

Strengthening Communities

Local Government Energy and Mineral Impact
Assistance Program

Thirty-first Annual Report – 2007

January 31, 2008

Local officials and residents hold a ribbon-cutting to celebrate the opening of the Beaver Creek Water Treatment facility serving the domestic water needs for City of Rifle citizens. Energy and Mineral Impact funds totaled \$650,000.

Improving Lives

**Colorado Department of Local Affairs Mission:
Strengthening Colorado Communities**

The Energy and Mineral Impact Assistance Program has been helping to improve the lives of Colorado citizens since 1977. Grants and low-interest loans are directed to those communities socially and economically impacted by the development, processing or energy conversion of mineral and fuel resources.

We Remember

We honor and remember two very dear friends and colleagues at the Department of Local Affairs, Kent Gumina and Cathy Shipley. Both were Field Representatives within the Division of Local Government who played a vital role in administering the Energy and Mineral Impact Program and providing outreach to their communities. Colorado and the Department of Local Affairs benefited tremendously from their commitment to the state. This annual report is in honor of their memories and significant contributions to their communities.

This report has been prepared by: Clay Brown, Ken Charles, Steve Colby, Teri Davis, Debra Downs, Greg Etl, Kimberly Hernandez, Tony Hernandez, Bret Hillberry, Jack Kirtland, Lee Merkel, Glory Ortega, Linda Rice, Don Sandoval, Sue Schneider, Charles Unseld, Diane VonDollen and Greg Winkler

Strengthening Communities

Colorado Department of Local Affairs

Susan E. Kirkpatrick
Executive Director

Since 1977, the Energy and Mineral Impact Assistance Program has been helping communities improve lives. This program embodies the Department of Local Affairs mission, "Strengthening Colorado Communities," by addressing the social and economic impacts of energy and mineral production throughout the state.

Projects funded by the program have helped with a wide variety of community development efforts and improvements including planning, infrastructure, public safety facilities and services, roads and water and wastewater treatment facilities.

The nature of the energy and mineral production industry is highly variable and as a result, we can with great predictability, expect to see sharp rises and decreases in the revenues generated.

Understanding that variability and the tremendous responsibility associated with the administration of this fund, the Department of Local Affairs works in partnership with community leaders, legislators, industry representatives and other organizations, in determining the most effective and relevant methods for maximizing this fund in 2008 and beyond.

As we move forward, we will continue to work with stakeholders in improving the metrics for determining the impact of the fund in communities. We'll also continue to work with those communities to use these tools for giving us a clear picture of long-term needs and how they are being met.

I want to thank the members of the Energy and Mineral Impact Advisory Committee for their ongoing service as well as the members of the Interim Committee on Severance Tax for helping our efforts to raise awareness of the strengths of this program and meet the needs of Colorado communities.

Introduction

The Department of Local Affairs has two key objectives in administering Energy and Mineral Impact Assistance funds to communities. Those objectives are: 1) Provide or arrange funding to communities to improve their physical and/or economic conditions. This will include extensive technical assistance services in planning, decision-making, design and financial packaging of proposed projects, and 2) maintain a 100 percent collection rate on all Energy and Mineral Impact funds loaned for local government water/sewer projects.

In 2007, the Department was able to successfully meet those objectives by assisting local communities in achieving their goals by providing, in an efficient and timely manner, technical assistance services and distribution of revenues from state and federal sources. The Department's network of Field Representatives was key in facilitating this accomplishment.

This Thirty-first Annual Report of expenditures from the Local Government Severance Tax Fund and the Local Government Mineral Impact Fund is submitted to the General Assembly pursuant to C.R.S. 39-29-110(3) and 34-63-102(5)(c).

The creation of the fund is outlined in C.R.S. 34-63-102.

Pikes Peak Regional Hospital

The Pikes Peak Regional Hospital has been part of the Teller County community's vision for over eight years. Spearheaded by a volunteer board, the non-profit hospital association opened the new \$24 million hospital in October 2007. The facility was built to serve more than 30,000 residents of the northwest Pikes Peak region living in Teller county who were either underserved or had no access to healthcare services. All of those who pass through the region now have access to the 15-bed primary healthcare facility with 24 hour emergency care.

The Department of Local Affairs has provided a total of \$1.1 million for two different elements of this project. The first grant helped to provide access from State Highway 67 to the new medical center site. The second project provides access to medical records throughout the northwest Pikes Peak region.

Teller County is home to the Cripple Creek & Victor Gold Mining company (CC&V), the largest gold mining operation in Colorado. Annual gold production at the mine is approximately 300,000 ounces, making CC&V the fourth largest gold producer in the United States.

With over 400 employees working at CC&V and due to the dangerous nature of the industry, the availability of healthcare is critical. Prior to opening the hospital, all emergency patients had to be transported to Colorado Springs. The new hospital saves 45 minutes in ambulance transport time.

Clearly, the new hospital has already made a major impact on the community in two significant areas. Not only are mine employees and other community residents able to access critical medical care, but the hospital has a full lab and diagnostic capabilities, for things as simple as blood work, all the way to MRI, CT scan and digital mammography. Initially, it was projected the existence of the hospital would save as many as six lives per quarter, but recent medical evaluations by the staff and emergency personnel indicate that as many as 24 patients were in a critical state upon their arrival at the hospital in the first three months of operation. The hospital has also had a positive impact on the local economy with more than 100 new high-paying jobs being created. It is estimated the operation will have more than a \$14 million financial impact annually in the community.

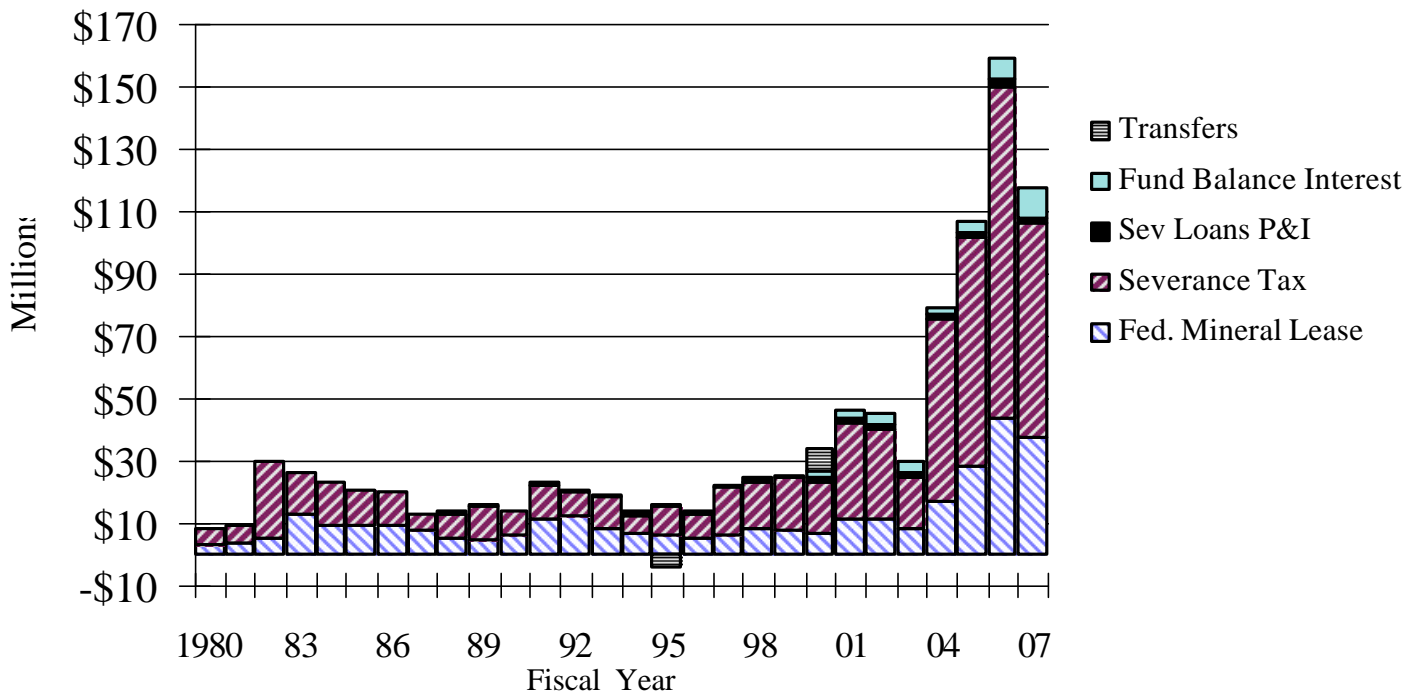

2007 Revenues

Fiscal Year 2007 revenues to the combined local government energy and mineral impact assistance program decreased.

The largest distribution of funds through the Energy and Mineral Impact Assistance program occurs in the form of discretionary grants and loans to municipalities, counties and other political subdivisions socially or economically impacted by the development, processing or energy conversion of minerals and mineral fuels. In 2007, more than \$120 million in grants and loans were awarded to grantees for 380 local public facility and services projects. These investments leveraged nearly \$270 million in local and other funds and positively affected the lives of citizens who enjoyed the benefits of the community-based projects supported with grant funds. Additionally, more than \$15 million was directly distributed to municipalities and counties based on the number of production employees residing within their jurisdictions.

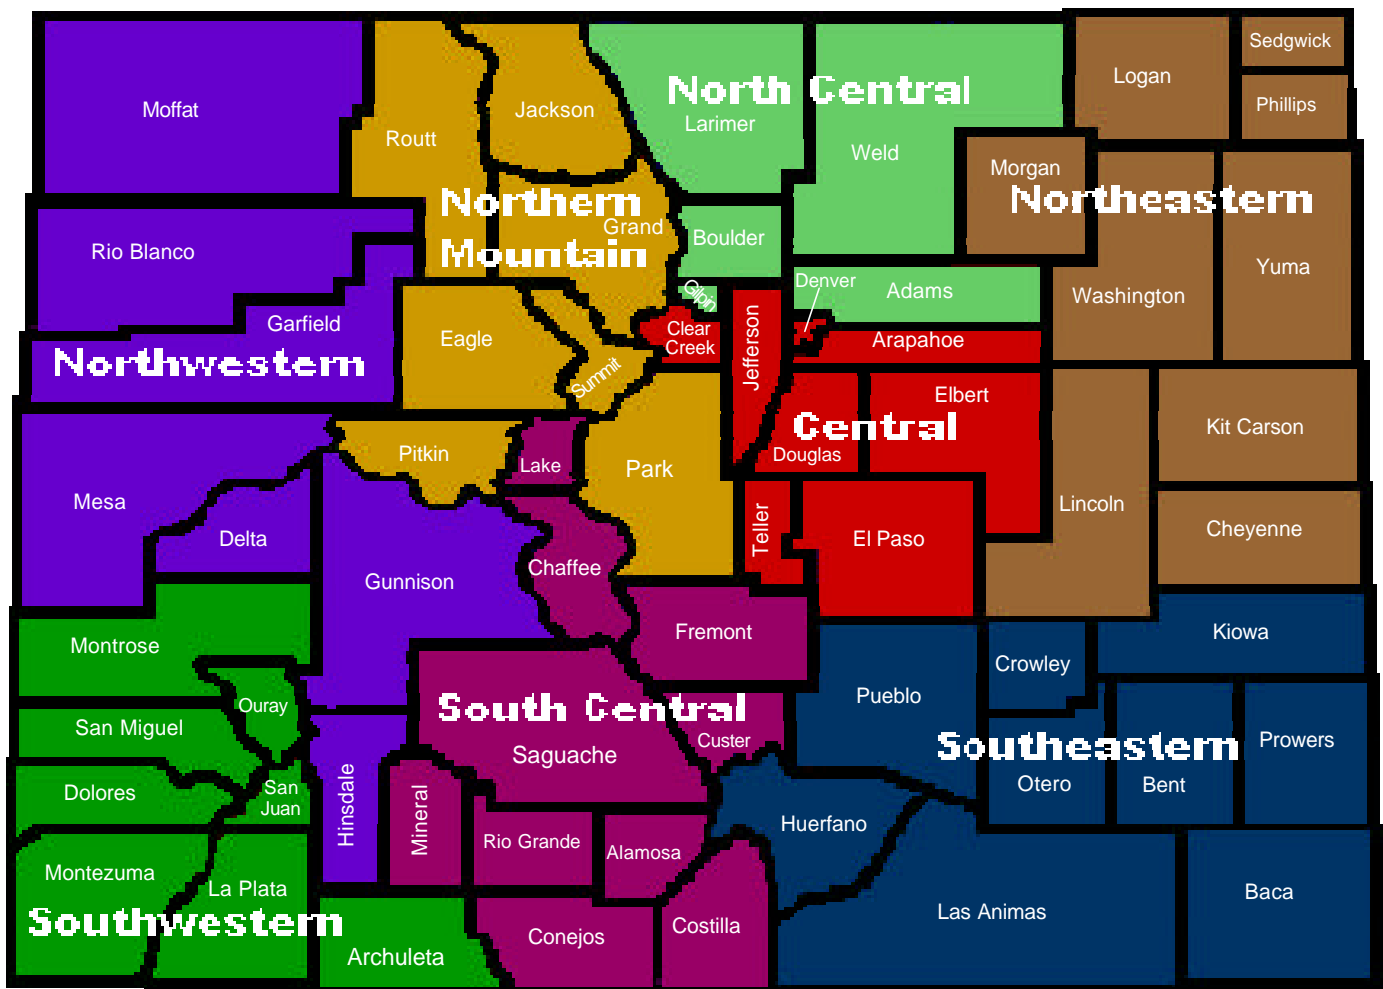

As shown in the chart below, the revenues to the grants program have varied considerably over the years with the mineral industry business cycles. The department maintains a careful fund balance strategy to preserve our ability to support local governments throughout these cycles.

TOTAL IMPACT FUND REVENUE Severance & Federal Mineral Lease

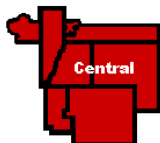

DOLA Regional Map

One of DOLA's strengths is our ability to deliver services directly within the communities we serve. Field Representatives cover eight regions throughout Colorado, allowing local governments, community leaders and organizations to address their needs with someone who lives and works right in their own communities. Our Field Representatives work tirelessly within their regions, serving as consultants to communities in their community development efforts and providing technical assistance and guidance to grant recipients throughout each step of the process – from application to contract.

2007 Project Highlights

In 2007, the Energy and Mineral Impact program continued to be administered with the goal of addressing local governments' priority needs. Projects ranged in size, scope and type, as characteristic of a state as diverse as Colorado. Needs met included public facilities, public safety and basic water and sewer infrastructure. Road reconstruction continued to be a high priority in those areas of the state most impacted by oil and gas exploration and development activity. Also, two extraordinary events -- the Southeast Colorado Blizzards and the Holly Tornado, prompted assistance to energy-impacted communities faced with natural disaster recovery.

Southeast Colorado Blizzard Response (Blizzard II)

Following on the heels of the December 20-22, 2006 Holiday Blizzard, Colorado was subjected to a more severe blizzard event beginning December 28. The heaviest concentration of snow occurred within the Southeast region of the state (Baca, Bent, Crowley, Kiowa, Las Animas, Otero, and Prowers Counties).

The area is home to 345,000 head of cattle and calves, 23,500 head of producing sows and 112,000 head of sheep and lambs, all with an estimated value of \$500 million.

More than 76,000 people were affected by the late December blizzard. More than 300 members of federal, state, county, and municipal agencies, as well as numerous volunteers worked around the clock to assist in recovery operations.

The Energy and Mineral Impact Program, was able to provide grants to assist these communities with emergency snow removal and tornado response.

Holly Tornado Response

On the evening of March 28, 2007, an F3 tornado (in excess of 158mph winds) struck the Town of Holly, and surrounding areas of Prowers County. The results of this tornado were one death, eight major injuries (requiring hospitalization), 48 destroyed or severely damaged structures, and 114 other structures receiving lesser damage. Disruption of electrical power, telecommunications, and the water system also occurred.

Because of the Dec 20-22, 2006, and Dec 28-Jan 5, 2007, blizzards that hit the Southeast Region as well as this tornado, DOLA was able to identify key infrastructure needs through the Energy and Mineral Impact program. A grant of \$20,162 was awarded to help with water system repair. DOLA also formed the Holly Long Term Revitalization Team, consisting of planners, architects, and landscape architects, to work with the Town to reconstruct public facilities and revitalize Holly's downtown. This project is ongoing.

Delta County School District Vo-Tech

Total Project Cost: \$628,846; Impact Assistance Award: \$408,846

The Paonia campus of the Delta-Montrose Area Technical College was in serious need of upgrades to provide a classroom environment suitable for learning. The facility is primarily used to host mine training programs, but other curriculum also is offered at the college including emergency medical services and forestry management classes. The building that houses the training programs needed a new roof, interior space modifications, electrical system adjustments and heating/cooling system improvements.

The entire North Fork Valley region has a coal mining employment base of nearly 800 workers that will directly benefit from this project. This project will directly improve lives through employment training opportunities. It is important to keep training programs including mine safety classes accessible for the local workforce. Mining companies provided financial support for a significant share of the project's cost. The general public will also benefit from the other curriculum offered at the facility. Approximately 900 students attend classes annually. The building also serves as a community center when formal classes are not in session. Maintaining this building and improving its utility will enhance the quality of life for many Paonia residents and for hundreds others throughout the North Fork Valley area.

Rio Blanco County Road 7 Overlay

Total Project Cost: \$1,250,000; Impact Assistance Award: \$634,123

The project involves the asphalt paving of a 3.7 mile stretch on County Road 7. This section of road improvement work will complete a 2-year paving cycle for the entire length of the 15.65 mile road. In addition to paving, the county has taken the initiative to institute a heavy load management system to protect road surfaces. The system consists of installing underground probes at strategic locations to provide temperature and soil condition information during critical freeze-thaw periods. This data allows the county to manage heavy load traffic appropriately to protect the financial investment in maintaining the road surface.

Rio Blanco County is experiencing significant oil and gas exploration activity in the vicinity of the Piceance Basin. County Road 7 experiences a large amount of heavy traffic due to natural gas exploration and production activities. A number of major gas producing companies including Encana, Exxon/Mobil and Williams Production are active in the area and use these roads. Contributions from industry to support this project amounted to \$150,000. The balance of the matching funds was derived from cash and in-kind contributions from Rio Blanco County.

County Road 7 is also used by residents of the county who are not associated with the natural gas development industry. Since the project improvements are designed primarily to keep the road safe, these individuals also benefit from the investment of state grant dollars.

Bayfield Sanitation

Total Project Cost: \$6.2 M; Impact Assistance Awards: \$1,412,909

The Bayfield Sanitation District received \$412,909 toward the construction of a new \$6.2 Million wastewater treatment plant. The District also received \$1.0 M for the plant from the Energy and Mineral Impact programs' Water and Wastewater Initiative, EIAF # 5816 for a total contribution of \$1,412,909. The balance of the project will primarily come from a loan. The District's treatment problems and violations of State Department of Public Health and Environment (CDPHE) standards will require the construction of an expensive mechanical treatment plant. The new treatment plant will improve the Bayfield community in several ways including improved access to clean water. This new plant will be a modern mechanical treatment that will produce a safe discharge to meet State CDPHE standards and will provide the community with a system that can accommodate future growth.

Growth in the energy industry has resulted in population growth in the Town of Bayfield and placed a greater demand on town services and facilities. Bayfield is located in the San Juan Basin coal-bed methane gas fields. It is projected that with the San Juan Basin Coal Bed Methane project, there will be an increase by hundreds in additional wells, many in the Bayfield area. The District estimates there are 25 employees and their families living in the Bayfield area working in direct energy-related fields and 125 working indirectly in related energy fields.

Trinidad Elm Street Road Improvements

Total Project Cost: \$1,625,066; Impact Assistance Award: \$812,533

This project consists of realigning and extending Elm Street in Downtown Trinidad to relieve congestion on Main Street, which is substantially impacted by increased heavy truck traffic as a result of the energy development occurring in Las Animas County. The project has been designed to be consistent with other street improvement projects in Trinidad's downtown that retain the city's historic character, utilizing brick street surfaces with decorative lighting, while including modern underground utilities and drainage improvements.

Trinidad has been impacted historically by the boom/bust cycles of energy development from the region's coal industry, which was driven by the CF&I Steel Mill in Pueblo beginning in the 1870s. Since the late 1990s, the city has been significantly impacted by activity related to the exploration, development, and production of coalbed methane gas in Las Animas County, which has created more than 700 jobs in this city of 10,000.

Relieving the traffic problems in downtown Trinidad will improve the quality of life for city and county residents, as well as visitors. It also will help improve the viability of the energy industry's continued development of natural resources in the area along with its ability to co-exist with the community's residents, businesses, and other industries.

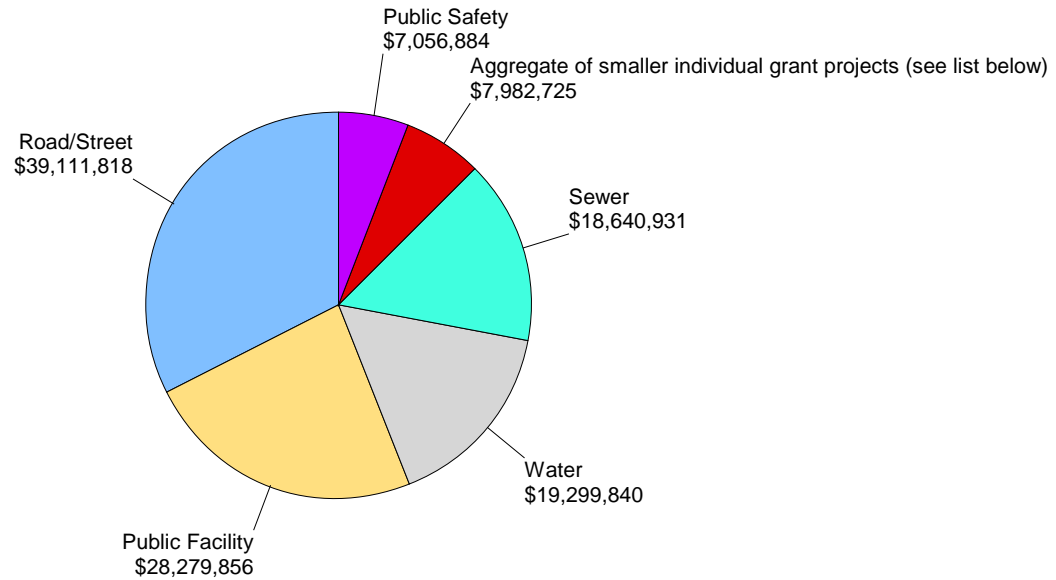

The city's economic development efforts have been directed at partnering with the energy industry at the same time that it diversifies the region's economic base by encouraging Heritage Tourism and the development of vacation/retirement homes. With its many historic buildings and quaint brick streets, Trinidad's downtown area is rich in Southeast Colorado history, with many tourism-based businesses attracting new residential investment as well.

Direct Distribution

In both the severance tax and federal mineral lease distribution statutes, the Department is responsible for distributing a portion of the funds directly to municipalities and counties based on employee residence reports from mineral producers.

A decision to alter the Federal Mineral Lease "third tier" direct distribution to local governments was made as a result of an October 17, 2005, Attorney General's Opinion (AGO) in which Attorney General John Suthers issued guidance on interpreting relevant statutes, which differed from the department's past practice. Past practice has been to make "third tier" direct distributions to local governments in the "counties of origin" which contributed to the overflow. These are the counties whose share of funds reached a statutory threshold of \$1,200,000. The AGO states these funds should be distributed solely on the number of residents employed in the production of minerals and mineral fuels on facilities on federal lands.

Due to this AGO in 2005, the department had postponed the federal mineral lease "third tier" direct distribution and convened a task force consisting of local county and municipal government and industry representatives to reach a consensus on how resident employees should be counted and reported. This successful effort and resulting consensus provided a revised formula that enabled the department to resume the distribution in August 2006.

Origins of the Program

Throughout its history, Colorado has experienced the booms and busts of energy and mineral production. The fluctuations of international marketplaces for precious and base metals, coal, oil, gas, carbon dioxide, uranium and other radioactive materials, oil shale, helium and other natural resources have profoundly affected Colorado, particularly small, rural communities near the geological resource deposits. Until the Local Government Energy and Mineral Impact Assistance program was created in 1977, few attempts were made to moderate these impacts and to assist the communities affected by cyclical periods of prosperity and decline.

State Severance Tax

In 1977, the General Assembly enacted legislation establishing a state severance tax on certain minerals. In that legislation, the Legislature found "when nonrenewable natural resources are removed from the earth, the value of such resources to the state of Colorado is irretrievably lost." The Legislature declared, severance tax is a means for the state to "recapture a portion of this lost wealth...removed from the soil of this state and sold for private profit" and expressed its intent that "a portion be made available to local governments to offset the impact created by nonrenewable resource development."

The severance tax legislation called for a portion of revenues from this new tax to be deposited in the Local Government Severance Tax Fund and to be distributed by the Executive Director of the Department of Local Affairs. According to the statute, 15 percent of the severance tax revenue credited to the fund is required to be distributed directly to counties and municipalities on the basis of the relative number of production employees residing in the unincorporated areas of such counties and in the boundaries of unincorporated municipalities. "Eighty-five percent of the funds from the Local Government Severance Tax Fund shall be distributed to those political subdivisions socially or economically impacted" by the development, processing, or energy conversion of mineral and mineral fuels subject to severance taxation. Such funds shall be "used for the planning, construction, and maintenance of public facilities and for the provision of public services."

Federal Mineral Leasing Funds

In 1977, the General Assembly also enacted legislation directing a portion of the state's receipts of federal mineral lease revenues to be deposited in a Local Government Mineral Impact Fund for distribution by the Executive Director of the Department of Local Affairs to "public schools and political subdivisions of the state" impacted by mineral and energy development "for planning, construction and maintenance of public facilities and for public services."

In 1982, the Legislature called for additional federal mineral lease funds to be deposited in the Fund and required a portion to be distributed on the basis of the residence of employees of mineral producers. The statute requires that "priority shall be given to those public schools and political subdivisions socially or economically impacted by the development, processing or energy conversion of fuels and minerals leased under said federal mineral lands leasing act."

EXHIBIT E

Program Guidelines

Program Guidelines have been written following consultation with local government and industry representatives. The program guidelines include the criteria used in funding decisions. These funding criteria reflect the statutory purposes of the program and incorporate the statutory responsibilities given to the advisory committee. They include:

- The significance of the project as it relates to public health and safety, quality of life, and the enhancement of services to the public.
- The relative extent of impact from energy and mineral development, including bust conditions. The program maintains flexibility to respond to areas throughout the state.
- The relationship of the proposed project to the impact. The maximum grant guideline is \$500,000. However, the unique nature of needs in the producing areas of the state is recognized and this suggested maximum can be increased under appropriate circumstances.
- The amount of other funds leveraged including community and energy/mineral industry financial support. Lower amounts of local matching funds may be allowed if mitigating circumstances exist.
- The applicant's fiscal capacity and ability to pay.
- The availability of alternative funding to address the impact situation.

The committee makes recommendations to the Executive Director of the Department of Local Affairs as to whether applications should receive full, partial, or no funding. The Executive Director makes the final funding decisions.

In recognition of the mining industry's contributions to the Energy and Mineral Impact Assistance Fund, department staff will continue to publicize the program including the industry's role by: issuing press releases (including press releases summarizing awards within the various regions); continuing the enhancement of the annual program report (including fuller descriptions of projects); encouraging program signage to be placed at local project sites which indicate the source of funds, attending ground breaking and ribbon cutting ceremonies and other media events and participating in media interviews about the program upon request.
