

## 2001/02 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of approximately 10% of the hunters in the HIP database (7,479 of 75,297) was drawn; an attempt was made to contact 100% of the sample. 4,107 hunters were surveyed (response rate = 55%).

The report includes information by species on percent of hunters surveyed who hunted and harvested.

**Estimated statewide harvest, days in the field, and hunter number by species is available. In addition, there are estimates for each species by county.**

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of contacts made and their responses to survey questions. **The harvest figures are estimates of total harvest extrapolated from survey responses.** The estimates are followed by the standard error (SE) of the estimate i.e. a measure of the precision of the estimate ( $1.96 \times$  the SE). 95% UCI and 95% LCI are the upper and lower values for a 95% confidence interval around the estimate. So, for example, we estimated statewide harvest of blue grouse at 21,336 with a SE of 40. The 95% confidence interval ranges from  $+ \text{ or } - 1.96 \times 40 = 78$ . The range is  $21,336 - 78 = 21,258$  to  $21,336 + 78 = 21,414$ . We are 95% confident that between 21,258 and 21,414 blue grouse were harvested during the 2001/02 season.

### Overall Satisfaction Rating

Satisfaction	Frequency	Percent	Cumulative Frequency	Cumulative Percent
Strongly Dissatisfied	128	5.46	128	5.46
