

2000/01 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of 10% of hunters in the HIP database (7,200 of 72,677) was drawn; an attempt was made to contact 100% of the sample. 4,486 hunters were surveyed (response rate = 62%).

Questions on harvest of Richardson's ground squirrel were added.

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of contacts made and their responses to survey questions. The harvest figures are estimates of total harvest extrapolated from survey responses. The estimates are followed by the standard error (SE) of the estimate i.e. a measure of the precision of the estimate (1.96 x the SE). 95% UCI and 95% LCI are the upper and lower values for a 95% confidence interval around the estimate. So, for example, we estimated statewide harvest of blue grouse at 18,094 with a SE of 39. The 95% confidence interval ranges from + or - $1.96 \times 39 = 76$. The range is $18,094 - 76 = 18,018$ to $18,094 + 76 = 18,170$. We are 95% confident that between 18,018 and 18,170 blue grouse were harvested during the 2000/01 season.
