J. E. WHITTEN State Engineer

C. C. HEZMALHALCH Deputy

L. T. BURGESS Chief Hydrographer

HARRY L. SITTSER, Jr. Office Engineer

STATE OF COLORADO OFFICE OF STATE ENGINEER

DIVISION OF WATER RESOURCES DENVER 2

Durango, Colorado. November 22, 1955.

BUBJECT:

Mr. J. E. Whitten State Engineer Denver, Colorado.

Dear Sir:

This is to submit the preliminary report of Division Engineer, Irrigation Division Number 7 for 1955.

A more detailed and complete report will be made when all the data is assembled.

Respectfully yours

Division Engineer.

Preliminary Annual Report of Division Engineer Irrigation Division 7- 1955

The past season was the third consecutive low water year. Lack of snow cover in the mountains, deficient rainfall during the summer except for the month of August, and cold weather during the early months all contributed to deficient water supply. More than the average amount of water was used from storage but use from natural flow was very deficient. Crops were not more than fifty percent of average except on lands having adequate storage water for late use.

STATE OF COLORADO OFFICE OF STATE ENGINEER

DIVISION OF WATER RESOURCES

Durango, Colo. January 26-1956

L. T. BURGESS Chief Hydrographer

BUBJECT:

Mr. J. E. Whitten State Engineer Denver, Colo.

Dear Sir:

Herewith is Annual Report of Division Engineer, ^Irrigation Division Seven for 1955.

This will supplant the prediminary report which was given you in November.

Very truly yours,

Division Engineer.

ANNUAL REPORT OF DIVISION ENGINEER - IRRIGATION DIVISION 7

1955

The accumulated snow depth and water content as measured at several snow courses on the several water sheds at the beginning of the irrigation season was as follows:

***************************************	:	No.	of	-	Snow	:	Water	• :	Aver.	:	No.	: 7	955	•	Flor	w		•	1955	•

All stations in the division reported above average rainfall during August. Greatest monthly total was 5.13 ins. at Durango. Maximum was 1.82 ins. in 24 hours at Cortez on August 14.

The preceding tables prove that the records obtained by snow surveys now enable the forecasters to get within small limits of actual stream flow for the periods of snow melt. The maximum error in respect to forecasted flow in this area was six percent for Dolores River at Dolores. The precipitation records do not give an accurate guide to run-off. Probably because of evaporation and ground absorption factors. The prevailing temperatures and winds also have a bearing on stream flow. The average monthly temperatures at Durango during the snow melt period were:

	Month														
	:	April	:	May	:	June	:	July	:						
Aver. Mo. Te	mp.								•						
at Durango	<u>:</u> _	42.6		21.0	<u> </u>	33.3		00.1		 					
Departure	:	- 2.5	:	- 0.9	:	- 1.1	:	- 1.8	:						

The only published record of wind velocities is at Vallecito Dam which is well protected as compared with the mesa farm areas. There is no figure available to compare with average but from memory, it was a cold windy spring with more than the usual number of dust storms which originate in New Mexico, Arizona and Utah and which bring in a good sample each time of the top soil from the desert areas in those states.

The frost free period, greater than 28 degrees, was from early June to the very last of September. Cold weather retarded the early crops of hay and grain and in areas without storage water for second crops, the total harvest was decidedly short.

The total use of water from natural streams was 406,870 acre feet. This amount was 22,760 acre feet less than was used in 1954. The total use of reservoir water 100,570 acre feet which compared with 91,940 a.f. used in 1954.

The amount remaining in storage on Nov. 1st. was 67,160 a.f. as compared with 84,510 a.f. a year ago. Reservoir water was used until Nov. 15 th. owing to dry fall weather. The first snow of any consequence came on Nov. 15 which stopped the use of water except for domestic purposes.

There were no major irrigation projects started. The further development of land and water use in this area now depends on the approval of the Upper Colorado River Development Plan which failed in last session of Congress to obtain approval.

The tabulated statements of Water Commissioners Ditch and Reservoir Reports conclude this report.
