Major in Dance

Office in University Center for the Arts, Room 120
(970) 491-5529
dance.colostate.edu (http://dance.colostate.edu)

CSU offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following focus: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment. Dance major and scholarship auditions for prospective students (high school seniors or transfers) are held during Fall and Spring Visit Days. The audition assesses training background, technical level, and the potential to successfully complete the degree program at an advanced and/or pre-professional level. To be enrolled in the Dance major, students should have professional quality dance training in both ballet and modern technique, be at the intermediate technical level, and have the ability to withstand rigorous daily work throughout the year. Other forms of previous dance training are applicable and highly encouraged.

For pre-Dance students and non-majors, enrollment in dance technique classes depends on space availability, technical level, and suitability, and takes place during the classes of the first week of the semester as 'consent of instructor' is required. All technique classes are accompanied by accomplished musicians in piano, percussion, and a variety of other instruments. Performance, choreographic, and production opportunities take place each semester and students are encouraged to collaborate with other majors in music, theatre, and the visual arts. Visiting guest artists teach master classes and workshops and choreograph for the students on a regular basis. Supervised student teaching experiences are offered with different age groups and in a variety of situations.

Upon graduation, students will have a theoretical and practical foundation in dance. Graduates will achieve an intermediate/advanced level of proficiency in modern and ballet technique and be able to apply this knowledge to the areas of professional performance, choreography, and teaching. They will have a foundation in technical production and design which supports dance and theatrical productions. They will have a working knowledge of anatomy, kinesiology, and various movement theories relating to dance techniques. They will have a solid knowledge and appreciation of the history and philosophy of dance from many cultures and time periods.

Potential Occupations

Dance careers are rigorous and demanding, requiring years of training and discipline. Dance professionals must be versatile with a broad base of experiences in dance or related fields. Dance majors often select a second major such as music, theatre, business, occupational therapy, technical journalism, or exercise and sport science to enhance their career prospects. Experience acquired through extracurricular performances or internships is highly recommended to enhance practical training, development, and career opportunities. Students are encouraged to go on for advanced study at the graduate level in dance in order to secure teaching positions in higher education.

Some examples of the career opportunities in dance include, but are not limited to: professional dancer, professional choreographer, artistic director, university/college faculty, studio owner and faculty, conservatory or school faculty, dance critic, dance therapist, dance somatics specialist, arts manager, lighting designer, costume designer, sound designer, theatre technician, production crew, producer, fashion coordinator, special events coordinator, makeup artist, musical theatre director.

Major in Music (B.M.), Music Education Concentration

The Music Education concentration prepares students for teaching choral, instrumental, and general music in elementary and secondary schools. This degree prepares students to apply for music teaching licensure (grades K-12) in the state of Colorado. CSU's outstanding music education faculty members are in demand as clinicians, guest lecturers, conductors, and researchers. A feature unique to the accredited music education curriculum is extensive field experience that students receive throughout their coursework, culminating in a semester of student teaching at the end of the program. Students must select one of two options: instrumental or choral.

A successful audition is required prior to entrance into the B.M. in Music.

The Music Therapy concentration is designed to prepare students for careers in music therapy, an allied health profession whose members generally work as part of interdisciplinary teams in hospitals, clinics, rehabilitation facilities, assisted living centers, and special education settings. Some music therapists maintain private practices or serve as consultants. Music therapists use music to facilitate motor skills, cognitive abilities, communication, and social outcomes for individuals with disease or disability. The Music Therapy concentration at CSU is internationally recognized for its leadership in clinical training and research. The curriculum includes a strong emphasis in music, the neurosciences, psychology, and music therapy methods.

Major in Music (B.A.)

The Bachelor of Arts (B.A.) in Music allows students to study music within a larger context of a liberal education. In comparison to the curriculum leading to the Bachelor of Music (B.M.), less emphasis is placed on studies specifically in music, with greater flexibility for studies in a field outside of music. In lieu of a larger number of credits in music as required for the B.M, the B.A. student completes a 21-credit option in an area outside of music. In addition, completion of a major paper or capstone recital (half recital) is required during the senior year.

A successful audition is required prior to entrance into the B.A. in Music.

Requirements

A minimum grade of C is required in all music courses used to satisfy the requirements of the major programs (B.A. and B.M.) in music.

Master of Music, Plan A, Music Therapy Specialization

The degree is intended to provide Board Certified music therapists with advanced training in clinical skills and research. Our curriculum specializes in neuroscience and evidence-based music therapy to improve sensorimotor, speech and language and cognitive function in children and adults who have disabilities. Specifically, the study of music therapy is designed to prepare music therapists for advanced clinical work in music therapy, as music therapy supervisors and administrators and for teaching positions at the college or university level.

Two master's curriculum tracks are offered: the first is a thesis program of 30 credit hours designed to provide students with the opportunity to complete a substantial research project. The second track is a 32-hour program that requires, in lieu of a thesis, additional course work in music therapy, a final project, and a common final exam. Either program prepares the student to pursue doctoral study. Our academic curricula meet the standards of the American Music Therapy Association and the National Association of Schools of Music. Applicants are expected to be Board-Certified Music Therapists (or eligible to sit for the exam) and demonstrate excellent musicianship and interpersonal skills.

The Master of Music, Music Therapy Specialization is offered on-campus or online.

Major in Theatre

Office in University Center for the Arts, Room 120
(970) 491-5529
theatre.colostate.edu (http://theatre.colostate.edu)

Professor Price Johnston, Director

During their first two years in the 120-credit Bachelor of Arts (B.A.) in Theatre, theatre students enroll in a core of courses that provide a solid foundation as they pursue excellence in their discipline. Upon admission to CSU and the declaration of theatre as their major, students are directed into one of three concentrations: Performance, Design and Technology, and General Theatre. No matter which concentration is selected, students are equally prepared for graduate school or potential entry-level positions in the theatrical professions or creative industries.

Comprehensive training, both on and off stage, occurs in the classroom, in rehearsal studios, as well as during theatrical productions, produced by a company of student actors, directors, designers, and technicians. Each season includes classics, contemporary plays, and musicals.

Striving to always maintain the quality of a regional theatre, four main-stage productions — including one musical — are annually produced in the University Theatre (a 300-seat thrust theatre) and the Studio Theatre (a flexible black box seating 100), two opera-theatre productions in the 550-seat Griffin Concert Hall, and four dance concerts in the 200-seat University Dance Theatre round out the production schedule.

Concentrations

- Design and Technology Concentration
- General Theatre Concentration
- Performance Concentration

Major in Theatre, Design and Technology Concentration

Students entering the Design and Technology Concentration are exposed to multiple disciplines and design areas within the performing arts, including scenic design and stage management, and courses chosen from theatrical construction, lighting design and electrics, digital media design, and costume design and construction. This program is geared towards creative and imaginative, open-minded individuals with a drive for excellence.

Students in this concentration explore creative concepts on a theoretical level in the classroom and studio, while reinforcing their training through practical application in main-stage productions of music, theatre, and dance. In addition to coursework, as they travel through the program, students take on roles as production technicians and assistants, stepping into leadership roles as designers or production stage managers. This fully collaborative and interdisciplinary program supports pre-professional development.

Design and Technology students have a multitude of facilities available for their use, including a design lab with 28 drafting and rendering stations, CAD Lab with 22 student workstations, scene shop, paint shop, costume shop, sound/video editing lab, lighting lab, and acting labs. Professional-quality venues include the University Theatre, the Studio Theatre, the University Dance Theatre, Organ Recital Hall, and Griffin Concert Hall.

Major in Theatre, Performance Concentration

Students entering the Performance Concentration will have the ability, aptitude, and stamina to pursue a program of study intended to provide rigorous training as a theatrical performing artist within the context of a liberal arts education. Either as an actor or a creative collaborator with strong interpersonal communication and group problem-solving skills, the concentration provides a path for success in the public and private sectors of the creative industries. This course of study provides student actors with a technical foundation and a variety of approaches to the acting process from which they may glean their own approach to character building.

The concentration emphasizes both theoretical and practical aspects of theatre, both as an art form and as a commercial industry, and focuses on developing well-rounded, responsible theatre artists who value ensemble and collaboration within an artistic community.

Major in Philosophy

Philosophy is the oldest form of systematic, scholarly inquiry. It is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we quest for understanding and develop principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments.

The study of philosophy broadens and intensifies liberal education while enhancing interpretive abilities in many fields. The curriculum encourages a broad liberal arts background, including courses in foreign languages, and a plan for graduate school and teaching careers in philosophy. The broad relevance of philosophy to other fields permits most students to work toward goals such as professional training in law, medicine, business, or theology. There are three concentrations available to Philosophy majors: General Philosophy; Global Philosophies and Religions; and Philosophy, Science and Technology. It is not unusual for Philosophy majors to second-major in other disciplines, and these concentrations combine easily with other majors at CSU.

Student Learning Outcomes

Outcome 1: Critical Thinking

Students will recognize, construct, and evaluate arguments and alternative positions by correctly applying logical standards and methodology, demonstrating the ability to identify underlying assumptions, ambiguous or contested terms, and potential objections to a thesis.

Outcome 2: Content Knowledge

Students will demonstrate knowledge of major questions, arguments, problems, and figures from a variety of philosophical areas and traditions.

Outcome 3: Reading and Research

Students will develop the interpretive, analytical, and conceptual skills to read with understanding a variety of philosophical texts. Students will be able to assess the quality and relevance of a variety of sources (books, journal articles, etc.) and use these sources in their own research and writing.

Outcome 4: Communication

Students will clearly articulate ideas and arguments in writing and oral communication. Students will demonstrate competence in interpretive, analytical, and argumentative writing. They will effectively present their own ideas and research in oral communication and writing. Students will engage in open, thoughtful, and respectful dialogue.

Outcome 5: Values and Attitudes

Students will demonstrate cognitive flexibility by applying alternative possibilities and conceptual frameworks to their own and others' ideas and values. They will demonstrate intellectual curiosity in their pursuits of truth and meaning. They will engage in reflective inquiry and aim to achieve a greater understanding of their subject matter.

Potential Occupations

A major in Philosophy prepares students for a wide variety of professional aspirations, including graduate study in philosophy or other disciplines; training in law, computer technology, social work, health care, the ministry, business; and general intellectual flexibility in a changing world. The high level of skill that Philosophy majors acquire in communication, writing, and analytical and critical thinking enables them to secure jobs in a variety of private and public sector professions and to become leaders in their fields.

Depending on the major concentration that a student pursues, available career opportunities include, but are not limited to: public policy analyst, business manager, public administrator, computer programmer, intelligence officer, legislator, teacher, foreign diplomat, social worker, community developer, philanthropic organizer, physician, lawyer, researcher, writer, theologian, human resources manager, publisher, and ethics consultant, in a variety of fields, e.g., in medicine, business, law, public administration, non-profit administration, engineering, and the sciences.

Major in Political Science

Political science is the study of politics and political action in society. It encompasses international agreements and organizations as well as the patterns of political action which both create and shape them. It encompasses citizen action and the institutions which produce public policy at the local, state, and national levels within the United States. It encompasses systems of voting, political parties, and courts, compared across national political systems. It encompasses the raising of normative questions about the nature and purposes of political life. The presence of politics is felt in all areas and sectors of society at all times. The dynamic and transformative effects of political action are seen virtually everywhere.

The department's curriculum is distributed across five subfields of the discipline: American politics, political theory, comparative politics, international relations, and public policy. Course work across the discipline's subfields is complemented by a required support option. Support options include a minor in another department; an interdisciplinary minor; the second language support option; the methods support option, or a second major.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives
- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

Potential Occupations

The Major in Political Science, like all studies in the liberal arts, provides students with a broad academic background that is serviceable across a broad spectrum of employment in the public and private sectors. Political Science majors are trained to be independent and critical thinkers; to be discerning and active observers and listeners; to communicate persuasively; to constructively engage and solve intellectual and practical problems; to adapt and function effectively in a number of distinct occupational and institutional settings; to function comfortably in a multiethnic, multiracial, and globalizing society. The employment profiles of departmental alumni attest to the breadth of possibilities for today's graduates: public and non-profit organization managers, prosecutors, public policy analysts and consultants, federal law enforcement agents, legislators and legislative analysts, foreign service officers, private attorneys, demographers, criminal investigators, advertising specialists, urban/regional planners, environmental policy analysts, state budget analysts, public relations representatives, market researchers, elementary and high school teachers, international businessmen and businesswomen, lobbyists, novelists, construction industry managers, insurance agents and managers, financiers, and real estate brokers. Some graduates join professions following advanced study in law, international relations, area studies, public administration, public policy analysis, and business management.

Concentrations

Students may complete the general Political Science major or select one of the following concentrations for a more specialized course of study.

- Environmental Politics and Policy Concentration
- Global Politics and Policy Concentration
- U.S. Government, Law, and Policy Concentration

For further information on declaring the Major in Political Science, please schedule an appointment with a College of Liberal Arts Academic Success Coordinator by calling 970-491-3117 or visit Clark C 207.

Students will explore these issues from both domestic and global perspectives. Environmental Politics and Policy students are strongly encouraged to complete an internship to gain practical experience working in the field.

Major in Political Science, U.S. Government, Law, and Policy Concentration

The U.S. Government, Law, and Policy concentration is designed to prepare students to become future leaders in the public sector. The skills gained in this concentration help prepare students for a variety of careers. Resources for careers include the American Political Science Association (http://www.apsanet.org/careersinpoliticalscience) and the Network of Schools of Public Policy, Affairs, and Administration (https://www.naspaa.org). The courses in this concentration educate students about the political processes and the legal environment of all levels of American government, as well as the processes of policymaking and the administrative apparatus used to implement public policy. Students will also be exposed to a variety of substantive policy issues including urban policy, energy policy, and environmental policy in the United States. U.S. Government, Law, and Public Policy students are strongly encouraged to complete an internship in one of the many organizations in the broader community. Students in this concentration are also encouraged to participate in the Legislative Internship Program (http://polisci.colostate.edu/undergraduate/legislative-internship) during their junior or senior years.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

The minor in Applied Environmental Policy Analysis will provide students with a rigorous and in-depth study of the public sector environment, practice, and methods for analyzing and developing policy. Each course will also have the environment as a focus in the material, exams, and assignments. At the end of the minor, students will be able to recall and explain the basic rationales for public policies, apply rigorous research methods for evaluating policy, and integrate the elements of theory, methods, problem structuring, ethics, analysis and argumentation to generate reports useable in government and nonprofit management. The minor is appropriate for practicing professionals and current undergraduate students interested in expanding their applied evaluation skills and environmental policy expertise.

Major in Sociology

Sociology is the study of social life, focusing on the mutual interaction between human groups and institutions. Human beings, through patterned social interactions, construct and reconstruct the social webs within which they live. The nature and type of social relationships are central to their lives. Sociologists study relationships within family units from the most primitive cultures to interactions of large, bureaucratic institutions in major industrialized nations. Social issues are studied in

a variety of ways: direct observation of groups; surveying or interviewing individuals; analyzing historical research; and a variety of other methods.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically and perform research, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as Latin American and Caribbean Studies, Religious Studies, or Women's and Gender Studies.

Learning Outcomes

Students will:

- Analyze critically the major classical and contemporary theories from the 19th and 20th centuries. Students are expected to demonstrate how well these theories help us understand or explain current social phenomena both in the U.S. and abroad. Students will learn to apply a wide variety of theories, including European critical theory, functionalism, symbolic interactionism, and post-modern theory, in required empirical research.
- Analyze critically sociological phenomena by applying objective social research methodologies. Students will demonstrate a working knowledge of sociological theories and the application of these theories to real world social phenomena. Specifically, students will understand conceptual frameworks associated with:
  a. social structure (social stratification, ethnic structures, social institutions, small group dynamics, social demography, and social organizations);
  b. culture (socialization and the development of personalities, social norms, framing normative assumptions of societies and organizations); and
  c. social agency (the behavior of the individual, collective behavior such as with social movements, and the principles of social-psychology).
- Analyze critically sociological phenomena by applying social statistical techniques and qualitative research methods. Students will demonstrate a strong working knowledge of statistical techniques, including:
  a. parametric statistics;
  b. non-parametric statistics;
  c. ordinary least squares statistical analysis;
  d. application of the SPSS statistical package;
  e. interview techniques;
  f. focus group interviews;
  g. qualitative data analysis techniques; and
  h. qualitative data management and presentation.

Potential Occupations

Careers are exceptionally varied. Participating in internships and cooperative education opportunities is highly recommended to enhance practical training and development. Sociology graduates apply their education to a large variety of occupations in the non-profit, private, and public sectors. Because Sociology graduates possess a number of transferable communication, analytical, and people skills, they find positions in government, industry, and academia. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Graduates who go on to advanced studies can pursue careers in sociology or attain advanced positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: business manager, personnel director, city manager, clinical social worker, college/university instructor, human relations director, demographer, government aide, labor relations specialist, market analyst, researcher, medical administrator, police officer, politician, probation/parole officer, program director/manager, public administrator, publishers, sociologist-specialist, consultant, criminologist, lawyer, librarian.

Concentrations

- Criminology and Criminal Justice Concentration
- Environmental Sociology Concentration
- General Sociology Concentration

Major in Sociology, Criminology and Criminal Justice Concentration

Sociology majors who opt for the Criminology and Criminal Justice concentration will supplement their general sociological training with course work focused on social aspects of crime and criminal justice. Students will find the concentration helpful in enhancing their ability to think critically about issues of crime and justice and in preparing for various careers associated with the criminal justice system.

Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology's long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures. The task of the sociologist, therefore, is to stand back from common sense views of the world and understand the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues to which environmental sociology can be applied are: transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

Major in Sociology, General Sociology Concentration

The General Sociology concentration is designed to provide students with a broad liberal arts education and a greater understanding and insight into the social systems and processes that bear upon everyday lives. Students will find the concentration helpful in enhancing their ability to grasp the complexities of the world so as to prepare them for a variety of jobs upon graduation. Opportunities for students with bachelor's degrees in Sociology are quite varied. Some go on to work for human service agencies; others work in the fields of criminal justice and urban planning; others enter graduate programs in sociology, education, law, medicine, or social work.

Requirements Effective Fall 2019

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2**, and each course taken to satisfy the Social and Behavioral Sciences electives.

College-Wide Graduate Programs

Graduate Certificate

Certificate in Sustainable Military Lands Management

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas. Graduate areas of emphasis also include ecosystems and greenhouse gas management.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands, CEMML, (http://www.cemml.colostate.edu) which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

College Programs

Undergraduate Majors

The scope of the College's programs is more broadly based than most natural resources schools. There are ten undergraduate degree programs, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

Field Training Programs

Most undergraduate majors require the completion of a four or five-week summer field training program (five or six credits) *before* their junior or senior year. Summer field instruction is given at the CSU Mountain Campus (http://mountaincampus.colostate.edu) campus, 55 miles west of Fort Collins, and the geosciences department offers a summer field course in northern New Mexico and southern Colorado.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

International Education

International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

Graduate Programs

Master of Science and Doctor of Philosophy degree programs are offered in each department. Four professional master's degrees are offered by departments in the college: the Master of Fish, Wildlife, and Conservation Biology, the Master of Greenhouse Gas Management and Accounting, the Master of Natural Resources Stewardship, and the Master of Tourism Management. Descriptions of the various graduate programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

For High School Graduates

High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

Limitation on Transfer of Credits

Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

Transfer Students

Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.

Graduate Certificate in Sustainable Military Lands Management

The Graduate Certificate in Sustainable Military Lands Management at CSU is designed to enhance the knowledge and skills of current practitioners and managers, as well as new professionals interested in applying their education and background to the management of military lands. This knowledge and skill sets are transferable to professionals in a wide array of federal and state land management agencies. This online program is the first and only program of its kind in the U.S.

Major in Ecosystem Science and Sustainability

The major in Ecosystem Science and Sustainability provides a strong scientific foundation in ecosystem ecology integrated with a broad knowledge of the cultural, social, economic, and political issues that are shaping the issue of sustainability. Students in the major learn to integrate science into real-world decision making, with the goal of developing sustainable strategies to maintain ecosystem services around the globe. We provide students with a broad base of experiential and collaborative learning opportunities, opportunities for research through our affiliation with the Natural Resource Ecology Laboratory, and the latest scientific knowledge about sustainability science and how organisms interact with their environments to form complex ecosystems. Opportunities to join in research, internships, practical and group-based learning, and field experiences in the beautiful Rocky Mountains and beyond combine with an outstanding classroom education to build a solid foundation for applying sustainable resource management principles.

Learning Outcomes

Students in the major learn:

- How to help people use natural resources in a sustainable way.
- About environmental change at local to global scales.
- The amazing connections between different earth system components.

- How to conduct research or field work in a variety of settings addressing questions important to sustainability.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers related to sustainability and natural resource science. Examples of possible careers include: sustainability coordinator, ecologist, environmental educator, invasive species specialist, biological science technician, climate change scientist, natural resource specialist, or corporate environmental consultant. Students completing the undergraduate degree in Ecosystem Science and Sustainability will also be well prepared to succeed in graduate education in a variety of disciplines.

Major in Watershed Science

Why Watershed Science at CSU?

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The Watershed Science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land-use hydrology, snow hydrology, water quality, and watershed problem analysis. Students gain hands-on experience with water measurements outside and in the lab, and build technical and writing skills to prepare them for careers in hydrology and water resources.

Learning Outcomes

Students will demonstrate:

- An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
- An understanding of land use effects on fresh water resources.
- Field and lab-based watershed measurement and data analysis skills.
- Skills in watershed problem analysis, including the use of GIS and watershed models.
- Strong critical thinking, writing, and oral communication skills.

Potential Occupations

The B.S. in Watershed Science qualifies students for a wide variety of careers in hydrology and water resources management. Examples include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-governmental organizations, and private industry. Graduates are also well positioned for advanced science degrees. The B.S. curriculum includes all of the requirements for graduates to meet the U.S. governmental hydrologist certification.

Minor in Watershed Science

The minor in Watershed Science provides a background in core classes addressing land use hydrology and sustainable watersheds. Students also engage in experiential learning in the watershed practicum field course. The minor offers a broad and flexible selection of additional coursework options that emphasize physical, biogeochemical, and societal aspects of water resources and watershed management. Students can select the combination of courses that best fits their interests and complements their major.

Requirements

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Graduate Certificate in Water Resources

Advance your career in water resources planning, management, and policy with this graduate certificate addressing an array of water issues in the western United States and around the world. Expand your knowledge with case studies, geospatial applications and exercises. The program of study emphasizes an understanding of the hydrologic cycle and the physical processes that drive it, how humans adapt water resources to their needs, techniques for sustainable management, the evolution of laws and policies governing water use, and basic spatial and temporal analysis of water data.

After completion of this water resources training program, apply your knowledge to a career in the public or private sector. Career opportunities may be found in forests, parks, wildlife refuges, public lands, special-purpose water districts, academia, water resources engineering and consulting firms, nonprofit organizations, and municipal, tribal, county, state, or federal agencies.

Curriculum: Three courses total, offered through the Department of Ecosystems Science and Sustainability and CSU Online, and geared towards professionals across disciplines. Courses can be taken in any order.

Master of Greenhouse Gas Management and Accounting, Plan C (M.G.M.A)

Training in accurate quantification of greenhouse gas mitigation efforts is central to deployment of cleaner technologies and practices across all sectors of the economy. Every nation in the world has recognized the importance of limiting greenhouse gas emissions and agreed that emissions must be reduced. This goal cannot be achieved without a new class of technically adept professionals. CSU's Master of Greenhouse Gas Management and Accounting (MGMA) program provides students with knowledge, skills, and experience necessary to launch successful careers and tackle these challenges. The program leverages world-leading greenhouse gas and climate change expertise from across CSU and enables students from a wide variety of academic backgrounds, such as environmental studies, business, engineering, natural resources or agriculture, to develop the skills needed for emerging professions in greenhouse gas management and accounting.

The Master of Greenhouse Gas Management and Accounting is an affiliated Professional Science Master's (PSM) degree. Affiliation is administered by the Commission on Affiliation of PSM Programs (https://www.professionalsciencemasters.org) (formerly named PSM National Office) to ensure a strong and distinctive PSM brand. PSMs are designed for students who are seeking a graduate degree in science or mathematics and understand the need for developing workplace skills valued by top employers. The degree program also participates in the Western Regional Graduate Program (http://graduateschool.colostate.edu/for-faculty-and-staff/admissions-resources/wiche-process).

Master of Science in Ecosystem Sustainability, Plan A

Many physical, ecological and social factors interact to shape the future of our ecosystems and societies. CSU's innovative Master of Science in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems, in collaborative partnerships with researchers, resource users and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability, and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

A focus on solutions

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world's leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

What students can expect to gain

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users and team members outside of academia
- The skills to conduct integrated assessments using systems approaches, conceptual, mathematical, geospatial, and statistical models, and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology, and on managing the sustainable cities of the future

Local and Global Relevance

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, and in the lowest short grass steppe regions, on cities and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Master of Science in Watershed Science, Plan A

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the M.S. in Watershed Science, Plan A program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.

The program emphasizes the advisor/student relationship. There is no core curriculum; rather, the advisor and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a master's thesis.

The program has a strong record of employment and acceptance to leading doctoral programs after graduation, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, non-governmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

Requirements

Program requirements are:

- 30 credits that meet graduate school requirements.
- Thesis
- Selected courses approved by advisor and committee -- Prefixes that can be used to meet course requirements: ANTH, AREC, ATS, BZ, CHEM, CIS, CIVE, ECOL, ECON, ENVE, ESS, FW, F, GR, GEOL, GRAD, HORT, MATH, NR, NRRT, RS, SOC, SOCR, STAA, STAT, WR.

Master of Science in Watershed Science, Plan B

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the M.S. in Watershed Science, Plan B program work closely with research scientists in the classroom, laboratory, and field on applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Additionally, students participate in seminars, field courses, and practical internships to further develop their skills. Advisors and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a professional report.

The program has a strong record of employment, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, nongovernmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

Requirements

Program requirements are:

Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements
Chair of the Undergraduate Major

The Fish, Wildlife, and Conservation Biology major is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods. Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis. Required courses in the concentrations as well as elective courses explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU's mountain campus is required and provides students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs.Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today's natural resource professionals.

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
- Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
- Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
- Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

Potential Occupations

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity, with an emphasis on fish and wildlife species and their habitats.

Requirements
Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration

The Fisheries and Aquatic Sciences concentration allows students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

Requirements Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology.

Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 OR (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology. Students must sign up for 1 credit of FW 487 during the semester in which they are completing their internship or work experience requirement.

2. Students in the Honors Track 1 program must take HONR 499.
3. FW 300 and FW 301 count together as one selection in this choice.
4. Students will need to obtain a registration override from the appropriate department to take this course.
5. Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6. Guided Electives are courses intended to expand a student's depth and breadth in wildife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.
7. Select enough elective credits to bring program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Graduate Certificate in Conservation Actions with Lands, Animals, and People

The course content and applied assignments in this graduate certificate seek to integrate a holistic approach for sustainable practices with lands, animals, and people in private and public sectors using history, philosophy, policy, management techniques, leadership, education, and communications to improve environmental management, human interactions, and social/environmental justice.

Students will gain critical insights into issues, uses, and management of natural resources. Students will gain an understanding and develop skills to review situations and viewpoints that impact public and private debate, and use assignments that may influence decisions in conservation. Upon completion of this certificate, students will have foundations to be stronger leaders, better communicators, and more active members of their communities.

Effective Fall 2017

Additional coursework may be required due to prerequisites.

Major in Fire and Emergency Services Administration

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-

evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (http://www.online.colostate.edu).

Learning Outcomes

Students will demonstrate their ability to:

- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

Potential Occupations

Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians, inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

Major in Forest and Rangeland Stewardship

Forests and rangelands are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires, timber harvesting, or grazing. Rangelands occupy nearly fifty percent of the earth's land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Sustaining forests and rangelands in the modern world requires managers who understand ecosystem changes, and how forests and rangelands connect to global, ecological, and social systems. State and federal land management agencies, private landowners, consultants, and conservation organizations employ graduates of the Forest and Rangeland Stewardship (FRS) major. The curriculum includes a balanced mix of courses in plant and animal biology, integrated resource management, and the physical sciences. Colorado is an ideal setting for the study of forestry and rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, forests, woodlands, and riparian areas to the west. Students learn about ecosystem productivity, policy, conservation, and the latest in computer-based management tools. Students also gain an understanding of economics related to recognizing alternatives and analytical and decision-making skills, as well as developing communication, political and interpersonal skills to make their education effective, and contribute to their respective fields fully upon graduation.

The forestry-specific concentrations within the FRS major are accredited by the Society of American Foresters, with curricula meeting the Office of Personnel Management (OPM) requirements for the forestry series (0460) and the forestry technician series (0462). The range-specific concentrations in the FRS major are accredited by the Society for Range Management and students generally meet the OPM requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457).

Students in the FRS major will gain an understanding of and learn how to manage the animal, soil, and vegetation resources on rangelands or in forests for state and federal land management agencies as well as a variety of private landowners and non-governmental agencies. With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; and knowledge of important concepts of ecology and range management.

The FRS major includes summer field courses. All FRS students take a 4-week summer field course at the CSU Mountain Campus for field studies in forest and rangeland ecology and management, wildlife, watershed and human dimensions of natural resources. Students in the forestry concentrations take another 2-week summer field course at the Mountain Campus that focuses on forestry field measurements. Students in the rangeland concentrations take a 1-week summer field course focused on rangeland inventory and assessment that is normally held in shortgrass steppe or foothills rangelands close to Fort Collins.

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Positions are available in industry, education, consulting, public service, and government agencies. Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Examples of career opportunities in range management include, but are not limited to restoration ecologist, rangeland scientist, rangeland management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch manager, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, and international rangeland specialist.

Major in Forest and Rangeland Stewardship, Forest Management Concentration

The Forest Management concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. More specifically, this concentration is designed to instill an understanding of the basic principles of forest ecology and forest management. Although many students go on to graduate studies, the program is primarily intended for students interested in managing forestlands.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today's challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student's junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options
- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
- Accurately communicate their knowledge of natural resources, both verbally and in written form

Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today's critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

Major in Restoration Ecology

The Major in Restoration Ecology emphasizes interdisciplinary study, research, and restoration of damaged, degraded or destroyed rangelands and forested ecosystems of the world. More specifically, this major focuses on the restoration of rangelands and forests for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic

beauty, livestock grazing, and timber production. Forests and rangelands occupy the vast majority of the earth's land surface and Colorado is an ideal setting for the study of restoration ecology with many different types of rangeland and forest ecosystems in close proximity.

Students in this program will gain the important knowledge and skills necessary to restore damaged ecosystems. They will learn how to manipulate soil, water, vegetation and animal resources in order to implement successful restoration for local, state and federal land management agencies as well as for a variety of private entities, landowners and non-governmental agencies. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to restoration ecology; knowledge of important concepts of ecology and natural resources management; an understanding of economics related to evaluating alternatives; and analytical and decision-making skills. Students also develop communication, political and interpersonal skills to make their education effective. Examples of career opportunities include, but are not limited to restoration ecologist, soil conservationist, plant ecologist, riparian ecologist, researcher, commercial sales and service representative, consultants, and mine reclamation specialist.

Minor in Ecological Restoration

The minor in Ecological Restoration allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Students are required to take NR 479: Restoration Case Studies, which includes a required field trip one week prior to the first day of the fall semester.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ (https://warnercnr.colostate.edu/frs/undergraduate-program/advising) to make an appointment with an advisor.

Major in Geology

The Major in Geology provides a rigorous academic and practical basis for diverse professional geosciences careers that include private and public sector water, energy, mineral and other natural resources, geologic hazards, resources and environmental management, and education. The major also provides a solid science and general education background for subsequent graduate training in specialized fields, including hydrology, geophysics, environmental geology, economic geology, resources management, public policy, and many other areas.

The Geology curriculum encompasses a strong geosciences education within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Colorado Rocky Mountains and elsewhere with on-campus classroom and laboratory work. In addition to obtaining a solid core in geosciences, students complete substantial course work in math, physical sciences, communications, and the liberal arts that lead to effective quantitative, decision making, and communications skills. Four concentrations are offered to address specialized career interests: Geology, Environmental Geology, Geophysics, and Hydrogeology.

Learning Outcomes

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of field and classroom scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical, economic factors, and ethical practices and standards that apply to careers in geosciences

Potential Occupations

Many opportunities exist for geology graduates in the private and public sectors in a wide range of societally important and satisfying careers. Energy resources, water resource and management, industry service, mining , power generation, computer software, and many other companies employ geoscientists in exploration, development, production, communications, management, and research. Federal agencies employ geoscientists for resource mapping and assessment, oil-gas-coal-groundwater-geothermal resource evaluation and development, resource and environmental water studies, leasing and conservation, resource restoration and rehabilitation, hazards assessment and mitigation, regulatory activities, national defense, and research. State and local governments also employ geoscientists for geologic and soils mapping and resource management, natural resource and hazards evaluation and mitigation, public information activities, consulting, management, and communications. Environmental, engineering, and groundwater firms further employ geoscientists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic hazards, and in site feasibility evaluation and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, and cooperative education and public outreach are highly recommended and supported by the department via faculty, staff, and alumni mentoring to enhance

training and career opportunities. Graduates who go on to pursue advanced degrees acquire a strong disciplinary base for diverse areas of graduate study, including environmental studies, energy, seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can often more effectively attain management-level positions. Careers include, but are not limited to: educator, professor, environmental or geological entrepreneur or consultant, exploration professional geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist. With additional training and diversification, geosciences graduates may also pursue associated careers in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching certification, graduates can become primary and secondary educators in earth sciences.

Concentrations

- Geophysics Concentration
- Hydrogeology Concentration

Major in Geology, Environmental Geology Concentration

Environmental Geology students develop expertise in surface and shallow subsurface processes that shape the Earth and provide critical soil and water resources and services for human and natural use. Graduates will be prepared for careers that address environmental implications of geological process and human activities on Earth. The curriculum emphasizes courses spanning the fundamentals of geology, surface, and shallow subsurface processes, field-based research methodologies, and environmental aspects of geology. The concentration empowers students to pursue positions with public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency compliance, hazard identification and mitigation, and fundamental scientific investigations that can inform natural resource policy and decision making that promise sound stewardship of Earth resources. The curriculum also provides a strong foundation for those planning to continue on to graduate studies in geosciences or other environmental disciplines.

Master of Science in Geosciences, Plan A

The M.S. in Geosciences provides best practice preparation for employment in major fields of the geoscience profession. This is the normative working degree for many energy, environmental, natural resource, regulatory, and other professional opportunities. Each graduate student follows a custom-tailored program of coursework and research developed with their advisor and graduate committee. Strengths of the program include diverse field-driven scientific specializations; an interdisciplinary approach to addressing earth resource education, professional preparation, and global research interests; analytical, field, and computational facilities; and close student/faculty working relationships.

Faculty in the department advise M.S. students in a wide range of subdisciplines, including applied geophysics, economic geology, environmental geology, geochemistry, geochronology, geodynamics, geomorphology, geophysics, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, seismology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a curriculum specific to their academic needs and goals. Prospective students should contact likely advisors to learn more that is specific about the program.

Requirements Effective Fall 2019

A minimum of 30 semester credit hours are required to complete this program.

At least 16 credits must be at the graduate level (500-level or higher).

At least 15 credits in courses numbered 500-581, 600-681, or 700-781 are required and should be selected in consultation with the student's advisor.

Up to 6 of the 30 credits may be for GEOL 699 Thesis.

With permission of the advisor and committee, 300- or 400-level course credits may be applied to the degree.

Completion and successful oral defense of a thesis is a degree requirement.

Ph.D. in Geosciences

The Department of Geosciences offers a Ph.D. program in Geosciences. Faculty in the department advise Ph.D. students in a wide range of subdisciplines, including geophysics and seismology, economic geology, environmental geology, geochemistry, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a dissertation topic and curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to refine a program plan.

Requirements Effective Fall 2018

Ph.D. students must complete 72 semester credits beyond those required for the B.S. degree. They must satisfy a breadth requirement by:

Taking a six-credit upper-division or graduate-level course sequence outside of the student's discipline. Most students will take their breadth requirement courses outside of their department.

At least 10 credits beyond the master's degree must be earned in regular courses numbered 500-level or above.

A minimum of 72 credits are required to complete this program.

Major in Natural Resource Tourism

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered – Global Tourism and Natural Resource Tourism.

Learning Outcomes

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.
- Research and analytical skills. These skills will include the ability to generate a problem statement, associated research questions, data acquisition methodologies, synthesis of related information and the development of management implications and conclusions.
- Planning skills. These will involve an ability to implement the planning process, including setting goals and objectives, acquiring relevant background information, synthesizing information, conceptualizing ideas, constructing alternative courses of action, making recommendations and considering ways of evaluating decisions.

Potential Occupations

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

Concentrations

- Global Tourism Concentration
- Natural Resource Tourism Concentration

Major in Natural Resource Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential

in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

College Programs

Our goal is to provide an extraordinary education to students in order to prepare them for science careers in industry, modern research and academia. In addition, the College of Natural Sciences provides foundational courses in the biological, mathematical, behavioral, and physical sciences for CSU's seven other colleges, supporting CSU's broad liberal arts and general education objectives.

Undergraduate Majors

The college's eight departments offer thirteen undergraduate majors, all leading to a Bachelor of Science degree which requires a minimum of 120 credits including 42 or more credits in upper-division courses. The undergraduate major in Neuroscience is offered jointly with the College of Veterinary Medicine and Biomedical Sciences.

A major should be chosen based with both educational and career objectives in mind. Students earning degrees in College of Natural Sciences majors will be well prepared to succeed in careers in biochemistry, biology, chemistry, computer science, mathematics, physics, and statistics, including middle/high school science and math instruction. Students who plan to enter a human- or animal-health profession must formally declare an academic major. There is no specific premedical, pre-veterinary, etc. major at CSU because health profession programs do not require a specific major, only specific courses. Majors such as Biological Sciences, Biochemistry, Chemistry, Psychology and Zoology are popular for students interested in a career in the health professions.

All College of Natural Sciences students have the ability to work with an academic advisor to plan the coursework necessary to graduate from CSU. The College of Natural Sciences also provides students with the opportunity to seek specialized career counseling from a career education manager in the CSU Career Center. Our services are offered to all Natural Sciences students and alumni in all aspects of their career development. Additionally, pre-health professions advisors are available at the Collaborative for Student Achievement (http://studentachievement.colostate.edu), located in Canvas Stadium, East Building, 1415 Meridian Ave.

The college provides multiple opportunities for students to become engaged outside the classroom, including SACNAS, Student Leaders in Science, the College of Natural Sciences Learning Community (a residential learning community), and undergraduate research opportunities.

Education Abroad

Education abroad programs are available to all students in the College of Natural Sciences. Because the knowledge of another culture is valuable in understanding one's own, students are strongly encouraged to participate in at least one educational experience outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Education Abroad Office through the Office of International Programs (http://educationabroad.colostate.edu). The Education Abroad office offers information about credit and non-credit opportunities (service-learning/volunteer, research, internships), as well as support prior to and during travel, information about scholarships and financial aid, and resources for diverse populations (including adult learners & veterans, multicultural students and students with disabilities).

Graduate Programs

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the

college. The college also offers Professional Science Master's in Natural Sciences degrees with specializations in Biological Data Analytics, Microscope Imaging Technology, and Zoo, Aquarium and Animal Shelter Management. For detailed information about graduate degree programs, please consult the appropriate department and see the Graduate and Professional Bulletin.

Major in Data Science

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

Major in Data Science, Statistics Concentration

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who wish to become high school or junior high/middle school science teachers.
- Students who seek a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:

- Skills to critically interpret scientific data.
- Logical and critical thinking.

- The ability to analyze and solve complex problems.
- Strong written and oral communication skills.

Potential Occupations

Graduates with *licensure in secondary science education* will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, *physical science* graduates can meet requirements for professional schools (e.g., medicine or law) or graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education

The Bachelor of Science in Natural Sciences provides the scientific subject matter, education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

The program includes science courses in a concentration such as Biology, Geology, Physics, Chemistry; the All-University Core Curriculum and professional classes in the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program in the School of Education. In addition, the CEP program helps schedule classroom visits and practica. The experience culminates in a semester of student teaching under the supervision of a master teacher.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as a basis for graduate work and research or for entry into medical or veterinary professional programs.

Master of Natural Sciences Education, Plan C (M.N.S.E.)

The Master of Natural Sciences Education (M.N.S.E.) is an online degree program designed for:

- Current science teachers hoping to learn new pedagogical techniques that contribute to student learning and engagement
- Current science teachers who want the flexibility to teach other natural science disciplines by enhancing their knowledge in biology, chemistry, physics and environmental science
- Current non-science teachers with a natural science undergraduate degree who would like to pursue science teaching positions
- Current non-science teachers with a related undergraduate degree (computer science, agriculture, engineering) and a strong science background who would like to pursue science teaching positions
- Individuals with strong science backgrounds and past or current experience in educational settings who would like to earn a master's degree in science education and separately pursue a teaching certification

Major in Biochemistry

As the name suggests, biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how “lifeless” molecules work together to make “living” organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.

The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, and statistical measurements and methods used in research. Independent study and internships (typically during the junior and senior years, but could start in the freshman year) provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.

Learning Outcomes

Students will obtain:

- A command of the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
- The ability to critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
- Experience in use of a variety of laboratory techniques; critically interpret experimental results; and design new experiments
- Demonstrate the ability to perform original research in biochemistry and molecular biology

Potential Occupations

Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to earn higher degrees in graduate school or health care related professional schools, leading to careers in medicine, veterinary medicine, pharmacy, or law.

Concentrations

- ASBMB Concentration (American Society for Biochemistry and Molecular Biology)
- Health and Medical Sciences Concentration
- Pre-Pharmacy Concentration

Major in Biochemistry, ASBMB Concentration

The American Society for Biochemistry and Molecular Biology (ASBMB) concentration in Biochemistry is composed of a "core" set of courses comprised of 24 credits of primarily upper division coursework (22/24 credits are 400 level), along with a total of 9 "bioscience elective" credits selected from a list provided by the department. This option gives the student 13 "free elective" credits, which they can use to pursue a minor, a double major, and/or other academic interests. Thus, this concentration is designed to provide a broad background in biochemistry and can be tailored to meet the individual needs of specific students. The ASBMB concentration is recommended for students considering teaching and/or research as a career. Students who graduate from this program can state on their resume that they graduated from an "ASBMB program." If desired, students can take a 1-hour ASBMB exam during the spring semester of their senior year. Students who pass the exam will additionally receive degree certification from ASBMB. Accreditation (and certification) by ASBMB confirms that our undergraduate degree program meets very high standards, and thus will enhance the credentials of our graduating seniors.

Requirements Effective Fall 2019

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

Major Completion Map

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biochemistry major - ASBMB concentration assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

Major in Biochemistry, Health and Medical Sciences Concentration

This concentration augments the ASBMB Concentration with additional coursework in anatomy and physiology, biochemistry of disease, and either a medical internship or mentored research by requiring an additional 14-15 credits of concentration-specific coursework. The Health and Medical Sciences concentration is geared toward students interested in a number of health professions including, but not limited to, medicine, veterinary, dentistry, physician assistant and physical therapy.

Requirements Effective Fall 2019

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

If students successfully complete an additional 1-credit course, Responsible Conduct in Biochemical Research BC 360, they can state on their resume that they graduated from an "American Society for Biochemistry and Molecular Biology (ASBMB) accredited program." Further, students also have the option of taking a 1-hour ASBMB exam during the spring semester of their senior year. Student who pass the exam will additionally receive degree certification from ASBMB.

Major in Biological Science

Biology is the study of all living things—including microscopic bacteria and viruses, plants, and animals, and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues of animals and plants, ecology (the relationship between living things and their environment), animal behavior, genetics/genomics and evolution. They learn about physiology, behavior, genetics and heredity, aquatic systems, microscopic organisms such as bacteria, and techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that relates to particular career goals (for example: the ecology of organisms, cell and molecular biology, biomedical professions, aquatic biology, marine biology, plant molecular biology for agricultural biotechnology and bioenergy, evolutionary biology, etc.).

Learning Outcomes

Students will:

- Interpret scientific data both mathematically and statistically.
- Demonstrate organizational and laboratory skills.
- Define scientific hypotheses and design experiments or observations to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

Training in biology prepares students for a wide variety of occupations. Some involve daily interaction within teams; others can be done in relative isolation; some are highly focused, but most require knowledge far beyond the sciences. Career options related to biology include water quality assessments, field and lab technician work, biotechnology in biomedical sciences and agriculture, genetic research, agriculture, or sales (i.e., pharmaceutical, agricultural). Graduates work in small businesses, multinational corporations, academia, and government research laboratories and policy agencies. A degree in biological science offers a broad foundation for professional degrees in nursing, dental, medical or veterinary school, and a number of health professions such as physician's assistant, physical therapy, occupational therapy, optometry or public health. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Combining biology with additional skills can lead to exciting careers. Biology and computer science can be linked to the ever-expanding and exciting area of bioinformatics. Biology and writing can be incorporated into a career as a technical writer or science fiction novelist. Biology and visual arts combine in medical and scientific illustration. Biology and other humanities may lead to studies of the history of science or medicine. Work in both biology and philosophy/religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master's degrees are designed for many of these unique career paths.

Some career opportunities include, but are not limited to: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, field ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master's degree); and medical or clinical laboratory technologist.

Concentrations

- Biological Science Concentration
- Botany Concentration

Major in Biological Science, Biological Science Concentration

The curriculum includes a two-semester introductory biology sequence, cell biology, developmental biology, ecology, evolution, and genetics. Required courses in the physical sciences include a minimum of one year in introductory chemistry and in physics (with labs), and at least one course in organic chemistry (with lab), and one in biochemistry. A calculus course and a statistics course are also required. In addition, students choose a selected field of 12 credits in one of the following: anatomy/physiology, aquatic biology, behavioral biology, cellular/molecular and genetic biology, ecology, evolution/genetics, and systematics, microbiology, or integrative organismal biology. There is an additional requirement of one course in two other fields, which assures a broad base of study.

Requirements Effective Fall 2019

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for

the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Self-Designed Field

A student may, with the approval of their advisor and the Biology Curriculum Committee, define their own individual selected field. Students wishing to pursue this option should consult with their advisor to develop a proposal for a self-designed field. The proposal should include a description of the field of interest, the student's reason or rationale for wishing to pursue a self-designed field, and a list of relevant classes (totaling 12 credits) to be completed. To be included, courses should be upper-division classes that are primarily biological in content. Once approved by the advisor, a student's request for a self-designed field must be submitted to the Biology Curriculum Committee for approval. The Curriculum Committee's approval should be obtained before the end of the sophomore year.

1 A minimum of one course must be selected from two additional fields (cannot use courses that were used to fulfill selected field). Courses in additional fields must be at least three credits.

2 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major Completion Map

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biological Sciences major -Biological Sciences concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Semester 4 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. The selected and additional field must

be a minimum of 18 credits. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 310 and BZ 350 together.

Major in Biological Science, Botany Concentration

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

The botany curriculum begins with a solid foundation in mathematics, the biological sciences, chemistry, organic chemistry, physics, evolution, and genetics. Botany emphasizing terrestrial plant studies including

plant systematics, anatomy, and ecology, biochemistry, and earth sciences round out the core. Botany students also take liberal arts and communications courses to give breadth to their education.

Requirements
Effective Fall 2015

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

Students will:

- Interpret scientific data.
- Demonstrate strong organizational and laboratory skills.
- Define scientific hypotheses and design experiments to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zoo keeper, animal trainer and instructor, science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Requirements
Effective Fall 2019

To be qualified for graduation, students in the Zoology major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Zoology major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Term 5 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 350 and BZ 310 together.

- A graduate degree in Biological Science indicates that the individual has achieved a professional level of competence in research as well as formal classwork. Consequently satisfactory progress in a research program must parallel the effort in coursework.
- A preliminary examination, administered by the Graduate Advisory Committee and consisting of both written and oral components, must be passed at least two semesters prior to the dissertation defense and graduation.
- A completed dissertation must be submitted to the Graduate Advisory Committee and approved following a successful oral defense (final examination).

Major in Chemistry

Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions, enabling insight into a range of processes from mining to clinical diagnostics. Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

Learning Outcomes

Chemistry students will:

- Organize, critically evaluate, and present chemical information coherently through oral and written discourse
- Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-

level positions in chemical industry and allied fields, or for admission to a graduate or professional school
- Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

Potential Occupations

Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching at the secondary school level have the opportunity to complete the teacher licensure program through the School of Education (http://soe.chhs.colostate.edu).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemical technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

Concentrations

- ACS Certified Concentration
- Non-ACS Certified Concentration

Major in Chemistry, ACS Certified Concentration

Students who wish to work as professional chemists should select the ACS Certified Concentration to obtain professional certification by the American Chemical Society. The ACS-approved curriculum of this concentration offers an extensive and rigorous chemistry education that gives students intellectual, experimental, and communication skills to become effective chemistry professionals.

Requirements Effective Fall 2018

Chemistry majors must achieve a minimum grade of C in all the listed courses required for the major in chemistry.

Major in Computer Science

Computer Science is about exploring and creating innovative solutions to complex, real-world problems. The demand for computer science professionals is skyrocketing. As a Computer Science major, students will study step-by-step computational methods for solving problems by encoding, storing, tracking and transforming information. Students will learn the theory, architecture, and application of computers – how to process information and how to design software (sets of computer instructions) to perform specific functions. Students will also learn how to enable software and computers to learn and adapt on their own. Computer Science is much broader than just programming.

Computer scientists work in diverse fields and have crucial core skills:

- information analysis and processing
- practical and specialized software design
- computer theory, logic, and discrete mathematics
- computer architecture and networks
- operating systems and programming languages

Two concentrations are offered under the Major in Computer Science: Computer Science and Human-Centered Computing. During the first 2 years of study, students in both concentrations take the same 100- and 200-level Computer Science core courses in the following areas of study:

- Calculus
- Programming and mathematical foundations
- Computer security
- Data structures
- Computer organization
- Algorithmic theory
- Systems software
- Software engineering
- Statistics
- Linear algebra

Students may take courses from a wide range of senior-level offerings:

- Big data
- Artificial intelligence
- Bioinformatics
- Networks
- Human-computer interaction
- Cloud computing
- Graphics
- Database systems
- Machine learning
- Compilers
- Parallel programming
- Architecture

The Computer Science discipline changes quickly, and course offerings are continually updated to keep pace. Our department Industrial Advisory Board of industry representatives work with us to ensure skills are current and competitive in the marketplace.

Students may also participate in research and teaching. These opportunities give students additional valuable skills and experience. Engaging in undergraduate research and teaching can help students decide if they would like to pursue a graduate degree. A minor in Computer Science is also available.

Learning Outcomes

Upon completing this program, students will be able to:

- understand how to use the mathematical and scientific principles of computing to design and develop software and computing systems.
- work effectively in teams to develop computation solutions to complex problems.
- communicate your technical ideas effectively in writing and verbally.
- confidently pursue graduate studies or professional employment in the computer science field.

Potential Occupations

Our Computer Science students are in high demand, and the majority find related employment upon graduation. The proven performance of CSU graduates has resulted in annual recruiting visits by a wide variety of companies, government agencies, and research laboratories. Internships are readily available that enhance skills and marketability.

Career opportunities include, but are not limited to: systems programmer, software designer, computer researcher, software engineer, software tester, systems administrator, security systems designer, database programmer, consultant, technical product support personnel, and educator.

Major in Computer Science, Computer Science Concentration

The Computer Science concentration is a broad computer science program that prepares students for any introductory position in the field. This concentration also allows students to select a research area (http://www.cs.colostate.edu/cstop/csresearch.php) and focus on that topic in their 400-level coursework. Students can also take a breadth focus -- a little bit of everything -- for a broader perspective.

Distinctive Requirements for Degree Program:

To prepare for first semester: The curriculum for the Computer Science major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. Those pre-calculus requirements are listed as benchmark courses in Freshman Semester 1 below. All students must maintain a C or better in CO 150 and in all CS, MATH, STAT and departmental Technical Elective courses which are required for graduation.

Students will receive a strong background in computer programming and information technology aimed towards a specific application area.

Learning Outcomes

Students completing this program will be able to:

- Write computer software.
- Develop computer applications to be used in a variety of areas.
- Develop websites, including web-based software and databases for use by experts in a broad range of fields.
- Grasp and demonstrate the subject matter of a specific field in which computers are to be used.
- Work effectively in groups to develop solutions to complex, field-specific problems.
- Communicate through writing about their technical activities.

Concentrations

- Computing Technology Concentration

Major in Applied Computing Technology, Computing Education Concentration

This teacher education program leads to a Bachelor of Science degree in Applied Computing Technology with a concentration in Computing Education (K-12 technology education) with state licensure in instructional technology (computers) and provides students with a background in education, computer programming, and computer systems enabling graduates to teach computing principles and serve as computing technology experts in public schools.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu) program and the School of Education for general information.

Potential Occupations

Graduates of this program can go on to become teachers in K-12 schools and will be capable of teaching a broad range of computing technology: computer applications, web development, and programming, including AP computer science courses. They will also be capable of providing expert information technology support for schools for instructional and administrative purposes.

Major in Applied Computing Technology, Computing Technology Concentration

This concentration emphasizes the use of programming skills and computer applications and technology (e.g., web development, computer and network system administration) in a variety of computer application areas used in business and other organizations. This is essentially an Information Technology (IT) program, stressing the maintenance and use of computers and computer applications rather than developing large-scale software from scratch.

The Computing Technology concentration includes all computer science classes taken by Computer Science majors in the first and second year, and combines those with specialized computing technology courses, business courses, and a selection of advanced courses from the Departments of Computer Science (http://www.cs.colostate.edu/cstop) and Computer Information Systems (http://biz.colostate.edu/cis/Pages/default.aspx).

Potential Occupations

The Computing Technology concentration prepares students for careers in information technology in which knowledge of computer programming, applications, and computing systems are used in businesses or other organizational settings. Computing technology students can be employed as computer programmers, web developers, network and system administrators, computing consultants, and business analysts.

Minor in Computer Science

Computer science and programming skills are in high demand in every field. Most jobs now require them.

A minor in Computer Science will give students a foundation in software development, programming, and computer and information theory. Students will begin with a gradual introduction to programming and data structures. Then students can take courses in an area of emphasis that complements their current degree.

This customized minor can significantly boost student's career opportunities and success.

Computer Science has competitive entrance requirements. Please contact a department advisor for more information.

Requirements Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C is required in all courses required for the minor.

Master of Science in Computer Science, Plan A

The Master of Science in Computer Science, Plan A is a research-based degree which includes coursework, research and a thesis. The degree is appropriate for students who intend to go on to work in computer science research and development for industry or government, or those seeking more advanced research training in a computer science Ph.D. program.

Requirements Effective Fall 2010

At least 35 credits of graduate course work, including up to 8 credits of CS 699.

Master of Computer Science, Plan C (M.C.S.)

The Master of Computer Science degree is a professional (non-research) degree consisting of coursework only. This degree is intended for students desiring an advanced credential in computer science to enhance their technical abilities and knowledge of state-of-the-art computer science principles to apply as software engineers in organizational settings (industry, government, etc.).

Requirements Effective Fall 2010

A total of 35 semester hours in lecture and laboratory courses are required for graduation. At least 20 of these credits must be in computer sciences courses at the 500-level or above (graduate level courses). Major in Mathematics

Mathematics is the science of numbers, shapes, probabilities, and measurements. It is a universal language in which information is stated in the simplest possible form. Mathematics has a dual nature—it is an independent discipline valued for its precision and elegance, and it is an essential source of ideas and techniques for other scientific endeavors.

The undergraduate program is structured to provide a broad liberal arts education in mathematics, a strong set of core courses, and flexibility to choose from a broad range of courses. The liberal arts component requires students to acquire a broad background in communication skills, humanities, social sciences, and natural sciences. The major core focuses on developing students' understanding and appreciation of the mathematical sciences, problem solving skills, and their ability to combine knowledge and skills in productive ways. Core mathematics subjects include calculus and advanced calculus, linear algebra, methods of proof, abstract algebra, computer programming, and statistics.

Four concentrations are available in the program: Actuarial Science, Applied Mathematics, General Mathematics, and Mathematics Education.

Learning Outcomes

Graduates will:

- Obtain a solid background in theoretical mathematics and will be able to participate in mathematical work in a variety of fields or continue on to graduate school.
- Be able to apply a range of mathematical and statistical tools to a diverse set of problems as presented to them in either employment or the pursuit of further education.

- Be capable of describing their mathematical assumptions and results to colleagues.

Potential Occupations

The Mathematics major prepares students for a wide variety of occupations in business, industry, government, and education. Actuarial science graduates who have passed the first two professional actuary exams can expect to find positions with excellent entry-level salaries. Applied mathematics graduates continue to find employment opportunities in government and private industry. Many pursue advanced degrees in mathematics, computational science, or engineering. About one-third of general mathematics graduates continue on to graduate school in mathematics or other disciplines, with the rest finding employment in a large variety of capacities. Education students spend a semester teaching a classroom and have excellent job placement. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who continue to pursue advanced degrees can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities include, but are not limited to: applied mathematician, actuary, engineer, statistician, financial analyst/advisor, computer programmer, computer systems analyst, mortgage officer, market analyst, risk analyst, tax auditor, accountant, math educator.

Major in Mathematics, Actuarial Science Concentration

The Actuarial Science concentration trains students how to use mathematics, statistics, business, and economics to analyze and plan for future situations involving financial uncertainties and risks. This concentration is designed to qualify students to take the first two examinations administered by the Society of Actuaries (https://www.soa.org/member) and provides the foundation for the remaining examinations.

Major in Mathematics, Applied Mathematics Concentration

The Applied Mathematics concentration prepares students for careers as applied mathematicians working in business, government, and industry. It is recommended that students supplement the core mathematical program with courses in their chosen application area; for example, engineering, public health, finance, electronics, or geology. Course requirements emphasize mathematical foundations as well as the application of mathematics in other disciplines. In particular, students receive training in numerical analysis, mathematical modeling, statistics, and computing, as well as a solid preparation for further study.

Major in Mathematics, Mathematics Education Concentration

The Mathematics Education concentration is designed to prepare students to teach mathematics through the high school level, including Advanced Placement and International Baccalaureate courses. The program provides the subject matter, education classes, and classroom experience required for secondary education licensure in Colorado.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (http://www.cep.chhs.colostate.edu)and the School of Education for general information.

Minor in Mathematics

The Department of Mathematics offers a minor in Mathematics for those students who wish to acquire a more extensive knowledge of mathematical sciences in support of their personal interests or major area of study.

Requirements Effective Fall 2016

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C is required in each MATH, STAT, and CS course required for the minor in mathematics.

Major in Physics

Physics is the study of motion, matter, and energy. It is the most fundamental of sciences, and provides the essential underpinning of chemistry, biology, astronomy, and geology. Physicists probe the structure of atomic nuclei, study exotic states of matter that occur at ultra-low temperatures, and develop theories that predict the origin and destiny of the universe. Physics has practical applications to a wide variety of tasks such as fabricating very large scale integrated circuits, producing high efficiency solar cells, and developing nanomachines, high-power lasers, and scanners for imaging activity within the human brain. Fundamental research in physics has led to many important inventions, including the transistor, the computer, the internet, the flat panel display, and the cell phone.

The Physics major begins with an emphasis on fundamentals in the basic sciences and mathematics to provide students with a broad foundation. Subsequent course work is designed to develop analytical and experimental abilities that allow students to solve problems involving the technical applications of physics. The curriculum includes courses on classical mechanics, modern physics, quantum mechanics, electricity and magnetism, and thermal physics. A strong liberal arts program rounds out the major and provides educational breadth. Participation in undergraduate research is strongly encouraged since it enhances practical training and expands employment opportunities, as well as being expected of anyone applying to research-based graduate programs.

Two concentrations are offered: Physics and Applied Physics. The former is the standard concentration, and is recommended for students planning to apply to graduate programs in Physics or related disciplines. The latter requires the student to select a specific "field': there are a variety to choose from, and each has its own menu of associated electives. The Applied Physics concentration is ideal for students who are double-majoring in other technical disciplines, or who anticipate further education towards a career in health professions (including, notably, Medical Physics).

Learning Outcomes

Graduates will:

- Obtain a solid background in experimental physics and basic theoretical physics. This will include a conceptual understanding of mechanics, electromagnetism, many-body physics, and quantum mechanics as applied to important model systems and real systems.
- Have the contemporary skills and knowledge necessary for entry-level positions in a variety of occupations or for admission to graduate or professional schools.
- Be able to carry out experiments on diverse physics phenomena using electrical and optical techniques; analyze data using statistical methods appropriately; identify systematic errors; and relate the results to core physics content at the advanced undergraduate level.
- Be able to communicate the results of experiments and theoretical analyses in writing and orally.

Potential Occupations

Physics majors who go into the workforce directly after graduation use their training in a variety of settings. The primary employers for our graduates have been large aerospace/defense and electronics companies, as well as software firms and smaller high-tech companies. In addition to the more obvious jobs in those settings, such as computer programming, quality control, and electronics design, our students have also been hired in training and sales capacities. High school teaching is a possibility: there are several pathways for students with undergraduate Physics degrees to obtain teaching credentials. Physics graduates possess excellent mathematical and analytical skills that are useful in business and finance as well.

Our majors have gone on to research-based graduate programs in disciplines including Physics, Applied Physics, Applied Mathematics, Atmospheric Science, and Quantitative Biology. Those earning graduate degrees can work in college teaching and at industrial, government, and academic research labs and reach the highest professional levels.

Health Physics and Medical Physics are two less-known career paths that offer great opportunities for students interested in the direct application of physics to human well-being. The former is concerned with protecting people from dangers associated with ionizing radiation, while the latter involves working with x-ray machines and radioisotopes in clinical settings. Both require Master's degrees in the discipline, and a Physics major is the preferred undergraduate preparation.

Concentrations

- Applied Physics Concentration
- Physics Concentration

Major in Physics, Applied Physics Concentration

The Applied Physics concentration combines fundamental course work in physics with a selection of courses in a related field. Seven fields are available:

- The **Electronics, Semiconductors, and Optics** field and the **Materials and Fluids** field are designed for students interested in rapidly changing technology or in areas that overlap the boundaries of traditional engineering disciplines.
- The **Computers** field provides a foundation for the application of modern computer technology to problems in physics, the development of new types of computers, and jobs in computer programming.
- The **Chemistry** field combines thorough knowledge of both chemistry and physics, which is useful in such interdisciplinary areas as materials science, surface science, and physical chemisty/chemical physics.
- The **Medical Physics** field and the **Biophysics** field prepare students for further study in medical physics (the application of physics technologies to medical practice), health physics (radiation safety and protection), or biophysics, and are also appropriate for students planning careers in traditional health professions.
- The **Geophysics** field prepares students for further study in geophysics and careers involving application of physical methods in geology.

With this concentration, it is also possible for students to design a custom field (in consultation with departmental advisors) to meet their specific needs.

Requirements Effective Fall 2018

Each course used to meet requirements of the concentration need a minimum grade of C-, including courses to satisfy AUCC Categories 1, 2, and 3A.

1 For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.

2 CHEM 301 or CO 301B are recommended. Other courses in AUCC Category 2 may be accepted if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.

3 A minimum of 6 credits must be 300-, 400-, or 500-level.

4 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- , 400-level, or 500-level).

Major Completion Map

Distinctive Requirements for Degree Program:

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Many courses in a Selected Field list have prerequisites outside the Department of Physics. Any student considering the Applied Physics concentration should meet with an advisor as soon as possible. Note that PH 327 may be replaced by three credits from each of the two Technical Electives Lists.

Major in Physics, Physics Concentration

The Physics concentration provides a broad background in physics that serves as a base for later specialization, either in graduate school or on the job. It is designed for those seeking greater insight into physics and an introduction to more advanced topics and methods. Students who obtain a degree in Physics with the Physics concentration are prepared for a career in industry or government, or for advanced study at the graduate level.

Requirements Effective Fall 2018

Each course used to meet requirements of the concentration need a minimum grade of C-, including courses to satisfy AUCC Categories 1, 2, and 3A.

Major in Psychology

Psychology is one of the most popular and versatile majors. The major emphasizes a strong background in the natural sciences (e.g., mathematics, chemistry, biology, statistics, human physiology), writing, and research.

Electives enable students to obtain a second major or minor in a field of interest or take pre-professional courses and graduate with:

1. A combination of courses and experiences to qualify for semiprofessional jobs in psychological settings or closely-related fields (e.g., addictions counseling);
2. A combination of courses providing a background for careers outside of psychology (e.g., human resources);
3. Pre-professional courses for potential admittance into professional training programs (e.g., medicine, occupational therapy, veterinary medicine); and/or
4. A complement of courses for potential admittance into psychology graduate school programs. Advanced degrees are often a prerequisite for professional careers in psychology.

Learning Outcomes

Students will:

- Demonstrate understanding of the basic theories and principles of behavior.
- Demonstrate knowledge of psychological principles and concepts across several content areas.
- Demonstrate knowledge and appreciation of the scientific methods used in psychological research by engaging in analytical and critical thinking.

Potential Occupations

A B.S. degree in Psychology prepares students for a variety of career opportunities. Because of the strong science orientation, students develop a number of important skills required in a broad range of occupations. Skills such as written and oral communication, cooperation, analytical and critical thinking, and a background in the sciences demonstrate versatility and an ability to pursue a variety of career paths. Participating in paid or volunteer work, internships, research, study abroad and experiential education opportunities are highly recommended to increase students' employment opportunities.

Possible career opportunities include, but are not limited to: addictions counselor, human services worker, case worker, mental health services worker, probation officer, community relations officer, educator, program developer/administrator, human resources administrator, labor relations representative, compensation and benefits administrator, public relations specialist/special events administrator, advertising producer/writer, account services representative, media representative, market researcher, government program administrator, business manager, buying agent, sales representative, real estate broker, industrial/organizational consultant, psychometrician, neuropsychologist (with advanced degree), cognitive neuroscientist (with advanced degree), engineering psychologist (with advanced degree), clinical psychologist (with advance degree), family therapist (with advanced degree), lawyer (with advanced degree), occupational therapist (with advanced degree), veterinarian (with advanced degree) or physician (with advanced degree).

Major in Psychology, Addictions Counseling Concentration

The Addictions Counseling concentration provides students with an undergraduate degree in psychology while completing the required courses for becoming certified addictions counselors (Level 1) in the state of Colorado. Besides coursework, students are required to complete internship hours at an approved facility. Students who are interested in the clinical/counseling field of psychology, but do not wish to seek an advanced degree in psychology, may find this an attractive concentration.

Major in Psychology, Mind, Brain, and Behavior Concentration

The Mind, Brain, and Behavior Concentration prepares students to be competitive candidates for graduate programs in cognitive psychology, cognitive neuroscience, behavioral neuroscience, and sensation and perception. Many students considering a career in medicine or an allied health profession also choose to complete this concentration. Students acquire a stronger science and quantitative background compared to the other concentrations in psychology. Students are encouraged to participate as undergraduate research assistants and work with a faculty member on a research project.

Major in Statistics

Statistics is the science of modeling, summarizing, and analyzing data. Statisticians help people produce trustworthy data, analyze the data, and present the results in a useful manner. Statisticians work with people from other professional backgrounds to solve practical problems. They provide crucial guidance in determining what information is reliable and which predictions can be trusted. An exciting aspect of the field is the diversity of areas where statistical methods are used; this is one reason for continuing strong demand for well-trained statisticians. With the popularity of big data and the focus on quantitative analysis in many fields, there will continue to be a high demand for graduates with a statistics major or minor. Students who succeed in the field of statistics typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

Learning Outcomes

Students completing this program will be able to:

- Conceptualize analytical questions in terms of a model,
- Apply their knowledge of the core set of statistical methods,
- Perform data analysis using statistical software,
- Interpret and communicate statistical results,
- Either attend graduate school in statistics or find professional employment in a statistics field upon completion of a statistics major.

Potential Occupations

Statisticians find employment in a wide range of industries including medicine (evaluating new medicines and medical treatments), computing, business, market research, natural resources, government, and more. Almost every industry has a statistician or a group of statisticians somewhere in the organization. Graduate school is another pathway after graduation. Many of our undergraduate majors have continued on to graduate school in statistics, either at CSU or other universities. Almost all statistics majors are able to find work in this field and/or gain entrance to graduate school after successfully completing a Statistics degree.

Concentrations

- General Statistics Concentration
- Mathematical Statistics Concentration

Requirements

No new students are being admitted to this stand-alone major. Students interested in this area of study, please visit the General Statistics Concentration or Mathematical Statistics Concentration program pages.

Major in Statistics, General Statistics Concentration

The General Statistics concentration provides a solid foundation in statistical theory as well as education and training in modern statistical methods.

If you are interested in the General Statistics concentration, please contact our department at stats@stat.colostate.edu.

Graduate Certificate in Theory and Applications of Regression Models

Applications of regression analysis, generalized regression models, probability and mathematical statistics and other topics in statistical analysis. The focus is on the practical methods in regression analysis, understanding patterns and structure in data, and the explanation of findings.

Distinctive Requirements for Certificate: GSLL 3095 and GSLL 3096 (or STAT 500) are required skills courses and should be taken first. GSLL 3095 is intended not only as a review, but also as instruction in using the math skills in a statistical context. It does not replace the math prerequisites indicated. GSLL 3096 covers use of SAS and R programming. STAT 500 is a 1-credit version of GSLL 3096.

Master of Applied Statistics, Plan C, Data Science Specialization

The Master of Applied Statistics, Plan C, Data Science Specialization emphasizes practical methods in statistics and data science, focusing on applications and computational aspects, rather than theory. The goal of this degree is to enable students to start working as data scientists in business, industry or government immediately after graduation. Students will receive a strong background in statistical and business computing while completing this degree. Full time students complete the M.A.S. degree in less than a year; however, this degree may also be completed part time, either online or on campus. Students who succeed in the field of data science typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

College Programs

A concern for health and the diseases of animals and humans provides the unifying theme for the undergraduate, professional, and graduate programs of the College of Veterinary Medicine and Biomedical Sciences (CVMBS)—a manifestation of the concept of One Health. The College combines teaching, research, and public service activities in basic biomedical disciplines such as anatomy, neurobiology, physiology, microbiology, pathology, and radiological health sciences, with applied disciplines such as clinical veterinary medicine and surgery, diagnostic imaging, radiology, clinical laboratory sciences, epidemiology, and environmental health sciences. Graduates of the College in either the veterinary sciences or the biomedical sciences serve society in the broadest sense: they represent the concept that there is but "one medicine" supporting "one health" with human and animal health intimately interrelated within their environments.

Major Courses of Study

The CVMBS offers undergraduate, professional, and graduate courses of study. There are four undergraduate programs leading to the Bachelor of Science, with majors in Neuroscience in partnership with the College of Natural Sciences, Biomedical Sciences, Environmental Health and Microbiology. The Bachelor of Science degree requires a minimum of 120 credits with a minimum of 42 credits in upper-division courses. The four-year professional veterinary medical program leads to the Doctor of Veterinary Medicine degree; students in this program typically complete a baccalaureate degree prior to program admission. Graduate studies in each of the four departments of the college lead to Master of Science and Doctor of Philosophy degrees with selected professional master's programs serving emerging needs in society and through practitioner skill development.

Education Abroad

Education abroad programs are available to students in the CVMBS. Because the knowledge of at least one other culture is valuable in understanding our own, students are strongly encouraged to study outside the United States. Students interested in education abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

Continuing and Distance Education

The CVMBS supports the veterinary profession by offering continuing education courses that enable practicing veterinarians to obtain new medical information and meet the Colorado Veterinary Practice Act continuing education requirements for re-licensure. The College shares responsibility for continuing education and maintains close liaison with the American Veterinary Medical Association (AVMA), the Colorado Veterinary Medical Association (CVMA), the Colorado Board of Veterinary Medicine, and the Western Interstate Commission for Higher Education (WICHE). Innovative programs like Health Professions preparation—for students finishing essential courses to prepare to pursue health professions—are offered through CSU Online.

Graduate Programs

Programs leading to the Master of Science and Doctor of Philosophy degrees are offered in all departments of the College.

Students with Bachelor of Science or Doctor of Veterinary Medicine (DVM) degrees, or well-qualified students who are currently pursuing veterinary medicine degrees, are eligible to study for advanced degrees in the Departments of Biomedical Sciences; Clinical Sciences; Environmental and Radiological Health Sciences; and Microbiology, Immunology, and Pathology.

The CVMBS and the College of Business have created a combined five-year **DVM-MBA** program of study that can result in earning both the Master of Business Administration (MBA) degree and the DVM degree. Applicants to the DVM program are encouraged to consider extending their veterinary education to include a one-year start to an MBA degree. After successfully completing the first year of the MBA program, students will be guaranteed admission to the first year of the DVM program and will be expected to complete the remaining MBA course requirements concurrently with the first two years of the DVM curriculum. This program was undertaken to improve training of our students in veterinary practice

management, business and economics beyond what is currently offered as core content within the DVM curriculum.

Combining the expertise from public/environmental health and veterinary medicine and partnering with the Colorado School of Public Health (http://publichealth.ucdenver.edu), the College has created a five-year **DVM-MPH** program which provides specialty training in veterinary medicine and public health. Students spend the first year in the Master of Public Health (MPH) program, years two and three jointly in the DVM and MPH programs, and then years four and five focusing on completing the DVM requirements. Given the threats to public health from zoonotic diseases, changing ecosystems due to climate, and enhanced need for health professionals versed in the interplay of human, animal and environmental factors, DVM-MPH graduates bring a critical skill set to bear on issues of significant public impact.

The CVMBS and the Department of Animal Sciences within the College of Agricultural Sciences have partnered in developing a **DVM-MS-Animal Sciences** five-year combined degree, aimed at offering robust training in livestock production, animal health, industry and economics to future livestock veterinarians. Students will be optimally equipped to provide animal health services, advise individuals within production units, provide leadership within professional organizations, and contribute to knowledge development through research. Students complete graduate coursework in Animal Sciences and initiate clinical/field research in the first year, then complete research requirements during the subsequent four years of DVM training.

There is a national need for veterinarians who can serve as the bridge between research and all aspects of animal health and welfare. The College has developed a seven-year **DVM-PhD** program that integrates clinical and research training to provide a dual degree to selected candidates. Numerous outstanding research opportunities exist in diverse areas that complement DVM training, including cancer biology, infectious disease, neurosciences, reproductive biology, epidemiology, orthopedic sciences, environmental health and toxicology. The typical DVM/PhD program progresses as follows:

- basic graduate study and laboratory rotations (year one)
- first two years of DVM training plus electives and graduate work (years two and three)
- exclusive research work in the PhD program (years four and five)
- completion of the DVM training (years six and seven)

For detailed information about CVMBS graduate programs, view the College Academic Departments site (http://csu-cvmbs.colostate.edu/academics/Pages/default.aspx). Information on DVM combined degrees may be viewed on the CVMBS site (http://csu-cvmbs.colostate.edu/dvm-program/Pages/default.aspx).

Interdepartmental Program

Doctor of Veterinary Medicine (DVM)

A four-year professional Doctor of Veterinary Medicine (DVM) program is offered annually to approximately 148 students. Each year, approximately 138 students are admitted to the DVM program located on the main CSU campus in Fort Collins, Colorado. Additionally, up to 10 students are admitted to the CSU-University of Alaska Fairbanks (UAF) 2+2 DVM Program. These students complete the first two years of the four-year program in Fairbanks, Alaska, and join the larger cohort to complete years three and four in Fort Collins. Students in the 2+2 Program graduate with a DVM degree from CSU, and enjoy unique opportunities at UAF in small animal sports medicine, rural outreach, conservation, and wildlife medicine.

Because the number of applicants exceeds the number of students who can be admitted to any class, the members of the DVM Admissions Committee for the CVMBS carefully evaluate each applicant in a holistic manner to recommend those best qualified. Information concerning the academic program which leads to the DVM degree may be found in the Graduate and Professional Bulletin or online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements).

The full course of study requires four years beyond completion of the pre-veterinary requirements. While exceptional students may complete pre-veterinary requirements in two to three years and then be accepted into the DVM Program, it is much more common that students complete a baccalaureate degree or graduate degree, followed by four years in the professional program.

Pre-Veterinary Training for the Doctor of Veterinary Medicine Program

Students may complete pre-professional (pre-veterinary) training at any accredited institution whether these courses are part of a regularly offered baccalaureate program or whether the courses are taken as "stand alone" choices independent of a degree program. Courses must be substantially equivalent in subject content and level as offered for pre-veterinary students at CSU.

Inquiries regarding equivalent or substitute courses that may be taken *specifically* to meet pre-veterinary requirements should be directed to DVMAdmissions@colostate.edu. There is also a form for requests (Prerequisite Substitute Course Request (https://vetmedbiosci.colostate.edu/dvm/admission-requirements)), which is submitted to DVMAdmissions@colostate.edu.

The minimum course requirements for admission to the DVM program, exclusive of electives, are:

- Arts, Humanities, Behavioral and Social Sciences – at least 12 semester credits. (The required credits for English composition explicit in most programs of study as all university requirements—see category that follows—do not fulfill these requirements.)
- Biological Sciences – at least three semester credits in genetics and a laboratory associated with a biological science course.
- Chemistry – at least three semester credits in biochemistry (requiring organic chemistry as a prerequisite) and a laboratory associated with a chemistry course.
- English Composition – at least three semester credits.
- Physics – at least four semester credits with laboratory.
- Statistics – at least three semester credits (upper-division course preferred).

In addition to these minimum course requirements, 30 credits of elective courses are required. Highly recommended courses include anatomy, cell biology, developmental biology, histology, immunology, microbiology, nutrition, physiology, and computer science. These courses will enhance the student's preparation for the DVM program.

The pre-veterinary requirements include a total of 60 semester credits that must be completed prior to admission to the DVM program. Students may apply prior to completing all prerequisite requirements; however, in order to assure the most competitive application, one is encouraged to have the majority of the prerequisites completed at the time of application. The large majority of students will complete the pre-

veterinary requirements as part of a baccalaureate program. Exceptional students may apply for admission to the DVM program when only the pre-veterinary requirements are met.

Students who wish to pursue pre-professional veterinary medicine training (sufficient to meet minimum requirements to apply to the CSU DVM Program) through courses offered at CSU as part of their undergraduate degree program will find detailed information online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements).

Combined Degree Programs

Colorado State University offers four combined degree programs, pairing the DVM with a graduate degree. These include the DVM-MBA, DVM-MPH, DVM-MS-Animal Sciences, and DVM-PhD. Please see "Graduate Programs" above for detailed information.

Food Animal Veterinary Career Incentive Program

There are many vacancies and numerous career opportunities in all sectors of private livestock practice, including mixed animal practice and specialty practices in dairy cattle, beef cow-calf, beef feedlots, sheep, small ruminants and swine. There are also many opportunities in public practice including food safety and inspection, communicable disease management, and regulatory veterinary medicine. Many practitioners and producers have found it difficult to recruit new graduates into food and fiber animal practice, especially in rural communities. Reduced veterinary participation in food and fiber production animal medicine may contribute to increased vulnerability of livestock industries to emerging infectious diseases, exotic and zoonotic diseases, public health risks from food safety and quality problems, lowered public confidence in animal agricultural products, as well as threats to the national economy. Thus, the overarching goal of the Food Animal Veterinary Career Incentive Program (FAVCIP) is to create a sustainable source of future veterinarians for underserved disciplines and geographic regions central to the future of safe and successful food and fiber animal production. This program includes a plan of academic work, experience, and mentoring that encompasses undergraduate and veterinary medical education and meets specific needs of animal agriculture through a cooperative venture of the CVMBS and the Department of Animal Sciences in the College of Agricultural Sciences. It should be noted that DVM students who do not complete the FAVCIP may still focus coursework and clinical experiences on livestock medicine, especially in years three and four.

Undergraduate students with a strong interest in the discipline will be encouraged to follow the FAVCIP curriculum and program requirements (http://csu-cvmbs.colostate.edu/dvm-program/Pages/DVM-Special-Programs.aspx) as they complete their Bachelor of Science in Animal Science at CSU.

Major in Biomedical Sciences

An undergraduate degree in Biomedical Sciences prepares students for a wide variety of opportunities which have a basis in cellular and molecular biology, human/animal anatomy and physiology. In addition to enrolling in required courses, students will have opportunities to engage in elective courses and laboratory research in specialty areas of endocrinology, pharmacology, neurophysiology, reproductive physiology, and cardiopulmonary physiology. In this process, students are able to tailor their educational experiences to specific career objectives. The curriculum will prepare graduates to pursue further studies in professional schools for medicine, veterinary medicine, pharmacy, dentistry, and optometry, as well as other programs such as physician assistant and physical therapy. This degree will also prepare students for graduate studies in the biomedical sciences as well as for employment in a variety of innovative and developing fields in biotechnology.

The basic science curriculum meets many requirements for entrance into professional schools. Experiential learning opportunities are encouraged and could include participating in laboratory research, teaching/tutoring in selected courses, volunteer experiences and leadership positions within student club(s), study abroad, internships, and honors curriculum. These opportunities are encouraged with the student's interests and career goals as the focus.

Learning Outcomes

- Obtain a solid background in anatomy and physiology and be able to integrate knowledge from the molecular to the systemic level
- Demonstrate strong writing and oral communication skills
- Develop scientific hypotheses and experiments to test them
- Work effectively in groups
- Demonstrate effective organization, leadership, and laboratory skills
- Think critically and logically

Potential Occupations

A Bachelor of Science degree in Biomedical Sciences will provide students with a variety of opportunities for further study or employment in the broad area of biomedical sciences. The coursework is designed to prepare students for health-related graduate and professional programs. Post-graduate opportunities will include additional studies in specialty areas of physiology such as neuroscience, reproductive endocrinology, cardiopulmonary, and patho-physiology. Employment opportunities can be found in government at the local, state, and national levels; research in a variety of settings such as university, industry, and private laboratories; education; administration and management; and industry such as biotechnology, pharmaceuticals, and medical devices. Students will be exposed to skill sets which are necessary in a competitive, ever changing job market.

Distinctive Requirements for Degree Program:

TO DECLARE MAJOR: competitive entry controls required and capped enrollment in place. Please see advisor in Department for more information.

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biomedical Sciences major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. Those pre-calculus requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam.

Distinctive Requirements for Degree Program:

To Declare Major: competitive entry controls required and capped enrollment in place. Please contact Director of Student Success in the CVMBS Student Success Center for more information.

To Prepare for First Semester: The curriculum for the anatomy and physiology concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. Those pre-calculus requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam.

Major in Biomedical Sciences, Environmental Public Health Concentration

This program prepares students for employment by public sector environmental agencies, private industry, academic institutions, as well as graduate study in medicine, veterinary medicine, and related biomedical and health fields.

Students will begin their studies with foundational science courses including biology, physics, general chemistry, organic chemistry, math, and statistics, and then use these basic sciences as tools to solve environmental health problems. Students are involved in actual and simulated field projects with data gathering and analysis, characterization of environmental health problems, evaluation of alternative solutions, and presentation of results in written and oral formats. All students in the Environmental Health concentration will complete a professional internship for academic credit with a private sector company, environmental health agency, or research entity (public or private).

Major in Biomedical Sciences, Microbiology and Infectious Disease Concentration

This program offers a wide variety of opportunities which have a basis in cellular and molecular biology and infectious disease. In addition to enrolling in required courses, students will have opportunities to engage in elective courses and laboratory research in specialty areas of bacteriology, immunology, mycobacterial diseases, prion biology, vector borne infectious disease, and virology. In this process, students are able to tailor their educational experiences to specific career objectives. The curriculum will prepare graduates to pursue further studies in professional schools for medicine, veterinary medicine, pharmacy, dentistry, and optometry, as well as other programs such as nursing, physician assistant and physical therapy. This program will also prepare students for graduate studies in microbiology and infectious disease as well as for careers in research and employment in a variety of innovative and developing fields in biotechnology.

The basic science curriculum meets many requirements for entrance into professional schools. Experiential learning opportunities are encouraged and could include participating in laboratory research, teaching/tutoring in selected courses, volunteer experiences and leadership positions within student club(s), study abroad, internships, and honors curriculum. These opportunities are encouraged with the student's interests and career goals as the focus.

Distinctive Requirements for Degree Program:

To Declare Major: competitive entry controls required and capped enrollment in place. Please contact Director of Student Success in the CVMBS Student Success Center for more information.

To prepare for first semester: The curriculum for the microbiology and infectious disease concentration assumes students enter college

prepared to take MATH 124. Entering students who are not prepared to take MATH 124 will need to prerequisite requirements in the first semester. Those requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

Major in Neuroscience

Molecular, Cellular and Integrative Neurosciences Special Academic Unit

Assistant Professor Phillip L. Quirk, Undergraduate Program Director
Office in:
Physiology 228

The Molecular, Cellular and Integrative Neuroscience Special Academic Unit offers an interdisciplinary undergraduate degree program with faculty in five different colleges and ten departments. Two different concentrations are offered as programs of study: Behavioral and Cognitive Neuroscience and Cell and Molecular Neuroscience. Both concentrations have a strong foundation in mathematics, physics, chemistry and biological sciences that utilize a common core for the first two years, differing in only a single course for each concentration, thus making it easy to switch between concentrations if a student's interest changes during the first two years. Both concentrations require completion of an undergraduate thesis, providing significant opportunities for experiential learning in research laboratories in which they work closely with faculty, and which sometimes lead to authorship of original publications. Electives allow students in one concentration to acquire breadth and depth in the other area, if desired.

Learning Outcomes

Students will obtain:

- A command of basic concepts in chemistry, physics, biology, biochemistry, molecular biology, and cellular biology as well as a more in-depth understanding of the structure and function of the nervous system.
- An understanding of how the brain works, from molecules to the mind, and how its function becomes disrupted in diseases and following brain injury.
- The ability to critically analyze and present the methods, results, and conclusions of scientific papers in the current neuroscience literature, and orally present technical material in a clear and comprehensible form.
- Experience in the use of a variety of laboratory techniques, ability to critically interpret experimental results, and ability to design new experiments.
- The ability to perform original research or to critically analyze published work to advance an understanding of a specific area of neuroscience by preparing and defending an undergraduate thesis.

Potential Occupations

Possible career opportunities for students with a B.S. in Neuroscience include, but are not limited to: research technician, medical or clinical lab technologist, production/quality assurance lab technician, pharmaceutical research worker or salesperson, human resource specialist, neurotoxicology technician, teacher, writer, and research analyst. Many Neuroscience majors go to professional schools in medicine, veterinary medicine, or health sciences, or into graduate programs encompassing virtually all areas of biomedical sciences and psychology.

Concentrations

- **Cell and Molecular Neuroscience Concentration**

Major in Neuroscience, Behavioral and Cognitive Neuroscience Concentration

Overview

The Behavioral and Cognitive Neuroscience concentration integrates an understanding of neuroanatomy with the mechanisms of sensation/perception and learning/memory, generally applied to human behavior. Its focus is at the functional level of neuronal systems and networks. It differs from classical psychology in providing a more in-depth cellular and molecular basis for understanding behavior and neurological disorders that influence behavior. Graduates with this concentration are well prepared for many graduate and professional degree programs in health professions, as well as for careers in a variety of clinical settings, non-profit disease oriented foundations, and private sector organizations in either research-related or human resource service-related positions.

Major in Neuroscience, Cell and Molecular Neuroscience Concentration

The Cell and Molecular Neuroscience (CMN) concentration integrates neuroanatomy with the cellular and molecular basis of nervous system function. Its focus is to understand cellular processes in neurons and glia at the molecular level. It differs from degree programs in biochemistry or biomedical sciences by its specific focus on the nervous system. Required courses in microbiology, immunology, biochemistry, and advanced cell biology provide an excellent background for students interested in pursuing careers in medicine or biomedical research through graduate or professional schools. However, graduates with this concentration should also be well qualified for any positions in academia, government or the private sector where knowledge of cell and molecular processes is required, whether or not it is applied to the nervous system.

Students in the CMN Concentration with strong research interests and a GPA of 3.250 or above may qualify for early entry into the M.S. degree program in Biochemistry while pursuing the B.S. degree program in Neuroscience. Early entry requires that students have identified a faculty member willing to mentor them in their laboratory research for the M.S. degree and that they have obtained permission from the Neuroscience program and the Department of Biochemistry and Molecular Biology to apply to the graduate school for this. Students can apply to the graduate program (allowing them access to courses above those at the 500 level) during the semester that they complete 90 or more credits. Students will be moved from undergraduate to graduate standing the semester after they complete 120 or more credits. At that time they begin paying graduate tuition and fees and will lose all undergraduate institutional and scholarship aid, but they can qualify for many graduate assistantships and fellowships. Both degrees can be awarded during the same semester but the M.S. degree cannot be awarded before completing the requirements of the B.S. degree.

Minor in Biomedical Sciences

The minor in Biomedical Sciences provides students with a useful complement to majors in Animal Science, Biochemistry, Biological Science, Health and Exercise Science, Human Development and Family Studies, Microbiology, Psychology, and other biomedical science areas. The program offers a variety of courses which serve to broaden the background of students pursuing professional careers in biomedical sciences, human and veterinary medicine, and a variety of health-related disciplines. Candidates begin the program with a course in physiology. The remainder of the required 21 credits is selected to complement the student's educational goals and interests.

Requirements Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C (2.000) in either BMS 300 or BMS 360 will be required for those students who are seeking to graduate with a minor in biomedical sciences.

Master of Science in Biomedical Sciences, Plan A

The traditional Master of Science in Biomedical Sciences, Plan A (http://csu-cvmbs.colostate.edu/academics/bms/Pages/master-science-biomedical-sciences.aspx) is a research-based program and typically takes two to three years to complete. While less comprehensive than a Ph.D., students complete a meaningful and original research project, which culminates in writing and defending a thesis. This option is designed for motivated students who have the ability to develop critical thinking skills and conduct research in one of the three primary areas of study in our department: cardiovascular physiology, reproductive physiology, and neurobiology.

Professor Wayne Jensen, Department Head

Faculty in the Department of Clinical Sciences participate in training professional veterinary medical students and graduate students. For the veterinary medical student curriculum, students are instructed in the diagnosis, medical and surgical treatment, and prevention and management of domestic and exotic animal diseases. Through field service clinical experience, students receive on-the-farm training in livestock herd health management and production medicine. Our major clinical training center is the Veterinary Teaching Hospital, which operates state-of-the-art primary and referral services in all areas of small animal medicine and surgery, equine, and agricultural animal clinical care.

Undergraduate

No undergraduate major is offered.

Graduate

Graduate Programs in Clinical Sciences

Graduate programs offered in the department lead to Master of Science or Doctor of Philosophy degrees. Particular research focus areas within the department include epidemiology, musculoskeletal diseases, cancer biology, cardiovascular diseases, regenerative medicine, and infectious diseases of animals.

The department also offers a three-year combined master's degree and residency program in large and small animal surgery, anesthesiology, cardiology, dentistry, internal medicine, neurology, oncology, ophthalmology, dermatology, small and large animal sports medicine and rehabilitation, and emergency and critical care medicine. These training programs partially fulfill requirements for board certification in these specialties. Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Clinical Sciences (https://vetmedbiosci.colostate.edu/cs).

Major in Environmental Health

Environmental Health is a branch of public health that studies how biological, chemical, and physical factors in natural and built environments impact human health and disease. Students will learn how to help prevent injuries and disease by managing environmental hazards and promoting healthier air, water, soil, homes, workplaces, and communities. The degree program is one of only 30 programs nationwide to be fully accredited by the standards of the **National Environmental Health Science and Protection Accreditation Council**, and the only such program in Colorado.

The Environmental Health degree prepares students for immediate employment in the public and private sector as well as graduate study in toxicology, epidemiology, industrial hygiene & occupational health, public health, and related biomedical and health fields. The basic science requirements for the major will meet admission requirements for accredited medical and veterinary medical schools in North America.

Students begin their studies with foundational science courses in biology, physics, general chemistry, organic chemistry, biochemistry, microbiology, physiology, calculus, and statistics, and then use these basic sciences as tools to solve environmental health problems. Students are involved in actual and simulated field projects with data gathering and analysis, characterization of environmental health problems, evaluation of alternative solutions, and presentation of results in written and oral formats. All Environmental Health students complete a professional internship for academic credit with a private sector company, public health agency, or research entity (public or private). Read about **Environmental Health student internships** (http://csu-cvmbs.colostate.edu/academics/erhs/Pages/Environmental-Health-Internships.aspx) on the department website.

Learning Outcomes

Students will:

- Effectively communicate the health consequences of actions, behaviors, or environmental degradation to the public, political community, legal experts, or the media
- Demonstrate critical thinking and problem solving abilities for environmental health issues as an individual and as a member of a problem solving team
- Integrate knowledge in social, physical, and biological sciences to evaluate environmental health issues
- Apply knowledge of scientific methods to evaluate compliance with environmental health standards and assess risks to workers and the public

Potential Occupations

Career opportunities include, but are not limited to: environmental health specialist, public health specialist, industrial hygienist, toxicologist, epidemiologist, air and water pollution specialist, hazardous and solid waste specialist, occupational safety specialist, environmental consultant, and health educator. More information on career opportunities (http://csu-cvmbs.colostate.edu/academics/erhs/Pages/Careers-Environmental-and-Radiological-Health-Science.aspx) can be found on the department website.

Sources of radiation range from naturally occurring radioactivity to reactors. Successful persons in health physics have broad backgrounds in physics, biology, instrumentation and have an understanding of risks and risk analysis.

Required course work is structured to provide a sound foundation in the basic skills essential to the health physics profession. Students may concentrate on specific areas of interest through a wide selection of elective courses. Formal course work is supplemented by extensive laboratory exercises, field trips and research.

The M.S. in Radiological Health Sciences, Health Physics Specialization is accredited by the Applied Sciences Accreditation Commission of ABET (https://www.abet.org).
