To His Excellency the Governor:

A brief summary of the various activities of the Colorado State Hospital for the two-year period ending November 30, 1938, is contained in the following report.

Movement of Population Tables 1936-1937

In order that a more accurate concept of the movement of population be obtained, the above tables contain numerous details that heretofore have been omitted in the biennial reports. During the two-year period, 1,349 patients were admitted while the total number of separations was 1,133 of whom 562 were discharged and 571 died. The number of patients who entered the hospital of their own volition for care and treatment was 62 or a marked increase over the previous biennium when 19 were admitted as voluntary cases. A total of 82 patients was transferred to other hospitals and 25 were deported to states or countries in which they had legal residences. There was a slight decrease in the total number of admissions in comparison with the last two-year period and the net gain of 230 patients actually resident in the hospital was also less than that for the previous biennium. Overcrowding has continued to be constant but this condition should be markedly relieved when the building program now in progress is completed.

EIGHT-HOUR DAY

On July 1, 1937, the eight-hour day went into effect and now practically all employees except officials and others in a supervisory capacity are working on this basis. Over two hundred employees have been added to the hospital pay roll and the increase in cost of salaries has been approximately \$12,000 per month or about \$288,000 for the fiscal period. When the act was passed by the legislature no provision was made to house the needed additional employees, consequently, a very real problem developed. It was finally decided as an emergency measure to move all but a few of the patients at the Annex to the main institution and utilize the buildings so vacated for living quarters for employees. This was done and although the housing accommodations provided are more or less of a makeshift they have proven fairly satisfactory. These buildings are not well adapted and arranged for the housing of employees, therefore, if they continue to be used for this purpose major remodeling will be necessary.

With the eight-hour law in operation and with the number of employees constantly increasing the time has come to discontinue providing maintenance for most of the personnel. It will always be necessary, of course, to have some employees live on the hospital grounds for emergency purposes but the great majority should reside outside under conditions of their own preference. This procedure has been put in operation in a great many hospitals throughout the country and has proven very satisfactory. The arguments in favor of its adoption are so numerous and the objections so few that arrangements should be made by the General Assembly to put it into effect during the next fiscal period. The most important fact to be determined is the cash value of the maintenance now provided the individual employee. Once this is decided by the legislature the program can easily be administered. A basic rate of pay exclusive of maintenance will be established

for each of the various positions throughout the hospital. If an employee is allowed maintenance a deduction equivalent to its cash value will then be made from his base salary.

BUILDING PROGRAM

Two major construction projects financed in part by the proceeds derived from the mill levy act of 1937 and in part from funds available as the result of grant agreements with the Federal Government have been approved by the Public Works Administration. The first for \$1,200,000 utilizing the monies collected for the years 1937 and 1938, consists of a hydrotherapy unit, buildings providing living accommodations for eight hundred patients, a central kitchen, additions and changes to the present heating plant, installation of automatic fire protection sprinkler systems in all old non-fireproof buildings housing patients and employees, renewal of steam mains and installation of modern heating equipment in a number of the older buildings, furnishing and equipping all new buildings, an extension to the present water main at the north unit and miscellaneous items such as tunnels, bridges and fencing material. The second for \$772,727 will be financed by anticipation warrants secured by taxes to be collected during the years 1939 and 1940. The items included in the project are: A detention building to house two hundred patients, a dormitory for patients and employees at the farm, an employees' dining hall, an isolation unit for patients with communicable diseases, a central storehouse, an ice plant, a hot water circulating system, an outdoor lighting system for the north unit, a gatehouse at the north unit, extension of the public address system, and improvements to the new grounds such as grading, roads, sidewalks, curbs, lawn sprinkling and fencing. Provided the above projects are completed as outlined the total cost of \$1,972,727 will be divided between the State and the Federal Government on the basis of fifty-five percent by the former and the balance by the latter.

SPECIAL APPROPRIATION REQUESTED

Maintenance, \$1,800,000. The population of the Colorado State Hospital has increased annually ever since it was established in 1879, therefore, each biennium the gross expenditures for general maintenance exceed those of the previous period. Facilities for the care and treatment of approximately twelve hundred patients will be added to the existing hospital plant and equipment during the next fiscal year, thus the total cost of operation will show a very decided rise. At present many wards in the hospital are being conducted without adequate help, consequently, with additional facilities being provided for the welfare of the patients a large number of employees will have to be added to the personnel. A high percentage of the increased cost of operation will, therefore, be accounted for by the total amount needed for additional salaries. Two factors are thus responsible for the large maintenance appropriation requested, these are: First, the normal growth of the patient

population; and second, the extensive building program now in progress. Full details of the cost increases in the various departments of the institution will be found in the budget submitted to the Budget and Efficiency Commissioner.

SPECIAL APPROPRIATIONS RECEIVED

Furnishing and equipping new buildings, \$85,000. In accordance with the provisions of this appropriation \$25,000 was expended to provide additional equipment for the laundry and the balance was used to furnish and equip the new ward buildings, the dining room and kitchen and the additions to the home for employees.

Maintenance, \$1,265,000. Due to the fact that there was a marked decrease in the cost of all commodities shortly after the first six months of this fiscal period it will be possible to operate the institution without a deficit provided the full amount of this appropriation is made available for the balance of the biennium. If, however, the total sum is reduced a deficiency will be inevitable.

W. P. A. PROJECTS

General repairs and improvements throughout the entire institution have been continued under W. P. A. during the past twenty-four months. The numerous projects completed and under construction will be found with details as to cost under Table No. 8 in the report of the Steward.

MEDICAL REPORT

In January, 1937, an epidemic of influenza developed among the patients and employees. The disease was quite malignant for individuals past middle life and approximately fifty deaths, which could be attributed either to influenza or its complications, occurred in the patient population. Two employees also died. During the months of August and September in 1938 an epidemic of diphtheria occurred and twenty-nine cases resulted, sixteen among employees and thirteen among patients. In all these the clinical diagnoses were confirmed by laboratory findings. The disease was so widespread throughout the various departments of the hospital that it became necessary to enforce strict quarantine regulations. A careful and systematic study revealed the milk supply of the hospital to be the medium of infection. The original source of contamination could not be determined even though local health officers as well as officials from the Colorado State Board of Health were called in consultation. Three deaths resulted and these occurred in female patients aged 40, 66 and 82, respectively. Accurate records from both a clinical as well as a laboratory viewpoint were kept, consequently, considerable data of medical interest relating to diphtheria have been accumulated and are now being studied. The most important lesson learned from the epidemic deals with pre-

vention. The milk supply of the hospital must be pasteurized as has been recommended for many years. If this procedure is adopted the possibility of any infection disseminated by milk is practically eliminated. It might be added that the total cost of this one epidemic would almost have paid for the installation of a modern pasteurization plant at the hospital dairy.

Medical activities have been increased both within and without the institution. The interchange of physicians with the Colorado Psychopathic Hospital has been continued. Consulting services have been established with local hospitals as well as with charitable clinics in the community. In April, 1938, arrangements were made with Warden Roy Best of the Colorado State Penitentiary for the examination of all inmates there suspected of having mental diseases. Psychotic individuals are either transferred to this hospital or if this procedure is not practical, are treated under supervision in the medical department there. The laboratories of this hospital have been placed under the direct supervision of an experienced pathologist and roentgenologist. This has resulted in a closer cooperation between the clinical and laboratory departments as well as a marked increase in the number of autopsies. Monthly clinicopathological conferences with case presentations and complete autopsy findings have been routine. Staff meetings have been held weekly for the discussion of recent literature and subjects associated with the practice of medicine and psychiatry. The regular staff meetings for diagnostic and therapeutic purposes have been continued as well as have those at which hospital policies and administration problems are discussed.

Since the nursing service for both the male and female departments has been consolidated under one head the main objective has been to raise the standard of care and treatment given the individual patient. Psychiatrically trained supervisors have been obtained and additional graduate nurses have been employed. The training course for attendants has been improved and new classes are enrolled twice yearly. Only residents of Colorado are accepted and a high school education is required of every applicant. Each class consists of twelve young women and twelve young men who receive special training over a period of six months. The curriculum covers hospital rules and regulations, medical and surgical nursing procedures, psychiatric nursing, anatomy, physiology, symptomology, materia medica, hygiene and occupational therapy. Clinical instruction is provided on the hospital wards, the receiving units, the isolation wards, certain wards for chronic patients, in the diet kitchen, in the fever therapy department, in the hydrotherapy units, in the operating room and in the clinical laboratory. Special courses are also given graduate nurses who have had little or no experience in psychiatry. It is planned that eventually all employees dealing directly with patients will receive at least a minimum amount of instruction relative to psychiatric nursing.

Progress has been made in broadening the scope of treatment afforded the individual patient. Additional equipment has been

installed for both diagnostic and therapeutic procedures. Specific treatment whenever possible for acute and chronic diseases has continued to be routine. All types of therapy available within the resources of the hospital have been utilized. Group psychotherapy was tried recently in a number of patients afflicted with chronic alcoholism but no evaluation of results can be reported at this time. Metrazol has been used over a period of more than two years while insulin therapy was instituted during the past year. Patients selected for "shock" treatment receive a careful preliminary study including in addition to physical and mental examinations, a complete blood picture, an electrocardiogram, X-ray examinations of the chest, basal metabolism tests and whatever other diagnostic procedures are indicated in the individual case. The immediate results from the above two drugs are sometimes spectacular while at other times disappointing so no conclusions as to their ultimate efficiency can as yet be drawn. It may be said, however, that the apparent improvement occurring in many cases justifies their continued use. This same statement can also be applied to nearly all the therapeutic procedures now used in the treatment of mental disease.

CHANGES IN PERSONNEL

Appointments during the period to the Medical Staff: Dr. Frederic D. Baier, December 14, 1936; Dr. F. Wm. Cutts, December 15, 1936; Dr. Irvin Schatz, February 25, 1937; Dr. John D. Marsh, March 18, 1937; Dr. T. Gallup, June 22, 1937; Dr. F. A. Majka, July 8, 1937; Dr. B. E. Konwaler, October 1, 1937; Dr. Adele C. Kempker, October 6, 1937; Dr. Paul Haun, November 1, 1937; Dr. Wm. N. Baker, August 1, 1938, and Dr. H. S. Knoch, November 11, 1938. Other appointments during the biennium: Mr. Thomas L. Bartley, Labor Co-ordinator, May 18, 1937 and Rev. C. D. Evans, Protestant Chaplain, September 1, 1937.

Resignations during the period: Dr. C. D. Anton, January 17, 1937; Dr. Roy T. McReynolds, February 13, 1937; Dr. Thomas D. Menser, March 21, 1937; Dr. Frederic D. Baier, May 24, 1937; Dr. J. W. Graham, June 3, 1937; Dr. Charles E. Knowles, November 9, 1937; Dr. Paul S. Wolfe, September 30, 1938; Dr. F. A. Majka, October 20, 1938 and Dr. John D. Marsh, November 1, 1938. Other resignations during the period: Rev. Lloyd C. Nichols, Protestant Chaplain, August 31, 1937.

LEGISLATION RECOMMENDED

The statute relating to the report of the superintendent of the Colorado State Hospital should be amended so that the report will deal with the activities of one fiscal biennial period. The report now made contains material taken from two different fiscal periods, consequently, is not complete for either and does not give a true picture of the financial cost of operating the hospital.

The statute governing the payments for care and maintenance of indigent patients by relatives should be clarified. It is believed that were this done additional funds could be obtained for the hospital from this source.

The various statutes relating to the "criminal insane" should be revised and all conflicting acts should be repealed. Specific legislation should be enacted regarding the procedure to be followed in case of patients of this class absent from the hospital on parole or escape.

Some provision should be made whereby the committing courts send the hospital all the information now required by law relative to the commitment of an individual patient.

Definite legislation should be enacted relating to the problem of providing maintenance for the employees of this institution.

ACKNOWLEDGMENTS

In conclusion I wish to thank His Excellency, Governor Teller Ammons, the other members of the Executive Council, the Board of Visitors, the physicians and surgeons of the consulting staff and the officers and employees of the Colorado State Hospital for their friendly cooperation and assistance in the management of the institution for the past two years.

F. H. ZIMMERMAN, M.D.,
Superintendent.

Dr. F. H. Zimmerman, Superintendent,
Colorado State Hospital.

Dear Sir:

I herewith present to you a report of the business department of this institution, covering the period beginning December 1, 1936 and ending November 30, 1938.

Tables numbers 1 to 9B inclusive relate to finances for the above period. Tables numbers 10 to 17, inclusive, cover the operation of various departments of the institution.

The per capita cost covering this period is higher than previous periods. This increase has been caused by the eight-hour law which went into effect on July 1, 1937, and necessitated the employment of over two hundred additional employees. It will also be noted that in figuring the per capita cost I have used the actual number of patient days instead of the hospital census as has been the procedure in the past.

At this time the personnel is inadequate to properly operate and maintain the existing institution. During the next biennium due to the building program the hospital will be greatly enlarged, consequently a marked increase in the number of employees must be anticipated. The additional amount that will be needed for salaries alone will cause a decided increase in the per capita cost.

I would suggest that in the future this report be limited to the fiscal biennium, thereby giving a clearer picture of the finances of the institution.

Respectfully submitted,

CHARLES G. DOWLING, Steward,
Colorado State Hospital,
