NORTH KIOWA-BIJOU DESIGNATED GROUND WATER BASIN 2014

This report contains the basic groundwater level data collected from wells in the North Kiowa-Bijou Ground Water Management District during the period from 2002 through 2014. Acquisition and publication of this information is a cooperative effort between the North Kiowa-Bijou Ground Water Management District, private land owners, and the Colorado Division of Water Resources. The project is part of a statewide ground water level monitoring program funded by Senate Bill 200 (1987 legislative session). This legislation directed that a portion of the fees collected for water well permit applications be used for the establishment of a program to monitor water level trends throughout the state.

A total of 35 wells were measured in early April 2012. These wells are all part of an observation well network that has been measured for many years. Records on at least one well date back to 1936, however, measurements from most of the wells date from the 1950's and 1960's. For 2014, depth to groundwater below land surface ranged from approximately 15 feet in the southern portion of the basin near Strasburg to 160 feet in the downstream reach near Wiggins. Water levels in excess of 100 feet were reported in wells: KB-12, -13, -14, 15, KB-18, and KB-41. These wells are located in the northernmost portion of the basin

A map is included showing the locations of the monitoring wells included in this publication. The wells in this report are listed by township, range and section. Tabular data are presented for each well for the previous ten years. Graphical data are presented for the entire period of record. Measurements for the full period of record may be accessed from Hydrobase.

Analyses of changes in the water level in the aquifer are complicated by unknown pumping schedules. Overall, average ground water levels in wells measured by the Division of Water Resources declined by 0.7 feet compared to 2013. Because of the distribution of the alluvium in this basin, analysis of groundwater levels by drainage is more revealing. Water level trends in the Kiowa Creek drainage were relatively stable over a one year average and declined -4.0 feet over a ten year average. Water level trends in the Bijou Creek drainage declined -1.3 feet over a one year average and declined -5.0 feet over a ten year average. Individual wells, however, vary significantly. The long-term trend over most of the basin shows a significant water level decline.

The 2014 report has not been published in hardcopy format. An electronic copy, in PDF, of this report is available on the Division of Water Resources website

<http://water.state.co.us/groundwater/Pages/HydroGeo.aspx>.

Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System website:

<http://cdss.state.co.us/onlineTools/Pages/GroundWaterWaterLevels.aspx>

and the Colorado Information Marketplace HydroBase Bulk Data Exporter:
