

2002/03 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of approximately 12% of the hunters in the HIP (Harvest Information Program) database (8289 out of 70,159) was drawn. The surveyor attempted to contact 70% of the sample within the time allowed. 3,562 hunters were surveyed (43% response rate).

The report provides estimated statewide harvest, days in the field, and hunter number by species. In addition, there are estimates for each species by county.

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of hunters surveyed and their responses to survey questions. ***The harvest figures are estimates of total harvest extrapolated from survey responses.*** The estimates are followed by the standard error (SE) of the estimate which is a measure of the precision of the estimate. By multiplying the SE by 1.96 you can obtain the 95% confidence interval. The 95% UCI and 95% LCI columns provide the upper and lower values for the 95% confidence interval around the estimate.

So, for example, we estimated statewide harvest of blue grouse at 21,213 with a SE of 55. The 95% confidence interval ranges from + or - $1.96(55)=108$. The range is $21,213-108=21,105$ to $21,213+108=21,321$. We are 95% confident that between 21,105 and 21,321 blue grouse were harvested during the 2002 season.
