INTRODUCTION

INTRODUCTION

This report describes traffic crashes severities, i.e., Property Damage Only (PDO), Injuries, and Fatalities and associated rates on the Colorado State Highway System for Calendar year 2002. Two major sources of data were required to produce this report: The computerized traffic volume data supplied by the Division of Transportation Development, and computerized crash data gathered and maintained by the Accident Records Group of the Safety and Traffic Engineering Branch.

REPORT FORMAT AND DEFINITION OF TERMS

SHXXXX	State Highway Number followed by a Section designation, e.g., SH006K, SH050B, SH318A.
MP	The milepost location of the section terminus as described in the aforementioned Colorado Roadway Information System (CORIS) report.
Section Length	The distance in miles (to two decimal places) between the indicated section terminus and the previous section terminus. Note that this distance is not necessarily the same as the difference in mile points of the two section termini. The limits of a section of highway as used in the CORIS. These limits have been established at State Highway Junctions, urban limits, city limits, county lines, Engineering Region Boundaries, construction projects, and other points where there are material changes in traffic volumes.
Functional Classification	"U" denotes that the section is within a designated urban area, and "R" denotes that the section is outside a designated urban area, or in a rural area. The number (2, 4, 6, etc.) denotes number of lanes. "M" denotes that the section is in mountainous terrain; "F" denotes that the section is in flat terrain, and "R" denotes that the section is in the rolling terrain.
MVMT	Million Vehicle Miles Traveled (MVMT).
AADT	Average Annual Daily Traffic, the average number of vehicles using a given highway section in one day.
PDO	Property Damage Only (PDO) type accidents (severity type).
Rate	For sections with a length of one mile or less, rates are indicated in units of crashes per million vehicles, computed from:

$$\boxed{V (\text{Vehicles}) = (365 \text{ days})(\text{Avg. Daily Traffic})}$$

INTRODUCTION

Rates for sections greater than one mile are indicated in units of crashes per million vehicle-miles, computed from:

$$M = (365 \text{ days})(\text{Avg. Daily Traffic})(\text{Section Length})$$

$$PDO \text{ Rate} = (\text{No. of PDO Accidents})(1,000,000) / (V \text{ or } M)$$

Injury Rate
Injury type accidents (severity type).
The number of injury-producing crashes per million vehicles or per million vehicle miles of travel, as appropriate, computed from:

$$\text{Injury Accident Rate} = (\text{No. of Injury Accidents})(1,000,000) / (V \text{ or } M)$$

Fatal Acc. Rate
Fatal type accidents (severity type).
The number of fatality-producing crashes per 100 million vehicles or per 100 million vehicle-miles of travel, as appropriate, computed from:

$$\text{Fatal Accident Rate} = (\text{No. of Injury Accidents})(1,000,000) / (V \text{ or } M)$$

Total
The number of total crashes per million vehicles or per million vehicle miles of travel, as appropriate, computed from:

$$\text{Total Accident Rate} = (\text{Total No. of Accidents})(1,000,000) / (V \text{ or } M)$$

USING THE REPORT

The information shown on each line refers to the highway section bounded by the section termini described on the line and by the previous termini. All sections (except the first section for highway or alpha section letter change) exclude the crashes at the beginning terminus but include the crash data at the ending terminus. For example, on SH002A, 189 crashes occurred with the section from, but not including, JCT SH 83 SE (LEETSDALE DR) up to and including RD E AND W (E 8TH AVE). However, for the first section on SH002A, 63 crashes occurred within the section from, and including, JCT U.S. 285 E AND W (E HAMPDEN AVE) up to and including RD E (E YALE AVE).

The ending mile point of a highway and the total section length are not the same on some highways. The reasons for this apparent discrepancy are as follows:

Section changes (indicated by a change in the alpha section letter under the column "Section Length") result when a given highway overlaps another highway, which takes precedence. For example, SH002A has an overlapping non-chargeable section with

INTRODUCTION

SH006H between mile points 9.84 and 10.86 during which time mile points on SH002A continue to increase but crashes are charged to SH006H.

A section of highway may contain an equation (either positive or negative) so the difference between the ending mile points is not equal to the given section length. For example, between Sheridan Blvd. (SH095A) and Federal Blvd. (SH287C) on Colfax Ave. (SH040C) 0.5 mile has been added to the segment in order to concur with the original posted mile markers.

Using the following procedure, it is possible to compute the various rates for combined highway sections. The equations used to compute Total Crash Rate (shown below) when combining sections, the total number of crashes, total section length, and average daily traffic for the combined sections must be determined before the rates can be computed. Given the following definitions:

Number of crashes in an individual highway section	= A_i
Number of crashes in the combined section	= A_s
Individual section length (miles to two decimal places)	= L_i
Length of combined section	= L_s
Individual section Average Daily Traffic Volume	= ADT_i
Combined section Average Daily Traffic Volume	= ADT'_s
Total Crash Rate for the combined section per million vehicles or per million vehicle-miles as appropriate	= R_s

The necessary calculations are:

$$A_s = \sum A_i 's$$

$$L_s = \sum L_i 's$$

$$ADT'_s = \sum \frac{(ADT_i)(L_i)}{L_s}$$

$$R_s = (A_s \times 1,000,000) / (365 \times L_s \times ADT'_s)$$

$$= (A_s \times 1,000,000) / (365 \times ADT'_s)$$

For example, to determine the Total Crash Rate on SH050 from the JCT SH 67 SW (MP 296.14) to The FREMONT-PUEBLO COUNTY LINE (MP 285.62) three sections are involved:

<i>Section Termini</i>	<i>Section Length (mile)</i>	<i>ADT</i>	<i>Total Crashes</i>
JCT SH67 SW	N/A	N/A	N/A
Penrose/Colorado Springs Interchange (MP 285.62)	4.14	15,962	22
JCT SH 120 S RD N (CO RD 368) (MP 294.33)	4.57	11,532	11
Fremont-Pueblo County Line (MP 296.14)	1.81	8,170	14
	$L_s = 10.52$		$A_s = 47$

INTRODUCTION

The combined ADTs for this section is then;

$$ADT's = [(15,962)(4.14) + (11,532)(4.57) + (8,170)(1.81)] \div 10.52$$
$$ADT's = 12,697 \text{ Vehicles}$$

The Total Crash Rate for the combined section is then;

$$R_s = [(47)(1,000,000)] \div [(365)(10.59)(12,697)]$$
$$R_s = 0.84 \text{ Crashes / MVM}$$

In a similar manner, Injury Crash Rates for combined sections may be computed by Replacing "As" with the Total number of injury crashes in the combined sections. Likewise, Fatal Crash rates can be computed by substituting the total number of fatal crashes in the combined section for "As" and using the constant 100,000,000 rather than 1,000,000 since Fatal Crash Rates are computed on the basis of 100 Million Vehicles or 100 Million Vehicle Miles of Travel.

OTHER USEFUL INFORMATION

Some information not included in the listing can be inferred from the provided data. An example is the number of crashes reported to be at or related to intersections or driveways. If the number of "open road accidents" is subtracted from the "total number of crashes", this results in the number of crashes reported indicating a relation to intersections, interchanges or driveway entrances. Also, by subtracting the driveway crashes from this figure one can obtain the total number of crashes reported indicating intersection or interchange relation for the location.

Another example is the number of crashes involving a collision on the road. If the number of "off roadway" crashes is subtracted from the "open road crashes", the result should reflect the number of open road crashes involving collisions on the road that may not indicate an intersection or driveway relation, these include collisions with other vehicles, overturning, animal, and pedestrian type crashes.
