INTRODUCTION

Summary Report of Client Characteristics for Fiscal Year 2003-2004

Description:

This Summary Report, also referred to as the *Orchid Report*, is a compilation of descriptive statistics designed to provide information for every agency in Colorado's public mental health system utilizing the Colorado Client Assessment Record (CCAR). This includes both capitated and non-capitated clients served in community agencies and state hospitals.

This primary Summary Report consists of three tables *for each variable*:

1. Open Cases on June 30, 2003 include clients open on that date, the last date of the prior fiscal year
2. Admissions/Activates from July 1, 2003 through June 30, 2004 and Discharge/Inactivates from July 1, 2003 through June 30, 2004
3. A combined **Clients Served** Summary of Admissions/Activates and Discharge/Inactivates for 2003-2004 PLUS Open Cases on June 30, 2003.

Report Format

The reporting format provides the following:

Type of Admissions – age group, legal status, and referral source at time of admission and the type of admission (new or readmission this or prior year)

Demographics – gender, ethnicity, living situation, geographic location, and socio-economic status

Consumer Clinical Information – diagnosis, mental health problem, severity, treatment history, medications, non-prescription drug use, and meds only and housing only status

Discharge/Inactivates – types of discharge or inactivation, employment and living situations, referral and problem severity at discharge or inactivation.

Each table displays statistics on one variable for all agencies. Subtotals are shown for mental health agencies and both State Institutes at Fort Logan and Pueblo. Grand totals are shown across the bottom of each page.

Notes:

Unduplicated Counts – Totals for Open Cases are, of necessity, unduplicated within agency. Totals for Admissions/Activates are counts of admission episodes and are not unduplicated for persons within agency or Statewide. An unduplicated count for persons can be estimated by calculating 86% of admission total.

Duplicated Totals – For variables such as Ethnic Group, Living Arrangement, Permanent Handicap, Benefits Received, Current Medications, Non-Prescription Substance Use and Consumer/Client Issues where more than one item may be marked, totals for each agency and Statewide are unduplicated. Duplicated Totals are also provided, but do not include cases where none of the items were marked. Because of this, the duplicated total may be lower than the unduplicated total. Ethnic Group contains a duplicated total for Minorities in addition to the unduplicated total for Minorities Only found on that table.

Definitions of variables – These may be found in the CCAR Users (Training Manual) Manual Dated July 2001.

Poverty Level - Family Income Below Poverty Level is constructed from Family Income, Number of Persons Supported by Family Income and poverty thresholds obtained from the U.S. Census Bureau, Poverty Thresholds. The thresholds for 2004 are:

Persons in Household	Family Income (\$)	Persons in Household	Family Income (\$)
1	9,393	6	25,122
2	12,015	7	28,544
3	14,680	8	31,589
4	18,810	9 or more	37,656
5	22,245		

Living Arrangement – This applies only if client is living independently or if a child or youth is living at home with family. Therefore, the total for this variable is based on clients whose Place of Residence is Homeless on Street, Supported Housing, Assisted Living, or Other Independent living situation and will not match totals for variables that apply to all clients.

Diagnostic Groupings – The Diagnostic groupings were changed to reflect the requirements for submission of data for the 'Annual Census of Patient

Characteristics', version November 1995. A copy of this diagnostic breakout is available, on request, from MHS.

Discharges/Inactivates – Employment Status and Place of Residence at discharge or inactivation are reported for both clinical and administrative discharges/inactivates.

Level of Functioning – This report uses the 'Overall Level of Functioning' score from the CCAR. The values used for each degree of severity are shown in the column headings of the report.

Serious Mental Illness (SMI) replaces the term *Major Mental Illness (MMI)* with no change in the criteria, and is intended to identify the broadest category of mental illness. The criteria may be found in the Client Services Utilization Summary (CSUS) directions and in the Algorithm Section of the MIS documentation manual (The Green Book).

Serious and Persistent Mental Illness (SPMI): There has been no change in either the use of this term or its definition; it is used to identify the most serious level of severity. The criteria may be found in the Client Services Utilization Summary (CSUS) directions and in the Algorithm Section of the MIS documentation manual (The Green Book).

Serious Emotional Disorders (SED) for children and adolescents. There has been no change in either the use of this term or its definition; it is the only term used to identify the most serious level of severity for all youth. The criteria may be found in the Client Services Utilization Summary (CSUS) directions and in the Algorithm Section of the MIS documentation manual (The Green Book).

Discharge Referral – This applies only in cases where the Termination Type indicates Discharge/Transferred, Treatment Completed with No Referral, Treatment Completed with Followup, or Evaluation Only and the total will not match totals for variables that apply to all discharged/inactivated clients.

A special thank you to all providers who complete the CCAR, your diligent efforts are greatly appreciated.
