Councils (RETACs) and was developed to:

- Facilitate communication and cooperation among EMS agency medical directors, allowing them to share ideas, discuss problems and communicate within their peer groups
- Provide resources for agency medical directors to enhance their ability to perform their job functions
- Facilitate improved efficiency in protocol development and delivery of education
- Provide a forum for the resolution of system issues at both local and regional levels
- Create opportunities for continuous quality improvement at both the EMS agency level and regional levels, provide benchmarks and best practices and allow for the monitoring of outcomes to guide the continued provision of quality care

The regional medical direction initiative allows each of the 11 regions within the state to play an integral part in developing medical direction that is consistent with standards across the state and meet local needs. The regional medical directors meet quarterly to share and discuss current local issues as well as best practices in regional medical oversight.

The Regional Medical Direction Committee works with the Emergency Medical Practice and Advisory Council to drive quality of care for the EMS systems throughout the state of Colorado. Funding is available annually for regional medical direction programs through evaluation and recommendation by the State Emergency Medical and Trauma Services Advisory Council. This process is separate from the annual competitive provider grant process, and as such allows regions to concentrate on meeting program deliverables and outcomes. Each year, funding is based upon performance reviews of the regions' abilities to meet the previous year's defined deliverables.

## Emergency Medical Practice Advisory Council

The council continued to effectively meet its obligation to review and make recommendations on requests for waivers to the EMS practice rules by EMS agency medical directors. The waiver request, reporting and tracking system continues to be improved and refined for efficiency and to reduce the reporting burden on the medical directors. As of June 30, 2019, there were 449 active waivers covering 60 waived acts and/or medications.

## Air Ambulance Licensing

As of June 30, 2019, there were 21 licensed air ambulance services and 11 recognized air ambulance services (recognized agencies have 12 or fewer patient pick-ups in Colorado a year). A map of licensed air ambulance services can be found at [www.coems.info](http://www.coems.info).

## EMTS System Consultative Reviews

An emergency medical and trauma services system consultation was conducted at the request of Lake County during the past year. The department worked collaboratively with regional and local stakeholders to assemble a team of practicing EMS and trauma professionals from communities across the state to assist the county in analyzing their current EMTS systems and developing strategies for improvement. After the review, department staff members and the review team met with local officials and stakeholders to provide a formal report on the system assessment and recommendations for enhancing the local EMTS system.

## Related Activities

### Communication Systems

Public access in the emergency medical services setting is defined as the ability of an individual to secure prompt and appropriate emergency medical care. All counties in the state have E911 telephone services. The existing Colorado digital trunked radio system provides statewide, two-way interoperable communications to state, local, tribal and a limited number of federal government agencies over a shared communication platform. The digital trunked radio system in Colorado consists of 245 remote tower sites, more than 1,000 agencies and more than 100,000 subscriber units (individual radios) spread across five zones. The system carried more than 107 million calls in fiscal year 2018. Local agencies provide additional funding to add infrastructure to the overall digital trunked radio system. Several new digital trunked radio tower sites are being constructed currently, with others scheduled to be completed in the near future. The Emergency Medical and Trauma Services grants program continues to help improve and expand communication infrastructure throughout the state. Funding has provided equipment to agencies so they can use the digital trunked radio system and keep other legacy communication systems operational.

The First Responder Network Authority (FirstNet) is an independent authority within the U.S. Department of Commerce. Chartered in 2012, its mission is to ensure the building, deployment and operation of the nationwide, broadband network that equips first responders to save lives and protect U.S. communities. Public safety spent years advocating for a nationwide broadband network for first responders following the Sept. 11, 2001, terrorist attacks. Major public safety organizations continue to voice their strong support for the FirstNet network today. FirstNet Colorado leads the state's efforts to plan, develop and deploy the National Public Safety Broadband Network.

House Bill 18-1325 provided an appropriation of \$2 million dollars in FY18-19 and \$2 million dollars in FY19-20 for the Office of Information Technology, Public Safety Communications Network to work in partnership with local and regional government entities to add additional Digital Trunked Radio System (DTRS) sites in areas experiencing critical coverage gaps for public safety radio communications.

### Injury Prevention

Injury prevention efforts at the state level are coordinated through the Violence and Injury Prevention-Mental Health Promotion Branch in the Prevention Services Division at the department. The branch builds capacity and sustainability at the community, regional and state levels by providing culturally appropriate programming and quality technical assistance and by maintaining diverse community partnerships.

During fiscal year 2019, joint efforts with the Violence and Injury Prevention-Mental Health Promotion Branch included continuation of a joint committee, the Injury Prevention Committee that meets at least quarterly. This dual purpose committee serves to help unify injury prevention efforts across the two branches so that stakeholders have one place to discuss, prioritize and implement prevention activities. Many trauma centers participate in this discussion and use the opportunity to find assistance and resources for the development of their facility-based efforts. Other joint efforts between EMTS and the Violence and Injury Prevention Branch included cooperation on implementation of grant activities and cooperation on injury data surveillance.

Funding for the department's injury prevention activities primarily comes through grants and cooperative agreements between the department and federal agencies such as the Centers for Disease Control and Prevention and the Administration for Community Living. Limited state general funds are provided to the Office of Suicide Prevention for its activities and to the Colorado Child Fatality Prevention System.

## Emergency Medical Services for Children

The department is authorized under Colorado Revised Statute § 25-3.5-204 to establish a program and receive funds to improve the quality of emergency care to pediatric patients throughout the state, including a component to address public awareness of pediatric emergencies and injury prevention. Historically, the Emergency Medical and Trauma Services Branch was the Colorado grantee for the federal EMS for Children State Partnership Grant and worked in partnership with the Section of Pediatric Emergency Medicine at the University of Colorado School of Medicine to implement the grant. On April 1, 2018, the School of Medicine became the direct grantee for the grant, and established a cooperative agreement with the department to continue the partnership in successfully implementing the grant. This partnership between state institutions leverages the clinical expertise and research capacity of the University of Colorado with the regulatory and program expertise of the department.

Over the past five years the program has collaborated extensively with the Children's Hospital Colorado Outreach and Education team to deliver mobile simulation-based training to nearly 2,500 EMS and hospital providers in communities across the state. Between July 1, 2018 and June 30, 2019, the mobile simulation lab reached almost 300 providers. In 2018, the program, in partnership with Children's Hospital Colorado, completed a large study on the effect of serial trainings using mobile simulation for pediatric emergencies among prehospital providers. The results, finalized in early 2019, showed improvement in providers' recognition and management of pediatric critical illness.

The program also continues to support an online education module to help providers better distinguish between accidental and inflicted injury. The module currently provides CEs to EMS providers in Colorado and several other states and is working toward being able to provide CMEs to nurses and physicians.

Finally, the program has been developing two initiatives to improve pediatric readiness across the state. The first, Colorado Pediatric Preparedness for the Emergency Room (COPPER), is aimed at improving emergency department preparedness in caring for pediatric patients. A steering committee is currently working to define the categories, criteria, incentives and resources for the program. Once finalized, COPPER will be a statewide, voluntary recognition program for hospital emergency departments. The second initiative, Colorado Pediatric Emergency Care Coordinators (COPECC), is being developed to promote and assist with the implementation of pediatric emergency care coordinators at EMS agencies across the state. Although not yet fully developed, COPECC will likely provide education and resources related to the role and value of a pediatric emergency care coordinator and may also facilitate workshops and/or annual meetings across the state.

## Attachment A - Fiscal Year 2020 Funding Program Awards

Applicant Name	Grant Category	Total Score	Total Project Amount	Match %	State Amount Requested	Provider Grant Amount Funded	System Improvement Amount Funded
Alamosa County Ambulance District	Ambulance and Other Vehicles	42.6	\$188,944.00	50%	\$94,472.00	\$94,472.00	
Alamosa County Ambulance District	EMTS Equipment	42.5	\$27,684.00	50%	\$13,841.99	\$13,841.99	
Alamosa Volunteer Search and Rescue	Ambulance and Other Vehicles	23.3	\$44,555.00	10%	\$40,099.50	\$0.00	
Arkansas Valley Ambulance District	Communications	36.4	\$12,516.00	10%	\$11,264.40	\$11,264.40	
Arkansas Valley Ambulance District	EMTS Equipment	37.8	\$78,613.59	10%	\$70,752.23	\$70,752.23	
Bennett Fire Protection District #7	EMTS Equipment	42.6	\$132,535.84	50%	\$66,267.92	\$66,267.92	
Big Sandy Fire Protection District	EMTS Equipment	36.4	\$34,254.60	10%	\$30,829.14	\$0.00	
Black Forest Fire Rescue Protection District	Ambulance and Other Vehicles	39.3	\$372,000.00	50%	\$178,924.00	\$178,924.00
