WATER LEVELS IN THE ALLUVIAL AQUIFERS OF THE LOWER SOUTH PLATTE RIVER BASIN

2009

This report contains basic data concerning the depth to ground water and elevation of the occurrence of ground water in the alluvial aquifers of the Lower South Platte River Basin during the fall of 2008 and spring of 2009.

The monitoring network consists of approximately 108 wells. Data was obtained for a total of 85 wells in 2009. Thirty-six monitoring wells installed by the South Platte Decision Support System have been taken over by the Division of Water Resources. Automated data loggers in those wells collect hourly data which is averaged to a daily value for this report. The report contains data from these wells as well as other wells which are part of this monitoring effort, but for which data were not obtained in 2009. Historic data for all wells which are part of this monitoring effort are included in the report. Wells that have not been measured in ten years have been dropped from the publication.

Water level measurements in this year's report were obtained by Colorado Division of Water Resources personnel Elizabeth Pottorff and Ivone Cruz and Water District Water Commissioners. Measurements are usually taken twice a year, typically in the spring before irrigation pumping commences and again in the fall after irrigation pumping has ceased. Locations of the observation wells are shown on Figure 1.

Water level changes were not analyzed.

Copies of this report are made available to well owners and participating entities free of charge. Additional copies may be obtained from the Colorado Division of Water Resources, Public Records Section. The Records Section can be contacted at 1313 Sherman Street, Room 818, Denver CO 80203, or by phone at 303/866-3581 or 303/866-3447. Additionally, this data may be accessed on the internet at the Colorado Decision Support System website <http://cdss.state.co.us/DNN/default.aspx> and can be exported to a number of different formats.
