YOUTH HOMELESSNESS IN COLORADO

Advisory Council for Homeless Youth
& Office of Homeless Youth Services

2019 Point in Time
Youth Supplemental Report

Acknowledgements

The 2019 Point in Time Youth (PIT) Supplemental Survey and the accompanying data continues to be the result of multiple partners across Colorado coming together with a willingness to take on additional work and effort. Ultimately, this report is a demonstration of communities working together to raise awareness regarding youth experiencing homelessness.

This year, as with every year, the Office of Homeless Youth Services (OHYS) would like to acknowledge the three Colorado Continuum of Care (CoC) regions for supporting this effort. By training volunteers on an additional survey, incorporating the supplemental questions into the broader Point in Time Count survey, and providing other capacity-based activities, the CoC partners made this report possible.

OHYS also acknowledges the partners and volunteers who engaged in the process of surveying people experiencing homelessness. Some volunteers know intimately the value of this survey and having the voice of all people experiencing homelessness heard, while others have only interacted with people without homes on this one day. Either way, volunteers came together with other community members to ensure everyone was heard and had a chance to stand up and say, “I’m here!”

This year the CoCs and OHYS concentrated on engaging Colorado School Districts in the PIT process. The PIT is additional work for everyone involved, including schools. Schools also have federal privacy laws to consider. In addition to the complexity of the laws, they also have to keep in mind differences in homelessness definitions and family type. Several schools were active partners in problem-solving ways to protect privacy and ensure families and youth without housing were counted.

Lastly and most importantly, OHYS extends thanks to the youth of Colorado. Youth are valuable in this process for two roles: being reviewers on the questions and being the respondents. The entire system of youth homelessness will improve because of the feedback and responses given to these questions.

Thank you.

2019 POINT IN TIME/YOUTH SUPPLEMENTAL SURVEY

According to the 2018 Annual Homeless Assessment Report to Congress, Point in Time Counts (PIT) are “unduplicated one-night estimates of both sheltered and unsheltered homeless populations. The one-night counts are conducted by CoCs nationwide and occur during the last week in January of each year.”^(1,2)

The Youth Supplemental Survey (YSS) is an additional survey that occurs in conjunction with the PIT in Colorado. The YSS is not a PIT count, YSS does not use the same definitions and does not get reported to Congress through the same reporting measures as the PIT data. Instead, the YSS uses the foundational basis of the PIT to obtain additional life experience information, specifically on youth under 25, who are experiencing homelessness. This information is collected specifically in Colorado and is used to raise awareness of the need throughout Colorado communities. The data guides recommendations to advance communities’ efforts to resolve homelessness for youth, including prevention strategies, new resources, and data collection and analysis.

Purpose

The effort in adding an additional survey to the PIT to specifically capture information about the life experiences of youth experiencing homelessness was born in the Colorado Advisory Council for Homeless Youth (ACHY) in 2017. The providers who attend ACHY mentioned the value of the data, but they desire to know more than the survey was currently capturing. This conversation aligned well to the national goal around ending youth homelessness as proposed by the United States Interagency Council on Homelessness in *Opening Doors: The Federal Strategic Plan to Prevent and End Homelessness*. The goal set by *Opening Doors* was to end youth homelessness by 2020. In 2018, *Opening Doors* was updated with *Home, Together: The Federal Strategic Plan to Prevent and End Homelessness*. *Home, Together’s* key elements are ensuring that homelessness is rare, brief, and one-time. For both of these reports, PIT is used as one of the methods to measure success on their listed goals.

To that end, YSS was proposed to learn more about youth who are experiencing homelessness in Colorado and to use the data collected to guide communities to improve the supports and solutions for youth without housing through the development of resources or new practices.

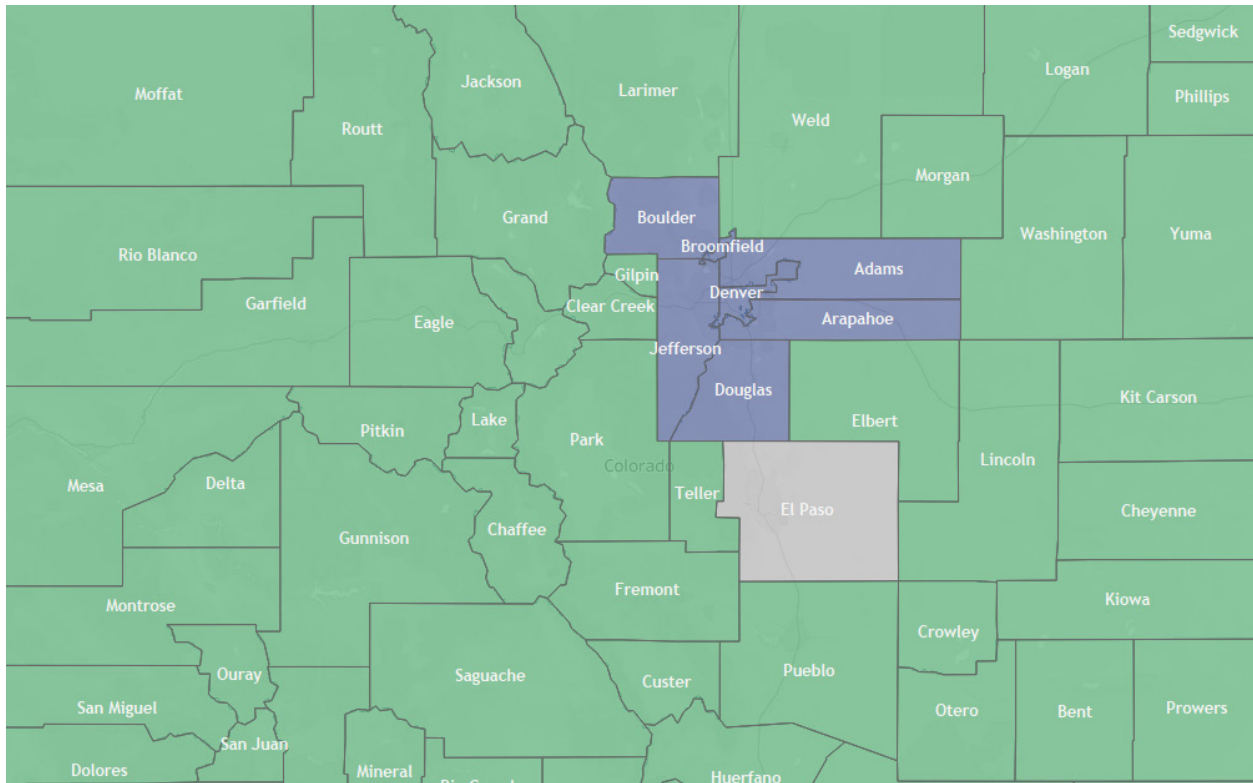

Methodology

PIT counts are planned and conducted by CoCs. HUD nationally identifies communities through regional planning and coordinating bodies, known as CoCs. Currently, Colorado is divided into three: Balance of State (56 counties), El Paso/Pikes Peak Region (one county), and the Metropolitan Denver Homeless Initiative (MDHI) (seven counties). The basic methodology for the YSS is operated through CoC coordination.

(1) CoC - Continuum of Care

(2) <https://files.hudexchange.info/resources/documents/2018-AHAR-Part-1.pdf>

The map below indicates which counties are covered by each CoC.

Questions Development

The initial list of questions were formed by reviewing previous youth-specific questions, such as those included in the Voices of Youth Count, the United States Department for Housing and Urban Development (HUD) proposed youth questions, and questions related to the United States Interagency Council on Homelessness (USICH) framework to end youth homelessness (i.e. questions around education, employment, health care access, and permanent connections, etc).

Youth Voice in Survey Questions The initial questions were given to youth to provide feedback on the questions and the length of the survey. In 2019, the survey was once again reviewed by members from Colorado’s Youth Action Boards. In an effort to ensure youth are involved in the process as partners, they were given the previous questions as a framework, but were given the guidance that they could start from scratch if they had other ideas or structural changes. The result was centered around wording changes, removing some options, and some additional clarity questions from the previous year.

Training on the Surveys Each CoC trained and encouraged their volunteers to use the YSS. Collected data was provided to OHYS to begin analysis and the development of this report.

Conducting the Survey

Data Types

Point In Time The PIT data collected includes demographic data: gender, age, race/ethnicity, disability (and type), as well as any current experience of domestic violence and the number of people in the family. In some cases, the PIT data was the only data collected. For a variety of logistical reasons, there were 202 respondents who completed only the PIT survey questions. The data collected provides a valuable level of introductory data. This is the most prevalent data type received, as this information is required and sent directly to HUD for their AHAR to Congress.

Youth Supplemental Survey The YSS data collected includes life experience data: public systems involvement (foster care and justice involvement); age at first homelessness episode; if the respondent is responsible for minors; education and highest educational level; barriers to services; and any income earnings. The YSS is not required, and in some cases was not completed. There were 37 respondents who completed only this survey.

Both Surveys: 595 Respondents Total In some cases, both surveys were completed. This accounted for 356 respondents, who did both.

Data Collection

It is also important to note how data was collected. Each CoC conducted the survey in different ways:

- 1) MDHI encouraged a paperless process by putting the PIT, YSS, and elective Veterans Survey into an app format to be used by volunteers on personal mobile devices;
- 2) Pikes Peak had both electronic survey formats and paper surveys available to volunteers;
- 3) Balance of State used paper survey format;
- 4) A significant portion of rural areas in Colorado struggle with reliable access to the internet, especially free wireless; and
- 5) This created a challenge to implement an electronic survey widely and consistently.

Even vs. Odd Years

An important nuance to highlight is the HUD requirement to complete a PIT count every year. While the count is required to occur, the type of count varies by 'Even Years' and 'Odd Years.' This report covers the 2019 PIT Count, which is an 'Odd Year' report. The distinctions between the two years are covered below:

Even Years are only required to be a count of every person experiencing homelessness staying in a shelter or other eligible housing program; this is often referred to as a Sheltered Count.

Odd Years are counts often referred to as an Unsheltered Count and include all the people that would be counted during an Even Year as well as persons experiencing literal (or street/unsheltered) homelessness.

These nuances become impactful as data is compared from year to year, as the type of count is often capturing different distinctions of homelessness. To add complexity, two CoCs in Colorado conduct an Unsheltered Count every year, those CoCs are MDHI and Pikes Peak. Conducting an unsheltered count takes extensive resources, planning, and volunteer base, and therefore is often not feasible for many communities to complete every year. As a result, this may have an impact on data variation between reports for Balance of State and for purposes of this report.

Definition Types

As previously mentioned, the YSS is a complement to the PIT and occurs in conjunction with the PIT, but has the capacity to collect data using different definitions. The YSS captures data on an extended definition of homelessness compared to the HUD definition used for the PIT. The two definitions are described below:

PIT Definition The definition used to gain data that gets reported to HUD, “is an Individual or family who lacks a fixed, regular, and adequate nighttime residence, (i) has a primary nighttime residence that is a public or private place not meant for human habitation; (ii) is living in a publicly or privately operated shelter.”

A note about people in housing programs: A person is eligible to be counted as sheltered but still homeless if they are living in an emergency shelter, safe haven, or a transitional living program.

YSS Definition The definition for this report includes youth headed (13-24) households eligible to be reported to HUD as described above and youth who are sharing the housing of other persons due to loss of housing, economic hardship, or a similar reason (often referred to as couch surfing). The description of a youth headed household is intended to describe a situation where the youth is not accompanied by any parent/guardian/other family member regardless of legality of the placement. E.g., if a youth is stable with an aunt, even if the aunt hasn’t been recognized as a guardian, the youth would not be counted for the purpose of this report. The YSS definition is intended to align with and promote participation with school districts, however the legality of guardianship is not aligned with the McKinney-Vento definition. This divergence comes from the difference between reporting about family vs. youth homelessness.

Although the definitions differ, the guidance was to give both the PIT and YSS to anyone under 25, even if they are not eligible to be reported to HUD with the AHAR. The information is still valuable and prevents us from asking the same questions twice to those who are eligible.

(a) vs. (b) Charts

This year, OHYS is presenting the data through two distinct populations: (a) those that self reported not being enrolled in school and (b) those that self reported being enrolled in school. This deep analysis is one way to identify barriers and life experiences that may differ depending on school enrollment status. This data is important for one main reason: students in a school setting have educational rights allowed to them under the federal McKinney-Vento Act. This act requires every school district to have an identified person who can connect with the student and ensure they have access to education. The school districts, through McKinney-Vento, often report higher numbers than other data sources on the number of youth experiencing homelessness. This means there is a large gap in data collected through PIT/YSS and data collected through schools. This report is meant to begin bridging that gap.

School Districts face an additional barrier to participating in PIT through privacy laws. Privacy laws serve a purpose and help keep information on vulnerable populations safe. These laws, pose a challenge in collecting and sharing data collected in schools about students. In most cases, schools have relationships with students experiencing homelessness and schools often know where the youth is to make surveying easier. Schools are covered under two primary laws: Family Educational Rights and Privacy Act (FERPA) which states individualized data cannot be reported on students and the Protection of Pupil Rights Amendment (PPRA) which protects students from being surveyed that will reveal certain types of personal information without the permission of a parent or legal guardian. These laws often result in schools feeling that they are unable to participate in the count activities and continue to result in their youth (and families) not being counted. As a result of not being counted, resources for these populations continue to not be developed. Work is being done in this arena to ensure youth data is protected and to ensure youth resources are being developed.

Challenges with YSS Data

PIT and YSS are not intended to be the only source of data used to raise awareness and solve homelessness. While PIT can help identify trends, PIT data should be combined with several other data sources to help create a comprehensive measurement of the need and response system's impact.

Get Involved

If you have not participated as a volunteer for your community's PIT Count effort, please consider volunteering. Every community in the state puts forth effort to identify every youth experiencing homelessness by conducting the annual HUD PIT Count and Youth Supplemental Survey. Each survey gives a youth a voice and helps improve the community for other youth struggling to secure housing. This is especially important for service providers outside of housing because youth often disclose housing instability to a trusted adult rather than seek services.

To participate in future counts, please contact the Office of Homeless Youth Services within the Colorado Division of Housing or your Regional CoC.

<https://www.colorado.gov/dola/office-homeless-youth-services-ohys>

Trends

The number of youth counted in the 2017 inaugural PIT/YSS Count was the highest to date. This could be due to an increased effort to maximize on the initial year of the count. In addition, 2018, being an Even Year (sheltered only count) was anticipated to be the lowest count of youth.

Trend: Number of Youth Counted

Trend: Number of Counties

The number of counties that participate in the PIT/YSS has increased 28.6% from the first year to the current year. This growth highlights the efforts of the CoC to work with and train the communities to participate in this effort.

There have been 13 counties who have participated in the PIT/YSS for all three years of this effort. This level of commitment to participate helps track changes within those participating communities, as demonstrated in the Community Table Section.

Number of Counties per Years of Participation

Trend: Older at Time of Survey Than First Experience

The results of the data is analyzed to see if respondents are currently older than they reported their first homelessness experience. This significant data points to the fact that the majority of the youth (89% for 2019) experiencing of homelessness are either not first-time homeless or have been in a prolonged period of homelessness. As this chart shows, this percentage has increased overtime by 11.3%. This also points to a need to: look closer at the age of experience; to determine interventions to prevent unaccompanied youth homelessness; and to address inflow.

Location

In comparison of PIT/YSS data and McKinney-Vento Data, the CoC spread of youth counted in both cases seems to be aligned closely. This indicates that although both data sources are anticipated to be undercounts, the sample may be a good indicator of other trends.(3)

CoC Responses

595 responses

McKinney Vento Data by CoC

2,397 Unaccompanied Homeless Identified Youth

The 2019 PIT/YSS had the highest number of counties participate in all three years of this effort.

Number of Youth Per County

592 responses

Mobility The majority (72.7%) of youth experiencing homelessness in Colorado had their last stable address in Colorado. This is especially true for youth who report attending school (83.2%) suggesting that being enrolled in school has a correlation with the likelihood of youth staying in their communities, even if housing becomes unstable. And that overall, youth may be less mobile than previously assumed.

Office of Homeless Youth Services

Definition

HUD Definition As mentioned in the Methodology section, the YSS used an extended definition of homelessness when compared with the PIT survey. These charts demonstrate how many of the youth counted did meet the HUD definition and were reported to HUD and subsequently to Congress. The chart shows that youth not enrolled in school were more likely to meet the HUD definition when compared with their peers who are enrolled in school (81.6% v 51.6%).

HUD Definition (a)

468 respondents

HUD Definition (b)

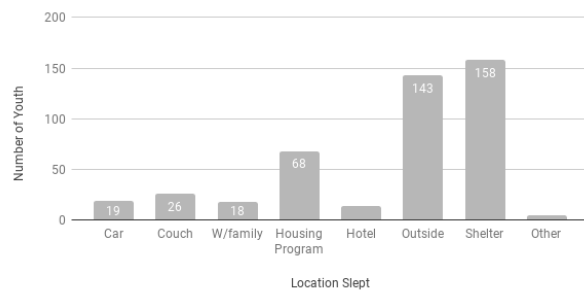

122 respondents

Location Slept For someone not enrolled in school, the two most common places to be sleeping are in Shelter and Outside whereas the two most common places for someone who is enrolled in school to be sleeping is With Family (other than parents/guardians) or in Shelter. This exemplifies the continued need for schools and shelters to collaborate on providing transportation services and support for education for their shared populations.

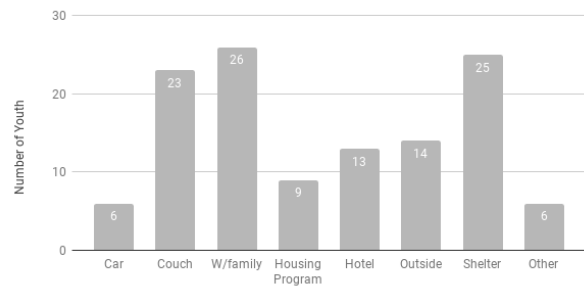

Location Slept (a)

451 respondents

Location Slept (b)

122 respondents

For more information on the difference of (a) vs. (b) charts, see page 6

Demographics

Age The majority of youth under 18 (68.4%) are enrolled in school.

20.3% of youth under 18 were in Jefferson County.

45.6% of youth under 18 met the HUD definition of homelessness

Age (a)

365 respondents

Age (b)

121 respondents

Gender Youth enrolled in school were slightly more likely (3.3% v 1.9%) than those not in school to report being a minority gender identity (Gender Fluid, Gender Non-Conforming, Non-Binary, and Two-Spirit). However, for both populations, Male is the predominant gender identity.

Gender Identity (a)

463 respondents

Gender Identity (b)

122 respondents

For more information on the difference of (a) vs. (b) charts, see page 6

Office of Homeless Youth Services

Sexual Orientation Nationwide, homeless service providers report approximately 40% of youth identify as LGBTQ+, the PIT/YSS found that of youth who were not enrolled in school, 22.4% reported being LGBTQ+ and that of youth who were enrolled in school 10% reported being LGBTQ+. While this appears lower than the national average, coordination with service providers to collect data on those served should be analyzed to determine the accuracy of the data collected during PIT/ YSS. The data may vary by national estimates because of the data collection methodology in self report and short term interview style.

Sexual Orientation (a)

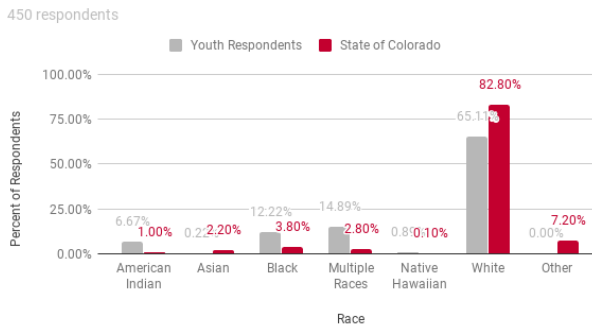

Sexual Orientation (b)

Race & Ethnicity While white youth continue to represent the largest number of youth experiencing homelessness, youth of color are overrepresented when compared to the general population of Colorado. This overrepresentation is true for both youth enrolled and youth not enrolled in school. These charts exemplify the overrepresentation especially for American Indian, Black, Multiple Races, and Native Hawaiian youth. In addition, the same overrepresentation is seen for Hispanic youth.

Communities across the state are beginning to look at the data associated with service provision and how it relates to equitable access for all, especially as it concerns race.

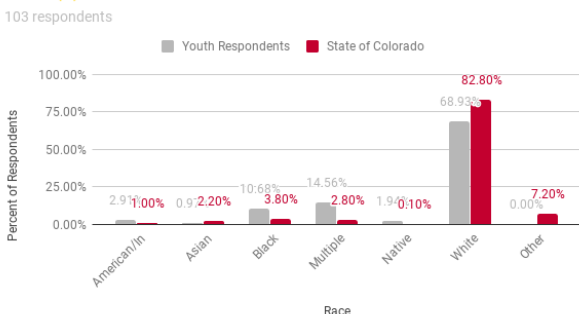

Race (a)

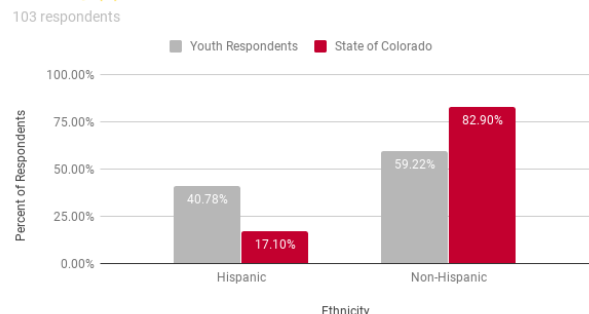

Ethnicity (a)

Race (b)

Ethnicity (b)

For more information on the difference of (a) vs. (b) charts, see page 6

Disability Having a disabling condition can be a barrier to accessing services or maintaining stable housing (at least 26 youth reported the presence of a disability as a barrier to accessing and maintaining services). For youth enrolled in school, the presence of a disabling condition is slightly less than youth not currently enrolled in school. However, for both groups of youth who responded yes to having a disabling condition, the majority responded it was related to mental health followed by substance use. Because youth could respond to having multiple disabling conditions, this chart also demonstrates the presence of multiple conditions, approximately 112 youth have multiple types of conditions.

Office of Homeless Youth Services

Life Experiences

Domestic Violence Prevalence of Domestic Violence seems to be decreasing from 20.7% in 2017 to 10.3% in 2019, this overall decrease-trend may be accurate but it is likely the number is a undercount.

Domestic Violence Experience (a)

428 respondents

Domestic Violence Experience (b)

103 respondents

Foster Care The experience of Foster Care for youth experiencing homelessness has maintained around 40% (42-40%) in the three years of this additional survey.

For youth enrolled in school, this number appears lower and it is important to note that outreach for this effort was geared toward McKinney-Vento providers in schools. Youth who are in school and in Foster Care connect with a different staff person in the schools called a Child Welfare Educational Liaison.

Of youth not enrolled in school, Foster Care exits were a close mix between Positive Exits (Adopted/ Reunified) with Negative Exits (Aged Out/Ran Away). For youth enrolled in school, Positive Exits are much more common, 78% exits were positive compared to 46.9%.

Foster Care Experience (a)

109 respondents

Foster Care Experience (b)

121 respondents

Of Those Responded with Yes, How Left (b)

42 respondents

For more information on the difference of (a) vs. (b) charts, see page 6

Corrections Youth enrolled in school are less likely than their peers not enrolled in school to have experienced a corrections experience (44.2% v. 55.6%). For both groups, if the youth did experience corrections experience, it most likely occurred with the Division of Youth Services and may be eligible to be expunged from their records. *Ensuring there is a connection to legal support for this process may help communities combat the negative implications for the youth with this experience.*

Corrections Experience (a)

259 respondents

If Yes, Type of Experience (a)

144 respondents

Corrections Experience (b)

120 respondents

If Yes, Type of Experience (b)

53 respondents

Overall Systems The majority of youth have had some form of systems involvement (68.8% not enrolled in school and 55.7% youth enrolled in school). If youth did have systems involvement, they were least likely to experience Foster Care only.

Because of the intersection with systems involvement and the experience of homelessness, it is important to look at the impact of multiple systems involvement as well. As this chart demonstrates, a large proportion of both populations have experience with multiple systems. In addition, data suggests that Colorado's rates of multiple systems involvement is higher than the national average (21% Colorado vs. 19% for National) for Foster Care involved youth at age 19.(4)

Overall Systems Involvement (a)

247 respondents

Office of Homeless Youth Services

Permanent Connections Both groups felt there was an existing connection between them and an adult in majority of the cases. When asked about the connection between the youth and the adult, family was the top answer for both groups.

To highlight the Case Manager role, youth not enrolled in school reported having a higher connection to a Case Manager (20.3%) when compared to their enrolled in school peers (17.1%). This is a key factor because in most cases, there is a support person built into the school system and are connecting with students who struggle with housing instability. When looking at connection to Case Managers, youth that reported having systems involvement (Foster Care (28%) or Corrections (24.4%)) reported the highest rates of connection.

In total, of the youth who had responded they that felt connected to an adult, only about 9% selected more than one category of person. (Category of person includes: CM, Family, Friend)

Connection to Adult (a)

120 respondents

Type of Adult

105 respondents

For more information on the difference of (a) vs. (b) charts, see page 6

First Experience

The youngest person to self report homelessness without a parent or guardian was 12 years old.

Youth not enrolled in school experienced homelessness without a parent in more cases when compared with their enrolled-in-school peers (54.2% v. 37.2%) In addition, youth not enrolled in school tended to follow the expected trajectory of generally being accompanied by a parent. If the experience was younger than around 18, it was a 50/50 shot, at which point it was more common to be unaccompanied by a parent. This is not a trend that is seen with the youth enrolled in school, for this, there is no notable trend tied to the first experience of homelessness being accompanied or unaccompanied.

Longitudinal Findings

In the 2019 PIT/YSS, there were 38 youth identified as having been counted in 2019 and 2018. The following breakout indicates what CoC they were counted in: BOS: 9 (23.7%) MDHI: 21 (55.3%) PP: 8 (21%).

77.1% of youth counted in multiple years indicated the presence of a disabling condition, indicating they may meet the definition of Chronically Homeless.

60% had foster care experience, 58% of those who had foster care experience reported leaving foster care through either Aging Out or Running Away. Of the 22 youth that responded to the question about being a parent, 6 stated they were parenting youth (27.3%).

Location Slept for Longitudinal Youth

36 respondents

The most common barrier faced was Transportation, then Affordable Housing, and finishing with a three-way tie between Lack of Income, Lack of Vital Documents, and Currently Being on a Waiting List.

For more information on the difference of (a) vs. (b) charts, see page 6

Office of Homeless Youth Services

Parenting Youth Youth not enrolled in school are more likely to have their own child when compared with youth that are enrolled in school. However, youth enrolled in school were more likely to be caring for a sibling (25%) when compared to youth not enrolled in school (4.4%). This may be because a youth's own child may be younger and not eligible for enrollment in school themselves which may put barriers on the youth to attend school, whereas siblings may be older and in school as well.

Conversely, if the youth is parenting (either their own child, a sibling, or a significant other's child), being enrolled in school may mean the youth is more likely to be sleeping outside (30%) compared to their peers not enrolled in school (17.6%).

*for purposes of the comparison, sleeping outside or in a car are grouped together as sleeping outside.

Education For those students not in school or youth represented in the charts, the majority (56.2%) have earned a basic education (High School Graduation or GED). Still, the rate for those who do not have a basic education (43.8%) is high. For those youth who are currently receiving income, it is more likely that youth has achieved a basic level of education (62.2%). It is more likely to earn money with a basic level of education.

Communities would benefit from learning more about the barriers to attaining high school level education and work on implementing alternative programs like GED Prep Courses or offering Credit Recovery programs.

Graduation Rate for those Not in School (a)

242 respondents

Earning Money v. Education Level (a)

247 respondents

Employment/Income Lack of Income is a major issue for youth (as demonstrated in the Barriers Faced section), however, the majority of youth have income, with the majority of the income being from an earned source. *This comparison exemplifies the need for jobs with livable wages which often are not obtained by youth. Youth are generally entering the workforce with minimum wage jobs which youth are self reporting as still resulting in the need for more income.*

Office of Homeless Youth Services

Youth not enrolled in school had an average of 4 barriers per youth, whereas youth enrolled in school had an average of 3 barriers per youth. Both groups had the same top three barriers:

- Lack of Income
- Affordable Housing
- Lack of Transportation

When it comes to Number of Barriers Faced, youth enrolled in school have a mostly downward trend with One Barrier faced as the highest and the lowest at 7 or more Barriers Faced. Conversely, for youth not enrolled in school, the Number of Barriers Faced, seem to be mostly populated in key numbers such as 1, 4, and 7 or more.
