Major in History

History analyzes the course of human affairs through evidence and reason. It sheds light on our present by showing how individuals and groups in the past made decisions, exercised power, and responded to changes through revolution, migration, war, ecological disturbance, and globalization. History also explains how people understood and sometimes exploited class, ethnicity, gender, race, and sexuality, and how they conceptualized the world through religion and ideology.

The Major in History also offers courses in public history (such as the National Parks, documentary films, and historic preservation), a Social Studies Teaching concentration, and as of Spring 2021, a new concentration in Digital and Public History, which gives students the

opportunity to apply twenty-first century tools and technologies to understand and interpret the past.

The Major in History is designed to enlarge students' knowledge about the past, improve their ability to think logically and critically, and sharpen their powers of written and oral expression. It is an outstanding choice for students planning further professional study in law, medicine, ministry, academia, business, and many other fields.

Learning Outcomes

Students in History courses:

- Analyze and interpret historical materials, such as documents, material artifacts, and images;
- Engage in chronological reasoning to understand causation and change over time;
- Examine critically how people in the past understood their own history in scholarly works and in popular forms such as myths, memorials, and other public commemorations;
- Interpret, write, and speak about the past using evidence and according to the standards and expectations of the historical discipline, including honest use of evidence, openness to multiple perspectives, and historical empathy; and
- Analyze both change and continuities over time by considering how events such as revolution, migration, war, ecological disturbance, and globalization changed societies as well as how structures like class, ethnicity, gender, race, sexuality, climate and religion shaped societies over a longer time horizon.

Potential Occupations

- Government official in foreign service, national security, military, cultural resources management, and other areas;

- History teacher in public and private schools;
- Any professional occupation in business or public service requiring a liberal arts education and skills in research, writing, and the analysis of information;
- With additional graduate training: lawyer, physician, social worker, minister, librarian, museum curator, archivist, professor, educational administrator, or other professional.

Concentrations

- Digital and Public History Concentration
- General History Concentration
- Language Concentration
- Social and Behavioral Sciences Concentration
- Social Studies Teaching Concentration

Major in History, Digital and Public History Concentration

The Digital and Public History Concentration offers students an opportunity to focus their coursework in public history (such as the National Parks, museums, documentary films, historic preservation, and cultural resources management) and digital history which give students the opportunity to apply twenty-first century tools and technologies to understand and interpret the past.

Minor in History

The minor in History allows students to explore historical questions and issues while broadly exploring the past or pursuing a specific concentration. In addition to gaining knowledge in specific subjects – including the history of humans and the environment, empires, race, immigration, war and society, gender and sexuality, digital history, public history, and religion across multiple continents – the minor in History trains students to use and apply the tools and methods of historical analysis.

The customizable minor consists of 21 semester credit hours, 12 of which must be taken at the upper division level, and complements a wide variety of majors in other disciplines. Majors in international studies, political science, economics, natural resources, foreign languages, literature, and philosophy will be provided with a historical understanding of social, cultural, political, and economic issues. Majors in business, mathematics, the sciences, and communication can use the minor to apply interpretive and analytical skills to evaluate and assess evidence and sources.

To declare the minor in History, please obtain a declaration form from the History Office, B356 Clark.

Requirements Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Journalism and Media Communication

The study of journalism, mass communication, and specialized media combines high-level professional training with a broad foundation in the liberal arts. All students complete a common 21-credit core, including writing, multimedia, and conceptual courses, as well as a capstone course and an internship. Students work closely with a faculty advisor to select an additional 19 credits in a focus area crafted to match their career interests. Practical experience can be gained on the staffs of the daily *Rocky Mountain Collegian*, the award-winning campus television station Collegian TV, *College Avenue* magazine, and KCSU-FM Radio. Graduating seniors present professional portfolios for assessment by panels of faculty and communication professionals from Denver and elsewhere in Colorado. Because successful communicators require broad knowledge, this flexible program encourages development of a background in the humanities, social sciences, natural sciences, and in-depth study in an area of interest outside journalism. The addition of a minor or double major in disciplines such as political science, information technology, history, economics, business, communication studies, psychology, the arts, or natural or applied sciences is possible.

The Department of Journalism and Media Communication is one of a relatively small number of departments formally recognized by the Accrediting Council on Education in Journalism and Mass Communications. Participation in volunteer activities, cooperative education opportunities, or communication-related part time jobs is highly recommended to enhance practical training and development.

Learning Outcomes

Students will demonstrate:

- Competence in writing, editing, and producing media messages as well as in planning, designing, and evaluating effective public information programs.
- Knowledge and use of communication theory and research principles to guide the selection of communication audiences, message content and format, and media channels to enhance communication impact.
- Understanding of the ethics, laws, and values associated with professional communication activity.

Potential Occupations

The Journalism and Media Communication program emphasizes the role of mass and specialized media in society and prepares students for entry-level work in private business, government, and education. Depending upon the focus of study, students may find career opportunities in a wide variety of professional communication venues. Specific career opportunities may include: advertising copywriter, designer, or producer; agriculture writer, reporter, or editor; attorney specializing in communication law; blogger, columnist, or editorial cartoonist; college professor; communications manager or director; company spokesperson; corporate media specialist; e-mail and direct mail strategist; environmental media specialist; freelance writer, editor, or photographer; health writer, editor, or producer; marketing coordinator; media relations director or strategist; multimedia producer; non-profit communications director; novelist or non-fiction author; reporter or photojournalist for the web, magazines, newspapers, or television; owner of public relations agency or production company; professional speaker; public affairs officer for government agency; public relations agency account executive; publication designer for magazines or newspapers;

radio disc jockey, reporter, or music director; reality television producer, writer, photographer, or on-camera talent; science writer or editor; social media specialist; sports writer, photographer, or producer; technical writer or editor; teacher for any level of K-12 education upon completion of appropriate licensing (see the Center for Educator Preparation (<http://cep.chhs.colostate.edu/>)); television news anchor or program host; television or radio news program producer or director; television documentary producer; travel writer, photographer, or program host; video editor for news, corporate, or entertainment television; website designer and manager.

Technical and Science Communication Minor

Dakota Cotner, Coordinator
Journalism and Media Communication
Clark Building, Room C244

The minor in Technical and Science Communication is designed to educate highly qualified communicators who have interests in specialized academic disciplines and career fields. Because science and technology often involve complicated research and processes, communicating the results of that work requires special skills. This program is designed to prepare students for a wide range of niche career opportunities in media, corporate communication, technology related industries, and scientific environments.

Students in this minor will learn to write and manage communication efforts, with a focus on turning complex ideas and processes into simple, clear messages applicable for publication and electronic delivery via broadcast, cable, or online. The accuracy and effectiveness of this communication is especially important as the internet and the ubiquity of mobile devices make the delivery and consumption of information widely available. Having the skills to interpret and communicate complicated processes provides significant career advantages in one of the highest-paying areas of professional communication.

Requirements Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Master of Communications and Media Management, Plan C (M.C.M.M.)

The Master of Communications and Media Management, Plan C (M.C.M.M.) is designed for students with a bachelor's degree seeking to transition to a communication-related career, or for those seeking to move up into a management role in their present media profession. The rapid rate of technological change in media technology has created a need for constant retraining and the acquisition of new multimedia knowledge and management skills. The program curriculum is designed to provide students with a comprehensive overview of "new media" developments. Upon completion of the program, students will be prepared to strategize and manage specific communications projects, as well as manage and direct staff members or contract workers in a communications unit within a corporate, educational, or nonprofit organization.

Dr. Daniel Goble, Director, School of Music, Theatre, and Dance

Undergraduate

The School of Music, Theatre, and Dance at CSU provides a rigorous undergraduate educational experience.

CSU Music is focused on the belief that music is both an artistic and intellectual pursuit. We offer intense training in specialized music disciplines combined with a balance of core music courses in music history and theory. Our renowned and versatile faculty are committed to helping students discover their own unique identities through music. We offer B.M. degrees in Music Therapy, Music Education, Music Composition, and Music Performance, as well as a B.A. in Music. Additionally, undergraduates can earn a performance-based music minor.

CSU Theatre emphasizes a reciprocal relationship between practice and scholarly study. Students explore every aspect of theatre, including the theory and practice of acting, singing, theatrical design, stage management, technical theatre, dramaturgy, dramatic criticism, storytelling, and playwriting. Students pursuing a B.A. in Theatre choose one of three concentrations: General Theatre, Performance, or Design and Technology. Each concentration provides fundamental skills and experiences in theatre within a liberal arts context.

CSU Dance offers programs in classical and contemporary dance education culminating in either a B.F.A. or a B.A. in Dance. Students will focus on areas such as performance and technique; choreography and improvisation; pedagogy and teaching methodologies; history and theory; and theatrical production and design. Dance majors will explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment.

Major in Music (B.M.), Music Education Concentration

The Music Education concentration prepares students for teaching choral, instrumental, and general music in elementary and secondary schools. This degree prepares students to apply for music teaching licensure (grades K-12) in the state of Colorado. CSU's outstanding music education faculty members are in demand as clinicians, guest lecturers, conductors, and researchers. A feature unique to the accredited music education curriculum is extensive field experience that students receive throughout their coursework, culminating in a semester of student teaching at the end of the program. Students must select one of two options: instrumental or choral.

A successful audition is required prior to entrance into the B.M. in Music.

Major in Music (B.A.)

The Bachelor of Arts (B.A.) in Music allows students to study music within a larger context of a liberal education. In comparison to the curriculum leading to the Bachelor of Music (B.M.), less emphasis is placed on studies specifically in music, with greater flexibility for studies in a field outside of music. In lieu of a larger number of credits in music as required for the B.M, the B.A. student completes a 21-credit option in an area outside of music. In addition, completion of a major paper or capstone recital (half recital) is required during the senior year.

A successful audition is required prior to entrance into the B.A. in Music.

Requirements

A minimum grade of C is required in all music courses used to satisfy the requirements of the major programs (B.A. and B.M.) in music.

Master of Music, Music Education Specialization

This program is designed for elementary and secondary music teachers who already hold a K–12 state music-teaching license or the international equivalent. Specifically, this program is designed to inspire and develop the next generation of leaders in the field of music education by developing and applying scholarly research skills in the field of music education, the in-depth study of advanced pedagogical expertise, and the impact of contemporary learning theory on K–12 music education.

In this program, successful students will have the opportunity to gain content knowledge regarding the history and philosophy of music education; an understanding of how quantitative, qualitative, and historical music research is conducted; advanced skills in music analysis and interpretation; and a contemporary understanding of the pedagogy of music teaching and learning. Students will also have the opportunity to participate in CSU music ensembles to continue to develop as musical artists. Additionally, students are expected to be full-time students in residence and will likely be given the opportunity to teach or assist with undergraduate music education coursework depending upon level of expertise and program demands.

The degree coursework is designed to be completed over a time span of two years and includes both on-campus and online coursework. Students in this program are encouraged to take advantage of the diverse summer and/or online elective offerings.

Master of Music, Music Education—Composition Specialization

The Master of Music in Music Education, Composition Specialization (MMECS) is intended as a professional degree with specialized training towards composing music for educational ensembles and incorporating composition, improvisation, and music theory into K-12 music classrooms. Students enrolled in the program will produce original compositions for educational ensembles and have them performed publicly by student ensembles.

The degree option in music education with a specialization in composition is designed to provide music educators with the ability to apply compositional and arranging skills and the pedagogy of the creative process to the classroom in K-12 settings. This provides an option for a master's degree in music education for students with an interest in composition, arranging, and the pedagogy of the creative process as opposed to the more traditional CSU graduate music education offerings of conducting, Kodály, instrumental, and choral.

Master of Music, Music Education— Conducting Specialization

Classes in the Master of Music, Music Education - Conducting Specialization are designed for current middle school and high school choir, band, and orchestra directors who seek to further their personal knowledge and conducting skills while earning a master's degree, completing most of their course work in three summers. The two-week conducting seminar (four credits each summer) includes daily conducting opportunities in all three disciplines with a workshop orchestra, band, and choir, providing further hands-on training. All participants learn to conduct in all three disciplines.

In addition, each student takes three, 3-credit academic classes (music history, analytical techniques, and music research), one 3-credit music education course (Foundations of Music Education), and three, 1-credit seminars on various topics of interest to music educators. These courses are either offered on campus during the summer or online during the school year.

The complete program consists of 30 credits. A maximum of six credits of academic courses can be transferred to your graduate program from NASM-accredited universities pending approval by your advisor and the Graduate School (<https://graduateschool.colostate.edu/>).

Master of Music, Music Education— Kodaly Emphasis Option

The Master of Music, Music Education - Kodály Emphasis Option is a graduate program designed for elementary classroom music teachers, independent music instructors, and secondary music teachers interested in developing their teaching, conducting, musicianship, and depth of knowledge about music education.

One unique aspect of this program is that it enables students to earn national certification in Kodály music teaching through CSU's Colorado Kodály Institute while earning a master's degree. The Colorado Kodály Institute (CKI) is one of the select programs endorsed by the Organization of American Kodály Educators (<https://www.oake.org/>). CKI faculty are among the top experts in the United States, and the University Center for the Arts location, at the foothills of the Rockies, provides an inspiring setting for personal growth.

The degree is designed to be completed over a time span of three summers with a minimum of 30 total credits, with several online and/or evening courses required to be taken during the school year. Students have the option, therefore, of living remotely during the school year and traveling to Fort Collins for the core summer coursework. The majority of participants in this degree program teach either part or full-time during the school year, gaining relevant experience while pursuing the graduate degree. As a result, they are continually assimilating real-world teaching experiences into their academic coursework. The degree is officially conferred at the end of the fall semester following the term in which all course work has been completed.

Applicants are expected to be State-Licensed Music Teachers* and demonstrate excellent musicianship and interpersonal skills.

* Exceptions may be made by the Music Education area on a case-by-case basis.

Master of Music, Performance Option

The Master of Music, Performance Option is a comprehensive approach to the study and performance of literature in all styles and idioms of music. The curriculum is designed to develop musicianship, technical proficiency, and cultural awareness in both performance and pedagogy. Regardless of degree concentration, the graduate student will maintain regular study on their applied instrument or voice and additional directed areas based on individual goals and needs. Graduate students may choose to specialize in one or more areas as they work toward degree recital requirements.

The intent of this option is to prepare students with outstanding performance potential to be competitive in performance and teaching careers and to be advocates for the arts in their communities. They may help meet the needs for skilled performers of solo, small, and large ensemble music, and they will be able to teach in a university and help meet the considerable community demand for excellent private studio teachers.

Unique performance opportunities include the Graduate String Quartet/Trio program and professional organizations in Fort Collins' thriving arts community.

Master of Music, Plan A, Music Therapy Specialization

The Master of Music, Music Therapy Specialization is intended to provide Board Certified music therapists with advanced training in clinical skills and research. Our curriculum specializes in neuroscience and evidence-based music therapy to improve sensorimotor, speech and language, and cognitive function in children and adults who have disabilities. Specifically, the study of music therapy is designed to prepare music therapists for advanced clinical work in music therapy, as music therapy supervisors, administrators, and for teaching positions at the college or university level.

Two master's curriculum tracks are offered: the first is a thesis program of 30 credit hours (Plan A) designed to provide students with the opportunity to complete a substantial research project. The second track is a 32-hour program (Plan B) that requires, in lieu of a thesis, additional course work in music therapy, a final project, and a common final exam. Either program prepares the student to pursue doctoral study. Our academic curricula meet the standards of the American Music Therapy Association (<https://www.musictherapy.org/>) and the National Association of Schools of Music (<https://nasm.arts-accredit.org/>).

Applicants are expected to be Board-Certified Music Therapists (or eligible to sit for the exam) and demonstrate excellent musicianship and interpersonal skills.

The Master of Music, Music Therapy Specialization is offered on-campus (<https://music.colostate.edu/music-therapy/>) or online (<https://www.online.colostate.edu/degrees/music-therapy/>).

Professor Price Johnston, Director

Student performing artists find a welcoming place of study in the School of Music, Theatre, and Dance.

At CSU, faculty, staff, and professional guest artists — all with extensive experience on stages ranging from Broadway to regional theatres, and worldwide — provide students an experienced lens through which to study every aspect of theatre, including the theory and practice of acting, singing, theatrical design, stage management, technical theatre, dramaturgy, dramatic criticism, storytelling, and playwriting.

Upon admission to CSU and declaration of the Bachelor of Arts in Theatre major, students choose one of three concentrations: General Theatre, Performance, or Design and Technology. No matter which concentration is selected, the program provides students with fundamental skills and experiences in theatre within a liberal arts context, preparing students for graduate study in theatre, and/or potential employment opportunities in a variety of fields related to theatre, film, and other creative endeavors.

As a theatre major, students will be challenged academically and artistically with a wide range of performance opportunities and occasions to collaborate across the School of Music, Theatre, and Dance on a shared theatrical vision.

Comprehensive training occurs in classrooms, labs, shops, rehearsal studios, and in annual productions of plays, musicals operas, dance concerts, and special events, produced by a company of student actors, directors, designers, and technicians under the mentorship of our professional faculty and staff. These outstanding artists and technicians provide small class sizes and individualized teaching and advising,

providing students with opportunities to succeed from their first day on campus.

Concentrations

- Performance Concentration
- Design and Technology Concentration
- General Theatre Concentration

Major in Theatre, Design and Technology Concentration

Stage and laboratory are synonymous at CSU as students, supported by a faculty and staff of working professionals, learn to apply artistic approaches and industry practices in all areas of design and production.

Students take foundational courses in set design, costume design, lighting design, sound design, projection design, and stage management,

exploring their ideas in the classroom as well as production on plays, musicals, operas, music events, and dance concerts.

This interdisciplinary and collaborative concentration is geared towards creative and imaginative, open-minded individuals with a drive for excellence. Many design and technology students work in multiple areas and most shows are designed and stage managed by undergraduate students from all disciplines, typically adding four shows to their portfolios each year.

Design and Technology students have five world-class venues plus multiple labs and shops available for their use, including a design lab, CAD Lab, scene shop, paint shop, costume shop, sound/video editing lab, lighting lab, and acting labs.

Major in Theatre, General Theatre Concentration

Generalists explore a selection of courses from both the performance concentration and the design and technology concentration, within the context of the liberal arts. Students emerge as well-rounded, renaissance artists and technicians who begin to develop an artist's aesthetic and world-view. Through real-time production experiences, students learn to

think critically and creatively, adapting to the rapid-paced, high-energy world of the performing arts. Students develop the confidence, skills, portfolios, and industry connections needed to pursue a broad base of careers in the performing arts and other disciplines, or pursue further study at the graduate level.

Major in Theatre, Performance Concentration

CSU's performance concentration equips students with the skills needed to pursue a variety of fields related to their own creative and professional paths. Engaged with their passion and imagination, young performers receive rigorous training in text analysis, acting technique, movement,

voice and speech, emotional expression, and critical thinking. In the process of understanding theatre, they make visceral connections between the physical, emotional, and scholarly as they harness their own stories and artistic vision.

The concentration emphasizes both the theoretical and practical aspects of theatre, and focuses on developing well-rounded, responsible artists,

leaders, and communicators who value collaboration within an artistic community.

Major in Philosophy

Philosophy is the oldest form of systematic, scholarly inquiry. It is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we quest for understanding and develop principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments.

The study of philosophy broadens and intensifies liberal education while enhancing interpretive abilities in many fields. The curriculum encourages a broad liberal arts background, including courses in foreign languages, and a plan for graduate school and teaching careers in philosophy. The broad relevance of philosophy to other fields permits most students to work toward goals such as professional training in law, medicine, business, or theology. There are three concentrations available to Philosophy majors: General Philosophy; Global Philosophies and Religions; and Philosophy, Science and Technology. It is not unusual for Philosophy majors to second-major in other disciplines, and these concentrations combine easily with other majors at CSU.

Student Learning Outcomes

Outcome 1: Critical Thinking

Students will recognize, construct, and evaluate arguments and alternative positions by correctly applying logical standards and methodology, demonstrating the ability to identify underlying assumptions, ambiguous or contested terms, and potential objections to a thesis.

Outcome 2: Content Knowledge

Students will demonstrate knowledge of major questions, arguments, problems, and figures from a variety of philosophical areas and traditions.

Outcome 3: Reading and Research

Students will develop the interpretive, analytical, and conceptual skills to read with understanding a variety of philosophical texts. Students will be able to assess the quality and relevance of a variety of sources (books, journal articles, etc.) and use these sources in their own research and writing.

Outcome 4: Communication

Students will clearly articulate ideas and arguments in writing and oral communication. Students will demonstrate competence in interpretive, analytical, and argumentative writing. They will effectively present their own ideas and research in oral communication and writing. Students will engage in open, thoughtful, and respectful dialogue.

Outcome 5: Values and Attitudes

Students will demonstrate cognitive flexibility by applying alternative possibilities and conceptual frameworks to their own and others' ideas and values. They will demonstrate intellectual curiosity in their pursuits of truth and meaning. They will engage in reflective inquiry and aim to achieve a greater understanding of their subject matter.

Potential Occupations

A major in Philosophy prepares students for a wide variety of professional aspirations, including graduate study in philosophy or other disciplines; training in law, computer technology, social work, health care, the ministry, business; and general intellectual flexibility in a

changing world. The high level of skill that Philosophy majors acquire in communication, writing, and analytical and critical thinking enables them to secure jobs in a variety of private and public sector professions and to become leaders in their fields.

Depending on the major concentration that a student pursues, available career opportunities include, but are not limited to: public policy analyst, business manager, public administrator, computer programmer, intelligence officer, legislator, teacher, foreign diplomat, social worker, community developer, philanthropic organizer, physician, lawyer, researcher, writer, theologian, human resources manager, publisher, and ethics consultant, in a variety of fields, e.g., in medicine, business, law, public administration, non-profit administration, engineering, and the sciences.

Major in Political Science

Political science is the study of politics and political action in society. It encompasses international agreements and organizations as well as the patterns of political action which both create and shape them. It encompasses citizen action and the institutions which produce public policy at the local, state, and national levels within the United States. It encompasses systems of voting, political parties, and courts, compared across national political systems. It encompasses the raising of normative questions about the nature and purposes of political life. The presence of politics is felt in all areas and sectors of society at all times. The dynamic and transformative effects of political action are seen virtually everywhere.

The department's curriculum is distributed across five subfields of the discipline: American politics, political theory, comparative politics, international relations, and public policy. Course work across the discipline's subfields is complemented by a required support option. Support options include a minor in another department; an interdisciplinary minor; the second language support option; the methods support option, or a second major.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives

- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

Potential Occupations

The Major in Political Science, like all studies in the liberal arts, provides students with a broad academic background that is serviceable across a broad spectrum of employment in the public and private sectors. Political Science majors are trained to be independent and critical thinkers; to be discerning and active observers and listeners; to communicate persuasively; to constructively engage and solve intellectual and practical problems; to adapt and function effectively in a number of distinct occupational and institutional settings; to function comfortably in a multiethnic, multiracial, and globalizing society. The employment profiles of departmental alumni attest to the breadth of possibilities for today's graduates: public and non-profit organization managers, prosecutors, public policy analysts and consultants, federal law enforcement agents, legislators and legislative analysts, foreign service officers, private attorneys, demographers, criminal investigators, advertising specialists, urban/regional planners, environmental policy analysts, state budget analysts, public relations representatives, market researchers, elementary and high school teachers, international businessmen and businesswomen, lobbyists, novelists, construction industry managers, insurance agents and managers, financiers, and real estate brokers. Some graduates join professions following advanced study in law,

international relations, area studies, public administration, public policy analysis, and business management.

Concentrations

Students may complete the general Political Science major or select one of the following concentrations for a more specialized course of study.

- Environmental Politics and Policy Concentration
- Global Politics and Policy Concentration
- U.S. Government, Law, and Policy Concentration

For further information on declaring the Major in Political Science, please schedule an appointment with a College of Liberal Arts Academic Success Coordinator by calling 970-491-3117 or visit Clark C 207.

Major in Political Science, Environmental Politics and Policy Concentration

The Environmental Politics and Policy concentration is designed to help students develop the knowledge and skills to analyze the connections between politics and the natural world, and pursue careers in environmental politics and policy-making. Students will learn about how political forces contribute to environmental degradation, the process for developing environmental policies, strategies to assess the strengths and weaknesses of different policy approaches, and how political forces can be harnessed to develop effective responses to problems such as climate change, water and air pollution, food security, and energy provision. Students will explore these issues from both domestic and global perspectives. Environmental Politics and Policy students are strongly encouraged to complete an internship to gain practical experience working in the field.

- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

Potential Occupations

Graduates may work as policy analysts, advocates, planners, educators or decision-makers in government agencies, non-profit organizations, businesses and consulting firms at the local, state, national and international levels.

For further information on declaring the Major in Political Science, Environmental Politics and Policy Concentration, please schedule an appointment with a College of Liberal Arts Academic Success Coordinator by calling 970-491-3117 or visit Clark C 207.

Students will also be exposed to a variety of substantive policy issues including urban policy, energy policy, and environmental policy in the United States. U.S. Government, Law, and Public Policy students are strongly encouraged to complete an internship in one of the many organizations in the broader community. Students in this concentration are also encouraged to participate in the Legislative Internship Program (<http://polisci.colostate.edu/undergraduate/legislative-internship/>) during their junior or senior years.

Major in Sociology

Sociology is the study of social life, focusing on the mutual interaction between human groups and institutions. Human beings, through patterned social interactions, construct and reconstruct the social webs within which they live. The nature and type of social relationships are central to their lives. Sociologists study relationships within family units from the most primitive cultures to interactions of large, bureaucratic institutions in major industrialized nations. Social issues are studied in a variety of ways: direct observation of groups; surveying or interviewing individuals; analyzing historical research; and a variety of other methods.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically and perform research, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as Latin American and Caribbean Studies, Religious Studies, or Women's and Gender Studies.

Learning Outcomes

Students will:

- Analyze critically the major classical and contemporary theories from the 19th and 20th centuries. Students are expected to demonstrate how well these theories help us understand or explain current social phenomena both in the U.S. and abroad. Students will learn to apply a wide variety of theories, including European critical theory, functionalism, symbolic interactionism, and post-modern theory, in required empirical research.
- Analyze critically sociological phenomena by applying objective social research methodologies. Students will demonstrate a working knowledge of sociological theories and the application of these theories to real world social phenomena. Specifically, students will understand conceptual frameworks associated with:
 - a. social structure (social stratification, ethnic structures, social institutions, small group dynamics, social demography, and social organizations);
 - b. culture (socialization and the development of personalities, social norms, framing normative assumptions of societies and organizations); and
 - c. social agency (the behavior of the individual, collective behavior such as with social movements, and the principles of social-psychology).
- Analyze critically sociological phenomena by applying social statistical techniques and qualitative research methods. Students will demonstrate a strong working knowledge of statistical techniques, including:
 - a. parametric statistics;
 - b. non-parametric statistics;
 - c. ordinary least squares statistical analysis;
 - d. application of the SPSS statistical package;
 - e. interview techniques;
 - f. focus group interviews;
 - g. qualitative data analysis techniques; and
 - h. qualitative data management and presentation.

Potential Occupations

Careers are exceptionally varied. Participating in internships and cooperative education opportunities is highly recommended to enhance practical training and development. Sociology graduates apply their education to a large variety of occupations in the non-profit, private, and public sectors. Because Sociology graduates possess a number of transferable communication, analytical, and people skills, they find

positions in government, industry, and academia. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Graduates who go on to advanced studies can pursue careers in sociology or attain advanced positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: business manager, personnel director, city manager, clinical social worker, college/university instructor, human relations director, demographer, government aide, labor relations specialist, market analyst, researcher, medical administrator, police officer, politician, probation/parole officer, program director/manager, public administrator, publishers, sociologist-specialist, consultant, criminologist, lawyer, librarian.

Concentrations

- Criminology and Criminal Justice Concentration
- Environmental Sociology Concentration
- General Sociology Concentration

Major in Sociology, Criminology and Criminal Justice Concentration

The Criminology and Criminal Justice concentration trains students to view issues of crime, victimization, and justice through a sociological lens. A sociological perspective on these issues focuses our attention to the social aspects of crime, law, and deviance including understanding societal factors that contribute to crime, effective and innovative programmatic approaches to prevent or control crime, the unintended consequences of our system for marginalized communities, and the role of research in creating effective policy. Our undergraduate program is designed to provide students with a strong foundation in research methods, data collection, analysis, and theory, which are all essential skills for those interested in careers associated with law, justice, or advocacy—all professional paths for which this concentration prepares students well.

Requirements Effective Fall 2020

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2***, and each course taken to satisfy the Social and Behavioral Sciences electives or the Criminology and Criminal Justice electives.

Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology’s long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures.

The task of the sociologist, therefore, is to stand back from common sense views of the world and understand the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues to which environmental sociology can be applied

are: transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

Major in Sociology, General Sociology Concentration

A concentration in General Sociology provides students with an opportunity to dig deep into a rich liberal arts education and develop a deep understanding of the nature and dynamics of social life. Sociology is unique because we study a diverse array of phenomenon including the environment, the criminal justice system, religion, class inequality, social policy, and politics. Students who major in this concentration have a lot of flexibility in what they choose to study and can take courses across these topical areas. They also develop a strong skill set in research

methods. Because of this rich academic experience, sociology prepares students for a wide variety of jobs upon graduation including researchers, counselors, policy analysts, managers, criminal justice personnel, as well as strong preparation for graduate or law school.

Requirements Effective Fall 2020

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2**, and each course taken to satisfy the Social and Behavioral Sciences electives.

College-Wide Graduate Programs

Graduate Certificate

Certificate in Sustainable Military Lands Management

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas. Graduate areas of emphasis also include ecosystems and greenhouse gas management.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands, CEMML, (<http://www.cemml.colostate.edu/>) which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

College Programs

Undergraduate Majors

The scope of the College's programs is more broadly based than most natural resources schools. There are ten undergraduate degree programs, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

Field Training Programs

Most undergraduate majors require the completion of a four or five-week summer field training program (five or six credits) *before* their junior or senior year. Summer field instruction is given at the CSU Mountain Campus (<http://mountaincampus.colostate.edu/>) campus, 55 miles west of Fort Collins, and the geosciences department offers a summer field course in northern New Mexico and southern Colorado.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

International Education

International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their

academic advisor and by visiting the Office of International Programs (<http://international.colostate.edu>) in Laurel Hall.

Graduate Programs

Master of Science and Doctor of Philosophy degree programs are offered in each department. Four professional master's degrees are offered by departments in the college: the Master of Fish, Wildlife, and Conservation Biology, the Master of Natural Resources Stewardship, the Master of Tourism Management and the Professional Science Master's in Ecosystem Science and Sustainability. Descriptions of the various graduate programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

For High School Graduates

High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

Limitation on Transfer of Credits

Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

Transfer Students

Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.

Graduate Certificate in Sustainable Military Lands Management

Major in Ecosystem Science and Sustainability

The major in Ecosystem Science and Sustainability provides a strong scientific foundation in ecosystem ecology integrated with a broad knowledge of the cultural, social, economic, and political issues that

are shaping the issue of sustainability. Students in the major learn to integrate science into real-world decision making, with the goal of developing sustainable strategies to maintain ecosystem services around the globe. We provide students with a broad base of experiential and collaborative learning opportunities, opportunities for undergraduate research, and the latest scientific knowledge about sustainability science and how organisms interact with their environments to form complex ecosystems. Opportunities for research, internships, practical and group-based learning, and field experiences in the beautiful Rocky Mountains and around the world, combined with an outstanding classroom education, build a solid foundation for applying sustainable resource management principles.

Learning Outcomes

Students in the major learn:

- How to use natural resources and implement solutions in a sustainable way.
- About environmental change at local to global scales.
- The amazing connections between different earth system components, founded in a systems thinking approach.
- How to conduct research or field work in a variety of settings addressing questions important to sustainability.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers related to sustainability and natural resource science. Examples of possible careers include: sustainability coordinator, ecologist, environmental educator, invasive species specialist, biological science technician, climate change scientist, natural resource specialist, or corporate environmental consultant. Students completing the undergraduate degree in Ecosystem Science and Sustainability will also be well prepared to succeed in graduate education in a variety of disciplines.

Major in Watershed Science

Why Watershed Science at CSU?

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The Watershed Science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land-use hydrology, snow hydrology, water quality, and watershed problem analysis. Students gain hands-on experience with water measurements outside and in the lab, and build technical and writing skills to prepare them for careers in hydrology and water resources.

Learning Outcomes

Students will demonstrate:

- An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
- An understanding of land use effects on fresh water resources.

Potential Occupations

The B.S. in Watershed Science qualifies students for a wide variety of careers in hydrology and water resources management. Examples include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-governmental organizations, and private industry. Graduates are also well positioned for advanced science degrees. The B.S. curriculum includes all of the requirements for graduates to meet the U.S. governmental hydrologist certification.

Graduate Certificate in Carbon Management

A workforce needs-assessment survey carried out by the Greenhouse Gas Management Institute concluded US organizations are ill-prepared for emerging regulatory emissions reporting, carbon markets are not "up-to-snuff", and competency concerns loom with expansion of climate programs. A set of recent reports in *Nature* confirmed that new international agreements will tax the capabilities of nations and organizations to carry out the supporting accounting activities.

The Graduate Certificate in Carbon Management is designed to deliver the latest fundamental knowledge and skills to practicing environmental/sustainability professionals, enabling them to advance their careers by expanding into this emerging area.

Graduate Certificate in Water Resources

The Graduate Certificate in Water Resources is designed to provide college graduates, current practitioners, and new professionals with targeted knowledge and skills to advance their understanding and career mobility related to water resources planning, management, and policy. The program of study emphasizes an understanding of the hydrologic cycle and the physical processes that drive it, how humans adapt water resources to their needs, techniques for sustainable management, the evolution of laws and policies governing water use, and basic spatial and temporal analysis of water data. These skills can be applied by a wide array of natural resource managers as water planning is essential

to sound governmental policy and community management. All courses include case studies, geospatial applications, and exercises pertaining to an array of water issues in Colorado and the United States, as well as international examples.

Career opportunities may be found in forests, parks, wildlife refuges, public lands, special-purpose water districts, academia, water resources engineering and consulting firms, nonprofit organizations, and municipal, tribal, county, state, or federal agencies.

Curriculum: Three courses total, offered through the Department of Ecosystem Science & Sustainability (<https://warnercnr.colostate.edu/ess/>) and CSU Online (<https://www.online.colostate.edu/certificates/water-resources/>), geared towards professionals across disciplines. Courses can be taken in any order.

Master of Science in Ecosystem Sustainability, Plan A

Many physical, ecological, and social factors interact to shape the future of our ecosystems and societies. CSU's innovative Master of Science in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems in collaborative partnerships with researchers, resource users, and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

A focus on solutions

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world's leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

What students can expect to gain

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users, and team members outside of academia
- The skills to conduct integrated assessments using systems approaches; conceptual, mathematical, geospatial, and statistical models; and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology and managing the sustainable cities of the future

Local and Global Relevance

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, in the lowest short grass steppe regions, on cities, and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Master of Science in Watershed Science, Plan A

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the M.S. in Watershed Science, Plan A program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.

The program emphasizes the advisor/student relationship. There is no core curriculum; rather, the advisor and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a master's thesis.

The program has a strong record of employment and acceptance to leading doctoral programs after graduation, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, non-governmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

Requirements

Program requirements are:

- 30 credits that meet graduate school requirements.
- Thesis
- Selected courses approved by advisor and committee – Prefixes that can be used to meet course requirements: ANTH, AREC, ATS, BZ, CHEM, CIS, CIVE, ECOL, ECON, ENVE, ESS, FW, F, GR, GEOL, GRAD, HORT, MATH, NR, NRRT, RS, SOC, SOCR, STAA, STAT, WR.

Ph.D. in Ecosystem Sustainability

Many physical, ecological, and social factors interact to shape the future of our ecosystems and societies. CSU's innovative Ph.D. in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems in collaborative partnerships with researchers, resource users, and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability, and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

A focus on solutions

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world's leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

What students can expect to gain

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users, and team members outside of academia
- The skills to conduct integrated assessments using systems approaches, conceptual, mathematical, geospatial, and statistical models, and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology and on managing the sustainable cities of the future

Local and Global Relevance

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, in the lowest short grass steppe regions, on cities, and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Ph.D. in Watershed Science

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the Ph.D. in Watershed Science program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.

The Ph.D. in Watershed Science requires 72 credits, most of which are research credits. Coursework includes in-depth classes in the student's area of research, as well as classes that expand into other disciplines. Each student develops an individualized program of study with the guidance and approval of the student's graduate committee. Students in the Ph.D. program develop new contributions to the literature of the watershed science discipline.

Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements
Chair of the Undergraduate Major

The Fish, Wildlife, and Conservation Biology major is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods.

Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis.

Required courses in the concentrations, as well as elective courses, explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU's mountain campus is required and provides

students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today's natural resource professionals.

Learning Outcomes

Students will:

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
- Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
- Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
- Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

Potential Occupations

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to

top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

Concentrations

- Conservation Biology Concentration
- Fisheries and Aquatic Sciences Concentration
- Wildlife Biology Concentration

Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity, with an emphasis on fish and wildlife species and their habitats.

Requirements Effective Spring 2020

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

¹ Students taking this biology selection should choose a botany-related course in the department elective options to meet the botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.

² Students may need to obtain a registration override from the appropriate department to take this course.

³ Students in the Honors Track 1 program must take HONR 499.

⁴ FW 300 and FW 301 count together as one selection in this choice.

⁵ Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.

⁶ Guided electives are courses intended to expand a student's depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.

⁷ Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Distinctive Requirements for Degree Program:

The curriculum for the Fish, Wildlife and Conservation Biology major – Conservation Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical / statistical, physical science, fish, wildlife, and conservation biology, and natural resources courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU's Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111 or B) LIFE 102/LIFE 103.

Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration

The Fisheries and Aquatic Sciences concentration allows students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

Requirements Effective Spring 2020

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology.

Major Completion Map

Distinctive Requirements for Degree Program: The curriculum for the Fish, Wildlife and Conservation Biology major – Wildlife Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/ statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU's Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103.

Graduate Certificate in Conservation Actions with Lands, Animals, and People

The course content and applied assignments in the Graduate Certificate in Conservation Actions with Lands, Animals, and People, seek to integrate a holistic approach for sustainable practices with lands, animals, and people in private and public sectors using history, philosophy, policy, management techniques, leadership, education, and communications to improve environmental management, human interactions, and social/environmental justice.

Students will gain critical insights into issues, uses, and management of natural resources. Students will gain an understanding and develop skills to review situations and viewpoints that impact public and private debate, and use assignments that may influence decisions in conservation. Upon completion of this certificate, students will have foundations to be stronger leaders, better communicators, and more active members of their communities.

Major in Fire and Emergency Services Administration

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (<http://www.online.colostate.edu/>).

Learning Outcomes

Students will demonstrate their ability to:

- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

Potential Occupations

Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians, inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

Major in Forest and Rangeland Stewardship

Forests and rangelands are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires, timber harvesting, or grazing. Rangelands occupy nearly fifty percent of the earth's land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Sustaining forests and rangelands in the modern world requires managers who understand ecosystem changes, and how forests and rangelands connect to global, ecological, and social systems. State and federal land management agencies, private landowners, consultants, and conservation organizations employ graduates of the Forest and Rangeland Stewardship (FRS) major. The curriculum includes a balanced mix of courses in plant and animal biology, integrated resource management, and the physical sciences. Colorado is an ideal setting for the study of forestry and rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, forests, woodlands, and riparian areas to the west. Students learn about ecosystem productivity, policy, conservation, and the latest in computer-based management tools. Students also gain an understanding of economics related to recognizing alternatives and analytical and decision-making skills, as well as developing communication, political and interpersonal skills to make their education effective, and contribute to their respective fields fully upon graduation.

The forestry-specific concentrations within the FRS major are accredited by the Society of American Foresters, with curricula meeting the Office of Personnel Management (OPM) requirements for the forestry series (0460) and the forestry technician series (0462). The range-specific concentrations in the FRS major are accredited by the Society for Range Management and students generally meet the OPM requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457).

Students in the FRS major will gain an understanding of and learn how to manage the animal, soil, and vegetation resources on rangelands or in forests for state and federal land management agencies as well as a variety of private landowners and non-governmental agencies. With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; and knowledge of important concepts of ecology and range management.

The FRS major includes summer field courses. All FRS students take a 4-week summer field course at the CSU Mountain Campus for field studies in forest and rangeland ecology and management, wildlife, watershed and human dimensions of natural resources. Students in the forestry concentrations take another 2-week summer field course at the Mountain Campus that focuses on forestry field measurements. Students in the

rangeland concentrations take a 1-week summer field course focused on rangeland inventory and assessment that is normally held in shortgrass steppe or foothills rangelands close to Fort Collins.

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Positions are available in industry, education, consulting, public service, and government agencies. Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Examples of career opportunities in range management include, but are not limited to restoration ecologist, rangeland scientist, rangeland management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch manager, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, and international rangeland specialist.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye

toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today's challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-

week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student's junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop

a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options

- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
- Accurately communicate their knowledge of natural resources, both verbally and in written form

Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today's critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

Major in Restoration Ecology

The Major in Restoration Ecology emphasizes interdisciplinary study, research, and restoration of damaged, degraded or destroyed rangelands and forested ecosystems of the world. More specifically, this major focuses on the restoration of rangelands and forests for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and timber production. Forests and rangelands occupy the vast majority of the earth's land surface and Colorado is an ideal setting for the study of restoration ecology with many different types of rangeland and forest ecosystems in close proximity.

Students in this program will gain the important knowledge and skills necessary to restore damaged ecosystems. They will learn how to manipulate soil, water, vegetation and animal resources in order to implement successful restoration for local, state and federal land

management agencies as well as for a variety of private entities, landowners and non-governmental agencies. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to restoration ecology; knowledge of important concepts of ecology and natural resources management; an understanding of economics related to evaluating alternatives; and analytical and decision-making skills. Students also develop communication, political and interpersonal skills to make their education effective. Examples of career opportunities include, but are not limited to restoration ecologist, soil conservationist, plant ecologist, riparian ecologist, researcher, commercial sales and service representative, consultants, and mine reclamation specialist.

Minor in Ecological Restoration

The minor in Ecological Restoration allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Students are required to take NR 479: Restoration Case Studies, which includes a required field trip one week prior to the first day of the fall semester.

Major in Geology

The Major in Geology provides a rigorous academic and practical basis for diverse professional geosciences careers that include private and public sector water, energy, mineral and other natural resources, geologic hazards, resources and environmental management, and education. The major also provides a quantitative science and general education background for graduate education in specialized fields, including hydrology, geophysics, environmental geology, economic geology, resources management, public policy, and many other areas.

The Geology curriculum encompasses a strong geosciences education within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Colorado Rocky Mountains and elsewhere with extensive on-campus classroom and laboratory work. In addition to obtaining a thorough knowledge of geosciences, students complete courses in mathematics, physical sciences, communications, and the liberal arts that lead to effective quantitative, decision making, and communications skills. Four concentrations are offered to allow focus on specialized career interests: Geology, Environmental Geology, Geophysics, and Hydrogeology.

Learning Outcomes

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of field and classroom scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical, economic factors, and ethical practices and standards relevant to professional careers in geosciences

Potential Occupations

Many opportunities exist for geology graduates in the private and public sectors within a wide range of societally important and satisfying careers. Environmental management, energy resources, water resource and management, construction services, mining, power generation, computer software, and many other industries employ geoscientists in exploration, development, production, communications, building, management, and research. Federal agencies employ geoscientists for resource mapping and assessment, oil-gas-coal-groundwater-geothermal resource evaluation and development, resource and environmental water studies, leasing and conservation, resource restoration and rehabilitation, hazards assessment and mitigation, regulatory activities, national defense, and basic and applied research. State and local governments also employ geoscientists for geologic and soils mapping and resource management, natural resources, hazards evaluation and mitigation, public information activities, consulting, management, and communications. Environmental, engineering, and groundwater firms further employ geoscientists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic and built environment hazards, and in site feasibility evaluation and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, collaborative team-building activities, professional societies, education, and public outreach and engagement are highly encouraged and supported by the department via faculty, staff, and alumni mentoring to enhance training and career opportunities. Graduates who go on to pursue advanced degrees acquire a strong disciplinary base for diverse areas of graduate study, including

environmental studies, energy, seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can often more effectively attain management-level and research positions. Careers include, but are not limited to: educator, professor, environmental or geological entrepreneur or consultant, exploration professional geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist. With additional training and diversification, geosciences graduates may also pursue associated careers in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching certification, graduates can become primary and secondary educators in geosciences.

Environmental Geology students develop expertise in surface and shallow subsurface processes that shape the Earth and provide critical soil and water resources and services for human and natural use.

Graduates will be prepared for careers that address environmental implications of geological process and human activities. The curriculum emphasizes courses spanning the fundamentals of geology, surface, and shallow subsurface processes, field-based research methodologies, and environmental geosciences. The concentration empowers students to pursue positions with public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency activities, hazard identification and mitigation, and fundamental scientific investigations that can inform natural resource policy and decision making to advance the sound stewardship of natural resources.

The curriculum also provides a strong foundation for those planning to continue on to graduate studies in geosciences and other environmental disciplines.

Major in Geology, Geology Concentration

The Geology concentration provides a comprehensive undergraduate education in geology, emphasizing a hands-on and field-oriented approach that is well-suited to professional careers in the energy and mining industries, government agencies, consulting, resource management, and the many other fields that employ geologists. The Geology concentration, combined with additional education, provides

an excellent science background for other diverse careers, including primary and secondary school teaching, science writing, environmental and resource law, and resource and/or hazards specializations within the construction, insurance, real estate, and securities industries. The Geology concentration additionally provides a foundational background for graduate education in the geosciences.

Major in Geology, Hydrogeology Concentration

The Hydrogeology concentration provides a rigorous education in geological aspects of surface and subsurface water resources and allied disciplines, while ensuring that students are well prepared for a variety of geosciences careers. Students will be particularly well prepared for employment in environmental, water resource, geotechnical, and

groundwater careers; in private employment or in government agencies managing or assessing water resources; and for graduate education in hydrogeology or other water science, environmental, and resource disciplines.

Master of Science in Geosciences, Plan A

The Master of Science in Geosciences provides best practice preparation for employment in major fields of the geoscience profession. This is the normative working degree for many energy, environmental, natural resource, regulatory, and other professionals. Each graduate student follows a custom-tailored program of coursework and research developed with their advisor and graduate committee. Strengths of the program include diverse scientific specializations, an interdisciplinary approach to addressing earth resource education, professional preparation, global research interests, strong field research, and close student/faculty working relationships.

Faculty in the department advise M.S. students in a wide range of subdisciplines represented by the faculty, including geophysics, economic geology, environmental geology, geochemistry, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, seismology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to develop a program plan.

Requirements Effective Fall 2019

A minimum of 30 semester credit hours are required to complete this program.

At least 16 credits must be at the graduate level (500-level or higher).

At least 15 credits in courses numbered 500-581, 600-681, or 700-781 are required and should be selected in consultation with the student's advisor.

Up to 6 of the 30 credits may be for GEOL 699 Thesis.

With permission of the advisor and committee, 300- or 400-level course credits may be applied to the degree.

Completion and successful oral defense of a thesis is a degree requirement.

Ph.D. in Geosciences

The Department of Geosciences offers a Ph.D. in Geosciences. Faculty in the department advise Ph.D. students in a wide range of subdisciplines including seismology, economic geology, environmental geology and geophysics, geochemistry, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a dissertation topic and curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to develop a program plan.

Requirements Effective Fall 2018

Ph.D. students must complete 72 semester credits beyond those required for the B.S. degree. They must satisfy a breadth requirement by:

Taking a six-credit upper-division or graduate-level course sequence outside of the student's discipline. Most students will take their breadth requirement courses outside of their department.

At least 10 credits beyond the master's degree must be earned in regular courses numbered 500-level or above.

A minimum of 72 credits are required to complete this program.

Major in Human Dimensions of Natural Resources

The source of many challenges in natural resources involves human behavior, and solutions to those challenges requires innovative problem-solving, a deep understanding of complex issues, and collective action. This major is focused on understanding the social aspects of natural resources, and developing the skills to assess, plan and implement strategies that lead to successful conservation. Curriculum for this major trains students in the areas of communication, leadership, systems thinking, collaboration, conflict management, decision-making, social science research in conservation, and conservation planning and management.

Learning Outcomes

Students will:

- Comprehend the institutions, policies and actors that influence conservation outcomes and historical perspectives
- Understand the role of social science in achieving conservation outcomes
- Recognize and articulate the interdependencies and linkages within social-ecological systems, and how these linkages assist in understanding the drivers, processes and outcomes of environmental issues
- Gain appreciation for the value and benefit in addressing environmental issues through inclusive processes that invite a diversity of perspectives, world views and ways of knowing
- Acquire skills to critically analyze social science research, and examine the role between human dimensions research and environmental decision-making
- Gain skills to effectively engage stakeholders in conservation action, and recognize their personal strengths and limits in influencing others to achieve positive conservation outcomes
- Acquire skills to effectively plan, design and deliver communication campaigns to achieve environmental outcomes
- Comprehend and critically analyze the policies, institutions and actors that influence environmental decision-making at different scales
- Gain the skills to effectively address conservation problems through application of theory, inquiry, planning and related techniques

Potential Occupations

Students are prepared for various positions with local, state and federal land management and natural resource agencies in the United States. Opportunities are also available both domestically and abroad with non-governmental, and nonprofit conservation and development organizations as well as private foundations. Examples of the types of positions include conservation planner/administrator, environmental

communication specialist, conservation/environmental educator, nature center coordinator, visitor services manager, public outreach coordinator, public information officer, protected area manager, park/wilderness ranger, communication coordinator, policy liaison, environmental analyst and others.

Major in Natural Resource Tourism

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered – Global Tourism and Natural Resource Tourism.

Learning Outcomes

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.
- Research and analytical skills. These skills will include the ability to generate a problem statement, associated research questions, data acquisition methodologies, synthesis of related information and the development of management implications and conclusions.
- Planning skills. These will involve an ability to implement the planning process, including setting goals and objectives, acquiring relevant background information, synthesizing information, conceptualizing ideas, constructing alternative courses of action, making recommendations and considering ways of evaluating decisions.

Potential Occupations

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-

approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

Concentrations

- Global Tourism Concentration
- Natural Resource Tourism Concentration

Major in Natural Resource Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

College Programs

Our goal is to provide an extraordinary education to students in order to prepare them for science careers in industry, modern research and academia. In addition, the College of Natural Sciences provides foundational courses in the biological, mathematical, behavioral, and physical sciences for CSU's seven other colleges, supporting CSU's broad liberal arts and general education objectives.

Undergraduate Majors

The college's eight departments offer twelve undergraduate majors, all leading to a Bachelor of Science degree which requires a minimum of 120 credits including 42 or more credits in upper-division courses. The undergraduate major in Neuroscience is offered jointly with the College of Veterinary Medicine and Biomedical Sciences.

A major should be chosen based with both educational and career objectives in mind. Students earning degrees in College of Natural Sciences majors will be well prepared to succeed in careers in biochemistry, biology, chemistry, computer science, mathematics, physics, and statistics, including middle/high school science and math instruction. Students who plan to enter a human- or animal-health profession must formally declare an academic major. There is no specific premedical, pre-veterinary, etc. major at CSU because health profession programs do not require a specific major, only specific courses. Majors such as Biological Sciences, Biochemistry, Chemistry, Psychology and Zoology are popular for students interested in a career in the health professions.

All College of Natural Sciences students have the ability to work with an academic advisor to plan the coursework necessary to graduate from CSU. The College of Natural Sciences also provides students with the opportunity to seek specialized career counseling from a career education manager in the CSU Career Center. Our services are offered to all Natural Sciences students and alumni in all aspects of their career development. Additionally, pre-health professions advisors are available at the Collaborative for Student Achievement (<http://studentachievement.colostate.edu/>), located in Canvas Stadium, East Building, 1415 Meridian Ave.

The college provides multiple opportunities for students to become engaged outside the classroom, including SACNAS, Student Leaders in Science, the College of Natural Sciences Learning Community

(a residential learning community), and undergraduate research opportunities.

Education Abroad

Education abroad programs are available to all students in the College of Natural Sciences. Because the knowledge of another culture is valuable in understanding one's own, students are strongly encouraged to participate in at least one educational experience outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Education Abroad Office through the Office of International Programs (<http://educationabroad.colostate.edu>). The Education Abroad office offers information about credit and non-credit opportunities (service-learning/volunteer, research, internships), as well as support prior to and during travel, information about scholarships and financial aid, and resources for diverse populations (including adult learners & veterans, multicultural students and students with disabilities).

Graduate Programs

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the college. The college also offers Professional Science Master's in Natural Sciences degrees with specializations in Biological Data Analytics, Microscope Imaging Technology, and Zoo, Aquarium and Animal Shelter Management. For detailed information about graduate degree programs, please consult the appropriate department and see the Graduate and Professional Bulletin.

Major in Data Science

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

Major in Data Science, Mathematics Concentration

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled

sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who wish to become high school or junior high/middle school science teachers.
- Students who seek a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:

- Skills to critically interpret scientific data.
- Logical and critical thinking.
- The ability to analyze and solve complex problems.
- Strong written and oral communication skills.

Potential Occupations

Graduates with *licensure in secondary science education* will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, *physical science* graduates can meet requirements for professional schools (e.g., medicine or law) or graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education

The Bachelor of Science in Natural Sciences provides the scientific subject matter, education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

The program includes science courses in a concentration such as Biology, Geology, Physics, Chemistry; the All-University Core Curriculum and professional classes in the Center for Educator Preparation (CEP) (<http://cep.chhs.colostate.edu>) program in the School of Education. In addition, the CEP program helps schedule classroom visits and practica. The experience culminates in a semester of student teaching under the supervision of a master teacher.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual

breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as a basis for graduate work and research or for entry into medical or veterinary professional programs.

Major in Biochemistry

As the name suggests, biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how "lifeless" molecules work together to make "living" organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.

The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, and statistical measurements and methods used in research. Independent study and internships (typically during the junior and senior years, but could start in the freshman year) provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.

Learning Outcomes

Students will be able to:

- Describe the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
- Critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
- Use a variety of laboratory instruments and techniques, interpret experimental results, and design new experiments
- Demonstrate the ability to perform original research in biochemistry and molecular biology

Potential Occupations

Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to earn higher degrees in graduate school or health care related

professional schools, leading to careers in medicine, veterinary medicine, pharmacy, or law.

Concentrations

- ASBMB Concentration (American Society for Biochemistry and Molecular Biology)
- Health and Medical Sciences Concentration
- Pre-Pharmacy Concentration

Major in Biochemistry, ASBMB Concentration

The American Society for Biochemistry and Molecular Biology (ASBMB) concentration in Biochemistry is composed of a “core” set of courses comprised of 24 credits of primarily upper division coursework (22/24 credits are 400 level), along with a total of 9 “bioscience elective” credits selected from a list provided by the department. This option gives the student 13 “free elective” credits, which they can use to pursue a minor, a double major, and/or other academic interests. Thus, this concentration is designed to provide a broad background in biochemistry and can be tailored to meet the individual needs of specific students. The ASBMB concentration is recommended for students considering teaching and/or research as a career. Students who graduate from this program can state on their resume that they graduated from an “ASBMB program.” If desired, students can take a 1-hour ASBMB exam during the spring semester of their senior year. Students who pass the exam will additionally receive degree certification from ASBMB. Accreditation (and certification) by ASBMB confirms that our undergraduate degree program meets very high standards, and thus will enhance the credentials of our graduating seniors.

Requirements Effective Fall 2020

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biochemistry major - ASBMB concentration assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

Major in Biochemistry, Health and Medical Sciences Concentration

This concentration augments the ASBMB Concentration with additional coursework in anatomy and physiology, biochemistry of disease, and either a medical internship or mentored research by requiring an additional 14-15 credits of concentration-specific coursework. The Health and Medical Sciences concentration is geared toward students interested in a number of health professions including, but not limited to, medicine, veterinary, dentistry, physician assistant and physical therapy.

Requirements Effective Fall 2020

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

If students successfully complete an additional 1-credit course, Responsible Conduct in Biochemical Research BC 360, they can state on their resume that they graduated from an "American Society for Biochemistry and Molecular Biology (ASBMB) accredited program." Further, students also have the option of taking a 1-hour ASBMB exam during the spring semester of their senior year. Student who pass the exam will additionally receive degree certification from ASBMB.

Minor in Biochemistry

The minor in Biochemistry is valuable to students majoring in any biological or physical science, or in engineering. The minor requires a sound chemistry background, provides fundamental courses in molecular biosciences, and augments the latter with more specialized courses in biochemistry and molecular genetics.

Requirements Effective Fall 2010

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Major in Biological Science

Biology is the study of all living things—including microscopic bacteria and viruses, plants, and animals, and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues of animals and plants, ecology (the relationship between living things and their environment), animal behavior, genetics/genomics and evolution. They learn about physiology, behavior, genetics and heredity, aquatic systems, microscopic organisms such as bacteria, and techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that relates to particular career goals (for example: the ecology of organisms, cell and molecular biology, biomedical professions, aquatic biology, marine biology, plant molecular biology for agricultural biotechnology and bioenergy, evolutionary biology, etc.).

Learning Outcomes

Students will:

- Interpret scientific data both mathematically and statistically.
- Demonstrate organizational and laboratory skills.
- Define scientific hypotheses and design experiments or observations to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

Training in biology prepares students for a wide variety of occupations. Some involve daily interaction within teams; others can be done in relative isolation; some are highly focused, but most require knowledge far beyond the sciences. Career options related to biology include water quality assessments, field and lab technician work, biotechnology in biomedical sciences and agriculture, genetic research, agriculture, or sales (i.e., pharmaceutical, agricultural). Graduates work in small businesses, multinational corporations, academia, and government research laboratories and policy agencies. A degree in biological science offers a broad foundation for professional degrees in nursing, dental, medical or veterinary school, and a number of health professions such as physician's assistant, physical therapy, occupational therapy, optometry or public health. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Combining biology with additional skills can lead to exciting careers. Biology and computer science can be linked to the ever-expanding and exciting area of bioinformatics. Biology and writing can be incorporated into a career as a technical writer or science fiction novelist. Biology and visual arts combine in medical and scientific

illustration. Biology and other humanities may lead to studies of the history of science or medicine. Work in both biology and philosophy/religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master's degrees are designed for many of these unique career paths.

Some career opportunities include, but are not limited to: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, field ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master's degree); and medical or clinical laboratory technologist.

Concentrations

- Biological Science Concentration
- Botany Concentration

Major in Biological Science, Biological Science Concentration

The curriculum includes a two-semester introductory biology sequence, cell biology, developmental biology, ecology, evolution, and genetics. Required courses in the physical sciences include a minimum of one year in introductory chemistry and in physics (with labs), and at least one course in organic chemistry (with lab), and one in biochemistry. A calculus course and a statistics course are also required. In addition, students choose a selected field of 12 credits in one of the following: anatomy/physiology, aquatic biology, behavioral biology, cellular/molecular and genetic biology, ecology, evolution/genetics, and systematics, microbiology, or integrative organismal biology. There is an additional requirement of one course in two other fields, which assures a broad base of study.

Requirements

Effective Fall 2020

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Self-Designed Field

A student may, with the approval of their advisor and the Biology Curriculum Committee, define their own individual selected field. Students wishing to pursue this option should consult with their advisor to develop a proposal for a self-designed field. The proposal should include a description of the field of interest, the student's reason or rationale for wishing to pursue a self-designed field, and a list of relevant classes (totaling 12 credits) to be completed. To be included, courses should be upper-division classes that are primarily biological in content. Once approved by the advisor, a student's request for a self-designed field must be submitted to the Biology Curriculum Committee for approval. The Curriculum Committee's approval should be obtained before the end of the sophomore year.

- 1 A minimum of one course must be selected from two additional fields (cannot use courses that were used to fulfill selected field). Courses in additional fields must be at least three credits.
- 2 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biological Sciences major -Biological Sciences concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Semester 4 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. The selected and additional field must be a minimum of 18 credits. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 310 and BZ 350 together.

Major in Biological Science, Botany Concentration

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

The botany curriculum begins with a solid foundation in mathematics, the biological sciences, chemistry, organic chemistry, physics, evolution, and genetics. Botany emphasizing terrestrial plant studies including plant systematics, anatomy, and ecology, biochemistry, and earth sciences round out the core. Botany students also take liberal arts and communications courses to give breadth to their education.

Requirements Effective Fall 2015

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

Students will:

- Interpret scientific data.
- Demonstrate strong organizational and laboratory skills.
- Define scientific hypotheses and design experiments to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zoo keeper, animal trainer and instructor, science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Major Completion Map

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Zoology major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Term 5 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 350 and BZ 310 together.

Major in Chemistry

Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions, enabling insight into a range of processes from mining to clinical diagnostics. Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and

physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

Learning Outcomes

Chemistry students will:

- Organize, critically evaluate, and present chemical information coherently through oral and written discourse
- Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-level positions in chemical industry and allied fields, or for admission to a graduate or professional school
- Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

Potential Occupations

Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching at the secondary school level have the opportunity to complete the teacher licensure program through the School of Education (<http://soe.chhs.colostate.edu/>).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemical technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the new American Chemical Society Certified Chemistry major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 and CHEM 120 require Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C (2.000) or better are required in all listed courses for the major in chemistry.

Major in Computer Science

Computer science is about creating innovative solutions to complex, real-world problems. Students in this major study step-by-step computational methods for solving problems by encoding, storing, tracking and transforming information. Computer science is much broader than just programming. It is informed by the theory and architecture of computing devices, and the tools and practices used to design and implement software.

The computer science major at CSU provides students a broad background in the field while simultaneously allowing students to focus on specific areas. In addition to a general computer science degree with the option for a minor in a field of their choice, we offer the following concentrations:

- Artificial Intelligence and Machine Learning
- Computing Systems
- Human-Centered Computing
- Networks and Security
- Software Engineering

The department offers a wide range of specialized senior-level courses where students can explore in depth different areas of computer science including: big data, computer networks, distributed systems, artificial intelligence, machine learning, computational biology / bioinformatics, human-computer interaction, graphics, database systems, compilers, parallel programming, object oriented design, and advanced topics in algorithms and theory of computer science.

Learning Outcomes

Upon completing this program, students will be able to:

- Understand how to use the principles of computing to design and develop software and computing systems.
- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Practice CS in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Confidently pursue graduate studies or professional employment in the field of computer science.

Potential Occupations

Our computer science students and graduates are in high demand. Their proven performance attracts annual recruiting visits by industry, government agencies, and research laboratories. Internships are readily available to enhance students' skills and marketability.

Career opportunities for computer science graduates include:

Software developer, database programmer, computer systems analyst, network architect, web developer, information security analyst, data scientist, computer and information systems manager, IT project manager, cybersecurity analyst, UX designer, cloud engineer, systems architect, mobile application developer, and educator.

Major in Computer Science, Artificial Intelligence and Machine Learning Concentration

Artificial intelligence (AI) and machine learning (ML) are about creating intelligent systems – systems that perceive and respond to the world around them. AI and ML systems are everywhere, in our cars and smartphones, and businesses of all sizes are investing in these areas.

The AI/ML concentration combines a rigorous computer science degree with coursework in AI, ML, and big data. This concentration also provides students the necessary foundational coursework and skills in math, statistics, and data science.

Learning Outcomes

Upon completing this program, students will be able to:

- Develop AI and ML approaches for complex real-world problems.
- Deploy high-performance computing tools for the analysis of large datasets.
- Use a broad range of AI and ML tools, techniques, and algorithms.
- Apply AI and ML tools in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Communicate results of complex analyses verbally and in writing using appropriate visualization techniques.
- Confidently pursue graduate studies or professional employment in AI/ML and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the AI/ML concentration opens career paths that include:

Machine learning engineer, data scientist, business intelligence developer, big data engineer, data mining analyst, natural language processing analyst, computer vision engineer.

Major in Computer Science, Computer Science Concentration

The Computer Science concentration is a broad computer science program that prepares students for any introductory position in the field. This concentration also allows students to select a research area (<http://www.cs.colostate.edu/cstop/csresearch.php>) and focus on that topic in

their 400-level coursework. Students can also take a breadth focus – a little bit of everything – for a broader perspective.

Requirements Effective Fall 2020

Major in Computer Science, Computing Systems Concentration

Computing systems are integrated devices that input, output, process, and store data and information. Computing systems encompass a wide range, from simple sensors and hardware components to phones, laptops, desktops, and entire data centers. Computing systems specialists are challenged to provide ever increasing levels of performance from these systems.

The Computing Systems concentration provides students the necessary tools to solve important and demanding systems problems at scale. Students will learn how to design and assess computer systems from a holistic perspective that encompasses distributed and parallel algorithms, big data, systems software, networking, compiler design, and artificial intelligence/machine learning.

Data is our most valuable resource. Large scale data are being generated by programs, sensors, and simulations. Drawing timely and effective insights from these data are at the heart of modern problems in computer science and society in general. The Computing Systems concentration includes courses that teach you how to accomplish this goal, from storing, transporting, organizing, and extracting insights from data to expressing programs that execute in parallel and distributed environments encompassing hundreds of thousands of cores.

Learning Outcomes

Upon completing this program, students will be able to:

- Design scalable systems for computational and data intensive problems.
- Design distributed and parallel algorithms to analyze large data sets.
- Leverage diverse computing architectures in support of problem solutions.
- Program accelerators/coprocessors (e.g., for deep learning).
- Confidently pursue graduate studies or professional employment in computer systems and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the Computing Systems concentration opens career paths that include:

Cloud applications designer, systems designer, data scientist, big data analyst, compiler designer, database specialist, and supercomputing applications specialist.

Requirements Effective Fall 2020

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technical Elective courses which are required for graduation.

Major in Computer Science, Human-Centered Computing Concentration

Human-centered computing (HCC) focuses on developing tools that improve the relationship between people and technology so that people can concentrate on the problem rather than the technology. The ultimate goal of HCC is to make the computer invisible.

Human-centered computing involves designing, developing, and deploying human-centric computer systems. In this concentration students will learn techniques for human-computer interaction using gestures, mobile devices, large surfaces, and virtual environments. Students will also learn how to design and conduct human-subject experiments and understand the role of HCC in developing human-centric artificial intelligence systems. The concentration provides rich interdisciplinary training in computer vision, machine learning, design and psychology.

Learning Outcomes

Upon completing this program, students will be able to:

- Design interactive systems using state-of-the-art HCC techniques.
- Design and conduct human-subject experiments.
- Build complex 3D worlds for user interaction (e.g., virtual and augmented reality).
- Confidently pursue graduate studies or professional employment in HCC and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the HCC concentration opens career paths that include:

User experience designer, virtual and augmented reality developer, and human-centric developer for intelligent systems.

Major in Computer Science, Networks and Security Concentration

Networks connect computers and other devices so they can share information. The Networks and Security concentration involves designing, building, and maintaining networks and protecting them from cyberattacks.

Network and security technology is vitally important to almost every modern field of human endeavor including biology, physics, agriculture, medicine, defense, and more.

There is explosive demand for professionals who can understand the underlying principles of networks and security, incorporate them into products and practices, and provide defensive capabilities against cyber threats.

The Networks and Security concentration provides students core and elective courses on computer networking, systems security (including the latest trends and technologies in cyber-security), ethical hacking, operating systems, databases, and software. Students will develop fundamental skills in security architecture and analysis, cryptography, system vulnerabilities and attack vectors, malware analysis and defense, intrusion detection and protection, network architecture, engineering and network software development. The *CSU Cyber-Security Center of Excellence* expands upon these course offerings with lab equipment, research topics, and certification opportunities.

Learning Outcomes

Upon completing this program, students will be able to:

- Work effectively in teams to develop computational solutions to complex problems.

- Develop products and technologies that provide network/cyber-security solutions or incorporate these technologies into products that require security or network capabilities.
- Analyze technologies and situations for cyber vulnerabilities to develop improvements to attack and defense methodologies.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in networks and security and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the networks and security concentration opens career paths that include:

Software developer, software architect, network security analyst, software project manager, computer systems security analyst, computer and information systems manager, and R&D jobs for both cyber-security attack and defense.

Employers in a wide range of fields recognize the need for network and cyber-security architecture and implementations within their domains, which creates R&D and management opportunities across a wide job market.

Requirements Effective Fall 2020

Major in Computer Science, Software Engineering Concentration

Software engineering involves designing, implementing, and maintaining computer programs. Developing modern software systems requires more than programming skills and core computer science concepts. It requires software engineering skills, which are in high demand in the software industry.

The Software Engineering concentration focuses on the concepts, techniques, and tools necessary for software analysis, design, testing, maintenance, and teamwork. Courses will include hands-on work with the software engineering tools used in industry.

This concentration combines a rigorous computer science degree with courses in software design, software testing, project management, and system analysis and design.

Learning Outcomes

Upon completing this program, students will be able to:

- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in software engineering and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the software engineering concentration opens career paths that include:

Software developer, software architect, full-stack developer, software project manager, database programmer, computer systems analyst, web developer, computer and information systems manager, UX designer, cloud engineer, mobile application developer, and educator.

Minor in Computer Science

Computer science and programming skills are in high demand in every field. Most jobs now require them.

A minor in Computer Science will give students a foundation in software development, programming, and computer and information theory. Students will begin with a gradual introduction to programming and data

structures. Then students can take courses in an area of emphasis that complements their current degree.

This customized minor can significantly boost student's career opportunities and success.

Computer Science has competitive entrance requirements. Please contact a department advisor for more information.

Requirements Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C is required in all courses required for the minor.

Major in Mathematics

Mathematics is the science of numbers, shapes, probabilities, and measurements. It is a universal language in which information is stated in the simplest possible form. Mathematics has a dual nature—it is an independent discipline valued for its precision and elegance, and it is an essential source of ideas and techniques for other scientific endeavors.

The undergraduate program is structured to provide a broad liberal arts education in mathematics, a strong set of core courses, and flexibility to choose from a broad range of courses. The liberal arts component requires students to acquire a broad background in communication skills, humanities, social sciences, and natural sciences. The major core focuses on developing students' understanding and appreciation of the mathematical sciences, problem solving skills, and their ability to combine knowledge and skills in productive ways. Core mathematics subjects include calculus and advanced calculus, linear algebra, methods of proof, abstract algebra, computer programming, and statistics.

Four concentrations are available in the program: Actuarial Science, Applied Mathematics, General Mathematics, and Mathematics Education.

Learning Outcomes

Graduates will:

- Obtain a solid background in theoretical mathematics and will be able to participate in mathematical work in a variety of fields or continue on to graduate school.
- Be able to apply a range of mathematical and statistical tools to a diverse set of problems as presented to them in either employment or the pursuit of further education.
- Be capable of describing their mathematical assumptions and results to colleagues.

Potential Occupations

The Mathematics major prepares students for a wide variety of occupations in business, industry, government, and education. Actuarial science graduates who have passed the first two professional actuary exams can expect to find positions with excellent entry-level salaries. Applied mathematics graduates continue to find employment opportunities in government and private industry. Many pursue advanced degrees in mathematics, computational science, or engineering. About one-third of general mathematics graduates continue on to graduate school in mathematics or other disciplines, with the rest finding employment in a large variety of capacities. Education students spend a semester teaching a classroom and have excellent job placement. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who continue to pursue advanced degrees can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities include, but are not limited to: applied mathematician, actuary, engineer, statistician, financial analyst/advisor,

computer programmer, computer systems analyst, mortgage officer, market analyst, risk analyst, tax auditor, accountant, math educator.

Concentrations

- Actuarial Science Concentration
- Applied Mathematics Concentration
- Computational Mathematics Concentration (No new students are being accepted into this concentration.)
- General Mathematics Concentration
- Mathematics Education Concentration

Major in Mathematics, Actuarial Science Concentration

The Actuarial Science concentration trains students how to use mathematics, statistics, business, and economics to analyze and

plan for future situations involving financial uncertainties and risks. This concentration is designed to qualify students to take the first two examinations administered by the Society of Actuaries (<https://www.soa.org/member/>) and provides the foundation for the remaining examinations.

Requirements Effective Fall 2020

A minimum grade of C (3.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

Major in Mathematics, Applied Mathematics Concentration

The Applied Mathematics concentration prepares students for careers as applied mathematicians working in business, government, and industry. It is recommended that students supplement the core mathematical program with courses in their chosen application area; for example, engineering, public health, finance, electronics, or geology. Course requirements emphasize mathematical foundations as well as the

application of mathematics in other disciplines. In particular, students receive training in numerical analysis, mathematical modeling, statistics, and computing, as well as a solid preparation for further study.

Requirements Effective Fall 2018

A minimum grade of C is required in all mathematics, statistics, and computer science courses that are required for graduation.

Major in Mathematics, General Mathematics Concentration

The General Mathematics concentration is a liberal arts-based program designed to provide a solid foundation in mathematics with the flexibility to explore and develop expertise in other academic fields. Because of its flexibility, this concentration is well suited for students who want

to combine mathematics with fields such as business, law, computer science, or statistics.

Major in Physics

Physics is the study of motion, matter, and energy. It is the most fundamental of sciences, and provides the essential underpinning of chemistry, biology, astronomy, and geology. Physicists probe the structure of atomic nuclei, study exotic states of matter that occur at ultra-low temperatures, and develop theories that predict the origin and destiny of the universe. Physics has practical applications to a wide variety of tasks such as fabricating very large scale integrated circuits, producing high efficiency solar cells, and developing nanomachines, high-power lasers, and scanners for imaging activity within the human brain. Fundamental research in physics has led to many important inventions, including the transistor, the computer, the internet, the flat panel display, and the cell phone.

The Physics major begins with an emphasis on fundamentals in the basic sciences and mathematics to provide students with a broad foundation. Subsequent course work is designed to develop analytical and experimental abilities that allow students to solve problems involving the technical applications of physics. The curriculum includes courses on classical mechanics, modern physics, quantum mechanics, electricity and magnetism, and thermal physics. A strong liberal arts program rounds out the major and provides educational breadth. Participation in undergraduate research is strongly encouraged since it enhances practical training and expands employment opportunities, as well as being expected of anyone applying to research-based graduate programs.

Two concentrations are offered: Physics and Applied Physics. The former is the standard concentration, and is recommended for students planning to apply to graduate programs in Physics or related disciplines. The latter requires the student to select a specific "field": there are a variety to choose from, and each has its own menu of associated electives. The Applied Physics concentration is ideal for students who are double-majoring in other technical disciplines, or who anticipate further education towards a career in health professions (including, notably, Medical Physics).

Learning Outcomes

Graduates will:

- Obtain a solid background in experimental physics and basic theoretical physics. This will include a conceptual understanding of mechanics, electromagnetism, many-body physics, and quantum mechanics as applied to important model systems and real systems.
- Have the contemporary skills and knowledge necessary for entry-level positions in a variety of occupations or for admission to graduate or professional schools.
- Be able to carry out experiments on diverse physics phenomena using electrical and optical techniques; analyze data using statistical methods appropriately; identify systematic errors; and relate the results to core physics content at the advanced undergraduate level.
- Be able to communicate the results of experiments and theoretical analyses in writing and orally.

Potential Occupations

Physics majors who go into the workforce directly after graduation use their training in a variety of settings. The primary employers for our graduates have been large aerospace/defense and electronics companies, as well as software firms and smaller high-tech companies. In addition to the more obvious jobs in those settings, such as computer programming, quality control, and electronics design, our students have also been hired in training and sales capacities. High school teaching is a possibility: there are several pathways for students with undergraduate Physics degrees to obtain teaching credentials. Physics graduates possess excellent mathematical and analytical skills that are useful in business and finance as well.

Our majors have gone on to research-based graduate programs in disciplines including Physics, Applied Physics, Applied Mathematics, Atmospheric Science, and Quantitative Biology. Those earning graduate degrees can work in college teaching and at industrial, government, and academic research labs and reach the highest professional levels.

Health Physics and Medical Physics are two less-known career paths that offer great opportunities for students interested in the direct application of physics to human well-being. The former is concerned with protecting people from dangers associated with ionizing radiation, while the latter involves working with x-ray machines and radioisotopes in clinical settings. Both require Master's degrees in the discipline, and a Physics major is the preferred undergraduate preparation.

Concentrations

- Applied Physics Concentration
- Physics Concentration

Major in Physics, Applied Physics Concentration

The Applied Physics concentration combines fundamental course work in physics with a selection of courses in a related field. Seven fields are available:

- The **Electronics, Semiconductors, and Optics** field and the **Materials and Fluids** field are designed for students interested in rapidly changing technology or in areas that overlap the boundaries of traditional engineering disciplines.
- The **Computers** field provides a foundation for the application of modern computer technology to problems in physics, the development of new types of computers, and jobs in computer programming.
- The **Chemistry** field combines thorough knowledge of both chemistry and physics, which is useful in such interdisciplinary areas as materials science, surface science, and physical chemistry/chemical physics.

- The **Medical Physics** field and the **Biophysics** field prepare students for further study in medical physics (the application of physics technologies to medical practice), health physics (radiation safety and protection), or biophysics, and are also appropriate for students planning careers in traditional health professions.
- The **Geophysics** field prepares students for further study in geophysics and careers involving application of physical methods in geology.

With this concentration, it is also possible for students to design a custom field (in consultation with departmental advisors) to meet their specific needs.

Requirements Effective Fall 2018

Each course used to meet requirements of the concentration need a minimum grade of C-, including courses to satisfy AUCC Categories 1, 2, and 3A.

Major Completion Map

Distinctive Requirements for Degree Program:

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Many courses in a Selected Field list have prerequisites outside the Department of Physics. Any student considering the Applied Physics concentration should meet with an advisor as soon as possible. Note that PH 327 may be replaced by three credits from each of the two Technical Electives Lists.

¹ For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.

² CHEM 301 or CO 301B are recommended. Other courses in AUCC Category 2 may be accepted if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.

³ A minimum of 6 credits must be 300-, 400-, or 500-level.

Major in Physics, Physics Concentration

The Physics concentration provides a broad background in physics that serves as a base for later specialization, either in graduate school or on the job. It is designed for those seeking greater insight into physics and an introduction to more advanced topics and methods. Students who obtain a degree in Physics with the Physics concentration are prepared

for a career in industry or government, or for advanced study at the graduate level.

Requirements Effective Fall 2018

Each course used to meet requirements of the concentration need a minimum grade of C-, including courses to satisfy AUCC Categories 1, 2, and 3A.

- 1 For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.
- 2 CHEM 301 and CO 301B are recommended. Other courses in All-University Core Curriculum (AUCC) Category 2 may be accepted as substitutes if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.
- 3 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300-, 400-level).
- 4 Only 3 credits from this course are applied towards the Technical Electives requirement.

Major Completion Map

Distinctive Requirements for Degree Program:

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Note that PH 327 may be replaced by six credits from the Mathematics and Statistics Electives List.

Minor in Physics

Most technical fields require some background in physics. A minor in Physics can provide students with an increased understanding of the foundations of their chosen major. For students majoring in Computer Science and Mathematics, a minor in Physics can offer experience in applying the skills acquired in their major to concrete physical problems.

Requirements Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C- is required in all courses applying toward the minor in physics.
