1949 ANNUAL REPORT

Pueblo. Colo. December 1, 1949

M. C. Hinderliser
State Engineer
Denver, Colorado

Dear Sir:

The 1949 irrigation season was favorable for crops. Yields were above the average.

The winter of 1948 and 1949 was cold. There was a light fall of snow in the mountains. However, several good falls of snow occurred in May that brought the runoff of snow water above the average.

The winter months were deficient in moisture. The spring was dry. The months of May and June had an excess of rainfall.. With this combination of heavy rainfall with a good runoff of snow water we were able to fill all reservoirs with the exception of the John Martin. We were also able to raise the John Martin reservoir to a capacity of 228000 acre feet after supplying all the needs of District 67 and Western Kansas. This was the second consecutive season that Eastern Colorado and Western Kansas were supplied from the John Martin reservoir without calling on the priorities of any of the canals above the reservoir. When the season was over a supply of 128857 acre feet was left in the John Martin reservoir for use during the 1950 irrigation season.

Below is a tabulation of the rainfall by months for 1949, starting November 1948, in inches.

Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct.	Total
1948-1948	1949	1949	1949	1949	1949	1949	1949	1949	1949	1949	1949	Inches
0.01	0.25	0.27	0.17	0.79	0.93	3.32	3.12	1.97	0.42	0.38	1.41	13.04
Average												
0.36	0.50	0.31	0.49	0.59	1.31	1.60	1.36	1.94	1.82	0.75	0.66	11.67

The total rainfall at Pueblo was 13.04 inches which was 1.37 inches above the average. During the months of May and June the total rainfall was 6.44 inches which was 3.44 inches above the average.

The rainfall at Las Animas was 9.65 inches. The average is 12.29 inches. The rainfall at Lamar was 22.10 inches. The average is 15.35 inches.

There was a total of 76983 acre feet of reservoir and trans-mountain water run to canals near Pueblo and east of there. A charge of 8796 acre feet was made for this service. Reservoir and trans-mountain water play an important part in the irrigated agriculture of the Arkansas Valley.

A total of 48000 acre feet of trans-mountain water was brought over. On May 1st there was a total of 230175 acre feet in reservoirs exclusive of the John Martin. Of this 212898 acre feet was for agriculture. The remainder was for domestic and manufacturing purposes. The average for the past 29 years was 277500 acre feet.

On November 1st there was a total of 239345 acre feet in storage, exclusive of the John Martin. Of this amount 217778 acre feet was for irrigation and the remainder was for domestic and

-3-

manufacturing purposes. The average for the past 29 years was 153414 acre feet.

Crops were good also prices although not as high as in 1949.

Hail storms were few and widely scattered and of small proportions. Insect pests were less numerous due largely to better method of control.

The records of this office are consulted almost daily for information about priorities, water rights and stream flow. As the years go by the records are becoming more valuable.

Yours truly,

Division Engineer of Irrigation Division #2
