WATER LEVELS IN THE ALLUVIAL AQUIFERS OF THE LOWER SOUTH PLATTE RIVER BASIN

2006

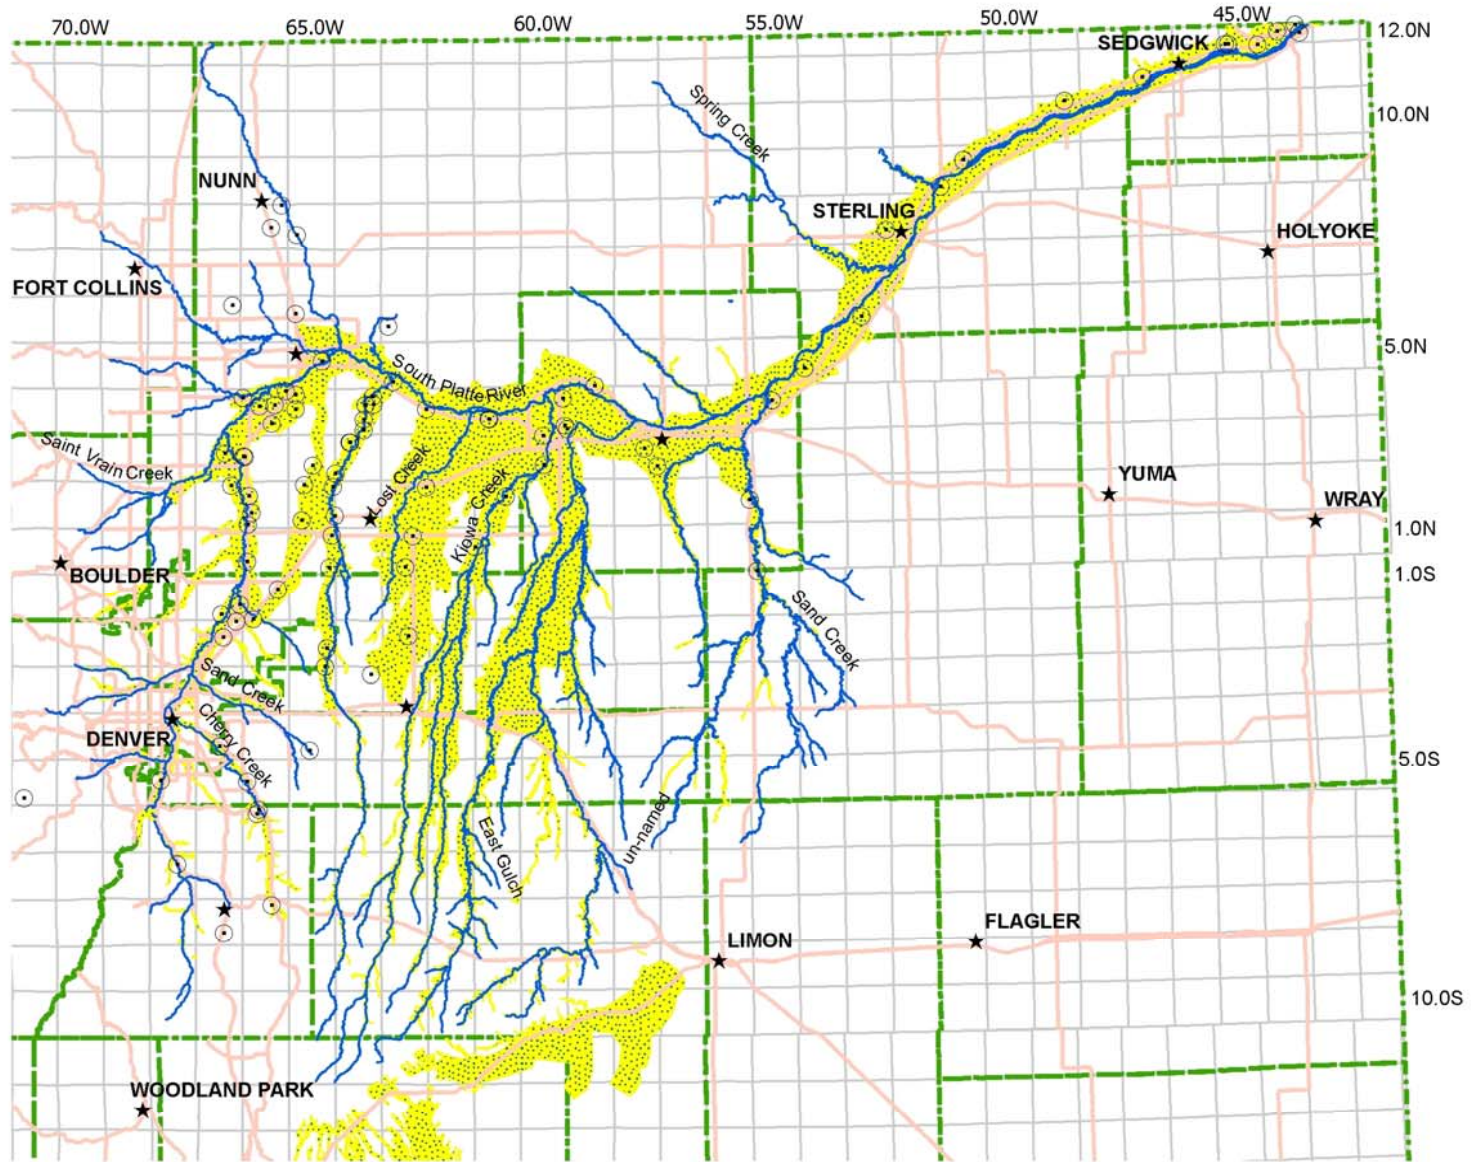

This report contains basic data concerning the depth to ground water and elevation of the occurrence of ground water in the alluvial aquifers of the Lower South Platte River Basin during the fall of 2006 and spring of 2007.

The monitoring network consists of approximately 105 wells. Data was obtained for a total of 54 wells in 2007. Thirty-six monitoring wells used by the South Platte Decision Support System are included this year. The report contains data from these wells as well as other wells which are part of this monitoring effort, but for which data were not obtained in 2007. Historic data for all wells which are part of this monitoring effort are included in the report. Wells that have not been measured in ten years have been dropped from the publication.

Water level measurements in this year's report were obtained by Colorado Division of Water Resources Water Commissioners and Elizabeth Pottorff. Measurements are usually taken twice a year, typically in the spring before irrigation pumping commences and again in the fall after irrigation pumping has ceased. Locations of the observation wells are shown on Figure 1.

Water level changes were not analyzed

Copies of this report are made available to well owners and participating entities free of charge. Additional copies may be obtained from the Colorado Division of Water Resources, Public Records Section. The Records Section can be contacted at 1313 Sherman Street, Room 818, Denver CO 80203, or by phone at 303/866-3581 or 303/866-3447. Additionally, this data may be accessed on the internet at the Colorado Decision Support System website <http://cdss.state.co.us/DNN/default.aspx> and can be exported to a number of different formats.
