

2012/2013 Small Game Harvest Report

The general small game harvest survey was conducted by phone. A sample of 8,000 hunters was drawn from the Harvest Information Program database for this survey. The surveyor attempted to contact 70% of the sample within the time allowed. 4,004 hunters were surveyed (50% response rate).

For the 2012/2013 survey, for species including chukar, jack rabbits, snow shoe hare, fox and pine squirrel, marmot, coyote, red fox, raccoon, badger, beaver, muskrat, Wyoming ground squirrel, rattlesnake, snapping turtle, and tiger salamander, harvest estimates were not collected, only hunter numbers were estimated. In addition, the 2012/2013 survey collected data specific to small game hunting on Walk-In Access lands. Specific questions were posed to hunters regarding their hunting for pheasants, scaled quail, mourning doves, bobwhites and cottontail rabbits, to measure participation, days, and harvest on WIA lands.

The report provides estimated statewide harvest, days in the field, and hunter number for **11** small game species; Abert's squirrel, bobwhite quail, cottontail rabbits, coyotes, dusky grouse, Gambel's quail, greater prairie chicken, mourning dove, pheasants, ptarmigan, and scaled quail. In addition, there are estimates for each of these 11 species by county.

County harvest estimates are frequently based on a very small number of hunter responses and are commonly accompanied by large confidence intervals. Harvest estimates (county and statewide) are generated based on the responses of those hunters contacted for the survey. These responses then form the basis of an estimate of species harvest for the small game hunting public at-large.

Those portions of the report that have frequency designations or are pure percentages are based on the actual number of hunters surveyed and their responses to survey questions. ***The harvest figures are estimates of total harvest extrapolated from survey responses.*** The estimates are followed by the standard error (SE) of the estimate which is a measure of the precision of the estimate. The 95% LCL and 95% UCL columns provide the upper and lower values for the 95% confidence limits around the estimate. For example, we estimated statewide harvest of ring-necked pheasant in 2012/2013 at 35,664 with a SE of 10,734. The 95% confidence interval range estimates that between 26,441 and 48,105 pheasants were harvested during the 2012/2013 small game season.
