Results of the 2022 Light Goose Conservation Order in Colorado

Jim Gammonley, Jon Runge, and Ed Gorman Colorado Parks and Wildlife 30 June 2022

The Colorado Division of Parks and Wildlife established a conservation order for light geese in 1999. The conservation order area is the eastern plains of Colorado, east of Interstate 25. The conservation order period in 2022 was February 14–April 30. Shooting hours were from one-half hour before sunrise to one-half hour after sunset. There was no bag or possession limit. Electronic calls and unplugged shotguns were allowed. Participants were required to be registered for the Harvest Information Program (HIP) and to have a Colorado state duck stamp. All other federal and state regulations pertaining to the take of migratory birds were in effect during the conservation order.

A stratified random sample of 4,500 potential light goose hunters was drawn from among 2021-2022 HIP registrants. The sample was stratified into HIP registrants that responded they did not hunt light geese during the 2020-2021 seasons and conservation order, light goose hunters that did not bag any light geese during 2020-2021, light goose hunters that bagged 1-30 birds during 2020-2021, and light goose hunters that bagged >30 birds during 2020-2021. A post-season harvest survey was conducted by phone; individuals within the sample that provided email addresses when registering for HIP were sent email surveys as well.

A total of 1,586 (35% of the original sample) hunters responded to the survey. Estimates of hunter numbers and total hunter-days in 2022 were similar to estimates in 2021, and higher than the 1999-2021 averages; however, light goose harvest in 2022 was higher than in 2021 and the long-term average (Table 1). In 2022, the average light goose harvest per hunter was 8.3, slightly lower than the 1999-2021 average of 9.2. The average number of days hunted per hunter in 2022 was 5.7, slightly above the 1999-2021 average of 5.1 days. In 2022, 75% of participants hunted north of Interstate 70 and harvested 76% of the total conservation order harvest, and 28% of participants hunted and harvested 24% of total geese south of I-70 in eastern Colorado.

Electronic calls were used by 25% of participants (704 \pm 107) and 41% of harvest was obtained using electronic calls. Twenty-seven percent of participants (749 \pm 111) hunted after sunset and 13% of the total harvest was obtained through hunting after sunset. Unplugged shotguns were used by 23% of participants (630 \pm 101) and 20% of total harvest was obtained using unplugged shotguns. Based on reported wounding loss by participants, we estimate that 1,511 \pm 102 light geese were wounded but not retrieved during the 2022 conservation order (6% of reported retrieved harvest).

In 2022, 63% of respondents indicated they were very likely and 31% responded they were somewhat likely to participate in a light goose conservation order if it is offered in future years. Estimates of hunter numbers, hunter-days, and harvest have remained stable or slightly increasing throughout the 24-year history of the light goose conservation order in Colorado (Figs. 1-3).

Table 1. Estimates (± SE) of participation and harvest during the light goose conservation action in Colorado.

							Harvest Using		Harvest After		Harvest with	
Year	Hunters		Total-Hunter Days		Total Harvest		Electronic Calls		Sunset		unplugge	d shotguns
1999	1,638	(179)	6,709	(62)	13,417	(550)	Not permitted		Not permitted		Not permitted
