

STATE OF COLORADO
IRRIGATION DIVISION NO. 2
PUEBLO

F. C. SNYDER
IRRIGATION DIVISION ENGINEER
DON DURANT BLDG.,
P. O. BOX 1423

Nov. 30, 1957

SUBJECT:

Mr. J. E. Whitten
State Engineer
Capitol Bldg.
Denver, Colo.

Dear Sir;

I hereewith submit my report as Division Engineer of Division No. 2 for the year of 1957.

A very welcome change in the water supply has occurred for the first time in five years with an adequate supply for all irrigated sections. Water supply changed from fair to excellent during April and May when the snowpack increased up to 300 per cent of normal and rains drenched the lower reaches. Stream flow through Pueblo for the year was more than twice the normal amount, three times last year's amount and just a little higher than the two previous high years on record.

Cool temperatures during the snow melt period resulted in delayed run-off and relatively low peak flows made for an extremely favorable distribution over a longer period of time. Rainfall in the irrigated areas cut the demand during the summer. Storage in reservoirs increased from 60,293 acre feet to the present favorable carry-over as of Nov. 1st of 494,324 acre feet. Practically all reservoirs in the Division are full or approximately filled.

Due to the moisture content of the ground, with a normal snowfall and full reservoirs, the outlook for the season of 1958 is for all reservoirs to top out before the peak flow and great damage from flood waters may be experienced all the way to John Martin Reservoir. John Martin reservoir stands a very good chance of filling to the flood stage for the first time.

Precipitation for Pueblo amounted to 21.21 inches which is just about twice the average and a little over three times last year's. This high precipitation condition will probably hold true for the entire Division.

Due to heavy rains which started on May 15th at 5 A. M. storage was allowed in all reservoirs by 2 P. M. May 15th and was continued to Aug. 21st., before it was necessary to make a river call.

John Martin Reservoir started the season April 1st with 3,892 acre feet in storage. Storage was continued until April 13, to 11,855 acre feet when runs were started. Reservoir was declared dry at 7 A. M. April 22nd. On May 16, at 7 A. M. gates were closed and storage was continued until August 7, to a total of 290,744 acre feet at which time runs exceeded inflow. The contents were reduced by excess runs over inflow to 220,053 acre foot on Nov. 1st when gates were closed for winter storage.

The law suit of the Beaver Park Company remains in the same status as last year, nothing having been done by the court. However, the subject has been in question before the Arkansas Valley Ditch Association almost every meeting.

On Nov. 27, 1956, the DeNeese Dye Reservoir gates were illegally closed and storage started. This was found by the Water Commissioner of District No. 13 on Nov. 30th., and orders were issued to pass the water to senior decrees. This they refused to do until the matter was appealed to the Division Engineer and later to the State engineer. On Jan. 7, 1957, I received notification that a restraining order by the court had been issued against our interfering with the storage water in the reservoir. A hearing was held Jan. 9, 1957, and on the request of the attorney for the Arkansas Valley Ditch Association the restraining order was dissolved. Gates were opened by the company Jan. 11, 1957, and the reservoir was dry Jan. 19th.

Investigations of the above case brought out the fact that certain decrees transferred by the court as listed by former water officials were in fact in error. There were certain duplications which gave transfers that were never decreed originally. Then there were decrees that were

supposedly transferred from waters decreed to extentions of those ditches which was found to be out of the water originally decreed to the ditches and not additional water. This cut their decrees down by 3.57 sec. ft. as formerly allowed. They have protested this to both the Division Engineer and the State Engineer and have now applied to the court for a determination of interpretation of the transfer decrees.

On May 14, 1957, they demanded 1.22 sec. ft. of water in addition to that allowed by the Commissioner which was denied on May 22nd. On July 5th an appeal was made to the Division Engineer which was denied on July 10th. The appeal dated July 15, 1957, was then taken to the State Engineer who upheld the decision of the Division Engineer. They have now made an appeal to the court for 1.22 sec. ft. of water under their transfer decrees and scorningly are not contesting the 2.35 sec. ft. consisting of the duplications in their decrees as transferred.

Appeal was made to the State Engineer of the Division Engineer's ruling on diverting water from Macy Creek to North Macy Creek in Custer County, District No. 13, to fill decrees on North Macy Creek. A hearing was held July 29th in the State Engineer's office which was continued until Sept. 12th for a field investigation. The State Engineer, Assistant Attorney General and several other interested parties made this trip. No decision has yet been rendered.

Irrigated acreage has risen from 490,000 acres last year to 507,303 acres this year, using 2,307,940 acre feet of water or 4.55 acre feet per acre.

Trans-mountain water diverted from the Western Slope amounted to 44,936 acre feet. Considerable more could have been obtained if storage space had been available.

The total available supply of water was 2,741,349 acre feet being made up of the 2,307,940 acre feet used plus the 434,031 acre feet stored.

Crop production was greater than for many years due to the abundant water supply. Prices were good but are lowering. Considerable difficulty was experienced during the fall by excess ground moisture and fall rains retarding the harvesting of crops. Sugar beet tonage was up, as also was the sugar content, but many beets may be caught in the ground by a severe freeze.

Since wells and pumps were not much used or needed, the water table was allowed to recover. Stock ponds were all filled and in most cases remain full.

Tabulations are attached showing the trans-mountain diversions, reservoir contents each month and water used for each district.

Thanking all water officials and especially those in the Denver office for their splendid cooperation, I am,

Respectfully submitted,

J. C. Snyder
Division Engineer, Division No. 2.
