## 2017 Flower Trial Garden

Dr. James E. Klett, David Staats and Sean Markovic\*

### Introduction

The W. D. Holley Plant Environmental Research Center (PERC) on the Colorado State University campus was in operation for over 40 years. Currently, the major remaining part of PERC is the arboretum, due to the new stadium construction. Dr. James E. Klett is the faculty coordinator for the Annual Flower Trial Garden. In 2000, the trial garden was moved from its site at PERC to the park located on the north-west corner of Remington and Lake Streets (1401 Remington Street). The relocation of the garden to this more spacious and visible site furthered its mission by more effectively extending education, research and outreach to students, home gardeners, Master Gardeners, community members and Green Industry personnel.

The outdoor display and test areas were established to allow students, researchers, industry representatives, homeowners and extension personnel to learn, teach and evaluate horticultural research and demonstration projects in the Rocky Mountain/High Plains region. The Annual Flower Trial Garden is both an All-America Selections® display and trial site. The garden is open to students, industry personnel and the public for viewing, gathering ideas about new varieties, studying the different growth habits, tolerances and visual characteristics of many annual flowering varieties.

The purpose of the trial garden is to evaluate the performance of annual flower varieties under Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures and a season-long need for irrigation. Plants are evaluated for plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these cultivars are judged in early August, and again in early September, by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners.

The trial garden is funded, in most part, by the entry fees collected from the plant breeding seed and vegetative companies who have chosen to participate in the trials. Additional financial assistance and supplies for the trial operations are donated by a number of sources. These sources include various state horticulture industry associations, foundations, nurseries, greenhouse growers and plant and seed production companies from across the nation and world. The trial garden at Colorado State University receives no operating dollars directly from state funds. Some operational and staff dollars have come from the Colorado State Agricultural Experiment Station, Extension, the College of Agricultural Sciences and the Department of Horticulture and Landscape Architecture.

---

\* Professor and Extension Landscape Horticulture Specialist; Horticulture Research Associate; Horticulture Graduate Student and 2017 Garden Coordinator

## **Acknowledgements**

The Department of Horticulture and Landscape Architecture at Colorado State University would first like to thank the many vegetative and seed companies who continue to participate in the trials year after year. Without their cooperation and support, the research done at the trial garden would not be possible. There are 450 varieties planted in sun beds, 25 varieties planted in shade beds, 323 varieties planted in sun containers and 35 varieties planted in shade containers.

### **Participating Companies:**

American Takii Inc.	Hort Couture
Ball FloraPlant	PAS/Keift Seed Co.
Ball Ingenuity	PanAmerican Seed
Beekenkamp	Proven Winners
Benary Seed	Sakata Seed America Inc.
Danziger	Selecta
Darwin Perennials	Suntory Flowers Limited
Dummen Orange	Syngenta
Flora Nova	Westhoff Flowers
Florist Holland B.V.	

### **In Kind Donations:**

**Greencare Fertilizers, Inc.** - Donated water soluble fertilizer for use in the garden and greenhouse.

**Everris, Inc** - Donated the Osmocote® slow release fertilizer used in the beds and containers.

**Pindstrup** - Donated potting media used to grow-on vegetative plugs.

**Altman Plants** - Donated potting media used to grow-on vegetative plugs.

**Organix** - Donated organic media for sun beds and containers.

**Welby Gardens** - Grew all seed propagated plants at a substantially reduced cost for the trials.

### **In Appreciation**

The Department of Horticulture and Landscape Architecture would like to recognize and thank the following people for making the trial gardens happen this year.

Sean Markovic – Graduate Student and Annual Trial Garden Coordinator

The Trial Garden Staff – Emily Helmus, Burt Thomas, Sam White

David Staats – Horticulture Research Associate

All the Larimer & Weld County Master Gardeners who volunteered their time and hard work.

Al Gerace and Dan Gerace of Welby Gardens and all of their staff.

The Trial Garden Advisory Committee – Harvey Lang (Syngenta Flowers), Melissa Main (Ernst Benary of America, Inc.), Dan Gerace (Welby Gardens), Al Gerace (Welby Gardens), Diana Reavis (Eason Horticultural Resources Inc.), Duane Sinning (Colorado Department of Agriculture), Eric Pitzen (Syngenta Flowers), Frank Yantorno (Center Greenhouse, Inc.), Galen Dokter (Vaughan's Horticulture), Gene Pielin (Gulley Greenhouse), Jim Devereux (Dummen Orange), Sharon Kendall (Tagawa Greenhouses), Karl Trellinger (Syngenta Flowers), Keith

Stieduhar (City of Westminster), Bridget Blomquist (Denver Botanic Gardens), Mark Seguin (Sakata Ornamentals), Merle Moore (retired, Denver Zoological Gardens), Ron Brum (Ball Horticultural Company), Amy Gonzales (Syngenta Flowers), Susan Stauber (Ball Horticultural Company), Traicer Gray (Elitch Gardens), Julie Lehman (Denver City Park Greenhouse), Richard Anderson, Brian Austin (Dutch Heritage Gardens), Emily Mason (Dummen Orange), Jini Bates (Bloomin'), Debra Pfaff (City of Broomfield), Holly Shield (Denver City Parks), Nick Marinelli (Weston Landscape and Design), Scott Fulton (Botany Lane Greenhouse), Beth Gulley (Gulley Greenhouse), Diana Shull (Dummen Orange), Aaron Bivens (Altman's Plants), Kathy McKay (Flamingo Holland)

### **An Invitation**

You are cordially invited to tour the garden at your leisure to enjoy the color and ambiance of a place that is like no other in Colorado. Any suggestions you may have for future programs or improvements are strongly encouraged, so please feel free to contact us with your ideas.

Jessica Davis – Department Head

Phone: (970) 491-7018

James E. Klett – Annual and Perennial Flower Trial Garden Faculty Coordinator and CSU Arboretum Director

# 2017 CULTURAL DATA

## Growing

All seeds were sent to Welby Gardens in Denver, CO in February and March 2017 for germination and growing-on in their greenhouses into 4-cell packs. Seed varieties from Welby Gardens were all received on June 6 and planted in the garden starting on June 7. All vegetative varieties were received as plugs and transplanted into 4.5” pots shortly after arriving at Colorado State University from mid-March to late April.

## Fertilization in Greenhouses†

Dosatron® fertilizer injectors rated at 7 GPM were used in the greenhouses to fertilize plants each day they were watered, with the exception that every weekend they were watered with clear water. Greencare 14-4-14 water soluble fertilizer was used. Plants were grown in the greenhouses at the CSU Horticulture Center. They received fertilization at a rate of 200 ppm.

## Chemicals Used in Greenhouses

A drench of Banrot® (6 oz/gallon) was applied to all vegetative plugs immediately after arrival and prior to potting up.

This year there were no major abiotic or biotic issues in the greenhouse making for an extremely stress-free year on the plants. The new greenhouse environment was ideal for growing quality plants. High sun and warm temperatures lead to the application of B-Nine on some more vigorous Petunias and Calibrachos on May 15.

## Soil Amendments and Preparation

All beds were raked clean of old mulch, planting material and weeds prior to planting. Where necessary, RoundUp® was sprayed on weeds. Prior to planting, 1.5-2” of new Grower’s Mix media from Organix Supply Inc. was added to all sun beds. The beds were roto-tilled to a depth of 8” which helped incorporate the new media. After tilling, the beds were crowned for better drainage and raked smooth. For containers, the top 6-8” of media was removed and ¼ teaspoon of Banrot® was sprinkled over the remaining soil and watered in. The containers were then re-filled with the same Grower’s Mix media used on the sun beds.

Antirrhinum	20	22
Pentas	19	22
Ipomea	19	22

**Containers**

There were some extra containers located in the shade area and the last row of the sun container area. These containers were filled by the Annual Flower Trial crew with extra plants of varieties which were located in the garden.

**Watering Schedule**

Plants were watered on an “as needed” basis while in the greenhouses. All plants were thoroughly hand watered after being planted in the garden or in the container. Container trials were irrigated three times a day (depending on rain), every day, for about the first two weeks after planting and then twice a day after that. Each container has 2 drip emitters positioned towards the center that are rated at 1 GPH. All sun containers ran for one hour per cycle and the shade containers ran for 30 minutes per cycle. Beds are zoned according to weekly water-use requirements of 0.5”, 1.0” and 1.5” of water per week, and were watered 2-3 times a week for varying amounts of time starting around July 1, depending on the bed’s water-use rating. Due to some rain this summer, the irrigation was sometimes decreased depending on how much water the individual beds needed.

<b>Bed</b>	<b>Irrigation (in)</b>	<b>Bed</b>	<b>Irrigation (in)</b>
<b>A</b>	1.0”	<b>K</b>	1.5”
<b>B</b>	Drip Irrigation	<b>L</b>	1.5”
<b>C</b>	1.0”	<b>M</b>	1.0”
<b>D</b>	1.0”	<b>N</b>	1.0”
<b>E</b>	0.5”	<b>SA</b>	1.5”
<b>F</b>	0.5”	<b>SB</b>	1.5”
<b>G</b>	0.5”	<b>SC</b>	1.5”
<b>H</b>	1.0”	Shade Containers	Drip Irrigation
<b>I</b>	1.0”	Sun Containers	Drip Irrigation
<b>J</b>	1.5”	UCA Containers	Drip Irrigation

**Fertilization in Garden**

All beds were top-dressed with Pro Rich<sup>®</sup> Fertilizer (14-5-5) at the rate of 1 pound N per 1000 square feet prior to planting. Before planting, Osmocote<sup>®</sup> (14-14-14) was applied to all sun containers at a rate of 130 grams/pot and mixed into the media prior to planting. After planting, Osmocote<sup>®</sup> (14-14-14) was applied to all shade containers at a rate of 65 grams/pot. After planting, Osmocote<sup>®</sup> (14-14-14) was applied to all sun beds at the rate of 6.4 grams/sq. ft. (suggested medium rate on label) or approximately 160 grams/variety. Osmocote<sup>®</sup> (14-14-14) was applied to the shade beds at a rate of 3.2 grams/sq. ft. or approximately 80 grams/variety. Greencare water soluble fertilizer (20-10-20) was dispensed through a 100 GPM Dosatron<sup>®</sup> twice a week at a rate of 200 ppm.

### Maintenance of Flowers & Pinching

#### **Greenhouse Maintenance**

Genus	Maintenance
Geranium	Deadheaded 5/08

#### **Garden Maintenance**

(as of July 15, 2017)

Genus	Maintenance
Geranium	Deadheaded 6/8, 7/15, 7/20, 8/16
Dahlia	Deadheaded 6/16, 7/7, 7/31
Gerbera	Deadheaded 7/16

### Weed Control

RoundUp® was applied to all beds prior to tilling in the spring, as well as a spot treatment around the containers. Otherwise, all weeding was done by hand throughout the season.

### Pest Control in Garden

7/17/17 Applied Pageant at 5.25g/gal to all Petunias and east side beds plus Zinnias; 7/26/17 Applied Bayleton at 2.5g/gal to all Petunias and east side beds plus Zinnias; 8/4/17 Applied Pageant at 16.25g/gal to Petunias and small sampling of many other plants to test for phytotoxicity at higher rates; 8/8/17 Applied Bayleton at 7.5 g/gal to all Petunias; 8/18/17 Applied Heritage at 25 g/4 gallon to all Petunias and east side beds plus Zinnias.

### Disease Control in Garden

Zerotol was applied as a soil drench prior to planting. In previous years this was done as a preventative measure against *Xanthomonas*. The annual garden has its own supplies and tools in order to reduce the potential spread of disease from other sites.

Pageant was applied to Petunias, Dahlia, and New Guinea Impatiens in sun beds 7/17 as a preventative fungicide treatment.

### **Monthly Temperatures and Precipitation for Summer 2017**

Month	Avg. Maximum Temperature	Avg. Minimum Temperature	Precipitation (Inches)
April	62.0° F	36.6° F	1.69
May	71.4° F	44.8° F	3.47
June	80.7° F	53.9° F	0.27
July	86.2° F	58.8° F	0.02
August	87.7° F	59.5° F	1.56
September	78.9° F	50.1° F	1.54

<https://www.wunderground.com/history/airport/KFNL/2017/8.html>

### **Data Collection Methods**

#### **Plant Size**

Height and width measurements were taken twice during the growing season, July 8<sup>th</sup>, and September 19<sup>th</sup>. This was done to get a feel for the average size of the plants and each variety's growth performance. For consistency in bed data collection, the third plant from the front of the right row was measured; however, if that plant was noticeably smaller or larger than average on July 8<sup>th</sup>, an alternate plant was selected for measurement and the location was noted so the same plant would be measured when the second measurements were taken. Measurements were taken at the highest and widest parts of the plant, including any flowers. This may account for the decrease in height on some varieties. For containers, measurements were taken at the highest and widest parts of overall growth.

#### **Flowering Performance**

Since 2007, data on the bloom period for each variety has been taken. In presenting this data, we hope to give a feel for how long the plants were in bloom and how well they bloomed during that period of time. Data was collected on a regular basis, every 7-14 days. Plants were evaluated by estimating the overall flowering based on a scale of 1-5, with 5 being in peak bloom and 1 being plants not in bloom or have very few blooms. Full bloom (5) meaning the stage at which the average consumer perceives the plant as being in perfect bloom. One should take into consideration the broad range between these ratings when interpreting these data. If a variety started at full bloom, it means it was already in full bloom in the greenhouse before it was planted. All of this data is presented in numerical fashion in this performance evaluation. Towards the end of the season, any dead plants in the trial were not considered in the evaluation; thus, the data given always reflects the percent of live plants in bloom.

### Evaluation

The trial evaluation day was held on August 1<sup>st</sup>. 153 judges consisting of industry representatives, master gardeners, university employees and trial garden advisory committee members evaluated the plant varieties for performance using a combination of these criteria:

#### Plant Quality:

- Uniformity of plant habit
- Bushy, well-branched shape versus open and leggy
- Healthy foliage (deep green versus chlorotic, yellow leaves)
- Foliage texture
- Disease resistance

#### Flower Quality:

- Flower power (number of flowers per plant, substance and holding power)
- Flower presentation (i.e. not hidden by the foliage)
- Color uniformity
- Stable color (resistance to fading) and stable pattern (for bicolor)
- Flower size and uniformity of flowers
- Balance of color in a mixture

#### Overall Presentation:

- Overall “clean” look, versus visible spent blooms
- Fragrant flowers and/or foliage
- Good vigorous growth
- Resistance to climatic stress
- Novelty value of unique features
- Overall consumer appeal

Plant varieties were rated on a scale of 1 to 10 (1 = very poor performance; 10 = excellent performance). These numerical evaluations were used to calculate the average ratings for each variety in the trials. Participants were encouraged to circle pre-generated comments on the evaluation form, if appropriate, as well as write in any other comments and observations they had. The pre-generated comments they could choose from included: Low vigor, Vigorous plant, Few flowers, Many flowers, Uniform, Non-uniform, Unique color and Some chlorosis. This was the second year we enacted a digital evaluation format. Of the 153 evaluators, 84 performed evaluation using the digital format, while 41 used the paper evaluation forms, some people group evaluated.

**Selection of “Best Of” Winners, “Plants Rated As Superior”, and “Sneak Peeks”**

Ratings from all evaluators on August 1<sup>st</sup> were averaged and the top five in each class were placed on a preliminary list. A class is determined to be any group of plants in the same genus that consisted of 10 or more trial entries. The “Best Of” award was given to classes whose top-five list had ratings of at least 6.0 and one of them could be considered superior. A sub-committee of university and industry representatives revisited the garden on September 9<sup>th</sup> to review the top-five list and verify the superiority of the top rated varieties later in the season and not just on August 1<sup>st</sup>. A majority vote was taken for each class to determine the final selections for winners. “Plants Rated as Superior” was an award created to recognize other plants that deserved special recognition; especially for those plants that did not have ten varieties to make up a judging class.

**Other Information for the 2017 Trials**

Number of companies participating.....	19
Total number of trial entries (includes AAS).....	900
Varieties grown in the ground.....	481
Varieties grown in a container.....	293
Varieties grown in both locations.....	63
Varieties propagated by seed.....	324
Varieties propagated by cuttings.....	576

## **“Best Of...” Annuals from 2017 Colorado State University Trials**

[www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu)

### **Best of Show - Calibrachoa 'CHAMELEON® Indian Summer Improved' from Westhoff**

The top award for the 2017 flower trial had eye catching color combined with great vigor for exceptional flower power. Varying shades of red, rose, pink and yellow were ever changing to create a dynamic appearance. The flowers of the CHAMELEON® series are selected for their ability to change color as environmental conditions change which was evident in this selection. Blooming continued strong all summer and into September. Plants maintained a uniform growth habit that enveloped the container as a ball of flowers.

### **Best Novelty - Millet 'Copper Prince' from PanAmerican Seed**

This plant is an excellent selection for the senses and texture in a garden. It had stout, large, fuzzy panicles of dark rose/bronze rising high above the plant. The arching foliage had wide blades and plants were very uniform with a unique caramel/copper color during the summer. This plant would create a very dramatic look in the landscape or in a large container.

### **Best New Variety - Lantana 'Luscious® Royale Cosmo' from Proven Winners**

These plants resulted in a great overall appearance with a very uniform rounded growth habits and strong flowering all over. Flowers had a unique color and were on top of the foliage for maximum flower power.

## "Best Of..." by Class

### **Argryranthemum - Golden Butterfly™ from Proven Winners**

The mass of sunny yellow flowers were very showy and with a deeper shade of yellow than 'Beauty Yellow'. Entire series was impressive with flower power and uniformity. Plants did not stretch and were low maintenance as they "buried their dead" spent blooms.

### **Begonia semperflorens (Sun) - 'BIG Red Bronze Leaf' from Benary**

Great vigor combined with strong flowering resulted in an outstanding overall appearance. Plants had a nice round habit that was very uniform. Flowers covered the plant evenly from top to bottom. It was a great plant that just keeps getting bigger and better all the way to a killing frost.

### **Begonia (Shade) - 'Whopper® Rose With Bronze Leaf Improved' from Ball Ingenuity**

The shiny bronze foliage made an excellent contrast with the prolific rose colored flowers. Plant vigor was impressive in the shade and the glossy foliage was large. Flowers were noted for standing above the foliage and that they did not require any deadheading. Entire series performed well.

### **Canna - 'Toucan® Scarlet' from Proven Winners**

Attractive dark foliage looked good even without flowers. However, the bright red flowers really stood out against the dark foliage and really made an impressive overall appearance. Plants were very uniform and helped make it the winner of this category for the second year in a row.

### **Celosia - 'New Look Red' from Benary**

Vibrant red plumes maintained color all season for long season display. Dark foliage was another important feature that really made the flowers stand out. Plants and flowers had good structure and did not lodge.

### **Coleus - 'PartyTime™ Ruby Punch' from Sakata**

Foliage was very eye catching with high contrast between the inner shades of dark red and the vivid bright green margin. Plants were large and upright in habit but with small foliage. There were no signs of bolting even in mid-September.

### **Combo - 'Kwik Kombos™ Shooting Star™' Mix from Syngenta**

This plant was the winner in this category for the second year in a row due to prolific blooming, good structure and high contrast of flower color. Plants had good heat tolerance and kept blooming strong all season. Dark purple angelonia were combined with golden yellow lantana that made a beautiful contrast of light and dark. With a little imagination, it resembled the stars in the night sky.

### **Cuphea - 'FloriGlory Manuel' from Westhoff**

This entry was reminiscent of heather and was a great plant to add a delicate texture to the garden or container. Small flowers and fine foliage combined to make plants with

excellent uniformity and appearance. Dark foliage was a nice contrast to the flowers which had a more intense color than other plants in the series.

**Dahlia - 'XXL Veracruz' from Dummen Orange**

The stunning display of flowers was a perfect combination of color, large blooms and prolific flowering. The "cactus" shape flowers had soft shades of lavender and white which would also make good cut flowers. The vigorous plants maintained uniform growth and resisted lodging with strong stems throughout the season. This had won awards multiple times in the past five years and has proven itself again in 2017.

**Geranium (Interspecific) - 'Calliope® Large Dark Red' from Syngenta**

An impressive overall visual effect was created by robust plants and abundant large flower heads with rich red flowers and dark flower stems. Intense flower color held strong even in the high light of Colorado. Growth habit was exceptionally uniform. It is considered more of a European style of geranium with smaller plants and large flower heads. Flower color was iridescent and the overall effect was show stopping.

**Geranium (seed) - 'Pinto Premium White Rose' from Syngenta**

This entry was noted for being a novel white and rose bicolor that had large umbels held high above the foliage for maximum show. Plants had good vigor with foliage that had a good zonation for added interest.

**Geranium (Zonal) - 'Darko® Deep Red' from Westhoff**

Dark, rich red flowers had great contrast against the emerald green foliage. Flower heads were large and bloomed all season. Plants showed good heat tolerance and were very uniform. Some consider it to be the industry standard for Zonal Geraniums.

**Lobelia - 'Hot® Waterblue' from Westhoff**

This variety held up to the heat all summer and still looked good in mid-September. Growth habit maintained a nice round shape. Flowers were abundant with a strong blue color that was very attractive.

**Osteospermum – 'Margarita Orange Flare' from Dummen Orange**

Flower color was very unique with a nice chocolate colored eye and flowers were a good contrast with the foliage color. Plants were compact and uniform.

**Pentas – 'BeeBright™ Red' from Syngenta**

Compact plants had large blooms with a great uniform growth habit. Flowers were a very intense shade of red that really grabbed attention. This selection showed good heat tolerance as well as being a good pollinator friendly plant.

**Petunia (seed spread) – 'SUCCESS! Pink Chiffon' from Benary**

Soft shades of pink flowers had a touch of cream creating a very romantic appearance. Flowering was prolific in the container and made a solid blanket of color in the ground. Plants maintained growth habits with great uniformity.

**Petunia (veg mound) – ‘Dekko™ Dark Lavender’ from Syngenta**

Dark lavender flowers covered the plants and remained fresh looking with no fading even into mid-September. Plants had great uniformity, did not stretch and seemed to be disease resistant. Vigor was very good while maintaining a controlled growth habit.

**Petunia (veg spread) – ‘Supertunia® Vista Bubble Gum’ from Proven Winners**

This variety has one multiple awards in the past or always in contention. As one evaluator stated, it is “forever wonderful”. Plants were extremely vigorous and produced a mountain of pink flowers that were stunning even from a distance. It made a great plant for landscape or large containers. It also was disease resistant.

**Salvia – ‘Mystic Spires Improved’ from Ball FloraPlant®**

Flower display was impressive not only due to the abundant spikes of rich, deep blue flowers but also because they were significantly longer than most other Salvia. Plants were all very uniform and the flowers looked fresh even in mid-September. It was an obvious favorite of the bees and a good pollinator plant.

**Scaevola – ‘ToppoT Aqua’ from Westhoff**

Compact plants had a nice rounded growth habit that were covered with blue flowers. The flowers were held above the foliage and had a striking blue color that really contrasted nicely with the foliage. It had an excellent appearance throughout the entire season.

**Sun New Guinea Impatiens – ‘SunPatiens® Compact Coral Pink’ from Sakata**

Compact plants with great uniformity were a solid mound of pink flowers and a lot of color. Not much foliage was visible but the dark green foliage made a good contrast with the bright flowers. Blooms faded attractively from pink to near white for added interest. This variety has won this class in other years and has proved its superiority again in 2017. Evaluators were impressed with the entire SunPatiens® series but ‘Compact Coral Pink’ was the best.

**Verbena - ‘Lanai® Upright Twister Purple’ from Syngenta**

Plants were grown in container and were covered with a beautiful canopy of large, soft lavender flowers with a white eye. The many flowers kept “burying their dead” and stayed fresh looking throughout the summer. The growth habit was very uniform.

**Vinca - ‘Cora Strawberry’ from Syngenta**

Strawberry colored flowers had a dark eye and were very showy with good contrast. Color did not fade and it was a low maintenance plant. Plants were relatively large and very uniform.

**Other Outstanding Plants**

**Alternanthera ‘Choco Chili™’ from Westoff**

Great foliage color and uniformity made this a great accent plant for the border with its compact spreading growth habit. The dark burgundy (nearly black) foliage was heat

tolerant and looked perfect all season long. Foliage color had a multi-dimensional appearance due to a lighter ruby color on the underside.

**Bidens 'Blazing™ Fire' from Danziger**

Fiery orange, yellow and red colors were prolific and spectacular. Plants had great vigor and the dense mounding habit enveloped the container as a ball of flowers with a large “wow” factor. Plants remained uniform all season and never flopped open. Flowers opened up darker and faded to a nice yellow.

**Calendula 'Lady Godiva™ Orange' from Proven Winners**

New breeding has created this entry with superior heat tolerance and growth habit. Plants formed a very compact, uniform blanket of orange flowers that was very impressive. Beautiful double flowers were a bright, cheery orange with shades of apricot yellow. Superior heat tolerance was observed on these plants keeping the flowers looking great in July and August.

**Calibrachoa 'CHAMELEON® Plum Cobber'**

This is another in the CHAMELEON® series that had both spectacular flowers and great growth habit. Flowers were a very attractive mix of soft shades of plum and yellow which change shades depending on the changes in the climate. Flower color was very unique and pleasing. Vigorous plants created a uniform ball of flowers in the container.

**Dianthus 'Rockin'™ Red' from PanAmerican/Kieft Seed**

Rich, deep red flowers were prolific on plants with a strong upright growth habit. Vivid colors popped out against the dark green foliage. It could be used as both a perennial or as an annual with abundant flowers the first year. It was a good low maintenance plant that did not require deadheading to maintain its appearance.

For a more complete report and photos of all of these winners go to [www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu).

For further information about the Colorado State University Annual Flower Trials, contact Jim Klett at [Jim.Klett@ColoState.edu](mailto:Jim.Klett@ColoState.edu) or phone 970-218-0104.

### **Consumer's Top 5 Plants**

This was the third year that we included a digital evaluation of on our garden for garden visitors to vote for their favorite plants. This new feature was very popular with the public garden visitors. This year we had 345 visitors submit digital and physical votes. The top 5 consumer voted plants are as follows:

<b>VARIETY NAME</b>	<b>COMPANY</b>
Dahlia XXL Veracruz	Dummen Orange
Lantana Lucky Sunrise Rose	Ball FloraPlant®
Ornamental Pepper Wicked	PanAmerican Seed
Petunia Constellation Virgo (Blue)	Westhoff
Helianthus Sunfinity	Syngenta
