Introduction

The Occupational Employment Statistics (OES) program conducts a semi-annual mail survey designed to produce estimates of employment and wages for specific occupations. The OES program collects data on wage and salary workers in nonfarm establishments to produce employment and wage estimates. Data from self-employed persons are not collected and are not included in the estimates.

The OES program produces these occupational estimates by geographic area and industry. Estimates based on geographic areas are available at the state and Metropolitan Statistical Area (MSA) levels. The industry classifications correspond to the 3-, 4-, and 5-digit North American Industry Classification System (NAICS) industrial groups.

In Colorado, the OES program surveys approximately 3,800 establishments per panel (every six months). To reduce respondent burden for Colorado employers, the collection is on a three-year survey cycle that ensures most individual establishments are surveyed only once every three years. The estimates for occupations in non-farm establishments are based on OES data collected for the reference months of May and November.

The OES survey is a federal-state cooperative program between the Bureau of Labor Statistics (BLS) and State Workforce Agencies (SWAs). In Colorado, the survey is conducted by the OES Unit of the Colorado Department of Labor and Employment's Labor Market Information section. BLS provides the procedures and technical support, selects the sample, and produces the survey materials, while the OES Unit collects and edits the data. OES wage survey data are produced in all fifty states, plus the District of Columbia, Puerto Rico, Guam, and the Virgin Islands.

Wage data for this publication are for May 2004. The OES survey began using NAICS in 2002, with data prior to 2002 based on the Standard Industrial Classification (SIC) system.

In 1999, the OES survey began using the new Office of Management and Budget (OMB) Standard Occupational Classification (SOC) system. The new SOC system, which will be used by all federal statistical agencies for reporting occupational data, consists of 821 detailed occupations, grouped into 449 broad occupations, 96 minor groups, and 23 major groups.

The OES program provides occupational employment and wage estimates at the major group and detailed occupation level. Due to the OES survey's transition to the new SOC system, 1999 and 2000 OES estimates are not directly comparable with previous years' OES estimates that were based on a classification system with 7 major occupational groups and 770 detailed

occupations. Approximately one-half of the detailed occupations were unchanged under the new SOC system, with the other half being new SOC occupations or occupations that are slightly different from similar occupations in the old OES classification system.

Prior to 1996, the OES program collected only occupational employment data for selected industries in each year of the three-year survey cycle, and produced only industry-specific estimates of occupational employment. The 1996 survey round was the first year the OES program began collecting occupational employment and wage data in every state. In addition, the program's three-year survey cycle was modified to collect data from all covered industries each year. 1997 is the earliest year available for which the OES program produced estimates of cross-industry as well as industry-specific occupational employment and wages.

May 2004 employment and wage estimates are based on data collected in the 2000, 2001, 2002, May 2003, November 2003, and May 2004 surveys. The 2001, 2002, May 2003, and November 2003 wage data have been adjusted to the May 2004 reference period by using the over-the-year wage changes in the most applicable national Employment Cost Index series. The May 2004 OES estimates are benchmarked to an average of the May 2004 and November 2003 reference periods.

Survey Coverage and Scope

The OES survey covers all full-time and part-time wage and salary workers in non-farm industries. Surveys collect data for the payroll period including the 12th day of May or November, depending upon the panel when surveyed. The survey does not cover the self-employed, owners and partners in unincorporated firms, household workers, or unpaid family workers.

The OES survey produces estimates of occupational employment and wages for most industry groups in these 20 NAICS sectors:

- Agriculture, Forestry, Fishing, and Hunting
- Mining
- Utilities
- Construction
- Manufacturing
- Wholesale Trade
- Retail Trade
- Transportation and Warehousing
- Information
- Finance and Insurance
- Real Estate and Rental and Leasing
- Professional, Scientific, and Technical Services
- Management of Companies and Enterprises
- Administrative and Support and Waste Management and Remediation Services
- Education Services
- Health Care and Social Assistance
- Arts, Entertainment, and Recreation
- Accommodation and Food Services
- Other Services (except Public Administration) and
- Public Administration.

Uses of the OES Survey Data

The OES employment and wage data are useful for a variety of purposes and by different groups. Requests for wage data come frequently from individuals who are considering a career change or re-evaluating their current career. Wage information is one of the most critical inputs workers seek when planning their careers.

OES wage data are also used by employers who are evaluating the wages paid in their own industry. For example, an employer experiencing a high rate of employee turnover can use occupational wage data to compare wages paid within their company to average market wages. An employer considering relocating to another state or area within their state can use the OES wage data to estimate the wage cost in the prospective location.

Other users of the OES wage survey include career counseling organizations, educational institutions, and policy makers. They can use the survey for:

- Analysis of occupational employment and wages
- Vocational counseling and planning
- Industry skill and technology studies
- Market analysis.

The occupational employment data derived from the OES survey are also key inputs needed to produce state and national occupational projections. Occupational staffing patterns obtained from the survey are used as a basis to estimate current and projected occupational demand in Colorado and other states.

Many useful rankings of occupational employment and wage data are available from data collected in the 2004 OES survey. Ranking of the top 20 occupations by estimated employment can be very useful as can rankings of the top 20 occupations ranked by average annual wage.

How to Obtain More Data

Data resulting from this survey are available in a wide variety of formats and for all fifty states. For wage data from various Metropolitan Statistical Areas (MSAs) and other areas within Colorado, visit:

Methodology

Scope of the Survey

The nationwide response rate for the May 2004 survey was 78.8 percent for establishments, covering 72.7 percent of weighted employment. Colorado's response rate was 80.7 percent for establishments.

In November 2002, the OES survey changed from an annual survey to a semiannual survey. The OES survey samples and contacts establishments in May and November of each year, over three years. The full three-year sample allows the production of estimates at fine levels of geographic, industrial, and occupational detail. Note the 2001 sample is annual while all other panels are semiannual. The total national sample size is 1.2 million establishments.

The Standard Occupational Classification system:

In 1999, the OES survey began using the Office of Management and Budget's (OMB) occupational classification system, the Standard Occupational Classification (SOC) system. The SOC

Methodology—continued

system is the first OMB-required occupational classification system for federal agencies. The OES survey categorizes a worker in one of the 821 detailed occupations. Together, these detailed occupations comprise 23 major occupational groups. The major groups are:

- Management Occupations
- Business and Financial Operations Occupations
- Computer and Mathematical Science Occupations
- Architecture and Engineering Occupations
- Life, Physical, and Social Science Occupations
- Community and Social Services Occupations
- Legal Occupations
- Education, Training, and Library Occupations
- Arts, Design, Entertainment, Sports, and Media Occupations
- Healthcare Practitioner and Technical Occupations
- Healthcare Support Occupations
- Protective Service Occupations
- Food Preparation and Serving Related Occupations
- Building and Grounds Cleaning and Maintenance Occupations
- Personal Care and Service Occupations
- Sales and Related Occupations
- Office and Administrative Support Occupations
- Farming, Fishing, and Forestry Occupations
- Construction and Extraction Occupations
- Installation, Maintenance, and Repair Occupations
- Production Occupations
- Transportation and Material Moving Occupations
- Military Specific Occupations (not surveyed in OES).

For more information about the SOC, please see the BLS Web site at <http://www.bls.gov/soc>.

The industry coding system: As noted earlier, in 2002, the OES survey switched from using the Standard Industrial Classification (SIC) system to using the North American Industry Classification System (NAICS). For more information about NAICS, see the BLS Web site at <http://www.bls.gov/bls/naics.htm>.

The OES survey includes establishments in NAICS sectors 11 (logging and agricultural support activities only), 21, 22, 23, 31-33, 42, 44-45, 48-49, 51, 52, 53, 54, 55, 56, 61, 62, 71, 72, 81 (except private households), state government, and local government. Data for the U.S. Postal Service and the federal government are universe counts obtained from the Postal Service and the Office of Personnel Management, respectively. An establishment is defined as an economic unit that processes goods or provides services, such as a factory, mine, or store.

The establishment is generally at a single physical location and is engaged primarily in one type of economic activity.

Survey coverage: BLS funds the survey and provides the procedures and technical support, while the State Workforce Agencies collect most of the data. BLS produces cross-industry NAICS estimates for the nation, states, and MSAs. NAICS estimates are produced for 3-, 4-, and selected 5-digit industry levels. BLS releases all cross-industry and national estimates and the SWAs release industry estimates at the state and MSA levels.

State Unemployment Insurance (UI) files provide the universe from which the OES survey selects its sample. The

Size Class	Number of Employees
1	1 to 4
2	5 to 9
3	10 to 19
4	20 to 49
5	50 to 99
6	100 to 249
7	250 and above

employment benchmarks are obtained from reports submitted by employers to the UI program. Supplemental sources are used for rail transportation (NAICS 4821). The OES survey sample is stratified by area, industry, and size class. Size classes are defined in the table at left.

UI reporting units with 250 or more employees are sampled with virtual certainty across a 3-year period. Generally, one-sixth of the certainty units are sampled in each panel in each state.

Concepts

Occupational employment: This is the estimate of total wage and salary employment in an occupation across the industries in which that occupation was reported. The OES survey defines employment as the number of workers who can be classified as full-time or part-time employees, including workers on paid vacations or other types of leave; workers on unpaid short-term absences; salaried officers, executives, and staff members of incorporated firms; employees temporarily assigned to other units; and employees for whom the reporting unit is their permanent duty station regardless of whether that unit prepares their paycheck.

The OES survey form sent to an establishment contains between 50 and 225 SOC occupations selected on the basis of the sampled establishment's industry classification and size class. To reduce paperwork and respondent burden, no survey form contains every SOC occupation. Thus, data for specific occupations are collected primarily from establishments in industries

Methodology—continued

that are the predominant employers of workers in those occupations. Each survey form is structured, however, to allow a respondent to provide detailed occupational information for each worker at the establishment; that is, unlisted occupations can be added to the survey form.

Wages for the OES survey are straight-time gross pay, exclusive of premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous-duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay are included. Excluded are back pay, jury duty pay, overtime pay, severance pay, shift differentials, non-production bonuses, employer cost for supplementary benefits, and tuition reimbursements.

The OES survey collects wage data in 12 intervals. Employers report the number of employees in an occupation for each wage range. The wage intervals used for the May 2004 survey are:

Interval	Hourly Wages	Annual Wages
Range A	Under \$6.75	Under \$14,040
Range B	\$6.75 to \$8.49	\$14,040 to \$17,679
Range C	\$8.50 to \$10.74	\$17,680 to \$22,359
Range D	\$10.75 to \$13.49	\$22,360 to \$28,079
Range E	\$13.50 to \$16.99	\$28,080 to \$35,359
Range F	\$17.00 to \$21.49	\$35,360 to \$44,719
Range G	\$21.50 to \$27.24	\$44,720 to \$56,679
Range H	\$27.25 to \$34.49	\$56,680 to \$71,759
Range I	\$34.50 to \$43.74	\$71,760 to \$90,999
Range J	\$43.75 to \$55.49	\$91,000 to \$115,439
Range K	\$55.50 to \$69.99	\$115,440 to \$145,599
Range L	\$70.00 and over	\$145,600 and over

Mean hourly wage: The mean hourly wage rate for an occupation is the total wages all workers in the occupation earn in an hour divided by the total employment of the occupation. To calculate the mean hourly wage of each occupation, total weighted hourly wages are summed across all intervals and divided by the occupation's weighted survey employment.

The mean wage for each interval is based on occupational wage data collected by the BLS Office of Compensation and Working Conditions for the National Compensation Survey (NCS).

The mean hourly wage value for the highest wage interval, \$70.00 and over, was computed separately for each panel or annual sample (May 2004, November 2003, May 2003, November 2002, and 2001). The average of these mean wage rates was derived and used for all of the \$70.00 and over data in the May 2004 survey. The wage rates for this interval do not go through any wage updating procedures.

Percentile wage: The p-th percentile wage range for an occupation is the wage where p percent of all workers earn that amount or less and where (100-p) percent of all workers earn that amount or more. This statistic is calculated by uniformly distributing the workers inside each wage interval, ranking the workers from lowest paid to highest paid, and calculating the product of the total employment for the occupation and the desired percentile to determine the worker that earns the p-th percentile wage rate.

Annual wage: Many employees are paid at an hourly rate by their employers and may work more than or less than 40 hours per week. Annual wage estimates for most occupations in this release are calculated by multiplying the mean hourly wage by a “year-round, full-time” figure of 2,080 hours (52 weeks by 40 hours). Thus, annual wage estimates may not represent the actual annual pay received by the employee if they work more or less than 2,080 hours per year. Some workers typically work less than full-time, year-round. For these occupations, the OES survey collects and reports either the annual salary or the hourly wage rate, depending on how the occupation is typically paid, but not both. For example, teachers, flight attendants, and pilots may be paid an annual salary, but do not work the usual 2080 hours per year. In this case, an annual salary is reported. Other workers, such as entertainment workers are paid hourly rates but generally do not work full-time, year-round. For these occupations, only an hourly wage is reported.

Hourly versus annual wage reporting: For each occupation, respondents are asked to report the number of employees paid within specific wage intervals. The intervals are defined both as hourly rates and the corresponding annual rates, where the annual rate for an occupation is calculated by multiplying the hourly wage rate by a typical work year of 2,080 hours. The responding establishment can reference either the hourly or the annual rate, but employers are requested to report the hourly rate for part-time workers.

Methodology—continued

Estimation Methodology

Each OES panel includes approximately 200,000 establishments nationwide. While estimates can be made with data from one panel or one year, the OES survey is designed to produce estimates using six panels (three years) of data. The full six-panel sample of 1.2 million establishments allows the production of estimates at detailed levels of geography, industry, and occupations. Combining six panels of data is also necessary to obtain the full complement of certainty establishments. The Colorado sample is approximately 3,800 establishments each panel.

Producing estimates using the 3 years of sample data provides significant sampling error reductions (particularly for small geographic areas and occupations); however, it also has some quality limitations in that it requires the adjustment of earlier years' data to the current reference period, a procedure referred to as "wage updating."

Wage Updating: As noted above, combining multiple years of data has both statistical advantages and limitations. Significant reductions in sampling error are achieved by combining six panels of data, particularly for small geographic areas and occupations. Wages for the current panel need no adjustments. However, wages in the five previous panels need to be updated to the current panel's reference period.

The OES program uses the BLS Employment Cost Index (ECI) to adjust survey data from prior panels before combining them with the current panel's data. The wage updating procedure adjusts each detailed occupation's wage rate, as measured in the earlier panel, according to the average movement of its broader occupational division. The procedure assumes there are no major differences by geography, industry, or detailed occupation within the occupational division.

Imputation: A "nearest neighbor" hot deck imputation procedure is sometimes required to impute occupational employment totals. A variant of mean imputation is then used to impute a wage distribution for each occupation. The variant of mean imputation for wage distribution is also applied to establishments that provide reports with occupational totals but partial or missing wage data.

Weighting and benchmarking: The sample establishments in each panel are weighted to represent all establishments that were part of the sampling frame from which the panel was selected. Based on the sampled establishments, weights are adjusted when six panels are combined. Weights are adjusted by benchmarking employment totals from the OES survey to employment figures derived from the BLS Quarterly Census of Employment and Wages.

May 2004 OES survey estimates: During the estimates processing, OES employment data were benchmarked to the average employment for May 2004 and November 2003 from the BLS Quarterly Census of Employment and Wages.

Reliability of the estimates: Estimates calculated from a sample survey are subject to two types of error: sampling and non-sampling. Sampling error occurs when estimates are calculated from a subset (i.e., sample) of the population instead of the full population. When a sample of the population is surveyed, there is a chance that the sample estimate of the characteristic of interest may differ from the population value of that characteristic.

Differences between the sample estimate and the population value will vary depending on the sample selected. This variability can be estimated by calculating the standard error (SE) of the sample estimate. If we were to repeat the sampling and estimation process countless times using the same survey design, approximately 90 percent of the intervals created by adding and subtracting 1.645 SEs from the sample estimate would include the population value. These intervals are called 90-percent confidence intervals.

The OES survey, however, usually uses the relative standard error (RSE) of a sample estimate instead of its SE to measure sampling error. RSE is defined as the SE of a sample estimate divided by the sample estimate itself. This statistic provides the user with a measure of the relative precision of the sample estimate. RSEs are calculated for both occupational employment and mean wage rate estimates. Occupational employment RSEs are calculated using a sub-sample, random group replication technique called the Jackknife. Mean wage rate RSEs are calculated using a variance components model that accounts for both the observed and unobserved components of the wage data. The variances of the unobserved components are estimated using wage data from the BLS National Compensation Survey.

In general, estimates based on many establishments have lower RSEs than estimates based on few establishments. If the distributional assumptions of the models are violated, the resulting confidence intervals may not reflect the prescribed level of confidence.

Non-sampling error: This occurs for a variety of reasons, none of which are directly connected to sampling. Examples of non-sampling error include: non-response, data incorrectly reported by the respondent, mistakes made in entering collected data into the database, and mistakes made in editing and processing the collected data.

Definitions

Establishment

The physical location of a certain economic activity, for example, a factory, mine, store, or office. Generally a single establishment produces a single good or provides a single service. An enterprise (a private firm, government, or non-profit organization) could consist of a single establishment or multiple establishments. A multi-establishment enterprise could have all its establishments in one industry (i.e., a chain), or could have various establishments in different industries (i.e., a conglomerate).

Estimate of Employment

The estimated employment for an occupation across all industries within the state. These estimates were obtained by summing employment in each wage interval across all industries. A further adjustment was made in order to match the estimated occupational employment within each industry and MSA to the universe employment (obtained from Unemployment Insurance tax files) in the industry and MSA.

Mean Wage

An average wage. An occupational mean wage estimate is calculated by summing the wages of all the employees in a given occupation and then dividing the total wages by the number of employees.

Median Wage

A boundary. An occupational median wage estimate is the boundary between the highest paid 50% and the lowest paid 50% of workers in that occupation. Half of the workers in a given occupation earn more than the median wage and half the workers earn less than the median wage.

Mid-Range

The middle fifty percent of the wage observations in a wage distribution. Another way to interpret a mid-range is to observe that 25 percent of workers in the occupation are paid less than the lower boundary of the mid-range, and 25 percent of workers are paid more than the upper boundary. The mid-range is the range between the twenty-fifth and seventy-fifth percentiles.

Occupation

A set of activities or tasks employees are paid to perform. Employees that perform essentially the same tasks are in the same occupation, whether or not they are in the same industry. Some occupations are concentrated in a few particular industries, other occupations are found in the majority of industries.

Standard Occupational Classification (SOC) System

This system will be used by all federal statistical agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data. All workers are classified into one of 821 occupations according to their occupational definition. To facilitate classification, occupations are combined to form 23 major groups, 96 minor groups, and 449 broad occupations. Each broad occupation includes detailed occupation(s) requiring similar job duties, skills, education, or experience.

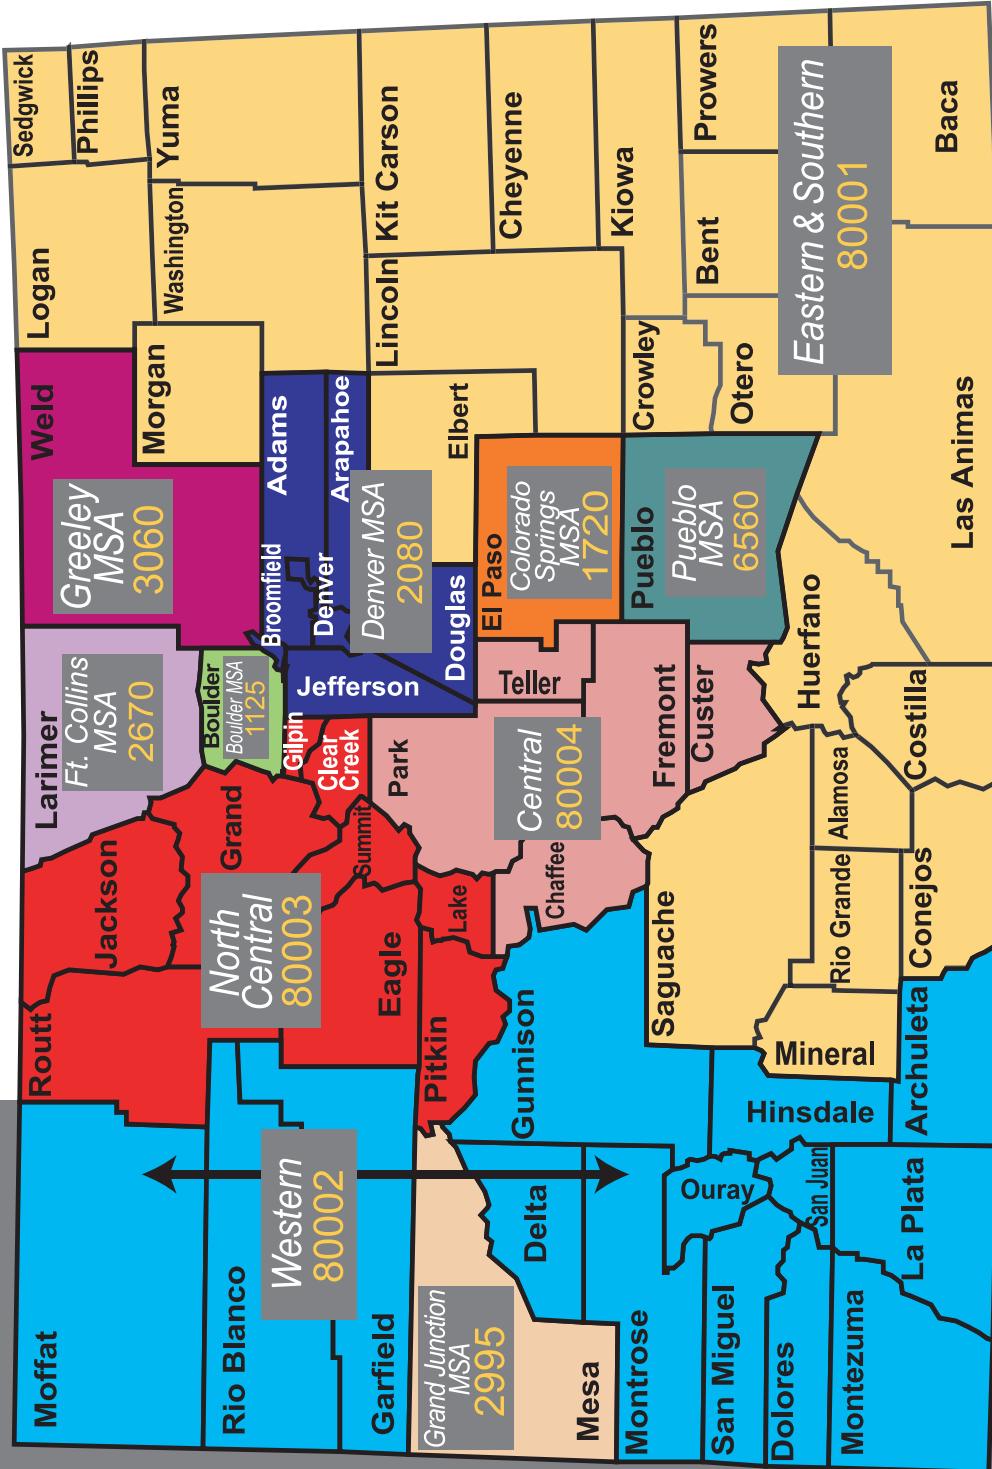

Wages and Salaries

Hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, excluding premium pay for overtime and for work on weekends and holidays, shift differentials, and non-production bonuses such as lump-sum payments provided in lieu of wage increases.
