

INTRODUCTORY STATEMENT

Annual Division Engineers Report
Irrigation Division #2

Irrigation Division #2 consists of all lands irrigated from ditches and canals taking water from the Arkansas River and its tributaries. The Division is made up of eleven Water Districts (10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 66, & 67) which comprise the counties of El Paso, Chaffee, Lake, Fremont, Custer, Pueblo, Huerfano, Las Animas, Park, Teller, Crowley, Otero, Bent, Prowers, Baca, and Kiowa. The area encompassed by Irrigation Division #2 may be best described by the following summarized table.

WATER DISTRICTS
IRRIGATION DIVISION #2

COUNTY	MAJOR CITY	ELEVATION	MAJOR STREAM	MAJOR TRIBUTARY	MAJOR WATER USE	IRRIGATED ACRES	ANNUAL PRECIPITATION	MAJOR INDUSTRY	NO. OF FARMS	LENGTH OF GROWING SEASON	WATER RES PROJECTS
Baca	Springfield	4,365	Carrizo	None	Irrigation	56,910	13 - 16"	Ranch./Farm.	750	161 days	Under-ground Water Dis
Bent	Las Animas	3,901	Arkansas	Purgatoire	Irrigation	45,292	12 - 13"	Ranch./Farm.	450	162 days	Fryingpan Arkansas Project
Chaffee	Salida	7,036	Arkansas	So. Arkansas	Irrigation	16,126	10 - 30"	Ranch./Farm.	170	102 days	Fryingpan Arkansas Project
Crowley	Ordway	4,312	Horse	None	Irrigation	25,010	11 - 12"	Ranch./Farm.	400	157 days	Fryingpan Arkansas Project
Custer	Westcliffe	7,888	Grape	Texas	Irrigation	15,930	15 - 25"	Ranch./Farm.	180	80 days	U.S.G.S. Under-ground Water Proc
El Paso	Colorado Sp.	6,012	Fountain	Monument	Irrigation/ Commercial	13,630	12 - 20"	U.S. Defense Department	750	122 days	Fryingpan Homestake Project
Fremont	Canon City	5,332	Arkansas	Grape	Irrigation	14,920	12 - 20"	Ranch./Farm. State Pen.	421	169 days	Fryingpan Arkansas Project
Huerfano	Walsenburg	6,185	Huerfano	Cucharas	Irrigation	11,453	11 - 25"	Ranching	280	153 days	None
Kiowa	Eads	4,213	Big Sandy	None	Irrigation	5,127	12½ - 14½"	Ranch./Farm.	350	155 days	None
Kit Carson	Burlington	4,163	Republicans	None	Irrigation	56,576	13 - 16"	Ranch./Farm.	840	153 days	None
Lake	Leadville	10,152	Arkansas	Lake Fork	Irrigation	6,036	10 - 35"	Mining	17	77 days	Fryingpan Arkansas Project
Las Animas	Trinidad	6,025	Purgatoire	None	Irrigation	19,463	11 - 20"	Ranch./Farm.	200	152 days	Trinidad Dam
Otero	La Junta	4,066	Arkansas	Horse	Irrigation	57,675	11 - 12"	Ranch./Farm.	690	150 days	Fryingpan Arkansas Project
Prowers	Lamar	3,622	Arkansas	None	Irrigation	93,044	13 - 15"	Farming	430	158 days	Fryingpan
Pueblo	Pueblo	4,695	Arkansas	Fountain	Irrigation/ Commercial	35,749	11 - 18"	Farm./Steel	469	150 days	Fryingpan Pipeline
Teller	Cripple Crk.	9,494	Four Mile	None	Irrigation	865	14 - 20"	Tourism	10	-	None

Westcliffe	1.41	.98	1.03	1.55	2.55	2.31

PRECIPITATION
IRRIGATION DIVISION #2

No storms of any consequence were reported in the Arkansas drainage area. Precipitation from snow was above average. Rainfall was near average for nearly all the drainage.

There was no hail suppression work done in the area and there were no reports of any hail storms of consequence. We did not receive any reports of crop damage due to hail.

FLOODS

There were no reports of damage due to floods. Stream flows on the main stem were above average and prospects are good for winter storage and above average reservoir supplies for the 1971 Irrigation Season.

WATER BUDGET
 UNITS - WATER IN 1000 ACRE FEET
 IRRIGATION DIVISION #2

1944 estimate

<u>SUGAR LOAF RESERVOIR OPERATION</u>	<u>ACRE FEET</u>
Homestake Tunnel Imports	68.9
Fry-Ark Total Imports	86.4
Busk-Ivanhoe Imports	8.3
Native Inflow - Lake Fork	39.0
Total Inflow to Reservoir	202.6
Release for Downstream Irr. Right	4.6
Release to Maintain Fish Flows	1.6
Release to Elbert Canal	156.3
Release for Irr. Demands at Pueblo	0.0
Net Evaporation	1.4
Spills from Reservoir	16.0
Total Outflow	179.8
End of Month Active Content	98.9
End of Month Total Content	107.9
End of Month Area - Acres	1,693.2

MALTA DIVERSION DAM AND CANAL - ELBERT CANAL AND POWERPLANT

Native Flow at Malta Diversion Dam	71.0
Homestake Eagle Imports	8.2
City of Pueblo Imports	8.5
Total Flow at Malta Diversion Dam	87.7
Fish Bypass at Malta	16.2
Diversion to Malta Canal	41.3
Spills at Malta	30.3
Net Gain - Malta Diversion-Clear Creek	54.4
Malta Canal Seepage Loss	0.5
Native Flow Halfmoon Creek	29.7
Halfmoon Bypass Downstream Irrigation Right	4.9
Halfmoon Diversion-Elbert Canal	14.5
Spills at Halfmoon	10.3
Total Flow in Elbert Canal	211.6
Elbert Canal Seepage Loss	3.6
Flow Available to Elbert Powerplant	208.0
Generation - Elbert Powerplant	153.6

TWIN LAKES RESERVOIR AND OTERO POWERPLANT OPERATION

Independence Pass Tunnel Imports	70.6
Native Inflow - Lake Creek	146.3
Total Inflow to Reservoir	216.9
Releases for Fish Flow - Granite	1.6
Homestake Water Delivered	70.8
Releases for Otero Powerplant	220.7
Total Release to Otero Canal	291.5
Otero Canal Seepage Loss	1.9
Water Available to Otero Powerplant	218.8
Generation - Otero Powerplant	50.7

<u>TWIN LAKES RESERVOIR AND OTERO POWERPLANT OPERATION</u>	<u>ACRE FEET</u>
Releases for Irrigation Demand at Pueblo	0.0
Net Evaporation	1.2
Spills from Twin Lakes	37.4
Total Outflow	331.7
End of Month Active Content	93.2
End of Month Total Content	166.2
End of Month Area - Acres	3,133.3
Project Operated Flow at Granite	183.2
 <u>CLEAR CREEK RESERVOIR OPERATION</u>	
Native Inflow - Clear Creek	73.8
Total Inflow	292.6
Net Evaporation	0.7
Total Outflow	292.6
End of Month Total Content	8.9
Project Operation Flow Below Creek Creek	475.1
 <u>SALIDA TO PUEBLO RIVER OPERATION</u>	
Native Gain - Clear Creek-Salida	251.5
Project Operated Flow at Salida	726.6
Native Flow at Salida	665.7
Total Transportation Loss	6.7
Native Flow at Pueblo	831.8
Net Gain - Salida to Pueblo	166.1
Fry-Ark M and I Delivered to Colorado Springs	10.0
 <u>PUEBLO RESERVOIR OPERATION</u>	
Native Water Stored Upstream	38.0
Project Operated Inflow - Pueblo	876.0
Storable Flood Flows	115.8
Storable Winter Water	77.6
Mandatory Releases	600.4
Total Valley Irrigation Requirement at Pueblo	286.2
Non-project Releases	33.7
M and I Releases	16.9
Useable M and I Return Flows	8.9
Remaining Irrigation Requirement	243.6
Release of Winter Water	74.3
Release of Project Water	65.5
Irrigation Shortage at Pueblo	77.6
Total Releases from Pueblo	790.8
Net Evaporation	7.4
Spills from Reservoir	0.0
End of Month Active Content	77.7
End of Month Total Content	92.9
End of Month Area - Acres	2,484.9

EVAPORATION AND END OF MONTH CONTENT SUMMARYACRE FEET

UNDERGROUND WATER
IRRIGATION DIVISION #2

Irrigation Division #2 composed of Water Districts 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 66 and 67 has, of this date, 13,166 wells of all types in operation. Types of use are domestic, stock, domestic and stock, commercial, industrial, irrigation, irrigation and stock, and, lastly, municipal. Tabulation, showing the number of each type of well in each district is illustrated by a following table.

The principal aquifer area extends thru a 150 mile reach of the Arkansas River valley extending from Pueblo to the Kansas State line. This is a valley-fill aquifer which is adjacent to, underlies, and is in hydraulic connection with the Arkansas River. The aquifer consists of unconsolidated deposits of gravel, sand, silt and clay. It ranges from one to 14 miles in width and covers an area of about 500 square miles in parts of Pueblo, Otero, Crowley, Bent and Prowers Counties. The aquifer fills a "U-shaped" trough cut into the bedrock, which consists of shale, limestone, and sandstone of Cretaceous age. About two million acre feet of water is stored in the valley-fill deposits. Summary of the hydrologic character is shown below:

<u>UNIT</u>	<u>THICKNESS</u>	<u>PHYSICAL CHARACTER</u>	<u>HYDROLOGIC CHARACTER</u>
Dune sand	0 - 100'	Very fine to coarse, poorly sorted sand.	Commonly not saturated, but transmits water readily from the surface to underlying aquifers. Source of water for a few domestic and stock wells.
Valley-fill deposits	0 - 300'	Boulders, cobbles, gravel, sand, silt, and clay. Generally grades from fine sand near the surface to coarse sand and gravel at the base.	Principal source of water for irrigation, public supply, and industrial wells. Irrigation-well yields are as much as 3,150 gpm (gallons per minutes) and average 650 gpm. Aquifer furnishes water to 1,348 irrigation wells.
Pierre Shale	0 - 2,200'	Shale and sandy shale.	Low-permeability confining bed; acts as a barrier to vertical movement of ground water. Not known to yield water to wells.
Niobrara Formation	0 - 700'	Chalky and marly limestone and calcareous shale.	Low-permeability to confining bed; acts as a barrier to vertical movement of ground water. A few stock wells tapping fractured limestone yield less than 5 gpm.

<u>UNIT</u>	<u>THICKNESS</u>	<u>PHYSICAL CHARACTER</u>	<u>HYDROLOGIC CHARACTER</u>
Carlile Shale	0 - 200'	Calcareous shale, limestone, and sandstone.	Low-permeability confining bed; acts as a barrier to vertical movement of ground water. Not known to yield water to wells.
Greenhorn Limestone	0 - 150'	Limestone and chalky shale.	Low-permeability confining bed; acts as a barrier to vertical movement of ground water. A few stock wells tapping fractured limestone yield less than 5 gpm.
Graneros Shale	0 - 200'	Gypsiferous shale and sandstone.	Low-permeability confining bed; acts as a barrier to vertical movement of ground water. Not known to yield water to wells.
Dakota Sandstone	75 - 235'	Sandstone, sandy shale, siltstone, and shale.	Important source of water for domestic, stock, and public supply wells. Restricts vertical movement of water to and from the valley-fill deposits. Wells yield as much as 100 gpm and average 20 gpm.

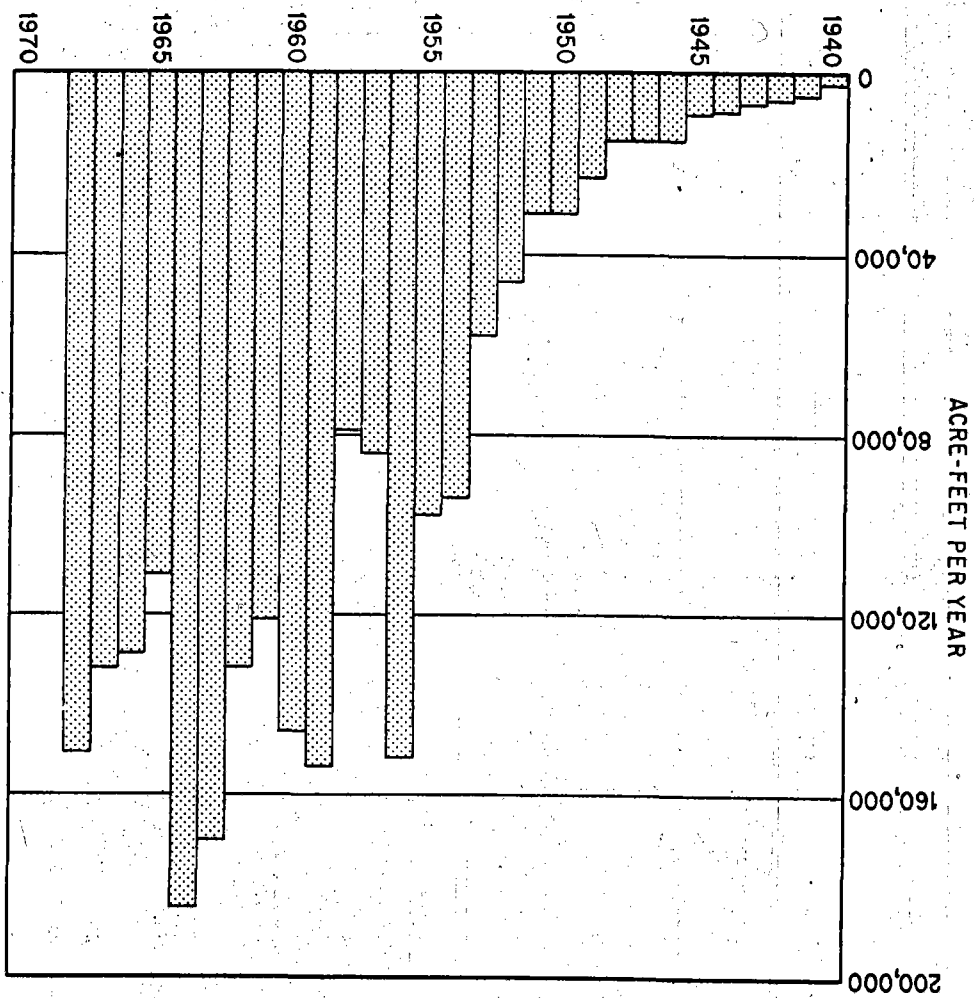

Table 2.--Ground-water withdrawal from the valley-fill aquifer by irrigation wells

[acre-feet per year]

County	1964	1965	1966	1967	1968

ARKANSAS RIVER COMPACT
Irrigation Division #2

- A. The general principle of this Compact is the division of the benefits of the reservoir storage on the basis of the maximum rates of flow, 750 C.F.S. or 60% to Colorado and 500 C.F.S. or 40% to Kansas, out of available storage water in the reservoir. Colorado having an advantage of using all accretions and return flow at the State line to make up Kansas' 40% share at the State line (i.e., assuming Kansas called for 500 C.F.S. release of stored water and there was 250 C.F.S. of other water crossing the State line, then only a sufficient flow necessary to develop a flow of 500 C.F.S. need be released from storage. Consequently, if each State continued to call for maximum releases at the same time, Colorado would always have the advantage of such return flow and accretions at the State line, which would actually result in Colorado's share being larger than 60% and Kansas less than 40%.
- B. Reservoir operation is divided into two general periods:
- (1) Winter storage from November 1 to March 31, period during which all water flowing into the reservoir shall be stored up to the conservation capacity limit. Exception is that Colorado may call up to 100 C.F.S. limited to the river flow entering the reservoir for stock pond and other winter uses.
 - (2) Summer storage from April 1 to October 31, when all water entering the reservoir up to conservation capacity limit shall be stored, provided that if river volume flow is sufficient, Colorado can call the first 500 C.F.S. but Kansas is limited to what river flow may be available in excess of Colorado's maximum, but in no event more than 250 C.F.S. Again, Colorado has the advantage of using return flow and accretions at the State line to make up Kansas share of such river flow.
- C. Releases of stored water are limited to the summer storage period of April 1 to October 31 and the following criteria is to be observed:
- (1) Releases may be made simultaneously upon the demands of either/or both States.
 - (2) Water released upon concurrent/separate demands shall be applied promptly to beneficial use unless downstream storage is authorized.
 - (3) There shall be no allowance or accumulation of credits or debits for or against either State.
 - (4) Releases, excepting periods when all Colorado water users are operating under decreed priorities, shall not impose any call on Colorado water users that divert from the river above the Reservoir.

- D. When storage water is available in the reservoir, Colorado shall not administer diversions on a decreed priority basis, but user above the reservoir may divert without regard to the decreed priorities in Colorado below the reservoir and at the same time users in Colorado below the reservoir may divert in accordance with any distribution agreement in effect at that time.
- E. Whenever the reservoir becomes empty, the river administration will revert back to the decreed priority basis as though the reservoir had never been constructed. Kansas shall not be entitled to any portion of the river flow entering the reservoir.
- F. If usable quantity and availability for use of the Arkansas River waters in Colorado Water District No. 67 and Kansas will be materially depleted or adversely affected then;
- (1) Present decreed priority rights in Water District No. 67 shall not be transferred to other water districts or to any points of diversion above the reservoir.
 - (2) Present ditch diversions in Water District No. 67 and Kansas shall not be increased beyond the total present rights without administration findings of fact that no depletion or adverse effect will result from such proposed transfer or increase.
- G. There are no particular problems in the operation of the Compact, however, it should be mentioned that the presence of the reservoir on the main Arkansas River provides for poor management on the river during periods that the reservoir is dry. Due to the necessity of passing large volumes of water from Water District No. 17 thru a large, sandy, dry reservoir bed to deliver a small amount of water into Water District No. 67 causes an enormous waste. There should, in some manner, be established in John Martin Reservoir some type of a permanent pool and, also, a debit-credit system for Water District No. 67 water users.

DAMS
IRRIGATION DIVISION #2

There was only one major problem regarding a dam failure. On July 30, 1970, the Clear Creek Reservoir reported an uncontrollable leak in the outlet pipe. The water level was lowered at the maximum discharge rate until the reservoir was evacuated. Inspection disclosed that a portion of the roof of the outlet tunnel had failed. Work was started by the owners to effect repairs which were completed on October 23, 1970 and storage was commenced.

The owners were fortunate in being able to exchange most of the contents with another reservoir, which had a run in progress, at the time of the difficulty, and should over the winter be able to exchange back to Clear Creek the original contents.

At present, there are no stop or restriction orders in effect.

LIVESTOCK WATER TANKS
IRRIGATION DIVISION #2

There are in Irrigation Division #2, 5,308 registered livestock water tanks.

The computer print-out showing registered livestock water tanks in Districts 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 66 and 67 of Irrigation Division #2 does not compare to the approved livestock water tank permits filed in the Division office. The computer print-out is, in its present form, completely worthless, and, furthermore, there is no way of knowing whether or not our permit file is up-to-date.

WATER RIGHTS
IRRIGATION DIVISION #2

A. TABULATION:

The tabulation of water rights in Irrigation Division #2 was completed during the month of July 1970. Written, specific objections and/or protests to individually published rights totaled approximately 125. Four objectors protested the entire publication in general and not on any specific item. The protests to specific items have been checked and corrected and objectors have been notified of the action taken on their protests; corrected cards have been forwarded to the Denver Office. However, it must be stated, that the Division Engineers' Office, in checking the publication, have discovered many errors and/or omissions that are due to our own original work in Pueblo, to errors caused in the Denver Office, to keypunch errors, and, in my opinion, to a poorly developed computer program.

Of approximately 4,500 adjudication cards, corrections would require an estimated 1,500 cards. This in itself presents no serious problem; the main problem is a matter of time since, in order to present the public with as good and accurate publication as possible of water rights in each and every district, it will be necessary, in my opinion, for each Division Engineer to prepare, manually, a tabulation of water rights for each district in a particular Division from a certified copy of the adjudications proceedings. This will require the reading of all appropriations within a particular adjudication, and cross checking this manually prepared tabulation against the appropriation file cards, all transfers, and finally, against the records filed in Denver. This process will be made very difficult by the lack of trained personnel; and, to train such personnel will merely delay the completion of the project.

Generally speaking, the publication was received very well in Division #2; the main complaints, aside from the specific, written protests, were:

- (a) Lists should have been published for specific, main streams, i.e., Arkansas, Fountain, Grape, Greenhorn, Huerfano, Cucharas, Apishapa, Purgatoire.
- (b) Transfers could not be identified as to their parent right.
- (c) Position of domestic adjudications in the overall publication.

Recommendations and/or suggestions will be included in Item 10.

B. REFEREE'S FINDINGS AND DECREES:

The Division #2 Water Court is located in the Judicial Building, Pueblo, Colorado, and is staffed by Judge William Gobin, Clerk Priscilla Lucero and Referees Wallace Doe and Robert Harrison.

Applications to November 1, 1970 totaled 83 and are classified as follows:

- (1) Underground Water Rights.....20
- (2) Change of Water Right..... 8
- (3) Plan of Augmentation..... 0
- (4) Water Right.....26
- (5) Diligence (Cond. Decrees).....15
- (6) Water Storage Right.....14

Of the applications filed and decrees issued, none of the rights granted involved wells as alternate points of diversion, augmentation or primary water right diversion. Well owners are not taking advantage of the provisions of Senate Bill 81 enabling them to tie wells to surface decrees or decreeing wells to their own surface appropriations. The reason for the lack of activity in this area and, also, in the area of augmentation is that both surface and/or underground users have virtually no idea what such plans would entail or how these plans would be carried out. The matter will not be alleviated until the water users become educated in what, how and why they should participate in such activities.

RECOMMENDATIONS AND SUGGESTIONS
IRRIGATION DIVISION #2

I. TABULATION OF DIVISION WATER RIGHTS

The present procedure of correcting errors in the publication does not insure a correct tabulation of water rights in any Division. The original computer program, as written, cannot produce an acceptable print-out of a Division's water rights. Correcting such a program merely compounds the errors coherent in the original. Recommendation is that a manual tabulation be completed by each Division.

II. COMPUTER PRINT-OUT OF LIVESTOCK WATER TANKS

The current livestock water tank print-out is worthless. Print-out does not compare with approved tank permits on file; print-out is not complete nor can there be a re-call on specific items, i.e., height, capacity, tributary, etc. Recommendation is that the livestock tank files be completed and/or brought up-to-date and that a useable computer program be developed.

III. COMPUTER PROGRAMMER

In view of the difficulties with items (1) and (2) it is suggested that the State Engineers' Office develop its own programmer.

IV. SENATE BILL 81

Senate Bill 81 remains a mystery to practically all concerned; it is suggested that a simplified synopsis be prepared by our legal counselor.

There have been no "augmentation" plans filed in Division II Water Court and, in my opinion, the users have no idea what this entails. An education plan should be developed by our planning section.

V. PAYMENT OF BILLS AND OF WATER COMMISSIONERS EXPENSE CHECKS

Payment of bills are often two to three months behind and payment of Water Commissioners expense checks are three weeks behind. This is a poor public relations policy since we are a State agency that under the best of circumstances is always maligned and we in turn help create the appearance that we are in a state of confusion.

VI. WATER COURT REFEREES

In some instances, water referees and/or the water judge are allowing opposing attorneys to and in the granting of a right by making a "deal" among themselves and we, the administrators, are not consulted in any way, yet, we are expected to administer the right. Division Engineers should be allowed to express their opinions, either pro or con to the Court on every and/or any type of application.

VII. WATER COMMISSIONERS

Our present practice of employing Water Commissioners should be studied. We are able to keep them reasonably well occupied through the irrigation season, but the full-time Water Commissioners, in some cases, have a paid four month vacation thru the winter months.

VIII. FIELD BOOKS AND ANNUAL REPORTS

The present procedure has resulted in a bale of paper and duplication and the results shown are of questionable value. Appoint a task force of Division Engineers and Water Commissioners to present a plan that works.

IX. LEGAL ACTION

Our legal section should have the power to institute necessary legal action in behalf of our Office as required. We should not be handicapped by waiting for a local District Attorney and/or Attorney General to make up their minds as to whether or not and as to when they should or should not institute legal action in our behalf.
