1963-1964

The Journal of the Fort Logan Mental Health Center is a scientific quarterly which publishes original articles describing individual or collective modes of prevention, treatment, and related aspects of care for those persons with emotional disturbances. Emphasis is placed upon recording the investigation and description of those modalities broadly subsumed within the concepts of social and community psychiatry.

The Fort Logan Mental Health Center is Colorado's second state hospital. Currently serving almost half the population of the state, its organization follows as much as possible the recommendations of the Joint Commission on Mental Illness and Health. Concepts of milieu therapy are strongly utilized, with emphasis on expansion of professional roles and the involvement of the patient's family and his community in treatment. The hospital is entirely open and relies heavily on transitional forms of treatment. Approximately one-half of its patients are admitted directly to day care, and evening care is offered. Geographic and administrative decentralization are utilized, with the same psychiatric team following the patient from the time of admission through all phases of treatment.
