

COLORADO

WATER SUPPLY CONDITIONS UPDATE

FROM THE OFFICE OF THE STATE ENGINEER: COLORADO DIVISION OF WATER RESOURCES
ROOM 818, 1313 SHERMAN ST., DENVER, CO 80203
303-866-3581; www.dwr.colorado.gov

August 1, 2024

The Surface Water Supply Index (SWSI) is used as an indicator of water supply conditions in the seven major river basins of the state and in each of the 41 smaller watersheds, or HUCs. The Colorado Water Conservation Board (CWCB) completed a major revision to the Colorado Drought Plan in 2010. At that time, Colorado adopted a revised SWSI analysis based on the components shown below, which vary depending on the time of year. The revised SWSI is based on a ranking of total volume in a HUC or major river basin ranked against similar volumes in historical years. For instance, in January, the total volume in a HUC is based on the forecasted runoff at specific locations plus the volume in storage in specific reservoirs, all within the HUC. That total volume is ranked against similar total volumes that occurred each January between 1980 and 2020.

Time Period	SWSI Components
January 1 - June 1	Forecasted Runoff + Reservoir Storage
July 1 - September 1	Previous Month's Streamflow + Reservoir Storage
October 1 - December 1	Reservoir Storage

The results of each month's analysis are summarized within this report and additional information, maps & data are available at: <https://dwr.colorado.gov/services/water-administration/drought-and-swsi>. Beginning March 1, 2022, this report no longer contains text updates about current regional conditions and water matters prepared by each DWR Division Office.

The SWSI calculation for the summer season (July 1 to September 1) is based on reservoir storage at the end of last month, in this case July 31, plus the previous month's streamflow. The following SWSI values were computed for each of the seven major basins for August 1, 2024. Water supply conditions as represented by water in storage and previous months streamflow, range from normal in the South Platte, Arkansas, Rio Grande and Colorado River Basin to below normal in the Gunnison and San Juan-Dolores River Basins.

Basin	August 1 SWSI	Change from Previous Month	Change from Previous Year
Arkansas	0.3	-0.3	-0.7
Colorado	0.2	-1.6	-1.1
Gunnison	-1.5	-1.7	-2.8
Rio Grande	0.2	1.3	-1.2
San Juan-Dolores	-1.0	0.0	-3.0
South Platte	0.6	-0.7	-2.1
Yampa-White	-0.2	-0.4	-0.9

SURFACE WATER SUPPLY INDEX FOR COLORADO BY MAJOR RIVER BASIN

NEP is non exceedance probability for total reservoir storage and previous months streamflow in each HUC. Some HUCs do not have any reservoirs considered in the SWSI and are shown as "N/A". Total Vol is the volume of reservoir storage in the HUC is calculated compared to the volume historically occurring this month during the period 1980-2020. The following table lists each component considered in each HUC.

SWSI Color Scale:

-4.0 (Severe Drought)	0.0 (Normal)	4.0 (Abundant Supply)
-----------------------	--------------	-----------------------
