

Number of Incident Cases* and Rates** of *Clostridium difficile* by Age Group -- Denver Metro Area (EIP)^, 2014

- * **An incident case** is defined as a positive *C. difficile* toxin assay or a positive *C. difficile* molecular assay (e.g. PCR) in a resident of one of the 5 EIP counties who is at least 1 year of age and whose specimen was collected greater than 8 weeks after any previous positive test.
- ** Rates are calculated based upon 2014-based population estimates, State Demography Office – DOLA. Denominators used population ≥1 year of age.
- ^ EIP - Emerging Infections Program surveillance area, which includes the Denver metropolitan counties of Adams, Arapahoe, Denver, Douglas, and Jefferson
