## 2016 Flower Trial Garden

Dr. James E. Klett, David Staats and Sean Markovic\*

### Introduction

The W. D. Holley Plant Environmental Research Center (PERC) on the Colorado State University campus has been in operation for over 40 years. Currently, the major remaining part of PERC is the arboretum, due to the new stadium construction. Dr. James E. Klett is the Director of PERC and the faculty coordinator for the Annual Flower Trial Garden. In 2000, the trial garden was moved from its site at PERC to the park located on the north-west corner of Remington and Lake Streets (1401 Remington Street). The relocation of the garden to this more spacious and visible site furthered its mission by more effectively extending education, research and outreach to students, home gardeners, Master Gardeners, community members and Green Industry personnel.

The outdoor display and test areas were established to allow students, researchers, industry representatives, homeowners and extension personnel to learn, teach and evaluate horticultural research and demonstration projects in the Rocky Mountain/High Plains region. The Annual Flower Trial Garden is both an All-America Selections® display and trial site. The garden is open to students, industry personnel and the public for viewing, gathering ideas about new varieties, studying the different growth habits, tolerances and visual characteristics of many annual flowering varieties.

The purpose of the trial garden is to evaluate the performance of annual flower varieties under Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures and a season-long need for irrigation. Plants are evaluated for plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these cultivars are judged in early August, and again in early September, by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners.

The trial garden is funded, in most part, by the entry fees collected from the plant breeding seed and vegetative companies who have chosen to participate in the trials. Additional financial assistance and supplies for the trial operations are donated by a number of sources. These sources include various state horticulture industry associations, foundations, nurseries, greenhouse growers and plant and seed production companies from across the nation and world. The trial garden at Colorado State University receives no operating dollars directly from state funds. Some operational and staff dollars have come from the Colorado State Agricultural Experiment Station, Extension, the College of Agricultural Sciences and the Department of Horticulture and Landscape Architecture.

---

\* Professor and Extension Landscape Horticulture Specialist; Horticulture Research Associate; Horticulture Graduate student and 2016 Garden Coordinator

## **Acknowledgements**

The Department of Horticulture and Landscape Architecture at Colorado State University would first like to thank the many vegetative and seed companies who continue to participate in the trials year after year. Without their cooperation and support, the research done at the trial garden would not be possible. There are 572 varieties planted in sun beds, 67 varieties planted in shade beds, 407 varieties planted in sun containers and 9 varieties planted in shade containers.

### **Participating Companies:**

American Takii Inc.	Home Garden Seed Association
AmeriSeed Inc.	Hort Couture
Ball FloraPlant	Jelitto Seed
Ball Ingenuity	JYK Seed
Beekenkamp	PAS/Keift Seed Co.
Benary Seed	PanAmerican Seed
Cultivaris	Proven Winners
Danziger	Sakata Seed America Inc.
Darwin Perennials	Selecta
Dummen Orange	Suntory Flowers Limited
Flora Nova	Syngenta
Florist Holland B.V.	Westhoff Flowers

### **In Kind Donations:**

**Greencare Fertilizers, Inc.** - Donated water soluble fertilizer for use in the garden and greenhouse.

**Everris, Inc** - Donated the Osmocote® slow release fertilizer used in the beds and containers.

**SunGro** - Donated potting media used to grow-on vegetative plugs.

**Organix** - Donated organic media for sun beds and containers.

**Welby Gardens** - Grew all seed propagated plants at a substantially reduced cost for the trials.

### **In Appreciation**

The Department of Horticulture and Landscape Architecture would like to recognize and thank the following people for making the trial gardens happen this year.

Sean Markovic – Graduate Student and Annual Trial Garden Coordinator

The Trial Garden Staff – Chris Tragakes, Taylor Reid, Brandon McCarron, Noel Rodriguez

David Staats – Horticulture Research Associate

All the Larimer County Master Gardeners who volunteered their time and hard work.

Al Gerace and Dan Gerace of Welby Gardens and all of their staff.

The Trial Garden Advisory Committee – Harvey Lang (Syngenta Flowers), Tom Linwick (Ernst Benary of America, Inc.), Dan Gerace (Welby Gardens), Al Gerace (Welby Gardens), Diana Reavis (Eason Horticultural Resources Inc.), Duane Sinning (Colorado Department of Agriculture), Eric Pitzen (Syngenta Flowers), Frank Yantorno (Center Greenhouse, Inc.), Galen Dokter (Vaughn's), Gene Pielin (Gulley Greenhouse), Jim Devereux (Dummen

Orange), Sharon Kendall (Tagawa Greenhouses), Karl Trellinger (Syngenta Flowers), Keith Stieduhar (City of Westminster), Bridget Blomquist (Denver Botanic Gardens), Mark Seguin (Sakata Ornamentals), Merle Moore (retired, Denver Zoological Gardens), Ron Brum (Ball Horticultural Company), Amy Gonzales (Syngenta Flowers), Luke Ellington (Express Seed Company), Susan Stauber (Ball Horticultural Company), Traicer Gray (Elitch Gardens), Aaron McDonald (Botany Lane Greenhouse), Julie Lehman (Denver City Park Greenhouse), Niles Reese (retired, Walters Gardens), Brian Austin (Dutch Heritage Gardens), Emily Mason (Dummen Orange), Jini Bates (Bloomin'), Debra Pfaff (City of Broomfield), Aaron Bivens (Altman Plants), Sean Moody (Ceres Land Care)

### **An Invitation**

You are cordially invited to tour the garden at your leisure to enjoy the color and ambiance of a place that is like no other in Colorado. Any suggestions you may have for future programs or improvements are strongly encouraged, so please feel free to contact us with your ideas.

Jessica Davis – Department Head

Phone: (970) 491-7018

James E. Klett – PERC Director & Annual and Perennial Flower Trial Garden Faculty Coordinator

# 2016 CULTURAL DATA

## Growing

All seeds were sent to Welby Gardens in Denver, CO in February and March 2016 for germination and growing-on in their greenhouses into 4-cell packs. Seed varieties from Welby Gardens were all received on June 7 and planted in the garden starting on June 9. All vegetative varieties were received as plugs and transplanted into 4.5” pots shortly after arriving at Colorado State University from mid-March to late April.

## Fertilization in Greenhouses†

Dosatron<sup>®</sup> fertilizer injectors rated at 7 GPM were used in the greenhouses to fertilize plants each day they were watered, with the exception that every weekend they were watered with clear water. Greencare 14-4-14 water soluble fertilizer was used. Plants were grown in the greenhouses at the CSU Horticulture Center. They received fertilization at a rate of 200 ppm.

## Chemicals Used in Greenhouses

A drench of Banrot<sup>®</sup> (6 oz/gallon) was applied to all vegetative plugs immediately after arrival and prior to potting.

This year there were no major abiotic or biotic issues in the greenhouse making for an extremely stress-free year growing the plants. The new greenhouse environment was ideal for growing quality plants. High sun and warm temperatures lead to the application of Cyclocel on some more vigorous Geraniums and B-Nine on some more vigorous Petunias and Calibrachoas on May 19.

## Soil Amendments and Preparation

All beds were raked clean of old mulch, planting material and weeds prior to planting. Where necessary, RoundUp<sup>®</sup> was sprayed on weeds. Prior to planting, 1.5-2” of new Grower’s Mix media from Organix Supply Inc. was added to all sun beds. The beds were roto-tilled to a depth of 8” which helped incorporate the new media. After tilling, the beds were crowned for better drainage and raked smooth. For containers, the top 6-8” of media was removed and ¼ teaspoon of Banrot<sup>®</sup> was sprinkled over the remaining soil and watered in. The containers were then re-filled with the same Grower’s Mix media used on the sun beds.

Lobularia	20	22
Dianthus	20	22
Antirrhinum	20	22
Pentas	19	22
Ipomea	19	22

## Containers

There were extra containers located in the shade area and the last row of the sun container area. These containers were filled by the Annual Flower Trial crew with extra plants of various varieties which were located in the garden.

## Watering Schedule

Plants were watered on an “as needed” basis while in the greenhouses. All plants were thoroughly hand watered after being planted in the garden or in the container. Container trials were irrigated three times a day (depending on rain), every day, for about the first two weeks after planting and then twice a day after that. Each container has 2 drip emitters positioned towards the center that are rated at 1 GPH. All sun containers ran for one hour per cycle and the shade containers ran for 30 minutes per cycle. Beds are zoned according to weekly water-use requirements of 0.5”, 1.0” and 1.5” of water per week, and were watered 2-3 times a week for varying amounts of time starting around July 1, depending on the bed’s water-use rating. Due to some rain this summer, the irrigation was sometimes decreased depending on how much water the individual beds needed.

<b>Bed</b>	<b>Irrigation (in)</b>	<b>Bed</b>	<b>Irrigation (in)</b>
<b>A</b>	1.5”	<b>K</b>	1.0”
<b>B</b>	Drip Irrigation	<b>L</b>	1.0”
<b>C</b>	1.0”	<b>M</b>	1.5”
<b>D</b>	1.0”	<b>N</b>	1.5”
<b>E</b>	0.5”	<b>SA</b>	1.5”
<b>F</b>	0.5”	<b>SB</b>	1.5”
<b>G</b>	1.5”	<b>SC</b>	1.5”
<b>H</b>	0.5”	Shade Containers	Drip Irrigation
<b>I</b>	0.5”	Sun Containers	Drip Irrigation
<b>J</b>	1.0”	UCA Containers	Drip Irrigation

## Fertilization in Garden

All beds were top-dressed with Pro Rich<sup>®</sup> Fertilizer (14-5-5) at the rate of 1 pound N per 1000 square feet prior to planting. Before planting, Osmocote<sup>®</sup> (14-14-14) was applied to all sun containers at a rate of 130 grams/pot and mixed into the media prior to planting. After planting, Osmocote<sup>®</sup> (14-14-14) was applied to all shade containers at a rate of 65 grams/pot. After planting, Osmocote<sup>®</sup> (14-14-14) was applied to all sun beds at the rate of 6.4 grams/sq. ft. (suggested medium rate on label) or approximately 160 grams/variety. Osmocote<sup>®</sup> (14-14-14) was applied to the shade beds at a rate of 3.2 grams/sq. ft. or approximately 80 grams/variety. Greencare water soluble fertilizer (20-10-20) was dispensed through a 100 GPM Dosatron<sup>®</sup> twice a week at a rate of 200 ppm.

## Maintenance of Flowers & Pinching

### Greenhouse Maintenance

Genus	Maintenance
Geranium	Deadheaded 4/26
Petunia & Petchoa	Pinched 4/20
Calibrachoa	Pinched 4/20
Verbena	Pinched 4/19

### Garden Maintenance

Genus	Maintenance
Geranium	Deadheaded 6/8, 7/15, 8/9, 8/17
Dahlia	Deadheaded 6/2, 6/17, 9/6
Violas	Pinched 5/31
Gerbera	Deadheaded 7/19
Canna	Deadheaded 7/19, 8/22

### Weed Control

RoundUp® was applied to all beds prior to tilling in the spring, as well as a spot treatment around the containers. Otherwise, all weeding was done by hand throughout the season.

### Pest Control in Garden

No insecticides were applied due to advanced scouting and lack of pest populations.

### Disease Control in Garden

Zerotol was applied as a soil drench prior to planting. In previous years this was done as a preventative measure against *Xanthomonas*. The annual garden has its own supplies and tools in order to reduce the potential spread of disease from other sites.

Pageant was applied to Petunias, Celosia, and New Guinea Impatiens in sun beds 7/18 as a preventative fungicide treatment.

### **Monthly Temperatures and Precipitation for Summer 2016**

Month	Avg. Maximum Temperature	Avg. Minimum Temperature	Precipitation (Inches)
April	62.0° F	36.5° F	2.75
May	67.4° F	42.1° F	1.84
June	83.0° F	53.0° F	0.20
July	91.0° F	56.4° F	1.43
August	89.4° F	65.0° F	1.36
September	75.6° F	57.0° F	0.95

\*Weather information for the Fort Collins area provided by the Colorado State University at: [http://ccc.atmos.colostate.edu/sum\\_form.html](http://ccc.atmos.colostate.edu/sum_form.html)

### **Data Collection Methods**

#### **Plant Size**

Height and width measurements were taken twice during the growing season, July 1<sup>st</sup>, and September 14<sup>th</sup>. This was done to get a feel for the average size of the plants and each variety's growth performance. For consistency in bed data collection, the third plant from the front of the right row was measured; however, if that plant was noticeably smaller or larger than average on July 1<sup>st</sup>, an alternate plant was selected for measurement and the location was noted so the same plant would be measured when the second measurements were taken. Measurements were taken at the highest and widest parts of the plant, including any flowers. This may account for the decrease in height on some varieties. For containers, measurements were taken at the highest and widest parts of overall growth.

#### **Flowering Performance**

Since 2007, data on the bloom period for each variety has been taken. In presenting this data, we hope to give a feel for how long the plants were in bloom and how well they bloomed during that period of time. Data was collected on a regular basis, every 7-14 days. Plants were evaluated by estimating the overall flowering based on a scale of 1-5, with 5 being in peak bloom and 1 being plants not in bloom or have very few blooms. Full bloom (5) meaning the stage at which the average consumer perceives the plant as being in perfect bloom. One should take into consideration the broad range between these ratings when interpreting these data. If a variety started at full bloom, it means it was already in full bloom in the greenhouse before it was planted. All of this data is presented in numerical fashion in this performance evaluation. Towards the end of the season, any dead plants in the trial were not considered in the evaluation; thus, the data given always reflects the percent of live plants in bloom.

### Evaluation

The trial evaluation day was held on August 2<sup>nd</sup>. 125 judges consisting of industry representatives, master gardeners, university employees and trial garden advisory committee members evaluated the plant varieties for performance using a combination of these criteria:

#### Plant Quality:

- Uniformity of plant habit
- Bushy, well-branched shape versus open and leggy
- Healthy foliage (deep green versus chlorotic, yellow leaves)
- Foliage texture
- Disease resistance

#### Flower Quality:

- Flower power (number of flowers per plant, substance and holding power)
- Flower presentation (i.e. not hidden by the foliage)
- Color uniformity
- Stable color (resistance to fading) and stable pattern (for bicolor)
- Flower size and uniformity of flowers
- Balance of color in a mixture

#### Overall Presentation:

- Overall “clean” look, versus visible spent blooms
- Fragrant flowers and/or foliage
- Good vigorous growth
- Resistance to climatic stress
- Novelty value of unique features
- Overall consumer appeal

Plant varieties were rated on a scale of 1 to 10 (1 = very poor performance; 10 = excellent performance). These numerical evaluations were used to calculate the average ratings for each variety in the trials. Participants were encouraged to circle pre-generated comments on the evaluation form, if appropriate, as well as write in any other comments and observations they had. The pre-generated comments they could choose from included: Low vigor, Vigorous plant, Few flowers, Many flowers, Uniform, Non-uniform, Unique color and Some chlorosis. This was the second year we enacted a digital evaluation format. Of the 125 evaluators, 82 performed evaluation using the digital format, while 43 used the paper evaluation forms.

**Selection of “Best Of” Winners, “Plants Rated As Superior”, and “Sneak Peeks”**

Ratings from all evaluators on August 2<sup>nd</sup> were averaged and the top five in each class were placed on a preliminary list. A class is determined to be any group of plants in the same genus that consisted of 10 or more trial entries. The “Best Of” award was given to classes whose top-five list had ratings of at least 6.0 and one of them could be considered superior. A sub-committee of university and industry representatives revisited the garden on September 9<sup>th</sup> to review the top-five list and verify the superiority of the top rated varieties later in the season and not just on August 2<sup>nd</sup>. A majority vote was taken for each class to determine the final selections for winners. “Plants Rated as Superior” was an award created to recognize other plants that deserved special recognition; especially for those plants that did not have ten varieties to make up a judging class.

**Other Information for the 2016 Trials**

Number of companies participating.....	24
Total number of trial entries (includes AAS and HGSA).....	1035
Varieties grown in the ground.....	526
Varieties grown in a container.....	287
Varieties grown in both locations.....	111
Varieties propagated by seed.....	430
Varieties propagated by cuttings.....	605
Number of genera represented.....	92
Number of student employees dedicated to the project	
Spring (part-time, 10-20 hrs/wk).....	3
Summer (full-time, 40 hrs/wk).....	3.5
Fall (part-time, 10-15 hrs/wk).....	3

## **“Best Of...” Annuals from 2016 Colorado State University Trials**

[www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu)

### **Best of Show – Argyranthemum ‘White Butterfly’ from Proven Winners**

Perfection came covered with white flowers in 2016. This plant had continuous blooms all through the growing season and looked fresh even during the summer heat. Plants maintained excellent uniformity and continuous growth helped “bury the dead” so that no dead heading was required.

### **Best New Variety – Lantana ‘Lucky’™ Red from Ball FloraPlant**

Flowers were abundant and had many citrus tones but predominately noted for a good dark red. This plant was unique for combining both the red flower color with a very uniform growth habit. Blooming started early in the season and was noted that it doesn’t cycle in and out of flowering like other lantanas.

### **Best Novelty – Begonia ‘Jurassic’™ Red Splash from Ball Ingenuity**

Fantastic foliage color gave this plant great interest as soon as it was planted in the garden. Foliage was a dramatic combination of red and silver with large jagged edges. A good choice for shady areas as it has iridescent foliage with the occasional beam of sunlight. Plants were well branched and also do well as an indoor plant.

## \_\_\_“Best Of...” by Class\_\_\_\_\_

---

### **Angelonia ‘Archangel Dark Rose’ from Ball FloraPlant**

Large flower spikes and a deep rose flower color gave this plant a lot of flower power. This plant is a great item for the landscape with dense, compact branching, glossy foliage and abundant flowering. It has won in this category in the past and has proven itself again in 2016.

### **Begonia boliviensis ‘Unstoppable Upright Fire’ from Dummen Orange**

Dark foliage makes a great contrast with the bright orange flowers. Large flowers were semi-double and very abundant on vigorous plants. This plant is a good choice for containers.

### **Begonia semperflorens ‘Big® Red Bronze Leaf’ from Benary**

Plants were characterized by their extreme vigor and prolific flowering. The dark foliage was very glossy and made a great contrast with the bright red flowers. Plants maintained excellent uniformity even with the vigorous growth. It is a good plant for either sun or shade areas.

### **Calibrachoa ‘Superbells Pomegranate Punch’ from Proven Winners**

Flowers had a unique color combination that helped this entry receive a very high rating. Bloom color was similar to that of a pomegranate around the edges. Then it developed into a very rich, dark center with a small speck of bright yellow in the throat. Plants had a very uniform growth habit that was stunning in combination with the flowers in a container.

### **Canna ‘Toucan Scarlet’ from Proven Winners**

Tall, beautiful plants with dark red foliage made a dramatic combination with brilliant scarlet flowers that resembled a candle flame at the top of the plant. Plants were around five foot tall and very uniform.

### **Celosia ‘Kelos’® Fire Scarlet Improved from Beekenkamp**

Deep burgundy foliage and flowers in small scarlet plumes made both a beautiful color and textural combination. Plants were compact and very uniform and made an impressive overall appearance.

### **Coleus ‘Under the Sea® Pink Reef’ from Hortcuture**

Unique foliage was eye-catching because of a combination of a vibrant pink/rose leaf color and a very interesting leaf shape with ruffled edges. Foliage color held up well to sun without fading. Plants had controlled vigor and a nice dense canopy.

### **Combo ‘Kwik Kombo Shooting Star Mix’ from Syngenta**

Dark purple angelonia were combined with golden yellow verbena that made a beautiful contrast of light and dark. With a little imagination, it resembles the stars in the night sky. The combination looked good both early and late in the season and never slowed down during the heat of the summer.

### **Dahlia ‘XXL Sunset’ from Dummen Orange**

Huge blooms captured attention not only because of their size but also because of the beautiful coloring that included all the shades of the sunset. Plants were vigorous and did not have any mildew late in the season.

### **Geranium (Interspecific) ‘Calliope® Dark Red’ from Syngenta**

Impressive overall visual effect was created by robust plants and abundant large flower heads with a dramatic dark shade of red. Intense color held strong even in the high light of Colorado. Growth habit was exceptionally uniform.

### **Geranium (Zonal) ‘Brocade Fire Night’ from Dummen Orange**

Coral colored flowers appeared especially bright against the unusually dark foliage created by a heavy reverse zonation. Plants were very uniform and covered by flowers. Plant seemed to have a somewhat “old fashioned” look due to the single petals and smaller umbels. However, they had great flower power due to the abundant flowers.

### **Impatiens ‘Big Bounce’™ Lilac from Selecta**

This entry is a multi-year winner in this category due to its dependable vigorous plants which was continually covered in flowers throughout the growing season. The soft lavender colored flowers had an iridescent quality that really made them stand out. Plants had a perfect mounding growth habit.

### **Ipomoea ‘Sweet Caroline Bewitched After Midnight’™ from Proven Winners**

Uniform plants had foliage of dark purple with shades of bronze that created mix of color for added interest. This variety stood out from the rest due to the large leaves that stood upright and a unique leaf shape which made it a plant to add texture in the landscape.

### **Lobelia ‘Suntory Lobelia Compact Blue’ from Suntory**

This variety was impressive due to its ability to look great all season long. Most lobelias fade out in the heat mid-summer but this variety still maintained a dense mound of abundant medium blue flowers even into September. Growth habit was very compact and tight in addition to being very floriferous.

### **Marigold ‘Little Duck Orange’ from Ameriseed**

Flowers were extra-large and the orange color “popped” against the dark green foliage. Plants had a compact growth habit with dense foliage and had a very uniform appearance.

### **New Guinea Impatiens ‘SunStanding Salmon’ from Dummen Orange**

Despite the name, this variety had impressive flower power even in the shade. Salmon color flowers were very attractive and even looked good as they faded to white with age. They were vigorous plants which grew tall but had great uniformity.

### **Pentas ‘BeeBright’™ Pink from Syngenta**

Bright pink flowers had uniform flowering and were good for attracting pollinators. Plants liked the heat and tolerated the cool nights. Abundant flowering created a good overall appearance.

### **Petunia (Veg Mound) ‘Purple Sky’ from Dummen Orange**

Plants were covered by a blanket of deep purple flowers that continued to bloom strong even into September. The floriferous plants had growth habits that were very uniform and showy.

### **Petunia (Veg Spread) ‘ColorRush’™ Pink’ from Ball FloraPlant**

‘ColorRush’™ Pink’ broke through the heavy competition in this class to come out the winner in 2016. The large spreading plants were very uniform and covered with a deep pink flowers. Foliage was dark green but hard to see due to the solid canopy of flowers.

### **Petunia (Seed Spread) ‘Tidal Wave® Red Velour from PanAmerican Seed**

Vigorous plants spread across the ground and had flowers with an impressive rich, burgundy red color. Blooms maintained deep color without fading. Plants were uniform and did not open up in the middle.

### **Portulaca ‘Colorblast Double Cherry’ from Westoff**

Flowers were more scarlet than cherry colored but were still very showy with a double center. Plants were floriferous and very vigorous with a spreading growth habit. Flowers opened significantly earlier in the day compared to others in the trial.

### **Salvia ‘Mirage Cherry Red’ from Darwin Perennial**

Prolific, bright cherry red flowers were large and made a great hummingbird attractant for the garden. Abundant branching made a very attractive, full plant. Plants maintained good growth habit.

### **Scaevola ‘Scalora™ Pearl’ from Westoff**

Great vigor made this Scaevola the biggest in its class. White flowers were very numerous and showy. Flowering began early on in the season and kept well into September. It had a strong mounding habit that works well in baskets.

### **Sun New Guinea Impatiens ‘SunPatiens® Compact Coral Pink’ from Sakata**

Beautiful soft coral colored flowers sat on top of the foliage for maximum visibility. Flowering was so abundant that foliage was barely visible but did show an attractive dark green that provided the perfect backdrop to the flowers. Plants were perfectly uniform and appeared to have no problem growing in full sun.

### **Verbena ‘EnduraScape™ Pink Bicolor’ from Ball FloraPlant**

This entry out-performed all other Verbenas for continuous flowering throughout the season. The large pink and white bicolor flowers were very abundant and formed a very uniform blanket of color. Flower power was enhanced due to the blooms being held high above the foliage and plants were self-cleaning.

### **Vinca ‘Mega Bloom™ Polkadot’ from Ameriseed**

This class had a lot of competition but this variety won out with great uniformity and large blooms. White flowers had a small pink eye giving it a “polkadot” effect which added interest. Plants were full and had a good foliage color.

### **Zinnia ‘Zahara® XL Fire Improved’ from PanAmerican Seed**

Long lasting appeal was created not only because of the prolific flowering but it covered the plants from the top all the way to the bottom. Vibrant shades of orange and red had a nice fade to a softer orange. Uniform plants were low maintenance and required no dead heading as the new flowers seemed to “bury its dead”.

### **\_\_\_\_\_ Other Outstanding Plants \_\_\_\_\_**

### **Angelonia ‘Archangel™ Cherry Red’ from Ball FloraPlant**

The cherry red color marked the entry of a new color class for Angelonia. The unique color was also combined with extra-large flower spikes and dark foliage that contrasted nicely with the blooms. Plants were very healthy and uniform.

## **Geranium (Interspecific) ‘Caliente® Fire’ from Syngenta**

This makes a great landscape plant but also looked amazing in the container. Impressive plant vigor and uniformity was second only to the prolific display of intense red flowers. Also, it was reported to do well even at 8,000’ altitude.

## **Lantana ‘Lucky Sunrise Rose’ from Ball FloraPlant**

Another multi-year award winner, ‘Lucky Sunrise Rose’ was again impressive in 2016 with a great combination of bright colors and superior flowering. Plants had excellent, dense growth habits and great vigor. Flower color contrasted nicely with dark green foliage. It would be a good choice for either a basket or in the landscape.

## **Phlox ‘Gisele Hot Pink’ from Selecta**

Not only did this plant survive in Colorado, it thrived and produced a mat of striking pink flowers. Growth habit was very dense and uniform. Flower color was vibrant with no fading.

For a more complete report and photos of all of these winners go to [www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu).

For further information about the Colorado State University Annual Flower Trials, contact Jim Klett at [Jim.Klett@ColoState.edu](mailto:Jim.Klett@ColoState.edu) or phone 970-218-0104.

### **Consumer’s Top 5 Plants**

This was the third year that we included a digital evaluation of on our garden for garden visitors to vote for their favorite plants. This new feature was very popular with the public garden visitors. This year we had 204 visitors submit digital and physical votes. The top 5 consumer voted plants are as follows:

<b>VARIETY NAME</b>	<b>COMPANY</b>
1. Sunflower Giant Teddy Bear	HGSA
2. Petunia Crazytunia® Blackberry Cheesecake	Westhoff
3. Canna Toucan™ Scarlet	Proven Winners
4. Kwik Combo Color My Sunset™ Mix	Syngenta
5. Mercadonia Garden Freckles	Danzinger
