JAMES DALRYMPLE, Chief Inspector	er, Colo.
W. M. LAURIE, Deputy InspectorTrinida	ad, Colo.
Hugo H. Machin, Deputy Inspector	ar, Colo.
William H. James, Deputy InspectorWalsenbur	rg, Colo.
James W. Graham, Deputy InspectorLafayet	te, Colo.
HENRY P. KING, Deputy InspectorDenve	er, Colo.
Ada R. Tibbits, Chief ClerkDenv	er, Colo.
Max M. Greenwald, Assistant ClerkDenv	er, Colo.

FIELD FORCE AND DISTRICTS

- W. M. Laurie, 512 Ash St., Trinidad, Colo...............District No. 1 Includes the following mines: Primero, Frederick, Sopris, Starkville, Morley, Engleville, Gray Creek, Boncarbo, Piedmont, La Belle, Jeffryes, Santa Fe, Bear Canon, Three Pine, Thor, Macoye, Baldy Mountain, Hines, Keystone, Leone, Henderson, Deep Vein, Liberty, Fisher's Peak, Pickford, Beshoar, Brown, Phillips, Star, Prospect, Toller, Forbes.
- Hugo H. Machin, Box 334, Aguilar, Colo....................... District No. 2 Includes the following mines: Lester, Ludlow, Rouse, Black Diamond, Rugby, Primrose, Star, Rapson, Southwestern, Jewel, Empire, Royal, Pryor, Cameron, Ravenwood, Ideal, Caprock, Hezron, Bunker Hill, Delagua, Cass, Tabasco, Greenville, Black Diamond, Berwind, Mutual, Brodhead.
- WM. H. James, 216 E. Indiana Ave., Walsenburg, Colo. District No. 3 Includes the following mines: Oakdale, Reliance, Caddell, Cuchara Canon, Toltec, Pictou, Jobal, Maitland, New Maitland, Vesta, Gordon, Turner, Sunnyside, Kebler Nos. 1 and 2, Walsen, Robinson 1 and 2, and all mines in Fremont county.
- HENRY P. King, 1255 Lafayette St., Denver, Colo......District No. 5 Includes mines in the following counties: Archuleta, Elbert, Jefferson, La Plata, Moffat, Montezuma, Routt, and Weld.

LETTER OF TRANSMITTAL

Denver, Colorado, May 21, 1923.

To His Excellency,
WILLIAM E. SWEET,
Governor of Colorado.

Sir: Herewith I have the honor to submit to you, in accordance with Section 37 of an Act entitled "Coal Mining Laws," the Tenth Annual Report of this department.

The period covered began January 1 and ended December 31, 1922.

Respectfully,

JAMES DALRYMPLE, State Inspector of Coal Mines.

STATEMENT SHOWING RECEIPTS AND DISBURSEMENTS FROM JANUARY 1, TO DECEMBER 31, 1922

RECEIPTS

Tax collected on coal mined	25,957.49	
From sales of copies of the Coal Mining Laws.	517.35	
From refund on mileage books and telegrams	55.40	
Balance brought forward from 1921	9,276.07	
Total		\$35,806.31

DISBURSEMENTS

Salary of chief inspector	4,400.00	
Salaries of five deputy inspectors	12,773.03	
Salaries of chief clerk and assistant clerk	3,300.00	
Expenses, chief and deputy inspectors	4,387.88	
Fatal accident investigators, per diem and expenses	182.50	
Mileage books (R. R. Transportation)	1,080.00	
Automobiles, supplies, and repairs	2,297.93	
Board of Examiners, per diem and expenses	93.64	
Printing	1,914,05	
Postage	307.50	
Stationery supplies	230.66	
Telephone service	95.05	
Telegraph service	2.7.59	
Instruments	101.98	
Electrical supplies	19.08	
Express	15.06	
Miscellaneous	188.41	
Total		\$31,414.36

FIELD EQUIPMENT

One Hupmobile Roadster Coupe Three Dodge Touring Cars One Ford Touring Car Seven Anemometers One Psychrometer One Geophone

Surplus

Five Speedometers
One Carbon Monoxide Gas Detector
Five Marseant Safety Lamps
Ten Koehler Safety Lamps
One Ancroid Barometer
One Burrell Gas Detector

One Gas Testing Box

SUMMARY OF THE COAL PRODUCTION OF COLORADO, 1922

Number of mines operated	275
Number of new and old mines opened	36
Number of mines closed 16; abandoned 2; total	18
Tons of sub-bituminous coal produced	
Tons of semi-bituminous coal produced	
Tons of bituminous coal produced Tons of anthracite coal produced	
Tons of semi-anthracite coal produced	,
Total number of tons coal produced	15,810
Increase, 1922	
Tons of run of mine coal produced	
Tons of lump coal produced	
Tons of nut coal produced	
Tons of pea coal produced	73.115
Tons of slack coal produced.	
Percentage of slack produced	42.8-
Tons of coal mined by hand	4,904,874
Tons of coal mined by machine	5,098,736
Kind and number of machines used: Compressed air 176; Electric 297; total	
Electric 297; total	473
Tons of coal mined for shipment.	
Tons of coal shipped out of the state	
Tons of coal sold to local trade and used by employees	544,011 227,836
Tons of coal used at the mines for steam and heat	750,998
Tons of coke made	490,668
Number of days coke ovens were operated.	337.7
Number of coke ovens used	377
Number of men employed at coke ovens	173
Number of miners employed: Pick 4,824; Machine 3,770; total	8,594
Total number of men employed in and about mines (average)	13,436
Number of employees foreign born	6,222
Number of employees speaking English	12,363
Average number of days worked (man days)	199.54
Daily production per miner	5.8
Annual production per miner	1,164 +
Number and type of safety lamps used: Flame 833;	F 790
Electric 4,906; total	5,739
Number of carbide lamps used	8,772 213,456
Number of pounds of permissible powder used	848.561
Number of pounds of black powder used	
Number of pounds of dynamite powder used	28.598
Number of men killed: Underground 71; Surface 3; total	74
Number of men injured	1,724
Number of men killed per thousand employed	5.5+
Number of men injured per thousand employed	128.3 +
Number of men killed per milion tons of coal produced	7.39
Number of men injured per million tons of coal produced	172.3 +
Number of tons of coal produced for each life lost	135,184
Number of tons of coal produced for each non-fatal accident	5,803
Number of men employed per fatal accident	181.6
Number of men employed per non-fatal accident	7.8
Number of widows left	48
Number of children left fatherless	107
Cost of development work in mines during 1922, 137 mines reporting	79 202 00
Number of days lost account of car shortage, 109 mines	10,202,00
reporting	5,619
Number of tons of coal lost through shortage of labor,	400.055
37 mines reporting	489,975

Tenth Annual Report

State Inspector of Coal Mines 1922

INTRODUCTION

The Tenth Annual Report compiled and tabulated by the State Inspector of Coal Mines is herewith presented.

The coal production of Colorado for the calendar year 1922 was 10,003,610 tons, an increase of 861,663 tons in comparison with the preceding year. The average number of men employed in and about the mines was 13,436, a decrease of 728 men compared with 1921, while the number of days worked was 199.54, a gain of 35.14 days over last year. The number of mines operated was 275, or 26 more mines than was recorded in the year before. Of these mines 131 have no railroad connections and supply local trade only.

There were 74 men killed in 1922, amounting to 5.5 per 1,000 employed, compared with 52 killed or 3.6 per 1,000 employed in 1921, and while seventeen lives were lost in the Sopris explosion, eleven lives were lost in the Oak Hills explosion and the Satanic fire in 1921. This increase in the loss of life is very discouraging because of the fact that so far as safety rules and safety devices are concerned, greater efforts than ever before were put forth during the past year, especially in the mines of Southern Colorado. It is a sad thing to say, but many of the accidents are the results of carelessness or incompetence on the part of the deceased or carelessness of the mine officials, All the safety measures in the world will not avail unless the underground worker is taught to protect himself, and the mine officials adhere strictly to the mining laws and the safety rules laid down in each mine. The non-fatal accidents numbered 1,724 and is an increase of 204, or 14 per cent more than in 1921.

In reviewing the coal industry of the State for the past year, the increase shown in the tonnage is rather remarkable, considering that there was a major strike effecting nearly all mines more or less, the greatest car shortage ever known, and a complete tie-up of The Denver & Salt Lake Railroad, by a cave-in which stopped transportation for over four months and at a time when the Routt county product is in great demand for storage purposes. Furthermore, to cap the climax of obstacles

to unhindered production, an unusually mild winter made a very slack domestic market. The strike failed to close up all the mines, many resumed operations almost immediately with curtailed labor and a very few were closed during the entire period of the trouble. The following figures show to what extent the strike effected the production. In April, the first month of the strike, the production fell from 984,159 tons in March to 401,674 tons in April. However, after that, it steadily increased each month and in August it was 952,556 tons, which is about normal.

Less coal was shipped out of the State than in 1921, consequently more coal was used for home consumption. This increase in the use of the product in the State cannot be charged to a heavy demand of the Pueblo Steel Works, as that plant did not resume increased activities until late in December. railroad yards and many of the coal yards were well stocked with fuel when the strike began. Yet in the fall, the monthly tonnages ran as follows: September, 889,967 tons; October, 923,777 tons; November, 1,002,701, and December, 1,555,777 tons. Therefore, there was no coal shortage in Colorado, and had the railroad facilities been good and the demand for coal from outside of the State been greater, the total production could easily have been the greatest in its history, as there was plenty of labor available after the strike was ended, and the capacity of the mines is such, that a great demand can be met without further development. What the coal industry of Colorado needs is a wider field of distribution and better transportation facilities.

NEW MINES

Seven new mines were opened up during the year, none on a large scale. Only two have railroad connections at the present time. As very little data concerning them was furnished this office, little more than bare mention can be made of them.

GRIFFITHS MINE, Griffiths Coal Co., post office, Canon City, Fremont county. Manager, David Griffiths. This mine has a slope opening about 500 feet long and reached a coal bed three feet and ten inches thick of the semi-bituminous variety. The mine is laid out for 40-ton daily capacity and has no railroad connections. Total cost of development and equipment was about twelve thousand dollars.

MOORE NO. 2 MINE, The North Park Coal Co., post office, Coalmont, Jackson county. R. W. Moore, Jr., manager. This mine has a slope opening 500 feet long and a shaft opening 225 feet deep. The coal under exploitation ranges between 30 to 60 feet in thickness and is of the sub-bituminous variety. The coal at the present time is hoisted through the shaft. The mine

has a 50-ton daily capacity and is connected with the U. P. R. R. by a branch road known as The Colorado, Wyoming & Eastern Railroad.

CHRISTENSEN MINE, Christensen Coal Co., post office, Littleton, but the mine is located in Jefferson county. Victor Christensen, manager. This property is a slope opening about 300 feet long and the coal bed is from 12 to 14 feet thick of the sub-bituminous variety. It daily capacity is 100 tons. It has no railroad connections. Tipple, screens, scales and other equipment have been installed, and also necessary buildings erected at a cost of twenty-three thousand dollars.

YOUNG MINE, Young & Caddell, post office, Rapson, Las Animas county. Thomas Caddell, general superintendent. A slope 300 feet long was driven and connected with a coal bed three feet five inches thick of the bituminous variety. The mine has a daily capacity of forty tons and is located close to the C. & S. R. R. Cost to date of development work and necessary equipment is five thousand dollars.

McINTOSH MINE, McIntosh & Pritchard, post office, Trinidad, Las Animas county. This is a small wagon mine with a daily capacity of 15 tons. It is a drift opening 450 feet long and the coal mined is four and one-half feet thick and of the bituminous variety. Wm. Pritchard is the manager and the property at the present time represents an outlay of fifteen hundred dollars.

PHILLIP MINES NOS. 1 AND 2, Producers Coal Co., post office, Craig, Moffat county. John E. Daly, manager. This mine has two openings, one a slope about 100 feet long and the other a drift 380 feet long. The coal under exploitation belongs to the Middle Series of the Mesa Verde Group, and consists of six beds aggregating 44 feet in thickness of good bituminous coal. The mine is laid out for a 100-ton daily capacity and is equipped with boilers, engines, pumps, an air compressor, pipe lines, trackage and tipple. A wagon road three miles long was built. This property represents an outlay of fifty thousand dollars, and was opened with the expectation of having railroad connections in the near future.

MOUNT EVANS MINE, Mt. Evans Fuel Co., post office, Craig, Moffat county. A. A. Evans, manager. This mine has a slope 270 feet long and struck a coal bed 6 feet thick and of the bituminous variety. The mine at present has a daily capacity of 20 tons, which is sold to local trade for which purpose a wagon road was built. However, the purpose is to operate on a large scale when railroad connections are made. This property represents an outlay of twenty thousand dollars. Two small tipples were erected, some machinery installed and several buildings erected.

IMPROVEMENTS

The following is a statement of some of the improvements made by The Colorado Fuel & Iron Company to make their mines as safe as possible. Recently at the request of Robert Mc-Allister, Company Inspector for The Colorado Fuel & Iron Company, I visited two of their mines, namely, the Frederick and Sopris No. 2, to see the effect of the sprays recently installed to assist the radiators in making the coal dust more wet.

The fine sprays are located on main haulage about 500 feet apart and branching at intervals into the air course. On partings where trips are made up, very large sprays are placed. The fine sprays are operated continuously when necessary. The large sprays are used to wet down the loaded cars before leaving the partings. In some instances similar sprays are used to wet down empty cars before entering the mine.

In the Frederick mine I found three men employed on main haulage roads gathering the fine coal and dust into little piles to be loaded out by the night shift. Sides and top of haulage roads wet and the fine coal on the bottom so wet that upon squeezing it in the hand wet balls were formed.

In Sopris No. 2, the conditions relative to dust while not as good as Frederick, show a great improvement in the last year and are very satisfactory.

The following is a table on sprinkling and humidifying systems installed by the Colorado Fuel & Iron Company in their mines in the Trinidad District during the past year:

Name of Mine	1-in. Pipe	2-in. Pipe	4-in. Pipe	8-in. Pipe	Small Sprays	Large Inside	Sprays Outside
Morley	150'	3,000′			6	. 1	
Sopris No. 1		3,500'				5	1
Sopris No. 2	500'	10,450'		325'		7	1
Frederick	4,050'	2,400"			19	2	1
Primero	4,100'	5,400'			45	2	1
Tabasco	6,065'	4,433'	650'		20	2	1
Berwind	2,800'	7,488'	894'		5	1	
Toller	2,741'	3,315′			35	7	
Totals	20,406'	39,986'	1,544′	325′	130	27	5

NOTE: Sopris No. 2, 325 ft. of 8" pipe conveys steam from fan exhaust down drill hole to humidify inside mine. Toller, 5,000 ft. of 4" pipe, installed about two years ago and has been tapped for sprinkling line as well as serving its original purpose of drainage. Walsen-Robinson mines has installed 6,000 ft. of 144" to 2" pipe for humidity purposes.

In the Morley Slope mine, which already has two intakes and two returns, another opening will be started. The third entry is under construction at Frederick and at Sopris the fourth entry is being driven. All this work is being done for the purpose of increasing the ventilation as needed.

The following is a letter which was received from D. A. Stout, Mgr. F. D., Colorado Fuel & Iron Co., concerning safety devices being installed at some of their mines:

THE COLORADO FUEL AND IRON COMPANY, PUEBLO, COLORADO.

D. A. Stout, Manager Fuel Department.

Mr. Jas. Dalrymple,
State Mine Inspector,
Denver, Colo.

March 16, 1923.

Dear Sir:

Sometime ago we had an automatic device installed at our Tabasco fan and power house whereby the power in the mine might be cut off in case the fan were to stop running or even the fan slowed down in speed. This device is worked through a contact in the fan building, which works a breaker within the power house and throws off the power over the entire mine. In conjunction with this and as a further safety measure we have installed a switch at our main slope hoist, which can be operated by the hoist man in case of runaway trips on the main slope. Should a runaway occur all he has to do is to throw off the power by pushing a button and thus relieve us of the danger of short circuits in the mine due to derailed trips. Our idea in throwing this was, of course, to reduce the chance for an explosion due to dust thrown into the mine by the wrecking of the trip. These devices are being installed at all of our mines, where there is a possible danger of this kind, and is a part of our program in trying to make our mines as safe as it is possible to make them.

From time to time as we develop other devices, we will be glad to advise you and will always welcome any suggestions you or your assistants may have in making the mines safer for those men who work underground.

I am inclosing for your information two prints of the device which we have at Tabasco mine.

Yours truly,

DAS-as

(Signed) D. A. STOUT.

The efforts being made by The Colorado Fuel & Iron Company to make their mines more safe are deserving of mention and other companies operating under similar conditions might benefit by following the example, and would advise making a thorough inquiry, including a visit to the mines above mentioned, so as to see the results for themselves.

The Royal Fuel Company, as their Royal Mine at Aguilar, Colorado, is putting down a new air shaft, 10x20 feet in the clear, so as to be able to properly ventilate the large acreage yet to be mined. Sprinkling lines have also been installed to properly take care of the coal dust.

FIRING OF SHOTS

Section 158 of the Coal Mining Laws provide that in mines where, in the judgment of the mine foreman, the roof is in such condition as to become dangerous if permitted to stand over night, he may by the employment of a shot examiner to examine each hole and the charge inserted, permit the miners to fire the cutting shots at the beginning of each shift and the remaining rib shots during the noon hour. If this privilege is abused it may be canceled by the Chief Inspector of Coal Mines. This privilege has been very much abused in most of the lignite mines. Shooting as above stated has been done and is still being done regardless of roof conditions, even in mines equipped with Oldroid cutting machines, undercutting to a depth of eight feet. Any practical man can readily see that a roof that will allow shots to a depth of eight feet to be fired is capable of supporting itself over night. Nevertheless, shooting during the day is done to as great an extent in those mines as in any other mines using puncher machines and undermining only half the depth of the others, then it is evident that the installing of the Oldroid machines has not improved working conditions. In my opinion, healthy conditions at the working faces are impossible during the day on account of powder smoke. Ninety per cent of all shots fired during the day are unnecessary on account of roof conditions.

Nearly all of the operators, mine officials, and miners in the lignite fields believe, or at least try to make others believe, that shooting during the day is an absolute necessity in the lignite mines. A few of the miners have appealed to me to assist them in doing away with the powder smoke nuisance during the day, but so long as the great majority of all the others directly connected with the question are in accord with the present methods, I can render them very little assistance. One or two of the companies, including The Pikes Peak Consolidated Fuel Company at Colorado Springs, Colorado, prohibit shooting during working hours, and in so doing neither the production of the mine or the wages of the miners have suffered.

In the interest of human life, I appeal to those who are in a position to remedy the conditions complained of, and if there is a doubt in the mind as to whether or not they can be remedied without loss, visit the Pikeview Mine and see for yourselves.

COAL MINE INSPECTION FUND

On account of lack of funds, the printing of the Inspectors Annual Report was delayed, also postponing the holding of examination for Coal Mine Officials, now a year over-due, and it may become necessary to lay off some of the inspectors. The Coal Operators turned down my request for an increase in the tax on coal from one-third of one cent to four-tenths of one cent per ton on

coal mined. A Bill was then presented to the Legislature carrying an appropriation of two thousand five hundred (\$2,500.00) per year, but failed to pass because it did not receive the approval of the Committee on Appropriations.

PROSECUTIONS

Information for violation of the mining laws was filed with the District Attorney at Greeley, against eight miners and two They were all given a hearing, four of them mine foremen. pleaded guilty, five not guilty and trial set for 10:00 a.m. March 13th, 1923. The complainant never received any official notice of either hearing or trial, notwithstanding that he had written two letters to the District Attorney concerning them. Thirty minutes after the hour set for the trial, the District Attorney called me by telephone and wanted to know why I was not present at the trial. Upon telling him that I had no official notice. he said, "I will dismiss the whole thing and no further complaints will be received by me from your office." It is fortunate that there is only one coal producing county in his district and that he is the only District Attorney in the State that has no respect for the State or the laws governing it.

Respectfully submitted,

JAMES DALRYMPLE, State Inspector of Coal Mines.

TABLE SHOWING

FATAL ACCIDENTS, AGE OF DECEASED, AND EXPERIENCE OF DECEASED FOR 1920, 1921 AND 1922

GRA	GRAND TOTAL	4	15	871	834	1,724

PERMANENT TOTAL DISABILITY. Loss of both legs or arms, one leg and one arm, total loss of eyesight, paralysis or other condition permanently incapacitating workman from doing any work of a gainful occupation.

PERMANENT PARTIAL DISABILITY. Loss of one foot, leg, hand, eye, one or more fingers, one or more toes, and dislocation where ligaments are severed, or any other injury known in surgery to be permanent partial disability.

In this column include only accidents which cause a loss of time more than the balance of the day or shift upon which the acci-

dent occurred.

REPORT ON SOPRIS NO. 2 MINE EXPLOSION

April 28, 1922.

Mr. James Dalrymple, State Inspector of Coal Mines, Capitol Building, Denver, Colo.

Dear Sir:

The following is my report concerning the explosion at Sopris No. 2 mine, which occurred on the afternoon of March 24th, 1922.

The mine is situated four miles west of Trinidad, Las Animas county, Colorado, on the Colorado & Southern Railroad, and is operated by the Colorado Fuel & Iron Co. The mine is opened by two parallel slopes, course East of South, 700 feet long. The slope dips 15%, the manway 20%, from this point the mine is practically level.

The mine is ventilated by a steam exhaust, reversible fan, 6x12 feet, double port of entry, steel type, made by the Colorado Fuel & Iron Company and was installed 50 feet, at right angles, from air-shaft. The volume of air entering the mine varied from 80,000 to 90,000 cubic feet per minute under three-inch water gauge and was conducted into the different districts by the split system, there being six splits.

The air upon entering the mine is pre-heated by radiators. Steam is then thrown into it for the purpose of furnishing all the moisture it will carry. The relative humidity readings taken by Deputy State Coal Mine Inspector, semi-annually, during summer and winter months varies but very little, if any, and run from 90 to 100. In addition to this, haulage roads were sprinkled frequently, part by hose from pipe line and part by water car.

Haulage system was by rope, electric motors, and mules. The voltage for electric motors was 550 D.C., and for electric machines and pumps, 440 A.C. Haulage motors and electric pumps were on the intake air. Electric head lamps were used exclusively, except mine officials.

Superintendent, mine foreman, assistant mine foreman, fire bosses, and shot firers use safety lamps for detection of explosive gas. All shots were fired at night by electric hand batteries, only permissible powder being used.

The mining of coal was done by hand on the east side of mine. Main slopes and west side of mine by electric machines.

At 4 o'clock in the afternoon of March 24th, 1922, I was notified by telephone through the office of the Colorado Fuel & Iron Co. that Sopris Mine No. 2 had exploded and that from 75 to 80 men were entombed, but by checking out the men it was found that all men were out but 17, who lost their lives. I immediately went to the mine and upon my arrival there found that the fan was still intact and in operation. The explesion doors to fan were blown out, thus disconnecting the fan from the mine until temporary repairs were made, when the ventilation was partly restored in the mine.

On entering the mine I found the Superintendent, Mine Foreman, Fire Bosses, and several others, building temporary stoppings along the main haulage road restoring the ventilation as rapidly as possible. The rebuilding of temporary stoppings was continued until 3:30 a. m. the morning of the 25th and progressed to within 500 feet of slope faces, when the shift which had continuously worked from the time of the explosion was withdrawn until that district could be cleared of gases. This shift was relieved by another shift, who after several hours found the bodies of the slope men.

The east side of the mine was explored by Mr. McAllister, C. F. & I. Mine Inspector, fire bosses, two others and myself, and we found that the point of ignition was not in the east side of the mine. The slopes and west side of the mine were explored by D. M. Harrington, U. S. Bureau of Mines, Robert McAllister, Company Inspector, State Inspector of Coal Mines, three Deputy Inspectors, and mine officials, who found that all permanent stoppings had been destroyed between the main intake and return airway, from the foot of 700-foot slope to face of main slopes, except three, which were left intact. All over-casts, under-casts, and doors were destroyed except one over-cast, which had been lately constructed on new airway, east side of mine.

There were four electric Sullivan latest type C. E. 7, gas proof machines carrying U.S. Bureau of Mines permissible plates. Three of them were in the 7th and 8th west entries. These machines ordinarily started cutting about 3:00 p. m. and quit about 11:00 p. m. Machine No. 1 was found in 8th west back entry still on its truck. Machine No. 2 was found in room No. 3 off room No. 9, 14 cut-off, set up and ready to start, Machine No. 3 was found in room No. 49, 7th west entry. machine apparently was in operation when the explosion occurred, but there were no signs of heat or violence within three or four hundred feet of this machine. The power apparently had been cut off by the men before leaving. Their bodies were found 800 feet from the machine. Machine No. 4 was employed in the main slopes, cutting here was done during the day. The machine was found on main slope, apparently it had been brought from the right back slope, as the feed cable was still there.

There are three places in the mine, either of which might have been the initial point. They are as follows: The 8th west right back entry, room No. 3 off room No. 9, 14 cut-off, and right hand back slope. All of these places generate explosive gas, especially the latter, and all of them are equally dependent on doors for ventilation. The leaving open of a door or doors at either place for 20 or 30 minutes would allow an accumulation of explosive gas. In the right back slope it would be greater than at either of the other two.

At the inquest it was brought out that there was no regular fire boss examining the places on the afternoon shift, as the regular night fire boss did not come on shift until 4:00 o'clock, which was two hours after the machine men had entered. Therefore, some places may have been cleaned up several hours before machine men entered to cut them, and in all probabilities a considerable body of gas was generated in the meantime.

The scouring on sides of main slope 7th west entry into room No. 1 and the condition of cars on main slope at 5th east parting, where parts of cars had been blown outward and inward, also coke deposits on inside and outside of timbers, indicate that double action had taken place. This evidence does not exist in other parts of the mine, where there was considerable room for expansion. Here there was very little sign of violence, but intense heat, timbers being charred deeply on all sides, with considerable deposits of coke all over them. The scouring on main slope and 7 west entry into room No. 1 indicate that last force came out of the 7th west entry and down main slope, destroying to some extent the scouring made by the previous force traveling in the opposite direction.

In conclusion, the catastrophe was an explosion of gas and dust, caused by an accumulation of gas through a door or doors being left open, and ignited by an electric arc, and that in all probability the right back slope was the initial point.

Respectfully submitted,

W. M. LAURIE,

Deputy State Inspector of Coal Mines.
District No. 1.

- Explosion at the Sopris mine in which 17 lives were lost:
- March 24—PETE ADAMO, American, machine helper, age 33 years, married, two children.
 - FRANCESCO AMETEIS, Italian, pick miner, age 23 years, single.
 - ANTONIO BERTETTO, Italian, pick miner, age 22 years, single.
 - GUISEPPE BONATO, American, pick miner, age 64 years, married, two children.
- MIGUEL CAUDILLO, Mexican, machine loader, age 28 years, married, no children.
- MAX COVI, Austrian, machine runner, age 44 years, married, four children.
 - PETE DELDOSSO, American, runner and machine miner, age 24 years, married, one child.
 - FELIX MAGLIA, Italian, pick miner, age 24 years, single.
 - JOE MARLO, American, runner and machine miner, age 33 years, married, one child.
 - PETE MUSIAL, Polish, pick miner, age 36 years, married, one child and three step-children.
- RUDOLPH PEASHKA, American, pick miner, age 36 years, married, four children.
- CHARLES ROMERO, American, machine runner, age 45 years, married, seven children.
 - ROBERT E. ROMERO, American, machine helper, age 18 years, single.
 - PETE L. SAVIO, American, runner and machine miner, age 25 years, married, one child.
 - ODILAN SERRANO, Mexican, machine miner, age 47 years, widower, two children.
 - FRANK VALENCHICH, Slav, machine runner, age 32 years, married, no children.
- MATT VALENCHICH, Slav, machine runner, age 28 years, married, two children.

LIST OF FATAL ACCIDENTS WHICH OCCURRED IN THE COAL MINES OF COLORADO DURING THE YEAR 1922

- (1)—January 14—RUDOLF BLOCHTER, American, pick miner, experience 10 years, single, employed by the Colorado Fuel & Iron Company at the Walsen mine, Huerfano county, was killed by a fall of coal and rock. Deceased was working in a pillar which was squeezing slightly with a bone coal over top of coal. The mine foreman and the brother of deceased had examined the roof and considered it safe. However, it was penetrated by several small pots of bone coal next to the regular roof which were not visible until after the fall. The accident was unavoidable.
- (2)—January 30—FRANK VIDIO, Slav, pick miner, experience one year, age 26 years, married, no children, employed by Caddell and Taggart at the Cuchara Canon mine, Huerfano county, was killed by a fall of rock. Deceased was working in a room when without warning a pot-shaped rock fell on him, causing instant death. The accident was unforeseen and therefore unavoidable.
- (3)—January 30—ROBERT ROMINES, American, pick miner, experience 15 years, age 49 years, single, employed by the Routt-Pinnacle Coal Company at the Routt-Pinnacle mine, Routt county, was killed by a fall of pillar coal. The coal was shot off the solid a day or two before the accident. Some shots had been fired which crushed the coal but left it standing. Deceased was loading a car when some of the loose coal fell on him, killing him instantly. The place was well timbered, but the accident could have been avoided had deceased pulled down the loose coal before starting to work near it.
- (4)—January 31—LOUIS UBERTI, Italian, pick miner, experience 7 years, age 27 years, single, employed by the Oakdale Coal Company at the Oakdale mine, Huerfano county, was killed by a fall of rock. A drawslate of 2½ feet thick on top of coal, and which could not be held up with timbers, had been pulled down square with face of coal; an invisible slip was exposed in the rock above. While deceased was working underneath mining coal it came down without any warning, killing him instantly. The accident was unforeseen and therefore cannot be charged to any one.
 - (5)—February 9—RAYMOND HUGHES, American, rope rider, experience three years, age 19 years, single, employed by the Colorado Fuel & Iron Company at the Crested Butte mine, Gunnison county, came to his death by a collision of two trips. The mine is operated by two hoisting engines situ-

ated at the mouth of the mine, one hoists loaded cars to a parting about 250 feet inside the mine, from where the other takes it to the tipple. At the parting the ropes pulling the trips cross each other and if a trip is standing there it has to be uncoupled from the rope before the trip can pass. In this instance, the rope rider of the trip on the parting neglected to detach his trip from the rope and consequently when Hughes' trip came along and not seeing in time that the road was not clear, it was too late to jump, the trips collided and he was thrown between cars and crushed so severely that he died a few hours later. The accident was caused by a co-worker's earelessness.

- (6)—February 11—JOHN HOGAN, Colored, pick miner, experience 20 years, age 53 years, widower, one child, employed by the Moffat Coal Company at the Oak Hills mine, Routt county, was killed by a fall of coal. Deceased was working on a pillar with a bar prying some coal down from a standing shot when it suddenly gave way and struck him before he could make his escape. The room was in a safe condition, the roof solid and the place well timbered. The accident was unforeseen and therefore unavoidable.
- (7)—February 18—J. H. KEITH, American, driver, experience seven years, age 29 years, married, no children, employed by the Canon Reliance Coal Company at the Canon mine, Fremont county, came to his death under a loaded ear. There was no eye-witness to the accident and it is believed that the mule he drove, being of a nervous disposition and inclined to leap forward when unexpectedly touched, was flecked by a small rock falling from the roof and threw deceased from the front end of the car, which ran over him killing him instantly. The accident was unforeseen and no one is held responsible for it.
- (8)—February 23—ANTONE SANKEY, Italian, piek miner, experience 9 years, age 40 years, married, two children, employed by the Colorado Fuel & Iron Company at the Sopris mine, Las Animas county, was killed by a fall of rock. Deceased and his partner were splitting a pillar when a slip running across the place was exposed, releasing the rock fall. The accident was a misadventure due to the inherent danger of the work.
- (9)—February 24—CASIMERO RIVERA, American, tipple laborer, experience none, age 50 years, married, no children, employed by the Colorado Fuel & Iron Company at the Sopris mine, Las Animas county, came to his death by being erushed under a loaded mine ear. Deceased was driving the ear to the tipple when he either fell off the ear while it was moving, or slipped under it while he was braking it. There was no eye-witness to the accident and it is elassed as unforeseen.

- (10)—March 1—MATT STARK, Croatian, machine miner, experience three years, age 32 years, married, one child, employed by the American Smelting & Refining Company at Boncarbo mine, Las Animas county, was killed by a fall of rock. Deceased and his partner were loading coal in an entry, when a large pot rock fell from the roof. Upon examination it was disclosed that the edge of the rock had been resting on the face of the coal which was being mined and was thus released. The accident was unforeseen and therefore was not guarded against.
- (11')—March 1—DONALD A. YOUNG, American, electrician, experience 18 years, age 35 years, single, employed by the Oakdale Coal Company at the Oakdale mine, Huerfano County, came to his death by electrocution. Deceased was knocking icicles off the eaves of the power house with a steel nail bar about three feet long with a hook at the end of the bar which was caught on a wire when the body was discovered. No one was present when the accident occurred and it is believed that he either overlooked the live wire which extends from the switchboard inside of the power house under the eaves of the building to a tower close by, or else he lost his footing, throwing bar over the live wire, causing a shock which killed him. Accident was due to carelessness of deceased in using a steel bar so close to electric wires.
- (12)—March 4—ALBERT BERGEN, Mexican, pick miner, experience two and one-half years, age 23 years, single, employed by the Colorado Fuel and Iron Company at the Morley mine, Las Animas county, was crushed to death between a car and roof. According to evidence, the rope runner had backed the rope with three empty cars into the room of deceased asking him to uncouple one of the cars for his use. Shortly after, he notified the rope runner that he had his car and the latter gave the signal to the engineer to hoist. However, when the cars were hoisted, it was discovered that the car was not uncoupled and deceased was found with his head caught between the edge of one of the cars and the roof. It is a dangerous practice to allow the miners to uncouple cars and should be discontinued. Had the rope rider uncoupled the car as it was his duty to do, the accident would have been avoided.
- (13)—March 8—TONY ZEHAR, Russian, machine miner, experience four years, age 47 years, married, two children, employed by the Colorado Fuèl and Iron Company at the Robinson mine, Huerfano county, was killed by a fall of rock. Judging from the appearance of the place after the accident, a piece of rock back of him fell and killed him. The place was fairly well timbered and had been narrowed from 20 feet to 10 feet because of bad roof. Deceased was considered both a careful and experienced man. The accident was unforeseen and consequently unavoidable.

- (14)—March 16—PETE GOTZOFF, Bulgarian, pick miner, experience 9 years, age 43 years, married, three children, employed by the Victor-American Fuel Company at the Pinnacle mine, Routt county, was injured by a fall of coal on the 15th and died on the following day. Deceased and his partner were taking coal off a pillar to load a car; while thus engaged, the roof gave a "bump" and caused a large piece of coal to fall on the former. Deceased's partner stated that they had tested the coal and considered it safe to work under, but the "bump" of the roof released the coal. This accident is charged to the inherent danger of the work and could not be foreseen.
- (15 to 31)—March 24—SEVENTEEN men lost their lives in a gas and dust explosion at the Sopris mine, operated by the Colorado Fuel and Iron Company, in Las Animas county. See Report on page 54.
- (32)—March 24—PETROLINO VIGIL, Mexican, pick miner, experience 20 years, age 45 years, single, employed by the Victor-American Fuel Company at the Cass mine, Las Animas county, was killed by a fall of rock. Deceased was working in a pillar entry where a drawslate of ten inches in thickness overlies the coal, a piece of which was loose. While deceased was in the act of taking a skip off the pillar, the rock fell on him killing him instantly. The accident was unavoidable.
- (33)—March 28—GEORGE LEDWICK, Austrian, pick miner, experience 18 years, age 43 years, married, no children, employed by the Leyden Coal Company at the Leyden No. 3 mine, Jefferson county, was killed by a fall of eoal. This accident is attributed to negligence of deceased in not testing the roof before starting to work. Had he ascertained the condition of the roof he would probably have set up enough props to have made the place safe, but he was in a hurry to load the coal.
- (34)—March 31—HUGH GRAHAM, Scotch, car coupler, experience 50 years, age 65 years, married, two children, (adults) employed by the Consolidated Coal & Coke Company at the Baum mine, Weld county, was injured by being caught between two ears on February 6th, and died on the above date. Deceased was in the run-a-round making up a motor trip of empty cars. While standing between two cars in the act of coupling them, an empty car came running down, bumping against the car he was coupling and was struck by the bumpers, causing such serious injuries that he died of the effects of same on the above date. Deceased stated that he did not hear the car coming and therefore was not able to get out of the way in time to escape the crash. Had his hearing not been defective, it is probable that the accident would have been avoided.

- (35)—April 10—BERNADO PAIZ, Mexican, machine miner, experience 9 years, age 40 years, married, six children, employed by the Colorado Fuel & Iron Company at the Sopris mine, Las Animas county, was killed by a fall of rock. The room in which the accident occurred had been undercut and shot the day previous to the accident. Early in the morning deceased and his partner were loading the coal out when a large rock gave way and fell, striking Paiz and killing him instantly. No timbers had been set up when the coal was removed. The assistant mine foreman stated that he had visited the place shortly before the accident and found it in good condition, although the roof was, somewhat bad. He advised that props be set up. The accident was unforeseen and no blame can be placed.
- (36)—May 8—JOE ORTEGA, Mexican, mule driver, experience two years, age 23 years, single, employed by the Boulder Valley Coal Company at the Boulder Valley mine, Weld county, was killed between a loaded car and roof. At the point where the accident occurred there is an upthrow of the coal seam. Deceased was driving a loaded car, sitting on the front end, when reaching the upthrow his head struck against the roof, forcing him to the top and side of the car and crushing him so severely that he died shortly after. There is sufficient height in the entry and had deceased exercised proper care the accident could have been avoided.
- (37)—May 9—COSMOS DAVIS, American, machine miner, experience 12 years, age 43 years, married, four children, employed by the Victor-American Fuel Company at the Delagua mine, Las Animas county, was killed by a fall of drawslate. Deceased was working at the face of his room where the coal is overlaid by drawslate about eight inches thick, which either falls when the coal is shot, or is taken down, and the roof then timbered. In this instance, the place had been shot the night before and the slate had fallen, except a small portion. Deceased was in the act of taking this down, when it suddenly gave way, falling on him and breaking his neck. The place was well timbered and deceased was doing his work to the best of his judgment. The acident was due to the inherent danger of the work and no one can be held responsible for it.
- (38)—May 18—BLAZ MARTINEZ, Mexican, machine miner, experience six years, age 29 years, single, employed by the National Fuel Company at the Puritan mine, Weld county, came to his death by a fall of coal. Deceased was loading a car and the probabilities are that he stepped back and his feet were caught in the track tie or rail and he fell, causing a piece of coal weighing about a ton, to roll on him. Death was accidental and no one is blamed.

- (39)-May 22-CIPRIANO SILBA, Mexican, machine miner, experience two years, age 48 years, widower, one son, employed by the Rocky Mountain Fuel Company at the Forbes mine. Las Animas county, was killed by a fall of rock. Deceased and his son were examining the face of their room before commencing to work when a rock fell on the former, killing him instantly. The coal seam at this mine is four feet high and is too low to be cross barred, but the gob was well timbered, only for the track in this part of the mine, is the roof brushed. It appears that deceased had left the brushing behind for 18 feet, having practically loaded out three cuts of The fire boss claims that when he examined the place, there was no indication of danger from the roof. It is evident, however, that the mine officials were careless in allowing the brushing to fall so far behind. Had they made deceased brush after each cut, the aeeident probably would have been avoided.
- (40)—June 13—MIKE JUMOVECH, Austrian, machine miner, experience 20 years, age 47 years, married, two children, employed by the Gordon Coal Co., at the Gordon mine, Huerfano county, was killed by a fall of rock. The aecident occurred in a room which was well timbered but a rock between two cross bars, with a prop under it did not look safe, and deceased decided to take it down. While in the act of prying it loose, it fell killing him instantly. The accident was a misadventure, due to the inherent danger of the work.
- (41)—June 20—JOE DI SANTIS, Italian, piek miner, experience 12 years, age 40 years, married, one child, employed by The Colorado Fuel & Iron Co. at the Berwind mine, Las Animas county, was killed by a fall of rock. Deceased was loading a car with coal in an entry when, without warning, a large pot fell from the roof, killing him instantly. This pot rock was eleven feet long and eight feet wide with an average thickness of two feet and was hard to detect as the slips were invisible. The accident was unforeseen and no one is charged with its responsibility.
- (42)—June 21—BERT POIER, Austrian, pick miner, experience 13 years, age 37 years, single, employed by The Cedar Hill Coal & Coke Co., at the Greenville mine, Las Animas county, was killed by an explosion of powder. The evening before the accident, the shot firer had tamped and charged two shots in the room where deceased was working. The shot on the upper rib had two sticks of powder and was about four feed in depth; shot on lower rib had three sticks and was about four and one-half feet in depth. Deceased had worked off all the coal of both shots with the exception of about fourteer inches of the lower shot when near the back of the hole his pick came in contact with the powder exploding it and cansing instant death. Deceased came to his death through no

fault of his own. Mine foreman and shot firer declared under oath that the shots had exploded and shattered and broken the coal of both shots. The accident probably was caused by a missed shot or defective powder which did not ignite when the other powder exploded. The accident may be classed as unavoidable.

- (43)—July 8—ANDREW McCLOSKY, Lithuanian, pick miner, experience six years, age 40 years, employed by Fruth & Stone at the Leader mine, Huerfano county, came to his death by a fall of rock. The accident occurred at the face of an entry. A piece of drawslate about one foot in thickness, which was always taken down as soon as the coal was mined from under it, had been left up and not timbered. The accident may be charged to the negligence of deceased and partly to the mine foreman in not making a second examination of working places while the men were in the mine.
- (44)—July 18—JOE GONZALES, Mexican, mule driver, experience six years, age 31 years, married, three children, employed by the Rocky Mountain Fuel Company at the Columbine mine, Weld county, was crushed to death between a loaded car and pillar side. At the point where the accident occurred the width of the roadway is 11 feet and six inches, the height 6 feet. On the right side coming out to the parting the width to the rail is 7 1-2 feet and on the left side, where deceased's head was crushed, the width from the rail to the pillar side is only from 10 to 12 inches. Deceased was riding on the front bumper on the left side of the car, when from some cause unknown, his head was caught between the car and pillar side. Deceased should have kept his head toward the wide side.
- (45)—July 20—SOSIO SALVATI, Italian, pick miner, experience ten years, age 37 years, single, employed by the Oakdale Coal Company, Huerfano county, came to his death by a fall of rock. Deceased was working in a pillar on an entry. He had been told by the mine foreman to take down a rock the evening before the accident occurred, but he did not do so. The next morning he was in the act of timbering the rock when it came down before he could get out of the way. Disobedience on part of deceased and carelessness of the mine foreman in not seeing that his instructions were promptly complied with before leaving the working place, led to the accident.
- (46)—August 1—FRANCISCO ACOSTA, Mexican, loader, no previous experience in coal mining, age 29 years, married, three children, employed by the Rocky Mountain Fuel Company at the Columbine mine, Weld county, was killed by a fall of drawslate. At the point where the accident occurred the coal seam is cut by a 19 inch band of drawslate which is

taken down. On the evening of the accident the night foreman visited the place and attempted to take down a rock, he failed, and left deceased to work under it with the result that five minutes later the rock fell on Acosta, killing him instantly. Deceased had no experience and therefore it was the duty of the official, when he could not get the rock down, to prop it.

- (47)—August 12—ATTILIO GUALANDRI, Italian, day man, experience 14 years, single, employed by the Colorado Fuel & Iron Company at the Robinson No. 2 mine, Huerfano county, was killed by a fall of rock. Deceased with several other men was engaged trimming a rib and side, taking down loose rock and putting up props for the purpose of installing electric wires in the entry. A slab of rock came down without warning on deceased, causing such injuries that he died a few hours later. The entry where the accident occurred had been abandoned for some time, the roof is moist and considered good and very little timber is used. Owing to the nature of the work, the roof being moist and the entry having been abandoned for some time, the accident was unforeseen and unavoidable.
- (48)—August 26—GUST KATSOULIS, Greek, machine miner, experience ten years, age 36 years, married, three children, employed by the Bear Canon Coal Company at the Bear Canon mine, Las Animas county, came to his death by electrocution. According to evidence, deceased was on the main entry and stepped aside to let a driver pass, and in so doing he came into contact with a bare spot on the feed wires which had been cut out of the insulated wires for the nips. No other part of the wires were exposed except where the nips applied. The accident is classed as unavoidable.
- (49)—September 8—ANTHONY FERRARI, Italian, machine miner, experience not given, age 55 years, married, five children, employed by the Big Four Coal and Coke Company at the Centennial mine, Boulder county, was killed by an explosion of black powder. Deceased and seven other employees were in the powder magazine for the purpose of getting their powder supplies. An explosion took place, powder became ignited probably from a spark from a eigarette or pipe, or from a flame from an open light or by striking a match. Four of the men escaped uninjured and the other four were severely burned, Ferrari dying that night. The miners at this mine open their own powder kegs from which they fill their powder jacks.
- (50)—September 19—JUAN PANTOJA, Mexican, pick miner, experience 21 days, age 33 years, married, four children, employed by the Victor-American Fuel Company at the Delagua mine, Las Animas county, was killed by a fall of rock. Deceased and his partner were mining coal in a room,

the former on the gob side and the latter on the road side. Deceased had released the inby portion of a large rock which was in the shape of a pot. The place was well timbered, the props being set about four feet from the face, one prop being under the outer edge of the pot. When the rock was released it threw out the prop and fell on deceased, killing him instantly. The accident was unforeseen and no one can be held responsible for it.

- (51)—September 19—JACOB GARCIA, Mexican, machine miner, experience 2 years, age 30 years, single, employed by the Temple Fuel Company at the Brodhead No. 9 mine, Las Animas county, came to his death by coming into contact with a live wire. Deceased and his partner were walking out on the haulage road, when the latter was about 60 feet ahead he heard the former scream and hastened back and found him on the wires. He was released soon afterwards but too late to save him despite the application of a Pullmotor. The investigation disclosed that a few weeks previous to the accident, the pumper discovered that two of the wires in the feed line in this section of the mine were broken and he repaired them, but not having any tape with him, left four bare connecting points. He stated that he notified the line man the next day that he had made this splice, but forgot to mention that he had left the connection points uninsulated. There was a little water in the entry and the shoes of deceased being in poor condition, it seems that he tried to walk on a discharge pipe from the inby pump which was running parallel with the track and directly under the trolley line $2\frac{\pi}{2}$ feet from the feed line. He must have slipped and in trying to save himself he reached out and seized the bare place in the feed line. In all probability the accident would have been avoided had the connecting points been thoroughly insulated or the wires have been of lower voltage which was 440 volts A. C.
- (52)—September 22—NICK RELSE, Austrian, miner, experience 16 years, age 42 years, married, two children, employed by the Utah Fuel Company at the Somerset mine, Gunnison county, was killed by a fall of top coal. Deceased and his partner were extracting a chain pillar in an entry. Before starting to work they sounded the roof with a pick and decided to set a prop up against it. The day before, although there were no indications of loose top coal, the mine foreman told them to set up two rows of props, which they did, one row on each side of the track. While they were loading, the top coal caved, covering deceased and killing him instantly. The accident was due to the danger of the work as all safeguards had been taken.
- (53)—September 23—JABE SHAW, American, machine miner, experience 32 years, age 57 years, married, four chilren, em-

ployed by the Aztec Coal Mining Company at the Toltec mine, Huerfano county, was killed by a fall of rock. Deceased was loading machine-cut-coal in an entry and the driver cautioned him against a rock that looked unsafe. He neglected to timber it until after he had loaded two cars, he then was in the act of cutting a hitch for a timber when the rock came down on him. The usual distance for cross-bars at this point is about 2 1-2 feet, owing to a heavy drawslate full of triangular slips. A center prop should have been used until ready for the crossbar. The accident may be charged to the carelessness of deceased and the neglect of the mine foreman in not seeing that the place was properly timbered.

- (54)—September 25—Frank KROVERTIN, Austrian, timberman, several years experience, age 50 years, married, five children, employed by the Canon-Reliance Coal Company at the Canon mine, Fremont county, was killed by a fall of coal. Deceased was working night shift and was packing dirt back in gob in an entry along a long wall face. Preps and gobs were about four feet from coal face. Coal fell and caught deceased between coal and gob wall. He had put in one sprag which was placed about 1 1-2 feet from roof with one end set against a gob prop and the other end against the coal. The accident might have been avoided had sprags been set six feet apart against the bottom at an angle of 45 degrees. The accident was due to the impracticable spragging of the coal and may be properly charged to the carelessness of deceased and to the neglect of the mine foreman in not seeing that the spragging was insufficient and compelling the miner to set sprags before allowing work to start.
- (55)—November 6—ANDREW CHUBA, American, driver, experience one year, age 17 years, employed by the Canon-Reliance Coal Company at the Reliance mine, Huerfano county, came to his death by electrocution. While walking down the main slope, deceased probably stumbled and in an effort to prevent falling his hand was caught in a live bell wire causing a shock. There must have been an excess power of electricity on the bell wire which cannot be accounted for. After the accident the volt meter and voltage conditions were found to be normal. Accident was unforeseen and is not charged to any one.
- (56)—November 7—DEWEY STOKES, American, driver, experience three years, age 23 years, single, employed by the Ohio Creek Coal Mining Company at the Ohio Creek mine, Gunnison county, was killed by a fall of rock. A few hours before the rock fell the roof had been examined and found safe. Deceased was driving a loaded car on the entry and

- roof. The accident was unavoidable because there was no indication of danger.
- was directly under the rock when it broke loose from the (57)—November 10—ISIDRO TAFOYA, American, machine miner, experience five years, age 34 years, married, one child, employed by the Temple Fuel Company at the Brodhead No. 10 mine, Las Animas county, was injured by a fall of rock on the 2nd of November and died eight days later. The accident was due to a loose rock in the roof of a room which had been discovered by the mine foreman and who instructed deceased and his partner to set a prop under it. However, the men tested the roof several times and could find no loose rock and therefore neglected to carry out instructions. The accident is charged to the faulty judgment and disobedience of deceased in not heeding the orders of the mine oreman, and to the neglect of the latter in not seeing that his orders were carried out.
- (58)—November 13—JOHN FOSTER, Bohemian, driver, experience 15 years, age 30 years, married, no children, employed by the Grand Junction Mining & Fuel Company at the Cameo mine, Mesa county, was killed by a fall of rock. Accident occurred on a pillar entry where there was some broken roof. A row of props had been set about three feet apart on each side of the track and the turn was about 20 feet long with props set as close to the tracks as the passage of the cars would permit. A gun was used in driving through this narrow place and Mr. Foster was riding it when a rock fell between the props and landed on him with fatal results. The falling of the rock was unavoidable, but deceased showed poor judgment in riding the gun in this narrow place and the mine foreman was at fault in allowing him to do so.
- (59)—November 16—CHARLES W. EICHINGER, American, pick miner, experience 30 days, age 38 years, married, four children, employed by the Producers Coal Company at the Phillips No. 1 mine, Moffat county, was killed by a fall of rock on the main slope. Deceased was assisting in taking off a skip of coal from the west side of the slope for the purpose of making a double parting. At this point the sandstone roof had been blasted from 16 to 18 inches deep to give sufficient height for the mules to pass under. A shot had been fired into the coal at this point and when deceased started to load coal, a slab of the sandstone fell on him killing him. It appeared that the shot into the coal opened up an half circle slip in the roof close to the coal face and caused the rock to fall. No one saw or knew of this slip until the rock fell. The accident was unforeseen and no one is held resopnsible for it.

- (60)—November 17—HUGH WILSON, American, cager, experience five years, age 24 years, married, one child, employed by the Colorado Fuel & Iron Company at the Fremont mine, Fremont county, was killed by a cage. Deceased's glove was eaught by ascending cage which pulled him up between the cage and side of shaft and dropped him back into the dump. Investigation disclosed nothing wrong with the cage or machinery and accident was a pure misadventure for which no one could be blamed.
- (61)—November 20—JAMES F. FICKES, American, pick miner, experience 10 years, age 32 years, married, no children, employed by his father, Frank M. Fickes, at the Coalby Red Canon mine, Delta county, was killed by a fall of rock. There was a bad piece of rock at the face of the room which several of the men working in the mine tried to pry loose, but succeeded only in breaking off a small piece. Instead of propping it, deceased began to undermine the coal when the rock fell and killed him. Deceased and his father, who was working with him, are equally to blame for the accident. Had the rock been supported by a prop, it would not have fallen.
- (62)—November 21—MATT ADENLADIC, Russian, piek miner, experience four years, age 29 years, single, employed by the Victor-American Fuel Company at the Ravenwood mine, Huerfano county, was killed by a fall of rock. Deceased was found dead under a rock. The room had been examined the morning before the accident and no visible sign of danger was found. A shot had been fired and most of the coal had been taken out when a piece of drawslate broke loose trom a slip and fell on deceased eausing instant death. The accident was unforeseen and is not charged to anyone.
- (63)—November 22—EDWARD J. BRENNAN, American, pick miner, experience two days, age 21 years, single, employed by the Barry Coal Company at the Rio Blanco mine, Rio Blanco county, was killed by a fall of rock in the drift of the mine. Deceased was working night shift with his father, M. R. Brennan, who claims to have had twenty-five years experience in coal mines. Twenty minutes prior to the accident, he had examined the roof and considered it unsafe but continued to work under it with his son. Just before the rock fell the son said he heard cracking and he realized the immediate danger and tried to pull his son away, but too late to escape. The drift was very poorly timbered in places. The father was guilty of great carelessness in permitting his son to work under a loose rock. The company and M. R. Brennan are jointly to blame for the accident.
- (64)—November 25—JOE STANDISH, American, rope rider, experience six years, age 22 years, single, employed by the

McNeil Coal Company at the McGregor mine, Routt county, came to his death by being run over by a trip of five cars. Deceased was gathering cars for a trip. In taking his last car to a room where his trip was made up, the rope was drawn to one side of the slope and when he gave the signal to pull up, the rope caught in the wing of the point rail and tore it loose and the trip crossed over it and threw deceased in front of it. The company is held responsible for the accident in not supplying a pulley on the slope to prevent the rope from going into the wing of the point rail.

- (65)—November 9—JOHN BLATNICK, Austrian, pick miner, experience 33 years, age 61 years, married, one child, employed by the City Coal Company at the City mine, La Platte county, was injured by a fall of rock at the face of his room and died on the above date. Apparently deceased was unable to see that a piece of loose rock was overhanging his working place and therefore did not take steps to protect himself. The accident is classed as unavoidable.
- (66)—December 7—KENNETH BALDON, American, pick 1 iner experience ten years, age 28 years, married, three children, employed by the Fox Coal Company at the Fox mine, Boulder county, was injured by a fall of rock and dirt from the surface, from the effects of which he died on the above date. Deceased and his partner were engaged in removing a stump of coal in a chain pillar, where the overlying roof to the surface was very thin, a cave-in occurred covering and imprisoning Baldon for nine hours. When deceased was extricated he did not seem to be seriously injured. A great part of the fall was held up by timbers and a loaded car, however, the weight which held him imprisoned so :nany hours congested some of his organs and affected his nerves to such an extent that he died seven days later. The place was well timbered and every precaution had been taken to make the place safe, hence the accident is classed as unavoidable.
- (67)—December 7—STEVE VISCOS, Greek, pick miner, experience ten years, age 42 years, married, three children, employed by the Colorado Fuel & Iron Company at the Robinson No. 2 mine, Huerfano county, was killed by a fall of rock. Deceased was working on an entry pillar where an invisible slip had formed a pot. Props had been set under one side of the rock and when coal was taken out on the other side, it overbalanced and discharged the two props releasing the rock. The place was well timbered and the accident was unforeseen and unavoidable.
- (68)—December 8—JOHN SMITH, Pole, track layer, experience 14 years, age 53 years, married, three children, employed by the Leyden Coal Company at the Leyden mine, Jefferson

county, was crushed to death between a car and rib. Deceased with other men was cleaning up and removing a wreckage of cars. Deceased got hold of one car which was being pulled up the entry by the hoist and it had one broken wheel which bulged out over the trace clearing the rib by a few inches only. Deceased was walking back of the car on the near side of the rib guiding it, when his shoulder came in contact with the rib, and before he could get out of the way, or the hoistman be signalled to stop, he was caught and crushed. There was ample clearance on the other side of the track. The accident was a mischance and no one is held responsible for it.

- (69)—December 9—JOE BLANTIZ, Italian, pick miner, experience two years, age 32 years, married, two children, employed by the Cedar Hill Coal & Coke Company at the Greenville mine, Las Animas county. Deceased was working alone at the face of a room. The coal in this section of the mine is overlaid by a strata of drawslate which is taken down and leaves a fairly good roof. The mine foreman had visited the place at 10:20 A. M. and discovered no danger. At noon deceased was found under a rock. The place was well timbered. Several cars of coal had been loaded and one was turned back in order that drawslate could be taken down and timbers set. Deceased apparently was in the act of taking down the upper half of drawslate when he released a pot which had been completely hid from view. The accident is classed as unforeseen and unavoidable.
- (70)—December 11—VERNER McWILLIAMS, American, miner, experience four years, age 21 years, single, employed by the Midwest Coal Company at the Midwest mine, Mesa county, was killed by a fall of coal. Deceased was working alone in a pillar entry taking a skip forward to make room for a track. He had about fifty feet to go to the coal cropping. The coal was good and sound but showed open water breaks running the same course as the butts. He was following one of the water breaks and connected with a face slip which released a lump of coal that fell on him. Deceased showed poor judgment in mining as he did and the mine foreman was at fault in not seeing the danger of the situation. Both are responsible for the accident.
- (71)—December 13—C. C. UNDERWOOD, American, machine miner, experience none, age 46 years, married, two children, employed by the Rocky Mountain Fuel Company at the Columbine mine, Weld county, was killed by a fall of top coal. The accident occurred on an entry which is eight feet high. While loading machine-cut coal it was the practice to keep the coal face perpendicular which is dangerous where the coal is so high. Deceased was stepping off a bench about ten inches high left by the mining machine, when he lost his

- balance and was caught in a fall of coal. The face boss was not a certified man and he was performing duties that properly belong to a mine foreman. The accident is classed as unavoidable.
- (72)—December 14—MATT BUSTUS, Mexican, pick miner, experience two years, age 35 years, married, two children, employed by the Colorado Fuel & Iron Company at the Morley Slope mine, Las Animas county, was killed by a fall of rock. Deceased was working on the butts about 15 feet from the face of his room. In removing the coal a rock gaye way from a slip that was invisible. The place was well timbered and the accident was unavoidable.
- (73)—December 15—DAN KORACH, Servian, machine miner, experience ten years, age 40 years, married, one child, employed by the Rocky Mountain Fuel Company at the Columbine mine, Weld county, was killed by a fall of coal. At 11:00 A. M. deceased and his partner were loading coal in a room and found that they required a little more coal to finish a car. Deceased asked his partner to pull over some bottom coal, but the latter refused on the ground that the top coal was loose. Deceased then proceeded to pull said coal over himself and was caught by a fall of top coal. Thirty minutes prior to the accident the face boss, who holds no certificate, visited the place, and after he left, deceased and his partner fired a shot that released the coal which they were loading. As only thirty minutes passed between face boss' inspection and the accident, and during which time shots had been fired and a car of coal loaded, the place being at least 60 feet in advance of air current, it is very evident that deceased and his partner entered the place immediately after firing shots, probably the powder smoke was so dense that loose top coal could not be seen by deceased. Responsibility for the accident is charged to the company for not employing certified men for mine officials and allowing shooting in the mine at a time prohibited by law.
- (74)—December 29—TRINIDAD CEDENO, Spaniard, motor man, experience eleven years, age 24 years, married, two children, employed by the American Smelting and Refining Company at the Boncarbo mine, Las Animas county, was injured December 28 by being caught between car and motor and died on the following day. Deceased, according to evidence, had arrived with a trip of loaded cars to the first parting and had uncoupled the motor from the trip and backed the motor behind a trip of empty cars, when in some manner unknown, he was caught between an empty car and motor. Deceased was unable to give any information how he happened to be caught. The track was found in good condition and the accident apparently was due to a misadventure.
