

2008/09 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of approximately 15% of the hunters in the HIP (Harvest Information Program) database (8,692 out of 58,913) was drawn. The surveyor attempted to contact 70% of the sample within the time allowed. 4,039 hunters were surveyed (46% response rate).

For the 2008/09 survey, for species including chukar, jack rabbits, snow shoe hare, fox and pine squirrel, marmot, coyote, red fox, raccoon, badger, beaver, muskrat, Wyoming ground squirrel, rattlesnake, snapping turtle, and tiger salamander, harvest estimates were not collected, only hunter numbers were estimated.

The report provides estimated statewide harvest, days in the field, and hunter number for **10** small game species; pheasants, scaled, Gambel's and bobwhite quail, blue grouse, mourning dove, ptarmigan, cottontail rabbits, Abert's squirrel, and coyotes. In addition, there are estimates for each of these 10 species by county. The 2008/09 survey collected data specific to small game hunting on Walk-In Access lands. Specific questions were posed to hunters regarding their hunting for pheasants, scaled quail, mourning doves and cottontail rabbits, to measure participation, days, and harvest on WIA lands.

County harvest estimates may be based on a relatively small number of hunter responses and may be accompanied by large confidence intervals. Harvest estimates (county and statewide) are generated based on the responses of those hunters contacted for the survey. These responses then form the basis of an estimate of species harvest for the small game hunting public at-large.

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of hunters surveyed and their responses to survey questions. ***The harvest figures are estimates of total harvest extrapolated from survey responses.*** The estimates are followed by the standard error (SE) of the estimate which is a measure of the precision of the estimate. The 95% UCL and 95% LCL columns provide the upper and lower values for the 95% confidence interval around the estimate.

So, for example, we estimated statewide harvest of mourning dove at 230,121 with a SE of 11,664. The 95% confidence interval range estimates that between 207,907 and 253,674 mourning doves were harvested during the 2008 small game season.

Hunter Numbers

Species	Hunters	SE(hunters)	LCL Hunters	UCL Hunters
Chukar	636	93	478	847
