## NORTH KIOWA-BIJOU DESIGNATED GROUND WATER BASIN 2016

This report contains the basic groundwater level data collected from wells in the North Kiowa-Bijou Ground Water Management District during the period from 2006 through 2016. Acquisition and publication of this information is a cooperative effort between the North Kiowa-Bijou Ground Water Management District, private land owners, and the Colorado Division of Water Resources. The project is part of a statewide groundwater level monitoring program funded by Senate Bill 200 (1987 legislative session). This legislation directed that a portion of the fees collected for water well permit applications be used for the establishment of a program to monitor water level trends throughout the state.

A total of 33 wells were measured in mid-February 2016. These wells are part of an observation well network that has been measured for many years. Records on at least one well date back to 1936, however, measurements from most of the wells date from the 1950's and 1960's. For 2016, depth to groundwater below land surface ranged from approximately 8 feet in the southern portion of the basin near Strasburg to 160 feet in the downstream reach near Wiggins. Water levels in excess of 100 feet deep were reported in wells KB-12, KB-13, KB-14, KB-15, and KB-41, which are located in the northernmost portion of the Bijou Creek drainage.

A map is included showing the locations of the monitoring wells included in this publication. The wells in this report are listed by name in numerical order. Tabular data are presented for each well for the previous ten years. Graphical data are presented for the entire period of record. Measurements for the full period of record may be accessed from HydroBase.

Analyses of changes of groundwater levels in the aquifer are complicated by unknown pumping schedules. Overall, average groundwater levels in wells measured by the Division of Water Resources increased by 2.39 feet compared to 2015. Because of the distribution of the alluvium in this basin, analysis of groundwater levels by drainage is more revealing. Groundwater level trends in the Kiowa Creek drainage were relatively stable over a five-year comparison and declined 1.5 feet over a ten-year comparison. Groundwater level trends in the Bijou Creek drainage were also relatively stable over the five-year comparison and declined 1.2 feet over a ten-year comparison. Individual wells, however, vary significantly. The long-term trend over most of the basin shows a diminishing water level decline and an average basin-wide water level increase of 2.4 feet.

Copies of this report can be purchased from the Office of the State Engineer, Records Section, 1313 Sherman St., Room 821, Denver, CO 80203, (303) 866-3581. An electronic copy of this report, in Adobe PDF format, is available on the Division of Water Resources website <http://water.state.co.us/groundwater/Levels/Pages/HydroGeo.aspx>.

Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System:

<http://cdss.state.co.us/onlineTools/Pages/GroundWaterWaterLevels.aspx>

and the Colorado Information Marketplace HydroBase Bulk Data Exporter:

<https://data.colorado.gov/Information-Sharing/DWR-Well-Water-Level/hfwh-wsgi>

or the Colorado Decision Support System MapViewer

<http://water.state.co.us/DataMaps/GISandMaps/MapViewer/Pages/FAQ.aspx>

If you have any questions regarding groundwater in the North Kiowa-Bijou Designated Ground Water Basin and the information in this report, please contact the Groundwater Information Desk at (303) 866-3587.
