Summary of Designated Uses and Attainment for Colorado Rivers
2006 305(b) Report

To conform to EPA's reporting requirements within the Assessment Database (ADB) some of Colorado's WBID descriptions have further segregated and refined. In these cases, a numeric flag, based on geographic location, has been appended to those WBID as an additional identifier. These additional identifiers have no bearing on the water quality standards that have been adopted in Colorado, but rather are utilized to assist in determining the location of the segment in question.

The 2006 303(d) List and the ADB are not directly linked, and discrepancies can occur where only a portion of a segment has been placed on the 303(d) List.
