### 2006 Sharp-tailed Grouse Harvest Report

The 2006 Sharp-tailed grouse report provides information on the estimated harvest of mountain sharp-tailed grouse. A stratified random sample of 2500 sharp-tailed grouse hunters was drawn from among HIP participants. The sample was stratified as follows:

- 1 =Not likely to hunt
- 2 = Somewhat likely to hunt
- 3 = Very likely to hunt
- 4 = Very likely to hunt for 4 or more years

The post-season survey, conducted by telephone, contacted 876 (35% response rate). In total, 25, or 2.8% reported they had hunted sharp-tailed grouse. The number of birds harvested ranged from 0 (11 respondents) to 6 (2 respondents), with 7 hunters reporting a harvest of 2 birds.

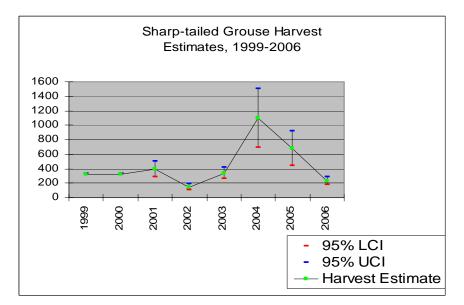

45% reported being satisfied with their sharp-tailed grouse hunting experience and 60% reported no crowding. Statewide harvest was estimated at  $232 \pm 53$  (185 – 291).

#### Comparison with 2005 survey results:

Harvest was down from 2005 when an estimated  $679 \pm 235$  (444 – 914) were harvested. Hunter numbers decreased from  $576 \pm 63$  to  $173 \pm 71$  in 2006. Days hunted also decreased with an estimated  $340 \pm 143$  hunting in 2006, compared to  $1,572 \pm 447$  in 2005.

### Harvest by Strata and County

Summary tables provide estimates of hunter numbers, days in the field and sharp-tailed grouse harvest by strata and population. Estimates are followed by the standard error of the estimate, and 95% upper (UCI) and lower (LCI) confidence intervals around the estimate. For example, the estimated number of sharp-tailed grouse hunters in Routt County is 102 plus or minus 1.96(SE) or 1.96(22)=43. The range of the estimate is 77 to 134. Estimates of days in the field and harvest are interpreted the same way. State totals are given at the bottom of each column.
